International Distribution : Following the transfer to Telefilm Canada of its international offices and its responsibility to support the promotion of Canadian films abroad, the NFB has retained responsibility for foreign marketing and sales of its own products. These activities are carried out from headquarters and with respresentatives located at Telefilm Canada offices abroad to ensure optimum distribution in the major markets.

Administration and Promotion Services : This area consists of the planning, financial and administrative support services. It also includes the creative services responsible for the production of publicity and information material. Additionally, this area operates FORMAT, a computerized information system for audio-visual materials. Presently FORMAT provides access to more than 12,000 film, video, filmstrip and multimedia records. As resources permit and as organization agreements develop such information as television program and stock shot collections will be added to the database. This system is now in use in six National Film Board offices across Canada. In addition, these facilities are now used to produce the annual NFB film and video catalogues.

Performance Information/Resource Justification

The Distribution Activity has operated a network of offices which provides access to our films in all regions of Canada in both official languages in conformity with the policies and objectives of the Board. The continuation of such distributions facilities, however, has become extremely costly. The Board will redefine its systems for delivery information and audio-visual products to the public, by establishing audio-visual centres across the country, consolidating its library system and opening new access routes for its product in the community. The goal is to reduce over a five-year period, the present network of 29 offices to 12 regional audio-visual centres, one for each province, except Quebec and Ontario which will each have two centres.

During 1985-86, this Activity also intends to examine the feasibility of contracting out the distribution of NFB films on a selective basis by establishing a series of pilot projects with private distributors, national non-profit organizations and public insitutions with a goal of increasing access and utilization of NFB products while reducing costs.

It is also planned to reduce the infrastructure of the international distribution and reorganize it on a cost recoverable basis focussing on the marketing and sales of NFB productions.

We have identified six major outputs relating to this Activity. Workload volumes and percentage of change year to year are displayed in Figure 19.

Figure 19: Distribution Outputs

	Forecast 1985-86		Forecast 1984-85		Actual 1983-84		Actual 1982-83

C. Research and Development

Objective

To engage in research in film activity by conducting technical research and development projects aimed at the advancement of the art and technology of audio-visual communication in conjunction with other components of the industry.

Resource Summary

Expenditures for this activity account for approximately 2% of the total program expenditures and 1% of the authorized person-years. Of the total expenditures 36% is for personnel costs. Other costs are primarily for contracted services, materials and supplies and accommodation costs.

Figure 20: Activity Expenditures ($000) and Person-Years

Description

One of the purposes of the Board as set forth in the National Film Act is to "engage in research in film activity and to make available the results thereof to persons engaged in the production of films".

The Board maintains a small group of specialized personnel who are engaged in projects that fall into one of the following areas:

System Design Services: Resources in this area are directed towards investigation, definition, design, software development and documentation of specifications for applications.

Innovation Prototype Development Services: This area is concerned with the construction of prototype hardware.

Technology Transfer Services: New technology data resulting from literature search and prototype development is disseminated through publications, technical committees, conferences and seminars, a microfiche databank and a computer abstract service.

Industrial Development Services: Practical assistance is supplied in promoting Canadian capability in the adoption of modern technology and systems through active involvement in standardization of equipment, systems and materials specifications, prototype development in partnership with the industry and equipment testing services.

Performance Information/Resource Justification

The National Film and Video Policy has defined a responsibility for the NFB to become a national centre for advanced research and development in the art and technology of film and video. In keeping with this new role, the Board intends to invest an additional $2 million in this Activity over the next five years.

For 1985-86, an additional investment of $450,000 will be directed in the area of System design services to pursue development in electronic editing, electronic delivery systems and computer-assisted animation.

Figure 22 identifies the important milestones for 1985-86.

Figure 22: Research and Development Outputs

Areas	Resources $	Allocated P-Y	Planned Milestones
System Design Services	180,000	4	Electronic editing and Interactive Video editing.
	150,000		Electronic delivery system using interactive videodisc and other related video technology.
	120,000		Continue research with the Canadian private sector in furthering development of the 3-D Imax technology.
	100,000		Computer assisted animation, using high definition technology.
	150,000		Computer graphics, electronic (sub)titling, and effects
	21,000		Motion control for animation
Innovation Phototype Services	115,000	1	Film Data Track readers
Technology Transfer Services	245,000	4	Publications of new technology data
			Databank services
Industrial Development Services	110,000	1	Testing of materials
			Advisory services
Total	1,191,000	10	

D. Executive and Administrative Services

Objective

To provide timely and effective direction and planning, financial and administrative support services to the operational activities of the Board.

Resource Summary

The Administration Activity represents 12% of the total program expenditures and 14.9% of the authorized person-years. Salary and other personnel expenditures makes up 56% of its budget.

Figure 23: Activity Expenditures ($000) and person-years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Executive and Administrative Services	8,362	118	8,056	130	8,185	147
Ottawa Services	-	-	1,400	17	1,221	22
	8,362	118	9,456	147	9,406	169

The Ottawa Services Division, formerly responsible for the direction of the Canadian Government Photo Centre, the Still Photo Division and the Sponsored Film Production Division, has ceased to exist following the transfer of these activities to other government departments on October 1, 1984.

Past Financial Performance

Figure 24 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 24: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		**Change**	
	$	P-Y	$	P-Y	**$**	**P-Y**
Executive and Administrative Services	8,185	147	7,452	154	**733**	**(7)**
Ottawa Services	1,221	22	1,310	22	**(89)**	**-**
	9,406	169	8,762	176	**644**	**(7)**

Explanation of Change : The increase of $644,000 or 7% in expenditures was caused by the acquisition of computer equipment and software packages required for the development of the integrated management information system.

Description

This area represents the central management and administration of the National Film Board. It includes the Office of the Commissioner, Internal Audit, Co-ordination of Planning and Evaluation functions, and Public Affairs. It also includes Personnel Services which is responsible for recruiting, training and career development, classification of positions and salaries, administration, negotiation of collective agreements, processing and maintenance of staff records and the operation of a health unit. Financial and Administrative Services provides financial services including accounting and financial controls, systems and data processing, a records centre, purchasing, stores, receiving, shipping, security, transportation, communications, a reference library, duplicating services, space and accommodation and equipment and inventory control.

Performance Information/Resource Justification

During 1985-86, it is planned to address the following matters:

- corporate programming which involves the definition of major corporate trends in productions and marketing programs with a view of assuring both the quality and the social and cultural relevance of NFB films;

- human resources management which involves the determination of the ideal size of each branch in terms of program activities and available resources while carrying on the program to reduce the total payroll; and

- management of financial resources which involves the continuation of the development and implementation of an integrated financial information system to improve the decision-making process and to automate certain clerical functions.

Executive and Administrative Services : Figures 25 and 26 show the ratio of overhead person-years and overhead costs to the total for the Board.

Figure 25: Relationship of Executive and Administrative Person-Years to Total Board Authorized Person-Years

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84

Percentage of total	12.0	10.4	10.4

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 27 presents the distribution of expenditures classified by standard object. Apart from personnel costs, other significant objects of expenditure are: professional and special services which include costs of sponsored film production contracted to the private sector and rentals, which include costs of accommodation payable to Public Works Canada.

Figure 27: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	30,663	34,433	34,268
Other personnel costs	5,251	5,567	4,813
	35,914	40,000	39,081
Goods and Services			
Transportation and communications	5,050	5,130	4,863
Information	775	870	821
Professional and special services	10,257	12,414	13,559
Rentals	9,000	10,250	9,916
Purchased repair and upkeep	830	870	834
Utilities, materials and supplies	5,000	5,200	5,210
All other expenditures	1,728	500	512
	32,640	35,234	35,715
Total operating	68,554	75,234	74,796
Capital	2,130	2,014	2,822
Transfer payments	294	282	565
Total expenditures	70,978	77,530	78,183
Less: receipts credited to the fund	(8,050)	(15,000)	20,627
Net expenditures charged to appropriation authority	62,928	62,530	57,556

2. Personnel Expenditures

The Board is a labour-intensive organization, with personnel costs including contributions to employee benefit plans constituting 51.5% of total expenditures. Figure 28 presents information on the 789 authorized person-years for regular employees and Figure 29 presents information on another 140 person-years which may be used by the Board on a temporary basis to cope with fluctuations in work levels and for special talent.

Figure 28: Authorized Person-years and Salary Provision

Category	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	16	18	18	46,410 - 80,021	62,874
Personnel Officer	5	7	7	22,365 - 51,755	44,337
Other Administrative and Foreign Services	144	178	180	17,866 - 57,541	38,143
Scientific and Professional	8	8	9	15,724 - 45,378	31,073
Administration Support	187	220	238	11,828 - 29,438	22,394
Operational	56	64	76	11,992 - 34,106	21,509
Executive Producers	13	16	17	44,846 - 58,874	55,338
Technicians and Filmmakers	355	416	415	13,552 - 54,273	35,731
Locally engaged	5	20	31	12,201 - 43,647	25,778

Note : The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

Figure 29: Temporary Person-Years by Category

Category	Forecast 1985-86 P-Y	Forecast 1984-85 P-Y	Actual 1983-84 P-Y
Administrative and Foreign Services	19	16	18
Technical	74	64	70
Administrative Service	47	40	44
	140	120	132

3. Transfer Payments

Figure 30 presents a summary of grants and contribution expenditures of the Board.

Figure 30: Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants			
Grants in support of significant film events of national and/or international interest held in Canada, as determined by the Board of Trustees	10	10	10
Contributions			
Payments in respect of contributions to the Federal Summer Employment Opportunities Program	-	2	301
Payments to Quebec in respect of Reciprocal Taxation Agreement	284	270	254
	294	282	565

B. Cost Analysis

The net cost of the NFB program for 1985-86 is $61,680,000 as shown in Figures 1 and 2 on page 8. The NFB pays for all services which it receives from other government departments including accommodation. In addition all revenue received is credited to its operations.

C. Revenue Analysis

Figure 31 presents a breakdown of the Board's revenues by type and according to the Production and Distribution Activities received for the years 1982-83 and 1983-84, with a forecast for the years 1984-85 and 1985-86. The transfer of the sponsored film production program and of the Canadian Government Photo Centre operations to other government departments in October 1984 is the major cause for the decline in revenue. In future years, revenue will be derived solely from the marketing of NFB productions.

Figure 31: Revenue by Class ($000)

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
Production

D. Analysis of Revolving Fund

1. Projected Use of Revolving Fund Authority

Under the continuing authority of the Adjustment of Accounts Act (S.C. 1980, c.17) Parliament has authorized a total drawdown of $20,000,000 for the National Film Board Revolving Fund to provide for working capital and to record the increase in the net book value of fixed assets. The anticipated use of this authority as of April 1, 1986 is $13,683,000; which represents an increase of $1,248,000 due to a projected increase in the net book value of fixed assets during the year. No change in working capital requirement is forecast. Figures 32 and 33 present an analysis of the Fund and its projected utilization.

Figure 32: Statement of Revolving Fund Position ($000)

	Forecast at March 31, 1986	Forecast at March 31, 1985	Actual at March 31, 1984
Assets			
Cash	100	100	103
Accounts receivable	2,300	2,400	3,063
Inventories	2,000	2,050	2,193
Prepaid expenses	200	250	306
Equipment (net value)	10,683	9,435	9,487
	15,283	14,235	15,152
Liabilities			
Accounts payable and accrued liabilities	1,600	1,800	2,754
Accumulated net charge against the Revolving Fund Authority made up of:			
Working capital	3,000	3,000	2,911
Equity in fixed assets	10,683	9,435	9,487
	15,283	14,235	15,152

1985–86 Estimates

Part III

Expenditure Plan

2731

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

National Library
of Canada

2785

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the program including a description, information on its background, objectives and planning perspective, as well as performance information that forms the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $30,526,220 to carry out the planned activities of the National Library for 1985-86. In addition, expenditures of $2,330,780 are forecast for 1985-86 under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	National Library		
70	Program expenditures	30,526	27,783

2789

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

With an increase of 9 person-years and $1,114,000, the National Library has established the following goals for 1985-86:

- to complete the second phase of a pilot project directed toward the development of a decentralized National Library and information network (see page 17);
- to improve conservation of the National Library's Canadian collections with special emphasis on mass deacidification of new books and special treatment for deteriorating historic sound recordings (see page 14);
- to improve the capacity to meet the demand for location and document delivery services while maintaining basic service levels, including the prompt shelving of library materials returned from loan or newly acquired for the collections so that these materials will be available to users (see page 16);
- to maintain the current level of legal deposit enforcement while the number of items received from publishers increases by 12% (2,600 titles) during the year (see pages 20 and 21);
- to design an effective records management system for the Library (see page 23).

2. Financial Summary

Figure 1: Financial Summary ($000)

	Estimates 1985-86	Forecast* 1984-85	Change
National Library	32,857	31,743	1,114
Person-years	549	540	9

* There has not been significant change from 1984-85 Main Estimates. The 1984-85 forecast is $1,984 million or 6.7% more than the 1984-85 Main Estimates of $29,759 million. (Extracts from Part II of the Estimates, page 4).

Explanation of Change: The 1985-86 estimated expenditures of $32,857,000 represent a net increase of $1,114,000 or 3.5% above the 1984-85 forecast. Major items accounting for the change include:

	$000
Increases:	
• allowance for inflation	816
• maintain current levels of service to the public and provide for other library services	812
• continuation of a pilot project to test telecommunications technology for a Canadian library/information network	611
• sundry lapsed amounts	30
Decreases:	
• non-recurring funds to allow for the equalization of pay between the Library Science Group and the Historical Research Group and for the summer employment of students	(955)
• reduction in operating costs base	(200)

B. Recent Performance

1. Highlights

There are no major changes to the Program's plans for 1984-85.

Highlights of the Program's performance during 1983-84 are shown below:

- The Library completed the first phase of a pilot project to test the utility of new telecommunications technology for bibliographic data interchange, at a cost of 10 person-years and $977,000 in 1983-84. An evaluation of the project showed the feasibility of supporting a library/information network with new telecommunications technology tested or developed during the project (see page 17).

- A total of 94 development projects and tasks were completed in the schedule to develop and operate DOBIS (Dortmunder Bibliothekssystem), an on-line, bilingual data base management system for use by the National Library and other Canadian libraries (see page 16).

- Workload increases of 8% in document delivery and 5% for information delivery services were handled while maintaining existing quality and turnaround times. A reduction of .5% in the location service workload was made possible by providing Canadian libraries with decentralized direct access to the Library's data base (see page 18).

- In 1983-84, titles acquired by purchase, gift, and exchange declined by 4% overall. The number of Canadian titles received on legal deposit during the same year increased by 11% (or 1,961 titles) which was close to the increase projected (see page 21).

2. Review of Financial Performance

National Library	29,621	29,829	(208)
Person-years	543	540	3

The difference of $208,000 or 0.7% between actual expenditures and the Main Estimates for 1983-84 results from the fact that computer processing services were less expensive than originally estimated. The extra person-year utilization was principally the result of the hiring of two summer students.

C. Background

1. Introduction

The National Library of Canada, established by Parliament in 1952, is the national institution responsible for collecting and making available those materials which comprise the Canadian literary heritage, for promoting equal access to library services and collections for Canadians, for coordinating the provision of library services in the federal government, and for administering legal deposit which requires that Canadian publishers send to the Library copies of all their new publications.

Major departmental functions include publication and distribution of the national bibliography, provision of reference, interlibrary loan and document delivery services, development and maintenance of an automated library management system and on-line data base for use by federal and other libraries, and the preservation of Canadian publications. As part of a library network that is composed of individual libraries, library consortia, regional and provincial systems which are under the jurisdiction of all levels of government and the private sector, the National Library contributes to overall planning and liaison, develops standards, and coordinates cooperative programs. Library services are provided through other libraries as well as directly to researchers using the Library's facilities on site.

2. Legal Mandate

The role of the National Library is governed by the National Library Act. Section 7 specifies the powers and duties of the National Librarian in regard to the operations of the National Library and the coordination of library services for federal libraries. Section 8 provides for the negotiation of agreements to ensure co-operation with libraries and other related institutions in respect of such services. Section 11 outlines the requirements for legal deposit of Canadian publications with the National Library.

The Library's mandate, based on the provisions of the Act, includes the development of collections to support its own services and those of other Canadian libraries, the administration of legal deposit, the provision of bibliographic, reference, interlending, systems, and network services which promote equalization of access to library and information services for all Canadians, the compilation and publication of the national bibliography, the co-ordination of federal library services, and the transfer and disposal of surplus books from other federal departments.

3. Program Objective

The objective of the National Library is to facilitate the use of the library resources of the country by the people and the Government of Canada.

4. Program Description

The Library is divided into three basic areas to achieve its objective.

Collections Management: consists of two sub-activities - Collections Development and Cataloguing.

Collections Development: is responsible for administration of legal deposit and for the development of the collections of the National Library. It also contributes to an improvement of the collection strengths of the nation's libraries by a redistribution of published materials among Canadian libraries through the Canadian Book Exchange Centre. Collections Development's responsibilities also include the acquisition of a comprehensive collection of materials published in Canada and materials to support research collections in Canadian studies, social sciences and humanities, the binding of library materials, and the micropublication and sale of theses accepted at 39 Canadian universities.

Cataloguing: creates and maintains records which describe and list Canadian publications and the holdings of the National Library. It compiles and produces current and retrospective national bibliographies of Canadiana in printed and microfiche versions; it maintains a data base of machine-readable cataloguing (MARC) records for both Canadiana and for foreign materials, and distributes these records on magnetic tape or on-line; it coordinates a pre- publication cataloguing program covering Canadian trade and official publications; it provides access to the National Library's collections by compiling and maintaining catalogues; and it develops and revises bibliographic standards.

Library Services: consists of two sub-activities - Public Services and Library Systems.

Public Services: provides reference, research, and advisory services, and increases the availability of library material in Canada. Its functions include reference and referral services to other libraries and to the public through collections as well as through automated data bases; the coordination of services for the handicapped; the documentation of current developments in library and information science; and the location and interlending of library materials and the distribution of foreign language materials to selected resource libraries. Among its other functions and responsibilities are the custody of the collections of the Library and the creation and maintenance of the manual and automated Canadian union catalogues.

Library Systems: promotes and facilitates access to information for the benefit of Canadians by providing quality, cost-effective informatics systems and services based on current technologies and techniques.

Policy Planning and Liaison: consists of a single sub- activity and includes the central management, planning and policy development for the Library, the coordination of federal government library services, provision of leadership, coordination and policy development for the developing Canadian library and information network, and the preparation of publications and exhibits related to the Library's mandate.

5. Program Organization for Delivery

Activity Structure: The National Library consists of only one activity, which is synonymous with the program, and comprises five sub-activities - Collections Development, Cataloguing, Public Services, Library Systems, and Policy Planning and Liaison.

Organization Structure: The National Library has its headquarters and operations located in the National Capital region. The National Librarian is the Chief Executive Officer and is responsible for all matters relating to the National Library. The National Librarian reports to the Minister of Communications.

Under the direction of the National Librarian, the Associate National Librarian supervises the operations of four branches of the National Library. Because the Public Archives provides financial, administrative, personnel, technical and internal audit services to the National Library, there is a functional relationship between the National Librarian and the Archives personnel responsible for providing these services. Planned resource utilization for 1985-86 for services peformed on behalf of the National Library is $5,137,000 and 81 person-years. Figure 3 displays the organization and resources of the Library for 1985-86.

Figure 3: 1985-86 Resources by Organization/Activity ($000)

	Collections Development	Cataloguing		Public Services	Library Systems	Activity Total
National Library	5,088	9,920	4,567	7,920	9,462	36,957
Person-years	82	154	82	196	95	549

D. Planning Perspective

1. Environment

Several key factors affect the nature and direction of the National Library services:

Canadian Studies and Canadian Cultural Development: The report of the Federal Cultural Policy Review Committee stressed the need to root contemporary Canadian artistic creation "in a respect for our artistic and intellectual heritage". Given the necessary resources, the National Library is in a position to provide support and leadership among libraries in the acquisition, preservation and provision of access to the Canadian literary heritage. It already is depended upon nationally and internationally to provide authoritative bibliographic access to Canadian publications. Bibliographical activity in the social sciences and humanities in Canada has increased significantly in the past few years primarily due to the Research Tools Strategic Grants programs of the Social Sciences and Humanities Research Council. However, there remains the significant problem of access to this information in printed or machine readable form. The National Library is under increasing pressure to support on-line access to this information.

A major problem in the provision of access to Canadian materials is the difficulty of maintaining these collections in an acceptable physical condition. The National Library is currently cooperating with the Public Archives in the testing and use of new conservation methods to treat all incoming Canadian material to prevent its subsequent deterioration. Much more work in this area remains to be done, including an examination of the feasibility of estabishing a national program to apply new preservation methods to the unique collections in Canadian libraries.

New Technology: The development of new technology, especially in the fields of telecommunications and electronic data processing, has had a major effect on library services. Rapid advances in computer technology in the past decade have resulted in the development of automated information systems, including many developed and maintained in Canadian libraries. Other advances in telecommunications, mini- and micro-computers, microforms, videotex (Telidon), and videodisc systems are combining to render obsolete some traditional forms of access to information. Opportunities now exist to increase productivity and to provide timely, accurate, and speedy access to information held in diverse data bases and in many locations to those who need it anywhere in Canada. As planners and managers of library programs face the major challenge of adapting to a constantly changing technological environment, they will find themselves in a position to exploit the advantages of technology.

The National Library has been among the leaders in Canada in the applications development and implementation of Open Systems Interconnection (OSI) standards for libraries which permit any computer or terminal to be connected with any other in order to exchange information in a nationwide library/information network.

The Library's work in the development of networks to improve access to documentation has highlighted a variety of issues about which policy must be established. These areas include copyright, ownership of bibliographic records, third party use of bibliographic records, charging policies, distribution rights for software, transborder data flow, and file transfer policy.

Publishing and Information Access: During the past decade, there has been an impressive growth in world publishing, as well as a growing recognition of the economic value of information. These factors have had a direct impact on library workloads. First, libraries had to cope with an estimated total increase of 25 percent in world publishing output between 1970 and 1978; at the same time, as bibliographic data came to be more widely perceived as a means of getting at documentation, major efforts were undertaken to ensure world bibliographic control of publications.

At the same time, there has been a rapid expansion in the forms of documentation to include various types of databases and machine-readable publications. The growth in the content of data bases and in their increasing availability in turn increases the expectations, and supports the information needs, of all publics: as more people become more aware of specialized information services now available, they put greater pressure on libraries and related institutions for fast and accurate access to documentation. The increasing value and expense of information also puts pressure on public institutions to ensure the equalization of access to documentation in a rapidly changing environment.

Economic Climate: In recent years, inflation, devaluation of the Canadian dollar and governments' fiscal restraint have severely restricted the growth of library programs and collections. At the same time, some libraries have begun to charge for services which were previously offered free. As a result, libraries have undertaken more cooperative projects in an effort to make the best possible use of their resources.

Accommodation: Since 1967, the National Library and the Public Archives have shared a headquarters building at 395 Wellington Street. This building was intended to be the permanent headquarters for the Library and was to serve the Archives temporarily until its permanent headquarters could be built. The construction of a Public Archives

has been delayed and now both departments suffer from an acute shortage of space. National Library collections and services are at present scattered in six buildings, several of which are inadequately climate controlled. More than thirty percent of its collections are now stored outside the Library's main building and must be retrieved for patrons when requested. In addition, more than sixty percent of the department's staff also work outside the headquarters building.

2. New Initiatives

The following initiatives will be undertaken.

Reference, Location, and Document Delivery Services: A number of measures will be taken during 1985-86 to improve the effectiveness of existing services to the public. Reference and advisory services to the public will be improved by initiating formal links between the National Library and other institutions which will agree to provide information services on specialized topics. In addition, steps will be taken to ensure that the Canadian Union Catalogue contains records which provide the most effective subject and geographic coverage possible, while, at the same time, automated processes for reporting to the Catalogue will be enhanced.

Bibliographic Services: A pilot project will be undertaken with the Bibliothèque nationale du Québec to provide a Cataloguing-in- Publication service for French-language Quebec publishers.

National Plan for Canadian Library Collections Inventories: During 1984-85, the Resource Network Committee of the National Library Advisory Board developed a National Plan for Collections Inventories which is now being discussed with various sections of the library community. The implementation of this plan will involve the identification of both general research and specialized collections in Canadian libraries and will facilitate interlending, scholarly research, funding programs, and cooperative collections management and conservation programs. Collections inventories will take several years to complete and will involve various types of libraries. A directory of special collections will be prepared under contract to the National Library.

3. Update on Previously Reported Initiatives

Systems Development to Support Library Services: In 1983-84, the Library's machine-readable DOBIS data base increased in size by 21.5% and the data base was interfaced with four other systems. In 1984-85, the DOBIS Search-Only Service was introduced on a limited pilot project basis. As of September 1984, a total of 61 organizations from across Canada were using the service. At the same time, a preliminary review of the Library's automation plans was completed and priorities were reviewed. This review led to the Strategic Informations Systems Plan Project to be completed in the Spring of 1985. Based on the recommendations of the Planning Project, the Library will begin in

1985-86 to upgrade its data base and computer systems and will promote, coordinate and facilitate end-user computing.

The Library will complete the implementation of its online cataloguing systems during 1985-86, thus providing access to records for monographs, serials, government documents, music, and sound recordings acquired by the Library as well as to records prepared for authority files and for the Retrospective National Bibliography.

Networks Pilot Project: During 1982-83 and 1983-84, the Library completed Phase I of a pilot project to test the utility of new technology for bibliographic interchange. The pilot project involved a group of libraries of various sizes and types located in Ontario and Quebec, and used, as the test facility, the iNet Gateway Trial mounted and subsidized by Telecom Canada. Phase I tested the potential for linking library and information data bases and services in a bilingual environment, using hardware from a number of manufacturers and testing applications in various library sectors. Test results confirmed the technical feasibility of using an open network as the technical basis for a library/information communications network.

The second phase of this project, begun in 1984-85, centres on assessing new telecommunications technology in terms of its utility for library applications. This will include developing the necessary standards for the applications, as well as the applications themselves, in the areas of interlending, acquisitions, and directories. At the same time, the Library will be able to enhance the usefulness of its data base by increasing the number of libraries which can search the Library's data base online, by extending the on-line data base service hours to permit users from all parts of Canada to use the service during their local business hours, by interfacing the Library's system to other systems via standard computer network protocols, and by carrying out a file transfer pilot project. Costs for the second phase will total $2,979,000 over 1984-85 and 1985-86.

Service to the Handicapped: In 1984-85, a union catalogue of library materials for the visually handicapped and a register of such materials in production in Canada were developed. A computer output microform catalogue will be produced in 1985-86.

Newspaper Collections: During 1984-85, the Library began to implement a decentralized program for the improved collection, preservation, and provision of access to Canadian newspapers in cooperation with libraries and other concerned parties in interested provinces.

4. Program Effectiveness

The effectiveness of the National Library is measured principally by the degree to which it can meet the steadily growing demand for the delivery of services to the public. Basic indicators of changes in

demand in this area are the number of information requests answered or referred, the number of items loaned from the National Library's collections, and the number of locations provided for material sought through interlibrary loan. Details of these measures are provided in Figure 4.

Figure 4: Demand for the Delivery of Services to the Public

	Forecast 1984-85		Actual 1983-84		Actual 1982-83
	Volume	% Increase	Volume	% Increase	Volume
Information Delivery (requests anwered)	38,900	(8)*	42,377	5	40,417
Document Delivery (items loaned)	274,000	6	258,909	8	239,699
Location Service (requests searched)	163,000	(11)*	182,373	(.5)*	183,368

* This decrease results from the fact that patrons are now able to search the Library's data base themselves for certain information.

In addition to the general indicators of effectiveness and the ongoing performance measurement carried out by departmental managers with respect to their own programs, the National Library also relies on program evaluation in assessing its effectiveness. The function permits a deeper periodic examination of the relevance, effectiveness and impact of individual departmental programs.

In 1983, evaluation studies were completed on the effectiveness of legal deposit and of the department's public relations services. The findings were summarized in the 1984-85 Expenditure Plan. As a result of the first study, alternative means of enhancing and maintaining publishers' awareness of deposit requirements began implementation during 1984-85. As a result of the evaluation of public relations services, improvements to the Library's advertising campaign are now being made.

Other evaluations, which were to have been carried out in 1983-84 and 1984-85 at the rate of one or two per year, have been delayed in order to use the existing program evaluation resources and staff to carry out the evaluation of the first and second phases of the Networks Pilot Project (see page 17).

5. Performance Information/Resource Justification

This Activity involves five major workload areas which are Collections Development, Cataloguing, Public Services, Library Systems, and Policy Planning and Liaison. Workload indicators for the first four of these areas have been summarized in Figure 5 and the resource allocations for all five are shown in Figure 6.

Figure 5: Major Outputs of the National Library (000's)

	Forecast 1985-86		Forecast 1984-85		Actual 1983-84		Actual 1982-83
Measures of Output	Volume	% Change	Volume	% Change	Volume	% Change	Volume
Collections Development							
Titles acquired by legal deposit	23.9	12	21.3	10	19.4	11	17.4
Monographs acquired by purchase, gift, or exchange	14.8	-	14.9	-	14.9	(4)	15.6
Cataloguing							
Number of records created	92.7	3	90.0	(1.8)	91.6	5	86.9
Number of records distributed	3,711.0	3	3,603.0	(5)	3,792.2	(6)	4,054.7
Public Services							
Reference requests answered	39.0	.3	38.9	(8)*	42.4	5	40.4
Library material circulated	275.0	.4	274.0	6	258.9	8	239.7
Interlibrary loan requests answered	165.0	1	163.0	(11)*	182.3	(.5)*	183.4
Library Systems							
On-line transactions	30,054.0	19	25,261.0	13	22,292.7	20	18,525.0
User entities	.182	24	.147	48	.099	43	.069

* This decrease results from an increased direct use of the Library's on-line data bases (see statistics on increases in on-line transactions under Library Systems).

Figure 6: Resource Allocation by Workload Area ($000)

	Forecast 1985-86		Forecast 1984-85		Actual 1983-84		Actual 1982-83	
	$	P-Y	$	P-Y	$	P-Y	$	P-Y
Collections Development	5,088	82	4,844	77.5	4,685	76	4,247	79
Cataloguing	6,920	154	6,955	150.5	6,372	153	6,052	161
Public Services	7,820	195	7,778	198	7,525	201	6,428	192
Library Systems	8,462	66	8,144	64	7,107	64	5,758	64
Policy Planning and Liaison	4,567	52	4,022	50	3,932	49	3,568	53
	32,857	549	31,743	540	29,621	543	26,053	549

Collections Development: The effectiveness of National Library collections depends on their growth in both quantity and quality to meet two needs: the need to provide a central guaranteed source for material on Canada or by Canadians to support research, decision-making, and cultural development in Canada, and the need to strengthen and supplement libraries and other information centres which are providing document delivery services to Canadians.

The preservation of the nation's printed heritage and the provision of National Library services are directly dependent on the resources provided for the systematic acquisition of materials published in Canada, materials published abroad relating to Canada and materials in the social sciences and humanities. Legal deposit continues to provide a very significant portion of Canadian materials to enrich the collection. However, the funds allocated for the book purchase account have remained constant. This fact, coupled with increasing prices, has resulted in a reduction of new titles purchased. Since the collection of the National Library has been developed for 30 years it has reached a maturity in certain subjects which places it among the leading research libraries in Canada. This fact, in turn, requires greater expertise in the selection and acquisition processes to maintain research collections on an advanced level. An analysis of collection growth is included in Figure 7.

Figure 7: Collections Growth, 1982-83 to 1985-86

Item	Forecast 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
Canadian titles acquired				
Legal deposit	23,900	21,300	19,381	17,420
Federal and provincial government publications	15,000	15,500	10,684	13,153
Theses and miscellaneous publications	6,600	6,300	5,306	5,645
Purchased titles	2,100	2,200	2,188	1,849
Foreign titles acquired				
Purchases	8,500	8,700	8,823	10,937
Gifts	2,100	2,000	1,906	1,888
Exchanges	2,100	2,000	1,958	923
Serials titles received				
Canadian	14,700	13,800	12,930	12,000
Foreign	6,900	6,500	6,121	5,717
Expenditures for purchase of materials for the collection	$1,725,000	$1,725,000	$1,653,000	$1,628,000
Expenditures for special purchases	-	-	333,782*	-

* This amount represents an extra expenditure in 1983-84 only for the purchase of a special collection of library material.

Cataloguing: The major outputs in this area are bibliographic and associated records created for the national bibliographies (Canadiana) and for the catalogue of the National Library's collections. These outputs contribute directly to the development and operation of a bibliographic communication network, the sharing of increasingly costly library resources, and the identification and interpretation of Canada's printed heritage. All of these depend upon access to well- researched standardized bibliographic information about Canadian and foreign library materials. Libraries can substantially reduce the time and effort required for selecting, ordering, cataloguing or borrowing all library materials by using the standardized bibliographic data created and distributed by the National Library from its computerized bibliographic data bases.

A summary of total output (records produced and records distributed) and a summary of resource allocation for Cataloguing are shown in Figure 5 and Figure 6.

A program evaluation of the Library's national bibliographic services is planned to begin in late 1984-85 and to be completed in fall 1985-86.

Public Services: The major measures of outputs in this sub-activity are the number of information requests answered or referred, the number of items loaned from the National Library's collections, and the number of locations requested for material sought through interlibrary loan. These three outputs result from external requests from other libraries, federal governmental departments, and from the public. Details of outputs and resources are provided in Figures 5 and 6 respectively.

Library Systems: As in 1984-85, planning and development in the systems area in 1985-86 will centre around the review of the Library's systems and data bases. The present system, DOBIS, will be examined from the point of view of the feasibility and costs of adapting it to the rapidly changing information service environment and to the new technologies being developed to meet service needs. Alternatives to the current systems will be considered and appropriate modifications will start to be implemented. Growth in demand for the Library's systems services is analyzed in Figure 8. The nature of the information provided in this Figure has changed from last year to provide readers with more appropriate performance information.

Figure 8: Demand for Systems Services 1982-83 to 1985-86

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
Number of entities using the system	182	147	99	69
Ratio of National Library use of the system to use by other libraries*	1.3:1	1.6:1	2:1	2.5:1
Total on-line transactions	30,054,000	25,261,000	22,292,699	18,525,000
Products produced from system **	75	65	55	29
Number of records in data base	3,800,000	3,400,000	3,081,918	2,527,372

* The change in this ratio reflects the increased use being made of the Library's data base by other institutions to obtain cataloguing copy, location information and bibliographic data.

** Typical products produced by the System are microfiche catalogues of library collections, hard-copy publications such as union lists of serials, and lists of recent acquisitions.

Policy Planning and Liaison: The major responsibility of this sub-activity during 1985-86 will be to continue to develop policies regarding the role which the Library will play in the developing library networks in Canada and abroad. Staff will continue assessments, on a trial basis, of the potential of new telecommunications technologies for use in bibliographic network development. Consultations will continue with the Council of Federal Libraries as part of the preparation of a document clarifying the role of the National Librarian in the coordination of federal government library services. In addition, the Library will continue to refine its communications with its clients to ensure that they receive accurate and timely information on the full range of National Library services. During 1985-86 work will begin on the improvement of the departmental records management system.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

National Library expenditures by object are presented in Figure 9.

Figure 9: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	16,649	16,437	15,553
Contributions to employee benefit plans	2,331	1,976	2,181
Other personnel costs	186	186	146
	19,166	18,599	17,880
Goods and Services			
Transportation and communications	1,141	958	826
Information	747	715	478
Professional and special services			
Computer services	4,682	4,492	3,675
Other services	3,121	2,994	2,450
Rentals	674	617	719
Purchased repair and upkeep	323	301	153
Purchase of books and other material	2,003	2,003	2,247
Other utilities, materials and supplies	661	590	633
All other expenditures	68	83	53
	13,420	12,753	11,234
Total Operating	32,586	31,352	29,114
Capital	229	354	479
Transfer Payments	42	37	28
Total expenditures	32,857	31,743	29,621

2. Personnel Expenditures

Figure 10: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management					
Executive	7	7	7	50,350 - 96,300	63,036
Senior Management	4	3	3	50,350 - 96,300	56,314
Scientific and Professional					
Library Science	207	216	216	19,782 - 50,712	33,252
Other	3	-	-	- -	35,466
Administrative and Foreign Services					
Administrative Services	13	15	15	13,912 - 57,987	36,603
Computer System Adminis.	32	33	30	18,766 - 61,433	36,215
Information Services	7	7	8	13,579 - 57,980	41,035

Other	6	4	4	- -	26,453
Summer Students	-	2	2	- -	-

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 11: Details of Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants			
International Federation of Library Associations	11	10	9
International Serials Data System	31	27	19
	42	37	28

B. Cost Analysis

Figure 12: Net Cost of Program for 1985-86 ($000)

	1985-86 Operating Expenditures	Add Other Costs	Total Costs	Deduct Revenue	Net Costs	Total 1984-85
National Library	32,857	10,190	43,047	1,433	41,614	37,407

Note: The "Other Costs" column above includes $4,602,000 for accommodation provided by the Department of Public Works, $5,137,000 for administrative services provided by the Public Archives, and $451,000 for Treasury Board contributions to various employee insurance plans and other sundry services provided without charge by Supply and Services Canada and Labour Canada.

C. Revenue Analysis

Figure 13: Revenue by Class ($000)

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Computerized library services	1,288	1,072	820
Canadian university theses program	130	127	107
Sundry	15	16	14
Total revenue collected by the National Library	1,433	1,215	941

Note: Revenues for computerized library services result from charges made to libraries for their use of DOBIS, from the sale of national bibliographic products such as Computer Output Microfiche (COM), and of machine-readable tape, and from subscriptions to the MARC (Machine-Readable Cataloguing) Records Distribution Service. Revenues for the Canadian Theses Program consist of charges for filming and for the purchase of university theses on microfiche or microfilm. Sundry revenues are those connected with charges for various on-line information services.

1985–86 Estimates

Part III

Expenditure Plan

2313

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

National Museums of Canada

2817

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more detail on items of particular interest.

It is to be noted that the objectives of each activity as well as the titles of the functions at the sub-activity level have been changed from those in last year's Expenditure Plan. These changes were undertaken to better address and reflect the active role of the National Museums in both understanding their collections and communicating them to targetted audiences.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $69,660,000 in support of the National Museums of Canada in 1985-86. The remaining expenditures, estimated at $5,204,000 for pensions and other employee benefits, will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	National Museums of Canada		
75	Operating expenditures	60,807	56,500
80	Grants and contributions	8,853	8,568
(S)	Contributions to employee benefit plans	5,204	4,449
	Total Program	74,864	69,517

Votes - Wording and Amounts

Section I
Program Overview

A. Highlights

The major priorities for 1985-86 are:

- to define, rebuild and project into the future the vital museological and operational core of the National Museums of Canada (see page 13);
- to enhance the national presence of the National Museums of Canada and strengthen its role of leadership, particularly in the areas of conservation and the education of museum professionals (see page 13); and
- to work toward the goal of improved physical facilities in which the collections can be safely housed and displayed (see page 14).

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86			Forecast 1984-85	Change	For Details See Page
	Expenditures	Revenues Credited to Vote	Net Expenditures			
Corporate Management	1,613	-	1,613	1,538	75	16
National Gallery of Canada	9,645	(520)	9,125	9,432	(307)	19
National Museum of Man	11,920	(200)	11,720	11,568	152	26
National Museum of Natural Sciences	9,145	(275)	8,870	7,722	1,148	31
National Museum of Science and Technology	5,420	(105)	5,315	5,214	101	37
National Programmes	21,777	-	21,777	21,272	505	42
Corporate Services	16,444	-	16,444	16,403	41	48
	75,964	(1,100)	74,864	73,149	1,715	
Person-years			1,043	1,055	(12)	

Explanation of Change: The major items contributing to the increase of $1,715,000 or 2.3% in the 1985-86 requirements over the 1984-85 forecast are:

• provision for inflation;	$2,224,000
• cost of the summer employment initiatives for students;	($262,000)
• other miscellaneous decreases	($247,000)

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $73,149,000, 5.2% higher than the 1984-85 Main Estimates of $69,517,000 (Extracts from Part II of the Estimates, page 4). The difference of $3,632,000 reflects the following major items:

• A Supplementary Estimate of $2,445,000 for new accommodation and for the Canadian Heritage Information Network (CHIN):	
- An increase in resources for the planning and control of the moves into the new National Gallery, Museum of Man and National Aviation Museum	$1,073,000
- An increase in resources to improve other essential accommodations	$1,145,000
- An increase in resources related to the conversion of client museum records to the new PARIS computer system	$ 227,000
	$2,445,000
• Increased resources for Summer Student and Youth Employment initiatives and for Implementation Assistance for improved management practices and controls (IMPAC)	$ 342,000
• Carryover of unspent portion of 1983-84 budget for acquisition of artifacts and works of art	$ 845,000

C. Background

1. Introduction

The National Museums of Canada (NMC) is a departmental Crown corporation governed by a Board of Trustees reporting to Parliament through the Minister of Communications. The Corporation is a national leader in the Canadian community of museums and galleries, whose common goal is the preservation, understanding and appreciation by Canadians of the objects which form the tangible record of our nation's heritage.

The National Museums of Canada shares common interests and functions with other federal custodial institutions and branches of government such as the Public Archives, the National Library, Parks Canada and other federal departments which hold heritage collections.

2. Legal Mandate

The National Museums Act (1968) describes the purpose of the National Museums of Canada and specifies that the Corporation shall comprise:

- a museum of fine arts;
- a museum of human history;
- a museum of natural history;
- a museum of science and technology; and
- such other museums as may be approved by the Governor in Council.

The National Museum Policy (1972) confirmed and extended the mandate of the Corporation and resulted in the creation of the National Programmes (see page 42).

3. Program Objective

The National Museums of Canada has been directed by the Government of Canada through the National Museums Act and subsequent policy directives: "to demonstrate, and to assist others to demonstrate, the products of nature and culture, with particular but not exclusive reference to Canada, so as to increase interest in and to disseminate knowledge of Canada's natural and cultural legacy for the enrichment of present and future generations".

To achieve this objective, the Corporation has adopted the following sub-objectives:

- to record, preserve and understand and to assist others to record, preserve, and understand the national heritage by developing, researching and maintaining collections of objects and information in accordance with generally accepted museological standards and practices;

- to communicate and to assist others to communicate knowledge of the national heritage by making objects representative of this accessible and by interpreting them to Canadians and to people around the world who seek to understand Canada, in accordance with generally accepted museological standards and objectives; and

- to obtain and manage the resources necessary to ensure that the collections are protected and preserved and that the mission and objective of the Corporation are attained.

4. Program Organization for Delivery

Activity Structure: The National Museums of Canada comprises seven activities. These activities, illustrated in Figure 2, are presented in more detail in Section II, Analysis by Activity.

Figure 2: Activity Structure

Organization Structure: The National Museums of Canada was established by the National Museums Act (1968) as a Crown corporation headed by a Board of Trustees. The Chairman of the Board, the Trustees, the Secretary-General and the Museum Directors are Governor in Council appointees. The Secretary-General of the Corporation, who has the delegated authority of a deputy head, directs and manages the business of the Corporation on behalf of the Board of Trustees. The Secretary-General is also Vice-Chairman of the Board. The Corporation reports to Parliament through the Minister of Communications.

The role of the Board of Trustees is to define objectives, set priorities, formulate policies, and ensure that these policies are carried out in keeping with regulations passed by Parliament and the government.

The Board is composed of a Chairman, a Vice-Chairman, and 12 other members, two of whom are ex officio - the Director of the Canada Council and the President of the National Research Council. The Chairman and Vice-Chairman are appointed by the Governor in Council for terms of not more than five years. The other members are appointed by the Governor in Council for terms of not more than four years. The Trustees come from various backgrounds and are broadly representative of all geographic regions of the country.

Corporate Management comprises the Board of Trustees and the office of the Secretary-General which includes the Internal Audit and Program Evaluation Directorates.

In the National Capital, the National Museums of Canada operates four national museums: the National Gallery of Canada, the National Museum of Man (including the Canadian War Museum), the National Museum of Natural Sciences and the National Museum of Science and Technology (including the National Aviation Museum). These Museums collect and demonstrate to Canadians and international visitors the fine arts, human history, natural history, and science and technology which have made Canada what it is today.

National Programmes consists of five programmes established by the National Museum Policy, an initiative of the government in 1972. The primary orientation of these programmes is outside the National Capital Region, as the services and funding are designed to provide technical and financial assistance to public museums and galleries across Canada which are not federally owned.

Corporate Services provides professional, managerial, technical and administrative services, systems, controls and advice to the entire NMC. The service directorates within this Activity include: Planning and Management Services, Architectural Services, Finance, Personnel, Administration, Information, Publishing, Library and Security.

Although the four National Museums, National Programmes, Corporate Services and Corporate Management are completely separate entities within the NMC, there is a constant exchange of advice, expertise, services and information.

Figure 3 shows the relationship of the activity structure to the organizational structure.

D. Planning Perspective

1. Environment

Several key environmental factors affect the National Museums of Canada.

Economic Conditions: Continued restraint in government expenditures has limited the capacity of the NMC to preserve and restore the national collections, to maintain an adequate level of public programming, and to continue its national role in the preservation of the national heritage and making it more readily accessible to Canadians (the national heritage refers to Canada's cultural, artistic, natural, scientific and technological heritage).

Social Climate: Growth in demand by Canadians for cultural and scientific knowledge has resulted in greater opportunities for museums to capture the public imagination. Museums can contribute to the continuing development of a national awareness and a stronger interest in things Canadian.

Accommodation Pressures: The present accommodation situation of the National Museums is critical. The collections of any museum are fragile, and housing them safely in environmentally controlled facilities is a key objective. Without adequate preventive measures, no amount of conservation treatment can preserve the collections for public use.

The government has approved a building program that may solve several long standing accommodation problems of the Corporation and has created a Crown corporation, the Canada Museum Construction Corporation (CMCC), whose sole responsibility is to build new buildings to house the National Gallery of Canada and the National Museum of Man. The government has also approved funds to construct a new National Aviation Museum. An opportunity has arisen for the National Museum of Natural Sciences to convert into public display space the portion of the Victoria Memorial Museum Building to be vacated by the National Museum of Man while at the same time Public Works Canada is planning construction of new facilities for that Museum to consolidate its curatorial activities. Further, there is a recognized need for an expansion of the public display space at the National Museum of Science and Technology, and for the relocation of the Canadian War Museum, necessitated in part by the plans for the new National Gallery.

The construction costs of the new buildings are not part of NMC resources. However, these accommodation plans have a direct impact on human and financial resources of the NMC. Senior management, professional staff and planning teams are preoccupied with the crucial problems of identifying and expressing their requirements to the CMCC, whose responsibility it is to direct the architects. Public

programming staff must develop themes for the halls, designs for exhibits, ways to improve and broaden the educational impact of programs and means to welcome more people to the new buildings. Registrars and curatorial staff must clear up backlogs in collections management so that the transfer of artifacts is orderly and secure. Curators must research items being considered for display and other professional staff must define requirements for laboratories, offices and environmentally controlled storage areas in order to prevent damage during the move and to ensure their proper display.

Administrative and technical support services are also finding their workload increased. Security personnel are designing sophisticated systems to minimize the requirements for extra staff in the new accommodation. Workshop staff will eventually have to prepare mock-ups, models, crates and other products for use in the moves. The personnel and financial functions are affected by staff and resource reallocations. Administrative staff are directing their attention to defining the coordination procedures necessary for a smooth move.

2. Initiatives

To meet the challenges of a difficult economic climate, a positive social climate, and the building of new and improved facilities previously described, the National Museums of Canada will continue several initiatives begun in 1984-85 in the following areas:

Vital Core: Over the last two years, it has become increasingly clear that NMC must examine and determine what constitutes the vital museological and operational responsibilities within NMC and the minimally acceptable level of service for each of these. The Corporation has undertaken and will continue a full review of its operations to identify this vital core of responsibilities and the minimally acceptable level of service. This will cost $227,000 in 1985-86. The results of this study should be known in the early months of 1985-86.

National Presence and Leadership: Canada's four national Museums were brought together as the National Museums of Canada in 1968. The individual museums, based in the National Capital, tended to see their role as one of serving residents of and visitors to the National Capital. In varying degrees and with limited resources, they nevertheless operated outreach programs for other parts of Canada. The new National Museums Corporation extended this further with its National Programmes, developed in the wake of the 1972 National Museum Policy on decentralization and democratization.

Despite these efforts and despite continuing improvement, the National Museums of Canada has not, to date, succeeded fully in having a truly national presence and impact. The level of NMC activity across Canada has been uneven and, perhaps because of this, recognition and

acknowledgement have been similarly uneven.

Having recognized this, NMC management decided to develop a strategy for increasing the national presence and leadership of the National Museums of Canada. This strategy, which contains a general approach and specific recommendations, has been brought forward to the Board of Trustees and will be implemented in 1985-86.

Improving Physical Facilities: Although the acquisition of new buildings requires capital funding, developmental resources are also required to: plan the museological requirements of the new facilities; prepare exhibitions; inventory the collections; ensure that environmental controls are operating effectively and provide conservation treatment where needed; and transfer collections to new buildings.

The work is not confined only to the individual Museums and administrative support. The Canadian Conservation Institute (CCI) and the Canadian Heritage Information Network (CHIN) within the National Programmes are providing assistance to the National Museums in the areas of conservation and inventorying of collections. Thus, this initiative will affect practically every part of the Corporation over many years.

Until the new buildings open, Museums will be assigning on a full time basis up to 20% of the existing total work force to the tasks associated with the building program. Additional resources will be assigned on a temporary or part-time basis.

3. Program Effectiveness

Criteria for measuring the effectiveness of the National Museums Program must be related to its basic mission, as stated earlier, which consists of safeguarding the products of nature and culture, demonstrating the products of nature and culture, and assisting others to safeguard and demonstrate the products of nature and culture.

The National Museums of Canada is committed to the systematic evaluation of its Program based on a five-year evaluation plan begun in 1983-84. This plan identifies three evaluation components: dissemination, exhibition and assistance to others. The first two relate to the second Program obejctive and the third to the third Program objective. Criteria for evaluation are based on the extent to which program outputs have a societal impact and effect.

The four Museums are evaluated separately on exhibitions, the dissemination function (school programs, publications, etc.) and the assistance provided to other museum professionals and the public. These evaluations measure the extent to which the intended themes of

exhibitions and dissemination activities are communicated, the degree of public support for NMC products and services (attendance, repeat visits, purchases, donations, etc.) and the degree to which NMC activities assist other museum professionals and the public. Internal activities such as researching and collecting are considered when determining which issues are to be evaluated within these programs.

The four programs within the National Programmes Activity are also evaluated independently: the Canadian Conservation Institute, the Canadian Heritage Information Network, Museums Assistance Program and Mobile Exhibits. These evaluation studies assess the extent to which each of the programs contributes to its stated objective. Basic issues are the rationale of the program, impacts and effects, the acheivement of expected results and the consideration of alternatives.

Evaluation studies currently underway include the exhibitions programs in the National Museum of Man and the National Gallery; dissemination activities within the National Museum of Natural Sciences; and the impact of implementing cost recovery alternatives for the Canadian Heritage Information Network. The findings of these studies will be reported when they become available.

In the meantime, an overall indication of NMC effectiveness is the degree of public support for its communications function. Figure 4 reveals public support of the NMC through the number of people across Canada who come into contact with the National Museums (page 71 provides a listing and the location of the National Museums). The degree of public contact will drop slightly in 1985-86 due to the resources that will be redirected towards preparations for the new accommodation.

Figure 4: Public Contact across Canada in Numbers of People

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Permanent/special exhibits[1]	2,135,000	2,142,000	2,165,730
Travelling exhibits[2]	60,000	270,000	194,980
Mobile exhibits	274,000	280,000	287,524
Educational programs	160,500	158,500	150,816

[1] In 1984-85, this figure, which represents the total number of visitors to the National Museums, included public contact through mobile exhibits, which is now shown separately. It should also be noted that because both the Museum of Natural Sciences and the Museum of Man are located in the Victoria Memorial Museum Building, it is assumed that each visitor entering the building visits both Museums.

[2] Information is not currently available for the National Museums of Natural Sciences and Science and Technology.

Section II
Analysis by Activity

A. Corporate Management

Objective

To direct, audit and evaluate the operations of the National Museums of Canada by defining the mission and objectives, formulating policies and ensuring that these policies are implemented.

Resource Summary

The Corporate Management Activity accounts for approximately 2.1% of the net 1985-86 Program expenditures and 1.4% of the person-years.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Corporate Management	1,613	15	1,538	16	1,204	15

The breakdown of the total activity expenditures is $686,000 for personnel costs, $665,000 for professional and special services, and $262,000 for other costs.

Description

Corporate Management comprises the Board of Trustees, the Secretary-General and those advisory, audit and evaluation operations that provide support to the Board of Trustees and to senior management for the coordinated attainment of corporate objectives.

The Board of Trustees formulates and reviews the objectives of the Corporation, determines the general policies of the Corporation, and determines and oversees the execution of the global strategies.

To enhance the Corporation's national presence and to maintain a balanced view of regional and provincial concerns, the Board of Trustees makes regional visits and attends various museological functions. Members of the Board participate in Board committees, including consultative committees to the activities of NMC, and attend parliamentary committees as required.

The Secretary-General, as the Chief Executive Officer of the Corporation, is responsible to the Board for ensuring that its policies are carried out. He has, on behalf of the Board, responsibility for the direction and management of the business of the Corporation, and is accountable to the Board for the exercise of the powers of the Corporation as stated in Section 5 of the National Museums Act in all matters that are not, by the Act or the By-laws, specifically reserved to the Board, a committee of the Board or a Director of a National Museum.

Internal Audit performs comprehensive, financial and legislative audits of all the activities of the National Museums of Canada according to a five-year plan.

Program Evaluation examines and addresses issues such as program rationale, societal impacts and effects, objectives achievement and alternatives in accordance with the Corporation's Program Evaluation Policy and five-year plan.

Performance Information/Resource Justification

Figure 6 shows the ratio of Corporate Management person-years and operating costs to the Program total.

Figure 6: Relationship of Corporate Management Expenditures ($000) and Person-Years to Net Program Expenditures and Person-Years

	Forecast 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
NMC	74,864	1,043	73,149	1,055	68,914	1,051
Corporate Management	1,613	15	1,538	16	1,204	15
% of total	2.1	1.4	2.1	1.5	1.7	1.4

Of specific concern for 1985-86 are: the development of a resource strategy to ensure that corporate strategic objectives are met, particularly the improvement of collection, curatorial and exhibit facilities of the Museums and vital core matters for all of the Corporation; the formulation of a marketing approach in the Corporation in order to ensure national presence through existing and future programs and undertakings such as regional visits, media coverage, and attendance at various museological functions; and the initiation and approval of policies as required for the efficient management of the Corporation, including: a long-range planning orientation; a Trust Account Policy to establish how donations can best be used by the Corporation; and a Corporate Policy on Volunteers and Friends to set standards for their involvement in affairs of the National Museums of Canada.

B. National Gallery of Canada

Objective

The National Gallery has three objectives. The first is to record, preserve and understand the cultural heritage through the fine arts in order to enrich the lives of present and future generations.

The second is to communicate, and to assist others to communicate, information and knowledge in order to foster understanding and appreciation of the national cultural heritage and to encourage and enrich the art experience.

The third is to direct and manage the overall resources of the Gallery in pursuit of its objectives and to assist in the management of NMC as a whole.

Resource Summary

The National Gallery Activity accounts for approximately 12.2% of the net 1985-86 Program expenditures and 13.5% of the person-years.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Record, preserve and understand	4,432	54	5,061	53	3,517	53
Communicate	3,014	40	2,749	42	2,615	41
Manage	2,199	47	2,142	47	2,015	47
Total gross expenditures	9,645	141	9,952	142	8,147	141
Less: Revenue credited to the Vote	520	-	520	-	559	-
Net expenditures	9,125	141	9,432	142	7,588	141

The breakdown of the net activity expenditures is $5,580,000 for personnel costs, $1,500,000 for the acquisition of works, $574,000 for transportation and communications, $739,000 for professional and special services, $450,000 for utilities, materials and supplies, and $282,000 for other costs.

This Activity generates, through its publications and boutiques, approximately $520,000 of revenue which is available for use by the Program through vote netting.

Description

The National Gallery of Canada is a national museum of international stature that records, preserves, seeks to understand and communicate collections of objects and related knowledge in the fields of the fine and decorative arts.

The Gallery is divided into three basic functions: record, preserve and understand; communicate; and manage.

Record, Preserve and Understand: The collecting patterns of the Gallery have been based on the realization of certain principles: the necessary inter-relationships between art made in Canada and art made in other countries, between contemporary and historical art, and among the various media.

The record, preserve and understand function comprises the following operational areas: curatorial, registration, restoration, conservation and the operation of a research library, known as the Canadian Visual Arts Study Centre. The function is charged with developing an historical record of Canada's national visual arts heritage and situating it within an international cultural tradition, by systematically acquiring and preserving the collections. An integral part of this responsibility is the maintenance of documentary records on the condition and cultural and historical origins of the objects collected, in order to promote a more thorough understanding of Canada's heritage. The function, particularly through the Canadian Visual Arts Study Centre, also provides a major study and teaching resource for Canadian and international artists, scholars and students, and interested members of the public.

Research is carried out by staff for many purposes, but is primarily directed towards understanding how art has been used to give form to creative forces within our society. The results of this research are directed towards the display of the collections, the organization of special exhibitions and, as well, are communicated as information about art through publications, radio, television and film, video and other audio-visual techniques.

Communicate: The National Gallery makes its collections of more than 39,000 works of art and related knowledge accessible to national and international audiences through its displays of the permanent collection and special exhibitions, education services, publications, and public and media relations.

Knowledge about the Gallery's collection is communicated through interpretative displays of the permanent collections in a thematic or sequential manner to be seen and experienced by all visitors to the Gallery. For visitors from other countries, it is the national showcase of Canada's visual arts heritage. In addition, special exhibitions based on all aspects of the collection are organized and shown in Ottawa and at institutions across Canada and abroad. Works from the collection are also loaned to Canadian and foreign institutions.

Manage: This function provides overall guidance and direction to the Gallery's work. Included are projects related to the new building and essential administrative services. Technical services are provided in support of the collections, conservation, and public programming areas. These services include installations, design and photographic services.

Performance Information/Resource Justification

Record, Preserve and Understand: Figure 8 shows the number and value or historical cost of acquisitions between 1983-84 and 1985-86, divided between purchases and gifts. As well, the number of works of art to be restored or conserved before the move into the new building is identified. Also related to this function is the organization and transfer of the records of the Gallery's collections to the Canadian Heritage Information Network (CHIN) (see page 43) and the physical inventory of works of art. The size of the total CHIN data base and the number of revisions and additions of records remaining to be entered is also identified. It should be noted that revisions to CHIN involve eliminating duplicate records, thereby affecting the total size of the data base.

Figure 8: Selected Workload and Level of Service Indicators in Record, Preserve and Understand

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Acquisitions			
Purchases	250	225	237
- historical cost	$1,500,000	$2,380,000	$993,000
Gifts	50	50	69
- value	$1,000,000	$1,500,000	$1,120,000
Conservation/Restoration			
Works of art restored/conserved	450	354	592
Works of art examined/documented	1,223	1,104	2,642
Registration			
Total data base (documents, not objects)	37,250	36,750	36,250
Backlog of records for CHIN			
Revisions of existing records in data base	5,000	15,000	19,750
Additions to the data base	11,000	16,000	17,500

Over the years important factors influencing acquisition matters have included the amount of funds available, the multiple stage approval process required for spending of those funds, the philosophy and expertise of the Director and curators, opportunities offered by the art market and the purchasing power of the dollar. As the Gallery's acquisition budget has remained constant at $1.5 million for over a decade while prices in the international art market have increased dramatically, the Board of Trustees and management recently completed a major review of its acquisition policy to ensure that funds were directed into those collecting areas of highest priority.

Communicate: Figure 9 identifies the degree of public contact by the National Gallery in making its collections accessible to all Canadians.

*not available

In addition to the information in Figure 9, the National Gallery produces catalogues of its permanent collections. The Canadian collection catalogue (A-F) will be edited in 1984-85 and sent for typesetting and printing in 1985-86. The text for Volume 1 of the European collection catalogue (1300-1800) will be typeset and printed in 1984-85 and the plates for this catalogue will be printed in 1985-86.

Over the next three years, the number of exhibitions and publications will be reduced in order to direct resources toward interpreting the permanent collection and preparing for new accommodation. The Exhibitions Division will be involved in planning and scheduling a program for the new facility with substantially increased special exhibition space and two and one-half times the total gallery area of the current National Gallery. Education Services will be largely responsible for maintaining a high level of activity in the Lorne Building where the National Gallery is presently housed. The production of exhibition catalogues will decrease and publications resources will be focussed on catalogues of the permanent collection, which are a long-term project.

Manage: Expenditures for the manage function, excluding Technical Services, will account for approximately 7.6% of the National Gallery's net budget in 1985-86.

In addition to its on-going pursuits, the manage function will carry out specific projects required for the new building's planning and design. Of specific concern for 1985-86 is the new building liaison and project planning and coordination which is a five-year project that began in 1982-83. These projects include producing scale models of galleries to test systems such as lighting and circulation; reviewing, revising, and refining the building program in response to design, costs and technology; planning, coordinating, and controlling large exhibition projects for the new building; maintaining an archival record of the entire building project; and coordinating a public relations master plan throughout the planning and construction phases.

The demands for support and service responsibilities as a direct result of the new building grow daily. Over the next few years the tasks include the following: assigning personnel according to priorities; providing procurement and inventory controls; effecting the necessary changes to administrative systems and processes; and maintaining the most economical, efficient and effective security system in the new building.

Figure 10 shows the relationship of the manage function's expenditures and person-years to the net activity expenditures and person-years.

Figure 10: Relationship of Expenditures ($000) and Person-Years of Manage Function to Net Activity Expenditures and Person-Years

C. National Museum of Man

Objective

The National Museum of Man has three objectives. The first is to record, preserve and understand the national heritage, in the context of the cultural history of the world, in order to enrich the lives of present and future generations and to assist others to do the same.

The second is to communicate information and knowledge in order to foster understanding and appreciation of the national heritage in the areas of history (including military history), ethnology, archaeology, physical anthropology and folk culture and to assist others to communicate information and knowledge relative to their similar collections.

The third is to direct and manage the overall resources of the Museum in pursuit of its objectives and to assist in the management of NMC as a whole.

Resource Summary

The National Museum of Man accounts for approximately 15.7% of the net 1985-86 Program expenditures and 18.4% of the person-years.

Figure 11: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Record, preserve and understand	6,813	104	6,850	120	6,947	124
Communicate	3,909	69	3,577	67	3,454	61
Manage	1,198	19	1,341	19	1,035	18
Total gross expenditures	11,920	192	11,768	206	11,436	203
Less: Revenue credited to the Vote	(200)	-	(200)	-	(173)	-
Net expenditures	11,720	192	11,568	206	11,263	203

The breakdown of the net activity expenditures is $7,990,000 for personnel costs, $320,000 for the acquisition budget, $740,000 for transportation and communications, $1,542,000 for professional and special services, $616,000 for utilities, materials and supplies, and $512,000 for other costs.

This Activity generates, through its publications and boutiques, approximately $200,000 of revenue which is available for use by the Program through vote netting.

Description

The National Museum of Man is a national museum of international stature, including the Canadian War Museum, that records, preserves, seeks to understand and communicates the collections of objects and related knowledge in the fields of history (including military history), ethnology, archaeology, physical anthropology and folk culture.

The Museum's collections consist of artifacts, specimens and other historical objects and the information related to the collections which is generated as a result of research and study by curatorial staff.

The Museum's affairs are categorized under three functions: record, preserve and understand; communicate; and manage.

Record, Preserve and Understand: The Museum acquires artifacts, specimens and other historical objects in the fields of ethnology, archaeology, physical anthropology, folk culture and military history. Archaeological artifacts are also collected from Museum-sponsored excavations. In addition, all artifacts recovered from digs in the Yukon and Northwest Territories are deposited in the collections of the Museum, which has been designated as the federal repository for such material.

All of the Museum's collections are inventoried and basic information recorded. As a result of research and study by curatorial staff, information related to the collections is generated to be used in publications, in response to inquiries from the scientific community and the general public and in the development of exhibitions and programs.

After they have entered the collection, artifacts and specimens must be restored or cleaned, repaired and stabilized and then maintained in safe, environmentally controlled conditions.

Communicate: This function includes the design, fabrication and maintenance of permanent, special and travelling exhibitions, and public and educational programming including publications and the coordination of volunteers.

Manage: This function involves managing the human and financial resources necessary to develop and make collections accessible. Resources are allocated to produce optimum results while meeting standards set by government regulation, legislation and directive, as well as internationally recognized standards for the curation and development of museum collections and documentation.

Performance Information/Resource Justification

Record, Preserve and Understand: The Museum is forecasting further decreases in the number of artifacts acquired by purchase due to the shrinking purchasing power of a static acquisition budget (see Figure 12).

Donations to the collections are, however, likely to increase. In 1984-85, for example, 8,000 to 10,000 objects such as uniforms and medals will be donated to the Canadian War Museum; this level is likely to be maintained. In other areas of the National Museum of Man there will likely be increases as public interest develops in the new building at Parc Laurier in Hull. The number of artifacts acquired by archaeological field search can never be accurately forecasted but it is expected to drop with more resources being directed to the new building.

Figure 12 shows the number of acquisitions between 1983-84 and 1985-86, divided among purchases, gifts/donations and field search artifacts.

Figure 12: Acquisitions (Number of Objects)

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Purchases	1,400	1,555	1,900
Gifts/donations	14,000	12,200	12,000
Field search	30,000	43,100	22,000

Of major concern to the Museum is the treatment of approximately 12,000 artifacts for use in new exhibitions when the new building at Parc Laurier opens.

Most of the Museum's collections are inventoried, and basic information is recorded in the computerized Canadian Heritage Information Network (CHIN) (see page 43). In the case of the Canadian War Museum, however, only 10% of its collections have been entered and

the remainder is being converted at the rate of 1% annually. The long-term program to produce more detailed cataloguing data and enter this information into CHIN will take a number of years to complete. To date, 14% of the Museum's collections have been fully documented and catalogued in CHIN. With its current resources, the Museum of Man is able to catalogue current additions to the collections, but the remaining backlog can only be diminished as new resources are obtained for this task. In 1985-86, however, the Museum will be completing the planning of the inventory of the collections and the organization of their move to the new building.

Communicate: The Museum has been forced to reduce some of its services to the public in order to redirect the efforts of its staff toward the planning of programs for the new building. In 1983-84, for example, the Museum presented seven special and 15 travelling exhibitions. In 1984-85 there were 10 special and 15 travelling exhibitions and, in 1985-86, there will be five special and five travelling exhibitions. After 1986-87 this will be reduced to two special and two travelling exhibitions. The popular Museum Edu-Kit program was transferred to provincial authorities for distribution to schools across Canada. The number of free publications produced for distribution will be reduced from 47 in 1984-85 to 35 in 1985-86. There will also be a reduction in scholarly publications in 1985-86.

Figure 13 identifies the extent of public contact by the Museum of Man through its permanent exhibitions, special program of films, lectures, concerts and demonstrations, travelling exhibitions as well as educational programs and publications.

Museum attendance is projected to show a decrease given the reduction in programming. A major contributor to this decline, however, is the loss of public parking for visitors to the Canadian War Museum with the construction of the new National Gallery on Nepean Point.

Figure 13: Museum Attendance

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Annual attendance*	640,000	647,000	685,804
Travelling exhibitions	40,000	120,000	102,000
Educational programs	45,000	47,000	51,000
Publications distributed	130,000	130,000	170,138

*includes special program of films, lectures, concerts and demonstrations.

The Museum will also continue work on the development of a long-term exhibition and public programming plan and on the definition of the systems and new technologies that can be used to provide greater access for the Canadian public to the Museum's resources.

Manage: Expenditures for the Manage function will account for approximately 10.2% of the National Museum of Man's total budget.

Figure 14 shows the relationship of the manage function's expenditures and person-years to the net activity expenditures and person-years.

Figure 14: Relationship of Expenditures ($000) and Person-Years of Manage Function to Net Activity Expenditures and Person-Years

	Forecast 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Manage	1,198	19	1,341	19	1,035	18
Net Museum of Man	11,720	192	11,568	206	11,263	203
% of total	10.2	9.9	11.6	9.2	9.2	8.9

In addition to its on-going work, the manage function will carry out specific projects required for the new building's planning and design.

Of specific concern for 1985-86 is: the completion of the consolidation of the interim curatorial facilities at Asticou as the interim solution to the current housing problems and as a necessary step in preparing for the new building; the finalization of a 10-year development plan and resource submission for the Canadian War Museum, which lacks room for expansion, especially with the government's decision to locate the National Gallery of Canada immediately adjacent to the War Museum site; and the definition of the equipment and furnishing requirements for the new Museum of Man building.

D. National Museum of Natural Sciences

Objective

The National Museum of Natural Sciences (NMNS) has three objectives. The first is to record, preserve and understand the natural heritage of Canada and environs in order to foster the development of science and to enrich the lives of present and future generations and to assist a variety of national and international clients to develop collections and to understand, in the context of the world, the natural heritage of Canada.

The second is to communicate, and to assist others to communicate, knowledge in order to foster understanding and appreciation of the natural sciences and the Canadian environment.

The third is to direct and manage the overall resources of the Museum in pursuit of its objectives and to assist in the management of NMC as a whole.

Resource Summary

The National Museum of Natural Sciences accounts for approximately 11.8% of the net 1985-86 Program expenditures and 12.2% of the person-years.

Figure 15: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Record, preserve and understand	5,327	64	4,063	64	4,327	64
Communicate	3,053	50	3,092	50	2,850	46
Manage	765	13	842	12	1,329	15
Total gross expenditures	9,145	127	7,997	126	8,506	125
Less: Revenue credited to the Vote	(275)	-	(275)	-	(189)	-
Net expenditures	8,870	127	7,722	126	8,317	125

The breakdown of the net activity expenditures is $5,985,000 for personnel costs, $75,000 for the acquisition budget, $445,000 for transportation and communications, $846,000 for professional and special services, $465,000 for utilities, materials and supplies, and $1,054,000 for other costs.

This Activity generates, through its publications and boutiques, approximately $275,000 of revenue which is available for use by the Program through vote netting.

Description

The National Museum of Natural Sciences is a national museum of international stature that records, preserves, seeks to understand and communicate collections of objects and related knowledge of the natural sciences with particular but not exclusive reference to Canada and environs.

The NMNS has concentrated on the biological and geological sciences because of the significance of the plants, animals and materials that are the subjects of these sciences. The NMNS develops collections and conducts research in the broad fields of botany, zoology, paleontology, earth sciences, and in co-operation with the National Museum of Science and Technology, astronomy.

The affairs of the Museum are categorized under three functions: record, preserve and understand; communicate; and manage.

Record, Preserve and Understand: This function includes the acquisition of specimens by purchase, donation, exchange and collection on field trips.

It also includes the curation of collections of specimens and related data by initial preparation, preventative and restorative conservation, registration, inventory control and collections management.

A third responsibility of this function is the generation of new knowledge and understanding through research by the curators, by documenting the specimens which make up the collections and the context in which they were found and which explain their origin, occurence, distribution and evolution. Research is conducted within traditionally defined disciplines and in accordance with modern scientific techniques by cross-disciplinary (e.g., ecological or ethological) approaches.

The provision of service by identifying, describing and establishing species of plants, animals and minerals in accordance with international conventions on biological, zoological and mineralogical nomenclature is also part of this function. This service is provided to scholars of the scientific communities and to the public.

Communicate: This function ensures that the collections and understanding developed by the Museum are made accessible to the public. It includes the conceptualization, designing, testing, fabrication, maintenance and renovation of permanent, temporary and travelling exhibitions; public services provided to complement the exhibitions or to enrich the understanding of the collections through a resource/information centre, educational programmes, special events, boutiques, publications, television, radio and film productions; and program evaluation and media and community relations, which are undertaken in order that both exhibitions and public services are effective, and that accurate information on the demographics and science information levels and needs of the various publics serviced by the Museum is gathered and analysed.

Manage: This function involves directing and managing the human and financial resources that are necessary to record, preserve and understand Canada's natural heritage as well as to communicate this understanding to the public. Resources are allocated to produce optimum results while meeting standards set by government legislation, regulation and directive, as well as internationally recognized standards for research and the curation of collections.

Performance Information/Resource Justification

Record, Preserve and Understand: Figure 16 shows outputs for each operational area under this function.

Figure 16: Selected Outputs and Workloads for the Record, Preserve and Understand Function

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Acquisition			
New specimens acquired, registered and conserved	100,000	100,000	110,000
Curatorial			
Identified conservation and registration backlogs			
Specimens conserved	21,000	21,000	-
Conservation backlog	579,000	600,000	600,000
Records computerized	35,000	35,000	5,000
Computerization backlog	2,215,000	2,250,000	2,255,000
Research			
Number of scientific research papers produced*	12	12	14

*The preparation of free scientific research (scholarly) publications was included under the Collections Accessibility function in the 1984-85 Expenditure Plan.

Acquisition: Figure 16 indicates the number of new acquisitions the Museum will obtain, by purchase, loan, exchange or field collection. 100% of all anticipated incoming specimens will be properly registered and conserved.

Curatorial: The elimination of the identified collections conservation/documentation backlog will continue to be based on the 20-year strategy developed in 1983-84. 21,000 specimens will be conserved/ monitored including 3.5% of the identified backlog and 35,000 records will be updated and entered into CHIN (see page 43) at a total cost of $1,063,000 and 30 person-years.

Research: The scientific papers produced and published by the Museum indicate the level of authority of the research staff in generating new knowledge and understanding. The publication of research findings is the output of research and the means whereby the national and international credibility and presence of the Museum is established. Of specific concern in 1985-86 is developing a comprehensive research policy and plan for the NMNS to enable the Museum to become a preeminent research institute. The Museum will define current responsibilities and associated costs, and produce a policy statement and long-term research plan establishing parameters and goals for NMNS research scientists. The total cost for 1985-86 will be $40,000 and one person-year.

Communicate: Figure 17 shows selected outputs and workloads for the communicate function.

Figure 17: Selected Outputs and Workloads related to Communicate Function

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Permanent exhibitions attendance	475,000	470,000	470,000
Exhibitions produced	3	3	4
Exhibitions circulated	15	13	15
Publications (for sale)*			
- new titles	1	2	4
- available titles	41	39	35
Inquiries answered	59,000	59,000	51,000

*Does not include freely distributed reports of research findings (scholarly publications) which are now included under the record, preserve and understand function.

Attendance at the permanent exhibitions installed in the Victoria Memorial Museum Building has remained stable over the last few years. There is a small increase anticipated in fiscal year 1985-86 due to the decision to extend open hours in the evening one night per week. Permanent exhibitions will be maintained at a total cost of $368,000 and 6.5 person-years. Of specific concern for 1985-86 are the renovating and refurbishing of existing permanent exhibit galleries (major work in bird life gallery and minor work in other galleries) on the east side of the Victoria Memorial Museum Building at a total cost of $160,000 and three person-years.

One new major travelling exhibition on climatic change in Canada and two minor exhibitions on constructing a dinosaur and the Museum's scientific work will be produced and circulated in 1985-86. Resources will also be expended in 1985-86 on producing two new travelling exhibits that will be completed in 1986-87.

Six exhibitions that are currently circulated will be refurbished to maintain their quality and extend their life span. Two major exhibitions, "Omingmak the Muskox" and "an Arctic Oasis", which have completed their Canadian tours, will tour internationally on a cost recovery basis.

The number of publications for sale produced by the Museum for general audiences as well as popular titles still in stock or reprinted is reported in Figure 17. One person-year has been allocated for work on titles that will be published in subsequent fiscal years. One title will be reprinted through a co-publishing arrangement with no associated costs to the Museum.

The Information Resource Centre responds to public enquiries of a general nature and distributes publications free of charge. The number of enquiries dealt with and publications distributed indicates the demand. This is carried out with two person-years and $100,000.

Manage: The National Museum of Natural Sciences devotes 13 person-years and $765,000 for the manage function. This represents 8.6% of net NMNS resources.

Figure 18: Relationship of Expenditures ($000) and Person-Years of Manage Function to Net Activity Expenditures and Person-Years

E. National Museum of Science and Technology

Objective

The National Museum of Science and Technology has three objectives. The first is to record, preserve and understand the national heritage in technology and the related sciences in order to enrich the lives of present and future generations and to assist others to do the same.

The second is to communicate, and to assist others to communicate, information and knowledge in order to foster understanding and appreciation of the national heritage in technology and the related sciences.

The third is to direct and manage the overall resources of the Museum in pursuit of its objectives.

Resource Summary

The National Museum of Science and Technology Activity accounts for approximately 7% of the net 1985-86 Program expenditures and 9% of the person-years.

Figure 19: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Record, preserve and understand	3,197	57	2,982	59	2,437	53
Communicate	1,598	27	1,581	28	2,005	29
Manage	625	12	756	15	679	15
Total gross expenditures	5,420	96	5,319	102	5,121	97
Less: Revenue credited to the Vote	(105)	-	(105)	-	(122)	-
Net expenditures	5,315	96	5,214	102	4,999	97

The breakdown of the net activity expenditures is $3,820,000 for personnel costs, $100,000 for the acquisition budget, $173,000 for transportation and communications, $560,000 for professional and special services, $421,000 for utilities, materials and supplies, and $241,000 for other costs.

This Activity generates, through its publications and boutiques, approximately $105,000 of revenue which is available for use by the Program through vote netting.

Description

The National Museum of Science and Technology (NMST) is a national museum of international stature with a branch gallery (Agriculture Museum) and a curatorially autonomous National Aviation Museum that records, preserves, seeks to understand and communicates collections of objects and related knowledge in the fields of technology and the related sciences with particular but not exclusive reference to Canada.

The Museum's responsibilities are grouped into three functions. These are: record, preserve and understand; communicate; and manage.

Record, Preserve and Understand: This function focusses on artifacts and related data in 21 major subject areas: pure sciences (mathematics, physics and chemistry); astronomy; meteorology; forestry; fishing; transportation; communication; agriculture; extractive industries; energy; industrial technology; marine technology; fire fighting technology; civil and structural engineering; computer technology; medical technology; photography; and aviation and space. This function comprises three areas: curatorial, collections management and conservation.

The curatorial responsibility involves the establishment and maintenance of a comprehensive collection of objects and related information. Suitable material is identified by curatorial research and obtained through purchase, transfers, trade, loan, donation and other means. As a result of research and study by curatorial staff, information related to the collection is generated to be used in publications, in response to inquiries from the scientific community and the general public and in the development of exhibitions and programs.

Collections management work involves organizing and storing artifacts and related information to ensure their preservation and ready access to them by interested parties. All of the Museum's collections are inventoried and basic information recorded.

The conservation work ensures that after they have entered the collection, artifacts and specimens are restored, cleaned and stabilized and then maintained in safe, environmentally controlled conditions.

Communicate: This function includes the design, fabrication and maintenance of permanent, special and travelling exhibitions, and public and educational programming including publications and the coordination of volunteers.

Manage: This function involves managing the human and financial resources necessary to develop and make collections accessible. Resources are allocated to produce optimum results while meeting standards set by government regulation, legislation and directive, as well as internationally recognized standards for the curation and development of museum collections and documentation.

Performance Information/Resource Justification

Record, Preserve and Understand: Performance information available for the three areas making up this function is as follows:

Curatorial: Artifacts are purchased or otherwise acquired according to a general acquisition plan prepared by curators. Acquisitions are dependent on the availability of the artifacts. Figure 20 shows the acquisitions between 1983-84 and 1985-86, which is a workload indicator for the other responsibilities of this area.

Figure 20: Total Additions to Collections 1983-84 to 1985-86

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Number of artifacts purchased	450	450	350
Number of artifacts from other sources*	450	450	450

*includes transfers, trades, loans and donations.

Collections Management: The current level of resources will allow the maintenance of ongoing registration work at the 1984-85 levels. Backlogs affect three areas: current acquisitions awaiting permanent entry into the system; artifact records awaiting upgrading and conversion to the automated system; and artifacts requiring in-depth research necessary to properly catalogue them.

Conservation: In order to ensure the preservation of the national heritage of artifacts in technological and related sciences, one person-year and $80,000 has been dedicated to a Collections Condition Survey beginning in 1985-86. This survey will document the condition and conservation requirements of approximately 25% of the total collection, thereby providing a basis for targets to reduce the conservation backlog and in turn result in the preservation of the collection.

The new Aviation Museum is scheduled for completion in December, 1985, and to be open to the public in the fall of 1986. That situation implies two goals for the Museum: moving during this period; and completing the restoration of the Curtiss HS-2L (1918), the HA 1112 (Me 109), The Robert McDowall (1910) and the Silver Dart reproduction (1958) for the opening.

Communicate: As a result of the priority placed on new accommodation for the Aviation Museum and related preservation and identification of the collections backlog, there will be a minimal increase in the level of work in the communicate function in 1985-86, pending the results of the comprehensive study (see page 41).

Figure 21 gives selected workload indicators for the various areas comprising the communicate function.

Figure 21: Selected Workload Indicators for the Communicate Function

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Exhibitions			
Permanent exhibits			
Exhibit space (sq. m.)	21,309	21,309	20,425
Annual attendance	825,000	775,000	718,000
Number of public hours open	2,870	3,648	3,648
Public programming			
Educational programs			
Number of programs available	30	30	30
Number of students involved	27,000	25,000	24,000
Public demonstration program			
Number of demonstrations	40	35	30
Attendance	80,000	70,000	60,000
Steam train*			
Number of excursions	25	25	15
Attendance	7,500	7,500	5,100

*Because of CP Rail's plan to abandon the line, the future of this programme is uncertain.

Manage: Expenditures for the manage function will account for approximately 12% of the NMST net budget.

Figure 22: Relationship of Expenditures ($000) and Person-Years of Manage Function to Net Activity Expenditures and Person-Years

	Forecast 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Manage	625	12	756	15	679	15
Net NMST	5,315	96	5,214	102	4,999	97
% of total	11.8	12.5	14.5	14.7	13.6	15.5

Particular areas of concern for 1985-86 include: completing the final phase of a comprehensive study which will establish the philosophical base, the scope, cost and means of implementation of a new Museum of Science and Technology for the next decades: and promoting cooperative projects with public and private agencies to enhance the Museum's national presence and further its goals. No additional cost is anticipated.

F. National Programmes

Objective

The National Programmes Activity has three objectives. The first is to record, preserve and understand, and to assist others to record, preserve and understand, collections of objects and knowledge relevant to Canada's cultural heritage by providing museological and advisory services; and providing financial assistance for collections management, conservation, research and training activities.

The second is to communicate, and to assist others to communicate, knowledge of the national heritage by providing museological and advisory services, and by providing financial assistance for exhibitions and dissemination work.

The third is to effectively and efficiently direct and manage the overall resources of the National Programmes in pursuit of its objectives by directing its work and supporting its managerial responsibilities and those of the Corporation.

Resource Summary

The National Programmes Activity accounts for approximately 29% of the net 1985-86 Program expenditures and 16% of the person-years.

Figure 23: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Record, preserve and understand	9,715	93	9,684	93	10,935	95
Communicate	11,400	64	10,810	64	9,671	64
Manage	662	13	778	14	667	14
Total expenditures	21,777	170	21,272	171	21,273	173

The breakdown of the total activity expenditures is $7,116,000 for personnel costs, $2,195,000 for professional and special services, $8,852,000 for grants and contributions, $1,690,000 for transportation and communications, $445,000 for utilities, materials and supplies, $665,000 for rentals and $814,000 for other costs.

Description

The National Programmes, established under the National Museum Policy (1972), is a set of programmes that delivers financial assistance and/or museological services and advice to the National Museums, to other similar Canadian and international institutions and to Canadian communities.

The National Programmes comprises three functions:

Record, Preserve and Understand: In order to record, preserve and understand and to assist others to record, preserve and understand collections of objects and knowledge relevant to Canada's natural and cultural heritge, the National Programmes provide museological and advisory services as well as financial assistance for collections management, conservation, research and training activities through three programmes, one entirely devoted to that function, and the two others partly devoted to it.

The Canadian Conservation Institute (CCI), entirely devoted to this function, provides to publicly owned museums and art galleries across Canada services, advice and training activities in the field of conservation. In addition, CCI frequently, but not exclusively, represents Canada's interest in conservation matters internationally.

The Canadian Heritage Information Network, devoted to this function as well as to the communicate function, develops and operates a computer-based information management system containing 1.6 million records and currently available to 150 Canadian museums and art galleries. It thus enables each user to maintain and access for its own use computerized records of its collections.

The Museum Assistance Programmes, also devoted partly to the communicate function, provides grants and technical assistance, information and co-ordination services to museums, galleries and other public, non-profit institutions and organizations which carry out collections development activities in support of the National Museum Policy.

Communicate: In order to communicate and assist others to communicate knowledge of the national heritage, the National Programmes provide museological advisory services and financial assistance for exhibition and dissemination activities and operate multi-disciplinary exhibits through four programmes, two partly devoted to the communicate function, and two entirely.

The Museum Assistance Programmes devote part of their endeavours and grants to assist museological institutions and other non-profit organizations to carry out exhibition and dissemination activities in support of the National Museum Policy.

The Canadian Heritage Information Network, under this function, provides access to information on and greater knowledge of Canadian heritage collections to 150 Canadian museums. This service results in a greater knowledge of all Canadian collections and therefore is a valuable tool for users in planning exhibitions and loans of objects.

The Mobile Exhibits Programme plans, prepares and circulates museumobiles exhibiting artifacts from three regions of the country (Atlantic, West, North) to small communities throughout Canada.

The International Programme encourages interest in international museum affairs and facilitates the exchange and circulation of exhibitions within and outside of Canada.

Manage: In order to effectively and efficiently direct and manage its overall resources in pursuit of its objectives, National Programmes directs its works and supports its managerial responsibilities and those of the Corporation through the Office of the Assistant Secretary-General, National Programmes and the Programme Coordination Division.

Performance Information/Resource Justification

Record, Preserve and Understand: Performance information is broken down into three areas as follows:

Canadian Conservation Institute: Because of extreme variations in the condition of damaged artifacts and the complexity of research projects, and therefore in the time and resources committed to them, quantitative measures alone are not an adequate indication of the Canadian Conservation Institute's work. However, Figure 24 provides an insight into the Institute's endeavours. (Pages 67 and 68 of Section III contain a list of the recipients of conservation services in 1983-84 and 1984-85, as well as the research projects undertaken by the research section in 1983-84 and 1984-85.) In addition, Figure 24 indicates the extent of CCI's contribution to creating among museum professionals an awareness of the need for collections care and to training people for careers in conservation.

With the development of basic treatment and analysis facilities within the Canadian museum community, CCI will likely be in a position in the future to concentrate its treatment work on artifacts requiring major and highly specialized treatments.

Figure 24: Selected Volume Statistics on Training, Information and Advice provided by CCI to the Museum Community

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Training			
Number of internships	20	21	23
Number of seminars given	24	26	20
Information and advice			
Number of publications circulated	9,000	7,900	8,000
Number of institutions visited by the mobile laboratories	90	92	80

Canadian Heritage Information Network: The change in the computer system undertaken in September, 1982 to expand the service capacity to the Canadian museum community will be completed in 1984.

Figure 25: Selected Volume Indicators of Services Provided by CHIN

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
CHIN			
Number of artifacts recorded	2,463,000	2,102,000	1,741,000
Number of institutions included	150	150	150
Number of users trained	40	50	54

Museum Assistance Programmes: The Museum Assistance Programmes (MAP) provide grants which enable non-profit museums and other organizations to undertake work in the areas of collections development and accessibility for the benefit of the Canadian public. MAP also provides professional and technical advice to the Canadian museum community in all regions of the country.

Of its nine programmes, three (Registration Assistance Programme, Upgrading and Equipment Assistance Programme, Conservation Assistance

Programme) are completely devoted to the record, preserve and understand function, four (Associate Museums Programme, National Exhibition Centres Programme, Specialized Museums Programme, Exhibitions Assistance Programme) to the communicate function and two (Special Activities Assistance Programme, Training Assistance Programme) to both of those functions.

A list of recipients of grants from the Museum Assistance Programmes for 1983-84 is provided in Section III (see page 58).

Figure 26 shows workload indicators for the Museum Assistance Programmes.

Figure 26: Selected Workload Indicators for MAP

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Financial assistance			
Grants requested ($000)	14,000	13,500	12,700
Number of grants requested	320	300	263
Grants approved ($000)	8,852	8,567	8,702
Number of grants provided	275	250	238
Professional and technical advice			
Number of days spent in the regions			
B.C./Yukon	115	120	115
Prairies/N.W.T	69	72	69
Ontario	67	70	69
Quebec	69	72	72
Atlantic	67	70	62

Communicate: Performance information is available for only two areas as follows:

International Programme: Since the International Programme was established in 1975-76, it has been able to meet only a portion of the demand for its services, especially since 1980. The addition of one officer in 1984-85 will help to increase its advisory services and the volume of international exhibitions in and from Canada. Figure 27 provides an indication of the workload of the International Programme.

Figure 27: Selected Workload Indicators for the International Programme

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Number of projects handled	120	150	95
Number of exhibitions circulated	30	30	28
Number of recipients of the quarterly calendar	235	220	210

Mobile Exhibits Programme: Figure 28 gives performance information on the operation of the three caravans: Canada North, Canada West, and Atlantic Canada.

Figure 28: Selected Performance Indicators for the Mobile Exhibits Programme

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Number of communities visited	156	165	181
Number of viewing hours	4,800	5,000	5,025
Total number of visitors	274,000	280,000	287,524

Manage: Expenditures for the manage function will account for approximately 3% of the National Programmes' total budget. Figure 29 shows the relationship of the manage function's resources to those of the National Programmes Activity.

Figure 29: Relationship of Expenditures ($000) and Person-Years of Manage Function to Total Activity Expenditures and Person-Years

% of total	3.0	7.6	3.7	8.2	3.1	8.1

G. Corporate Services

Objective

The Corporate Services Activity has three objectives. The first is to assist the professional staff of the National Museums of Canada and of other Canadian and international agencies in recording and understanding the natural and cultural heritage of Canada by providing policies, direction and sophisticated security, research and documentation systems and services as well as advice of acknowledged authority and quality.

The second is to assist the programming staff of the National Museums of Canada and of other Canadian and international agencies in communicating knowledge of the national heritage by providing responsive security and publishing services, systems and advice of acknowledged authority and quality.

The third is to assist the Board of Trustees and the management of the National Museums of Canada to obtain and manage the resources necessary to ensure the continued viability of the Corporation and the attainment of its objectives.

Resource Summary

The Corporate Services Activity accounts for approximately 22% of the net 1985-86 NMC Program expenditures and 29% of the person-years.

Figure 30: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Record, Preserve and Understand	6,408	149	5,501	135	7,511	170
Communicate	2,925	38	3,217	47	-	-
Manage	7,111	115	7,685	110	6,759	127
Total expenditures	16,444	302	16,403	292	14,270	297

The breakdown of the total activity expenditures is $11,467,000 for personnel costs, $2,637,000 for professional and special services, $889,000 for purchased repair and upkeep, $362,000 for information, $342,000 for construction and acquisition of machinery and equipment, and $747,000 for other costs.

Significant changes from 1984-85 to 1985-86 include the following:

- Security Services' resources are now split between the record, preserve and understand function and the communicate function; in the 1984-85 Expenditure Plan, all of Security Services' resources were shown under the Collections Development function; and

- it should be noted that the record, preserve and understand function now includes 12 person-years and $437,000 in salaries which have been transferred to NMC from the National Film Board. This represents the staff and funds associated with the Photo Division previously under the responsibility of the Board.

Description

The Corporate Services Activity is a set of functions that provides managerial, professional, technical and administrative services, systems, control and advice to all levels of managers of all activities of the National Museums of Canada and, where resources allow, to other Canadian and international agencies and institutions.

The responsibilities undertaken in Corporate Services fall within three functions.

Record, Preserve and Understand: The Library Services Directorate and part of the Security Services Directorate fall within this function. The Library Services Directorate develops, organizes, maintains and makes accessible archival photographic and library material and provides specialized documentation services to all activities. The Security Services Directorate provides protective security, fire and safety services for employees, material assets and premises which house the Museums' collections.

Communicate: The Publishing Services Directorate and some areas of the Security Services Directorate fall within this function. During the hours when the Museums are open to the public, the Security Services Directorate provides protective security, fire and safety services with special concern for the visiting public and the Museums' collections on exhibit. The Publishing Services Directorate coordinates the planning, marketing and distribution of publications produced by the National Museums of Canada.

Manage: The manage function provides managerial, professional, technical and administrative services, systems, controls and advice that support the management of the Corporation. The Planning and Management Services Directorate recommends and guides improvements in corporate and activity management practices, processes and procedures by designing and maintaining a corporate planning system, a policy development process, and the necessary mechanisms and advice to improve management systems, practices and controls. The Information Services Directorate coordinates the public relations affairs of the Corporation, provides communications advice to the Board of Trustees and corporate management, and provides information on the NMC's corporate endeavours to a variety of publics. The Architectural Services Directorate is responsible for the planning and implementation of new acommodation and the ongoing management of existing accommodation. With respect to new accommodation, its responsibility is to define the Corporation's requirements, analyze the design proposals of other agencies, and coordinate the diverse responsibilities necessary to prepare for the new facilities. The Administrative Services, Financial Services and Personnel Services Directorates provide the Corporation with systems, services and advice for the acquisition and control of these resources and strive to ensure an understanding of and a compliance with all government directives and guidelines.

Performance Information/Resource Justification

Record, Preserve and Understand: Figure 31 shows the efficiency indicator for Security Services provided for the non-public areas for the period from 1983-84 to 1985-86.

Figure 31: Efficiency Indicator for Security Services (non-public areas)

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Cost per square metre	26.39	26.08	24.71

Communicate: Figure 32 shows the efficiency indicator for Security Services provided for public areas for the three-year period from 1983-84 to 1985-86.

Figure 32: Efficiency Indicator for Security Services (public areas)

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Cost per square metre	57.65	55.83	47.89

Manage: Figure 33 shows the ratio of the manage function's operating costs and person-years in the Corporate Services Activity to the Program totals.

Figure 33: Relationship of Expenditures ($000) and Person-Years of Manage Function in Corporate Services to Net NMC Expenditures and Person-Years

	Forecast 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Total NMC person-years	74,864	1,043	73,149	1,055	68,914	1,051
Manage person-years	7,111	115	7,685	110	6,759	127
% of total	9.5	11.0	10.5	10.4	9.8	12.1

The manage function has an ongoing responsibility of seeking improvement of planning and management practices in order to ensure well directed operations.

The means to achieve this goal were redefined in 1983-84 at which time new projects were established. For 1985-86, 11 projects at an estimated cost of $367,000 have been outlined to continue work which has begun in the following areas:

- coordinating the implementation of integrated strategic and operational planning processes that will ensure the efficient

and effective realization of the National Museums of Canada's objectives;

- developing management information systems and databases to provide NMC managers with adequate and reliable information in the management of human, financial and materiel resources; and

- assisting management in its refinement of performance indicators and operational performance measures.

Also of particular concern in 1985-86 is the provision of assistance in the development of appropriate accommodation for the National Museums by:

- coordinating the detailed designs and working drawings and the necessary operational plans for the National Museum of Man, the National Gallery, the National Museum of Natural Sciences Curatorial Centre and the National Aviation Museum;

- coordinating the development of the architectural programs for redevelopment of the Victoria Memorial Museum Building, for the National Museum of Natural Sciences and for the Canadian War Museum; and

- planning the preliminary development, in consultation with the National Capital Commission, of the Brewery Creek site for the National Museum of Science and Technology.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 34: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	37,175	35,419	32,913
Contributions to employee benefit plans	5,204	4,449	4,699
Other personnel costs	266	334	346

General Services and Printing Operations	127	136	133	13,253- 39,988	26,169

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 37 presents a summary of all grants and contributions of the National Museums of Canada.

Figure 37: Details of Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants

	1985-86 Operating Expenditures	Add Other Costs	Total Cost	Deduct Revenue	Net Cost	Total 1984-85
Corporate Management	1,613	-	1,613	-	1,613	1,538
National Gallery	9,645	-	9,645	520	9,125	9,432
National Museum of Man	11,920	-	11,920	200	11,720	11,568
National Museum of Natural Sciences	9,145	-	9,145	275	8,870	7,722
National Museum of Science and Technology	5,420	-	5,420	105	5,315	5,214
National Programmes	21,777	-	21,777	-	21,777	21,272
Corporate Services	16,444	21,960	38,404	-	38,404	29,556
	75,964	21,960	97,924	1,100	96,824	86,302

Other costs are comprised of accommodation provided without charge by Public Works Canada ($21,125,000) and other services provided without charge by Supply and Services Canada ($110,000), Treasury Board Canada ($701,000) and Labour Canada ($24,000).

C. Revenue Analysis

Figure 39: Revenue Analysis ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Revenue credited to the Vote			
National Gallery of Canada	520	520	559
National Museum of Man	200	200	173
National Museum of Natural Sciences	275	275	189
National Museum of Science and Technology	105	105	122
Total receipts	1,100	1,100	1,043

Revenue Credited to the Vote: The National Museums of Canada earns revenue which is credited to the Vote from the sale to the public of books, pamphlets, replicas and other material related to the purposes of the Corporation.

National Parole Board

1985–86 Estimates

Part III

Expenditure Plan

2889

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

National Parole Board

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Statutory - Contributions to employee benefit plans	1,221,000	1,359,000	1,359,000
Total Program - Budgetary	14,065,000	14,442,754	13,805,066

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The National Parole Board has established the following major goals for 1985-86:

- to review the potential for more equitable and accountable structures and mechanisms for parole decision-making the Board will continue to contribute to the Criminal and Correctional Law Reviews, the development of paroling authority standards and a Ministry study on conditional release decision-making (see page 16);

- to create more effective means of dealing with violent and dangerous offenders the Board is continuing its review of legislation, policy and procedures to identify areas for possible modification (see page 16);

- to pursue program evaluation initiatives, including the evaluation of Full Release (Parole) and follow-up to the evaluation of Gradual Release (Day Parole), in accordance with the Board's long-term evaluation plan (see page 16); and

- to further increase the Board's operational efficiency through the conduct and follow-up of audits; the refinement, collection and analysis of performance information; the continued refinement of the Automated Parole Information System; and the conduct of an in-depth analysis of workload components (see page 16).

2. Financial Summary

Figure 1: Financial Requirements ($000)

	Main Estimates 1985-86	Forecast 1984-85	Change
Parole Board Operations	14,969	14,260	709
Authorized person-years	311	314	(3)

Explanation of Change: The increase of 5% or $709,000 in the 1985-86 requirements over the 1984-85 forecast is due to the following:

• implementation in 1985-86 of an automated communications network with the Correctional Service of Canada	230,000
• net increase related to workload volumes in the conditional release area (see page 21) and the Automated Parole Information System	121,000
• general reduction in other operating costs	(40,000)
• decrease due to non-recurring costs provided in 1984-85 for implementation of the 1984 Information Technology Systems Plan ($124,000) and the 1984 Summer Career Program (4 PYs and $37,000)	(161,000)
• increase for inflation in salaries and wages and contributions to employee benefit plans	559,000

Explanation of 1984-85 Forecast: The 1984-85 forecast is 3% or $454,000 higher than the 1984-85 Main Estimates of $13.8 million. The major items making up the difference are:

• Supplementary Estimates for Information Technology Systems Plan	124,000
• Supplementary Estimates for pardons workload and the Automated Parole Information System	312,000

B. Recent Performance

1. Highlights

The following represents signficant achievements of the Board with particular attention to the Highlights in the 1983-84 Program Expenditure Plan.

Concern for Violent and Dangerous Offenders: As part of its continuing concern for public safety the Board implemented procedures in 1983-84, in conjunction with the Correctional Service of Canada, which provided for the early identification, case planning and decision-making in respect of violent and dangerous offenders prior to release on mandatory supervision.

Responding to the Solicitor General's Conditional Release Study: Policy changes implemented in 1982-83 with respect to the unescorted temporary absence program were assessed following further experience and numerous refinements were made, particularly with respect to frequency and duration of absences.

The assessment of the Board's internal review process was completed and a recommendation was made to establish a separate Appeal Division to review conditional release decisions.

As part of its overall strategy to review its procedural safeguards a study was completed and initiatives were undertaken consistent with the Privacy Act, regarding the provision of information to inmates and parolees.

Future Perspectives Study: The Future Perspectives Study was brought to a conclusion with the articulation of various principles and positions with respect to conditional release decision-making. Action plans deriving from the Study have been integrated into the Board's operational planning process.

Operational Efficiency Improvements: A system was put in place to systematically collect and analyze information related to compliance with statutory requirements.

The Board completed follow-up action on the accepted recommendations of the Audits of Privacy Coordination and Case Analysis and Review resulting in minor operational changes.

An evaluation assessment of Gradual Release (Day Parole) was completed (see page 16).

The Automated Parole Information System was introduced in the Board's five regional offices and at headquarters.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Parole Board Operations	13,805	14,065	(260)

Explanation of Change: The 1983-84 expenditures were $260,000 (1.8%) lower than the Main Estimates. This was due to the following offsetting factors:

• additional resources for conditional release workload	211,000
• additional resources for employee contributions	138,000
• additional resources for summer student program	29,000
• decreased expenditures due to frozen allotment (MSSD)	(110,000)
• decreased expenditures due to administrative restraint measures	(47,000)
• underutilization of salary adjustment reserve	(256,000)
• under expenditure in operations (salaries and other operating)	(225,000)

C. Background

1. Introduction

The National Parole Board is one part of the Canadian criminal justice system. This system, whose aim is to reduce criminal activity and to minimize its repercussions in society, is made up of several closely inter-related components including the body of criminal law, the judiciary and legal profession, the law enforcement agencies and the correctional services. Jurisdiction over these components is shared by all levels of government.

At the federal level, the National Parole Board is a component of the Ministry of the Solicitor General which also encompasses the Royal Canadian Mounted Police, the Canadian Security Intelligence Service, Correctional Service of Canada and the Correctional Investigator.

2. Legal Mandate

The powers of the National Parole Board are derived from the Parole Act and its Regulations for parole matters, and the Criminal Records Act for clemency matters. Other statutes that confer jurisdiction on the National Parole Board are the Penitentiary Act for temporary absence, the Prisons and Reformatories Act, and the Criminal Code of Canada.

In addition to exercising absolute jurisdiction over decisions regarding conditional release of federal inmates, the National Parole Board makes decisions on cases of inmates in provincial institutions in provinces without provincial parole boards. (Federal inmates are those inmates serving a sentence of two years or more, whereas provincial inmates are those serving a sentence of less than two years.) At the present time provincial boards exist in Quebec, Ontario, and British Columbia. The National Parole Board therefore has jurisdiction over the granting of conditional release to provincial inmates in the seven remaining provinces and in the two territories.

3. Program Objective

To exercise statutory and regulatory powers to grant and to control the conditional release of persons undergoing sentences of imprisonment and to make recommendations for pardons and the exercise of the Royal Prerogative of Mercy.

4. Program Description

In accordance with the provisions of the Parole Act and other relevant statutes the National Parole Board is an independent administrative body which grants, denies and controls the conditional release of inmates of federal penitentiaries and recommends the exercise of the Royal Prerogative of Mercy and the granting of pardons. In addition, the National Parole Board exercises the same powers and responsibilities with the exception of the granting of temporary absences for provincial inmates in provinces without provincial parole boards. The Parole Board Operations Activity also involves the development of policies and procedures relating to the decision-making and recommendation responsibilities and all administrative support including policy and planning, case management, communications, finance, administration, and personnel.

There are four types of conditional release available to inmates.

The three types of conditional release for which the Board has discretion to grant, deny or revoke for inmates under their jurisdiction are unescorted temporary absence, day parole and full parole.

Temporary Absence: is an occasional release from the institution for humanitarian or medical reasons. A temporary absence might be granted for such reasons as provision of special medical care, attendance at funeral services or for interviews with possible employers and landlords.

Day Parole: is a form of gradual conditional release designed to assist an individual in the preparation for full parole or mandatory supervision. It also serves as a valuable testing mechanism to determine an individual's readiness for such releases. Day parole is usually granted for a specific purpose such as work projects, special education, or medical treatment for a limited period of time and requires regular return to an institution or halfway house.

Full Parole: allows an individual to complete the sentence of the court in the community provided a number of conditions on his/her freedom and behaviour are satisfied and the requirement to report regularly to a parole officer and the police is fulfilled.

According to the Parole Act, the above types of conditional release may be granted when:

- the requirement of the law or regulation as to the time that must be served before becoming eligible has been met;
- the release of the inmate would not constitute an undue risk to society;
- in the case of full parole, the inmate has derived maximum benefit from imprisonment; and
- the reform and rehabilitation of the inmate will be aided by the granting.

The decision-making process for granting the above types of conditional release begins with a study of the inmate's case. This includes an examination of the inmate's criminal record and various institutional reports. Once this investigation is completed the Board begins its review, which generally includes a hearing attended by Board Members and the inmate. At the hearing, the Board advises the inmate of the information that it will consider in rendering its decision. Upon completion of review the Board Members vote on the case. If the Board has decided to grant parole, the inmate is subject to supervision. Specific conditions of release must be satisfied. If these conditions are not met, the Board may suspend or revoke conditional release.

Mandatory Supervision: is the fourth kind of conditional release. Penitentiary inmates who are not released on parole are entitled by law to serve in the community, under mandatory supervision, the time which has been credited to them in the form of earned remission. The system of earned remission, which is based on the inmate's institutional performance, enables an inmate to earn time off the incarcerated portion of his/her sentence, up to a total of one-third of the sentence. Unlike parole, which is a discretionary decision of the Board, release under mandatory supervision is determined by the amount of the inmate's earned

remission credits. However, the Board does have the authority to set the conditions of release and to return individuals to prison for the remainder of their sentence if the conditions of release are violated or likely to be violated.

5. Program Organization for Delivery

Activity Structure: The National Parole Board has identified one activity, Program Operations, to describe its Program.

Organization Structure: The National Parole Board has its headquarters in Ottawa. There are five regional offices (Moncton, Montreal, Kingston, Saskatoon, and Burnaby).

The Chairman is the Chief Executive Officer and is responsible for all matters relating to the National Parole Board. Although the Chairman reports to the Solicitor General, the National Parole Board is independent of outside control in the exercise of its decision-making power except for the ultimate control of Parliament through legislation.

The Chairman is supported directly in overseeing the operations of the Board by a Vice-Chairman and an Executive Director. Board Members, located at each of the five regional offices and the Headquarters Division, are directed by a Senior Board Member who reports to the Vice-Chairman. The support services in the regional offices are the responsibility of Regional Executive Officers who report to the Executive Director together with similarly employed personnel at headquarters. Figure 3 displays the organization of the National Parole Board.

The National Parole Board itself comprises 26 full time members appointed for a period of up to 10 years by the Governor in Council upon the recommendation of the Solicitor General. Several Temporary Members have also been appointed in each region to assist the Board in its duties. In addition, representatives in each of the five regions (Community Board Members) are designated to act as regular Board Members when release is being considered for inmates serving sentences of life imprisonment or a sentence of an indeterminate period.

Figure 3: Organization Structure

D. Planning Perspective

1. Environment

The National Parole Board, together with the other components of the Ministry of the Solicitor General, has identified a number of environmental factors which will likely influence its operations in the near future. Those which are likely to have a major impact upon the National Parole Board are described below.

Economic Climate: While the performance of the Canadian economy may improve throughout 1985-86, fiscal restraint with respect to social policy areas including the criminal justice system will probably continue in light of the government's overall economic development and job creation priorities. The National Parole Board will continue to feel the pressure throughout the period to further increase its operational efficiency in order to provide acceptable levels of service.

Social Climate: With the increasing emphasis on openness and accountability in government as a result of access and freedom of information initiatives and the entrenchment of the Charter of Rights and Freedoms in the Canadian Constitution, policy adjustments throughout the criminal justice system will be necessary.

Offender Population Forecasts: The workload of the National Parole Board is largely determined by the size of federal inmate population, more specifically, the number and nature of individuals within that population eligible for release consideration. The Correctional Service of Canada's 1984-85 Offender Population Forecasts dated September 1984 indicate the likelihood of significant increases in the offender population through to at least 1988 as illustrated in Figure 4. An increase in the number of individuals within that population projected to become eligible for release consideration is illustrated in Figure 5. Historical data indicate that, on the average, 48.5% of the federal inmate population reaches first eligibility for parole consideration in each fiscal year. In addition to this segment of the federal inmate population which the National Parole Board must review in each fiscal year, there is another segment of the population, estimated at over 20%, who have passed their parole eligibility date and have not been granted parole or been released on mandatory supervision. Many of these cases will also be considered for release by the Board. If the federal inmate population increases as projected, the numbers of federal inmates eligible for release consideration by the Board will rise proportionately and increasing pressure will be exerted upon Board resources in subsequent years.

Figure 4: Federal Offender Population Forecasts 1983-88*

*1983-84 - Actual Figure

Figure 5: Forecast of Federal Offenders Reaching Parole Eligibility Date, 1983-88*

* 1983-84 - Actual Figure.

2. Initiatives

Having considered the environmental factors, the Board will continue during 1985-86 to place emphasis on continuing to expand upon initiatives in prior years' Expenditure Plans, with particular attention given to areas where there is potential for further increases in operating efficiency and effectiveness, as detailed below.

3. Update on Previously Reported Initiatives

Conditional Release - Long Term Initiatives: Having completed its Future Perspectives Study, the Board will continue to contribute to the Criminal and Correctional Law Reviews which are expected in future years to result in legislative revision. As well, the Board will continue to assist in the development of paroling authority standards in conjunction with the Canadian Criminal Justice Association and the Canadian Association of Paroling Authorities. The Board will also participate in the Ministry of the Solicitor General Secretariat's Decision-Making Research Study in order to further define the role of conditional release in the criminal justice system.

Concern for Violent and Dangerous Offenders: The National Parole Board continues to place the highest priority upon the minimization of risk to society in the conditional release of offenders. Anticipated legislative changes with respect to the control of violent offenders have not occurred; however, the Board is continuing its review of legislation, policy and procedures related to the identification, release planning and supervision of those offenders identified as violent and dangerous in order to ensure the minimization of risk.

Conditional Release - Program Evaluation: The National Parole Board has experienced some difficulty in maintaining its schedule for evaluations according to its long term evaluation plan. This is due mainly to lack of resources available for the completion of evaluations. It is anticipated that the long-term plan may require revision for subsequent years. Results from the evaluation of Gradual Release (Day Parole) may have an impact upon programs in 1985-86; however the extent and nature of such impact cannot be predicted at this time. It is expected that the evaluation of Full Release (Parole) will continue into 1985-86.

Operational Efficiency Improvements: The Board has identified the following goals in this regard for 1985-86:

- the report of the Audit of Corporate and General Management will be reviewed and appropriate follow up determined;
- audits will proceed in line with a revised audit policy and plan;

- the collection and analysis of performance information will continue in order to establish appropriate standards of operational efficiency and effectiveness;

- continued refinements will be made in the Board's Automated Parole Information System based upon a cost benefit analysis and an intercommunication study together with the ongoing recommendations of the Board's Users Committee;

- the findings of the Board's workload study will be reviewed and action taken as appropriate to increase operating efficiency; and

- in the absence of expected legislative changes and consequent program revision in the clemency and criminal records area the Board is continuing to make administrative changes aimed at improving the efficiency of the processing of pardon cases.

4. Program Effectiveness

Criteria for measuring the effectiveness of the National Parole Board's Program must be related to its mandate: to review cases and render decisions with respect to the grant or denial of conditional release; to review applications and make recommendations for the grant of pardons and the exercise of the Royal Prerogative of Mercy; and to formulate conditional release decision-making policy.

The National Parole Board has identified three key result areas (Conditional Release, Clemency and Criminal Records, Policy and Corporate Management) which most aptly reflect its significant tasks and which stand therefore as the basis for accountability.

Conditional Release: Social science and criminological research have developed many methods for measuring various aspects of Conditional Release success. There is, however, neither any consensus as to what is success nor what constitutes a valid and reliable measure of success. It is generally held that early release from prison has at least the direct effect of reducing the potentially debilitating effects of incarceration while assisting in the reintegration of an offender into his community.

Recidivism rates reflect those individuals who are revoked as well as individuals who are returned to prison for commission of a new offence after warrant expiry date. Revocation rates reflect the number of offenders returned to prison by a decision of the National Parole Board either as a result of a breach (including conviction for a new offence) or as an act designed to prevent a breach of conditions of release while under supervision. Revocation and recidivism rates as currently measured are a function of many interrelated factors, only a proportion of which can be affected by National Parole Board policy or

operational procedures. While paroling authorities must be sensitive to gross changes in these rates they must be considered imperfect performance indicators.

Figures 6 and 7 display the outcome of federal full parole and mandatory supervision releases from 1975-76 to 1979-80 based on the study of the status as of June, 1984 of all those offenders released between 1975-76 and 1979-80. Past studies have shown that a four to five year follow up is sufficient to demonstrate revocation and recidivism patterns. (The presentation of this information has been changed from calendar to fiscal-year to be consistent with other reporting in this document).

Figure 6: Recidivism Rates 1975-76 to 1979-80 Actuals

Figure 7: Revocation Rates 1975-76 to 1979-80 Actuals

An important measure of the National Parole Board's operational effectiveness is its ability to comply with the statutory requirements of the relevant legislation and to meet on a timely basis the procedural safeguards provided.

Figure 8 provides data covering the period April 1, 1983 to March 31, 1984, with respect to compliance.

Figure 8: Compliance with Statutory Requirements, April 1, 1983 to March 31, 1984

Regulation	Percentage of Compliance
1. Holding of panel hearings/review prior to parole eligibility date (section 14 15(1))	100%
2. Written reasons for negative parole decision within 15 days of the decision (Section 19(2))	85%
3. Ensuring legal requirement to give 14 days notice of the post-suspension hearing is given when a hearing is requested (Section 20(2)(b))	100%
4. Sending of written notification of parole eligibility date to federal inmates within six months of admission (Section 13)	100%

The Board has not been able to achieve 100% compliance in notifying inmates of negative parole decisions within 15 days of the decision. This has been due to a shortage of resources in this labour intensive area. Attempts are being made to increase operating efficiency in this area to effect a higher percentage of compliance. Additional resources which were granted to the Board by Treasury Board for 1984-85 should assist the Board in meeting its obligations in the conditional release area to the fullest extent possible.

Clemency and Criminal Records: Through the review of appropriate information and the weighing of significant factors the Board formulates recommendations to Cabinet for the granting of pardons and the exercise of the Royal Prerogative of Mercy. The Board is required by the Parole Act to undertake such reviews upon receipt of applications and to formulate recommendations. Indicators of the Board's effectiveness in this area are the average time involved in processing applications and the percentage of applications processed within the optimum timeframe.

Efforts are being made to implement a system to determine the average time involved in processing pardon applications. A sample of this information for January to March 1984 indicates an average

processing time of 15.6 months. It should be noted that approximately 60% of the processing time is consumed in the completion of components of the process, including police inquiries, which fall outside the control of the National Parole Board.

It was anticipated that an optimum timeframe for processing applications for pardon under the Criminal Records Act would be established in conjunction with possible legislative changes in this area. This optimum timeframe has, however, not yet been established. When this timeframe is set the National Parole Board will be in a position to report on the percentage of pardon applications processed within this period of time.

Policy and Corporate Management: The National Parole Board is required to efficiently administer the Parole Act with major emphasis upon the continuing viability of the program in terms of the integrity, quality and independence of its decision-making. In this regard, the National Parole Board considers the capacity to undertake in-depth evaluations of its programs as being of critical importance. The collection and analysis of current and objective information on program performance allows the Board to make resourcing decisions necessary to maximize the achievement of its Objective. National Parole Board programs will be systematically evaluated to ensure the achievement of articulated objectives and the maintenance of policies appropriate to the mandate of the Board (see page 16). Indicators of the Board's effectiveness in this area are the articulation of evaluation findings and the development as appropriate of follow-up strategies.

5. Performance Information/Resource Justification

The National Parole Board has identified corporate objectives in three areas.

- **Conditional Release** - to render conditional release decisions on a timely basis in accordance with statutory requirements and the reduction of undue risk to society;

- **Clemency and Criminal Records** - to review applications and formulate recommendations on a timely basis with respect to the granting of pardons and the exercise of the Royal Prerogative of Mercy; and

- **Policy and Corporate Management** - to analyse and articulate decision-making policy and to efficiently manage the National Parole Board.

The articulation of results and performance standards in these broad areas emphasizes the major responsibilities of the Board, the broad areas within which resources are allocated, and within which results are anticipated.

The National Parole Board has finalized efficiency indicators and is collecting data relating costs to decisions for conditional release and to recommendations for clemency.

The resources required for the timely and responsible analysis of parole applications, and performance reports with respect to those conditionally released, and the rendering of decisions by the Board, is directly related to the number and nature of cases presently at liberty and under the Board's ultimate authority. Resource levels with respect to the achievement of a conditional release result must therefore be calculated on the basis of these factors.

The analysis of resource requirements related to NPB operations with respect to the grant of pardons and the exercise of the Royal Prerogative of Mercy must be calculated upon the volume of applications and their complexity.

Workload statistics are presented here for information and forecast purposes. Figure 9 represents a breakdown of the total number of decisions and recommendations by category made by the Board in four fiscal-years. Figure 10 presents a forecast of the total number of cases under the supervision of the Board by type of release.

Figure 9: Total Conditional Release Decisions and Pardons/Royal Prerogative of Mercy Recommendations, 1980-81 to 1983-84 Actuals

Figure 10: Federal and Provincial Cases Under Supervision by Type of Release, 1983-89*

The Board is in the process of developing base-year data for the performance indicators related to each of its three result areas. The comparison of this base-year data to ongoing experience will provide in subsequent years a basis for resource allocation to the Board and for the assessment of relative operational efficiency.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

National Parole Board expenditures by object are presented in Figure 11.

Figure 11: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	10,698	10,276	9,203
Contributions to employee benefit plans	1,498	1,307	1,359
Other personnel costs	15	35	-
	12,211	11,618	10,562
Goods and services			
Transportation and communications	1,218	1,222	1,110
Information	187	205	114
Professional and special services	997	760	625
Rentals	45	42	76
Purchased repairs and upkeep	116	134	113
Materials, utilities and supplies	165	151	153
All Other Expenditures	-	-	2
	2,728	2,514	2,193
Total operating	14,939	14,132	12,755
Capital*	30	128	1,050
Total expenditures	14,969	14,260	13,805

* The large decrease in capital expenditures from 1983-84 to 1984-85 results from hardware costs in 1983-84 for the Automated Parole Information System.

2. Personnel Expenditures

The National Parole Board is a labour intensive organization, with personnel costs (including statutory contributions to employee benefit plans) constituting 82% of total operating costs.

Figure 12: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Board Members and Executives	43	39	35	50,350 - 96,300	68,014
Scientific and Professional	1	1	2	13,609 - 88,120	-
Technical	2	2	3	10,719 - 63,173	41,616
Administrative and Foreign Service					
Administrative Service	41	27	20	13,912 - 57,987	35,890
Personnel Administration	4	4	5	13,330 - 63,870	37,624
Welfare Programs	30	32	35	14,860 - 57,980	43,173
Financial Administration	5	5	5	13,853 - 57,980	40,762
Program Administration	5	20	26	13,912 - 57,987	32,268
Information Services	3	3	5	13,579 - 57,980	45,523
Other	3	2	1	12,766 - 66,252	38,250
Administrative and Operational Support	174	166	162	12,307 - 48,317	21,587

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Net Program Cost

The Parole Board's 1985-86 Estimates include only authorities to be voted and statutory authorities. When describing the Program on a full cost basis, other costs must be considered.

Figure 13: Net Cost of the Program for the Year 1985-86 ($000)

	1985-86 Expenditures	Add Other Costs	**Total Net Cost**	Total 1984-85
National Parole Board Program	14,969	1,432	**16,401**	15,660

The adjustments made to the voted budgetary operating expenditures to arrive at total net cost include services provided without charge by Public Works, ($1,191,000), Supply and Services, ($32,000) and Treasury Board Secretariat ($209,000).

1985–86 Estimates

Part III

Expenditure Plan

2019

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

National Research
Council Canada

Preface

This document contains Expenditure Plans for the two Programs of the National Research Council (NRC): the Scientific and Industrial Research Program and the Scientific and Technical Information Program. It is organized into three chapters. The first provides an introduction to NRC and summarizes both Programs. The other two present the Expenditure Plans for each Program. Extracts from Part II of the Estimates are included in Chapters 2 and 3 to provide continuity with the other Estimates documents.

The Expenditure Plan for the Scientific and Industrial Research Program is divided into three sections, which provide increasing levels of detail. Section I, Program Overview, provides information on the current status of the Program. Section II, Analysis by Activity, provides specific details of results expected in the upcoming Estimates year. Section III provides details of the costs and resources used by the Program and special analyses to explain it more fully.

The Expenditure Plan for the Scientific and Technical Information Program is divided into two sections. Section I presents an overview of the Program and includes a description and information on the background, objectives and planning perspective as well as performance information that forms the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

This document is designed to permit easy access to specific information. The table of contents provides a detailed guide to the contents of each section. Within Section I of the Scientific and Industrial Research Program Expenditure Plan, a financial summary provides cross-references to the more detailed information found in Section II.

Scientific and Industrial Research Program	2-1
Scientific and Technical Information Program	3-1

2925

Departmental Summary

Role and Responsibilities

The mandate of the National Research Council (NRC) is established by the National Research Council Act, which empowers NRC to undertake, assist, or promote scientific and industrial research. More specifically the Act also authorizes NRC to provide and operate facilities and make them available to industrial firms or to organizations or persons; to establish, operate, and maintain a national science library; to publish and sell or distribute scientific and technical information; to carry on work of an experimental and developmental nature aimed at improving processes, methods, or products in useful arts and manufacturing and for scientific purposes; and to operate and administer federal government astronomical observatories.

In accordance with its mandate, NRC carries out research and development activities in science and engineering in response to economic and social needs. These activities encompass work on the advancement of knowledge, building and construction, energy, the environment, food and forestry, health, industrial technology, public sector research, space, and transportation.

NRC also provides direct technical assistance to industry, and it provides financial assistance to companies undertaking innovative research projects and to firms acquiring technologies developed in government laboratories. NRC establishes and maintains physical standards; operates and makes available national science and engineering facilities as a service to industry, governments, and universities; maintains the national collection of scientific and technical information; and operates a nation-wide network of scientific and technical information services.

This many-faceted role of NRC is performed within the federal government's overall Science and Technology (S&T) program. NRC resources are included in the Economic and Regional Development Envelope and in the Energy Envelope.

Organization and Programs

NRC is a Crown Corporation (departmental corporation, schedule B as defined by the Financial Administration Act). There is a Council consisting of a President and 21 members appointed by the Governor in Council. Council membership is drawn from industry, universities and government, and includes representation from the various regions of Canada. The Council constitutes a broadly-based body of scientific and management expertise. NRC reports to Parliament through the Minister of State for Science and Technology.

Figure 1 illustrates NRC's organizational structure. The President chairs the Council and is the Chief Executive Officer of the organization.

Figure 1: Organizational Structure of the National Research Council of Canada

The activities of the Scientific and Industrial Research Program and the Scientific and Technical Information Program are the responsibilities of the six Vice-Presidents.

The Executive Vice-President chairs the NRC Management Committee and has responsibility for the Industrial Materials Research Institute in Boucherville, Quebec and the Institute for Optics under development in Quebec City. He is also responsible for External Relations and the Program Evaluation Office.

The Vice-President, Finance, is the Chief Financial Officer. He also has responsibility for the coordination of major capital projects, national facilities external to NRC, the operations of the Computation Centre, and the winding down of the cancelled Institute for Manufacturing Technology in Winnipeg.

The Vice-President, Physical Sciences and Engineering, is responsible for the Divisions of Physics, Microstructural Sciences, Electrical Engineering and Mechanical Engineering, the Herzberg Institute of Astrophysics, the Canada Centre for Space Science, the National Aeronautical Establishment, the Atlantic Research Laboratory in Halifax, and the Institute for Marine Dynamics in St. John's, Newfoundland.

The Vice-President, Biotechnology and Chemistry, has responsibility for the Divisions of Biological Sciences, and Chemistry, the Plant Biotechnology Institute in Saskatoon, and the Biotechnology Research Institute under development in Montreal.

The Vice-President, Technology Transfer, is responsible for the Division of Building Research, the Scientific and Technical Information Program, consisting of the Canada Institute for Scientific and Technical Information and the Canadian Journals of Research, and the NRC industrial development programs. The industrial development programs include the Industrial Research Assistance Program, which provides technical advice to industry from a network of offices and gives financial support to research and development carried out in and for industrial laboratories; and the Program for Industry/Laboratory Projects, which supports the costs of collaborative projects aimed at transferring to industry knowledge and expertise developed in government laboratories. The programs are important elements in achieving the government's goal of fostering industrial innovation and technology diffusion.

The Vice-President, Personnel and Administrative Services, is responsible for the maintenance of the NRC infrastructure, including the physical plant and all personnel matters, and is also responsible for the winding down of the Division of Energy.

Spending Plan

Figure 2 presents the spending plan for the National Research Council and its two programs. All proposed expenditures are budgetary.

Figure 2: NRC Spending Plan ($000)

	Estimates 1985-86	Forecast 1984-85	Change $	Change %	For Details See Page
Scientific and Industrial Research Program	419,209	478,920	(59,711)	(12.5)	2-1
Scientific and Technical Information Program	24,080	22,894	1,186	5.2	3-1
Total Budgetary	443,289	501,814	(58,525)	(11.7)	

Priorities

The federal government has made economic renewal its highest priority. The renewal is to be based on restraints in government spending, a redefinition of the role of government so that it provides a framework for economic growth, and the promotion of greater investment, innovation and international competitiveness. In keeping with these policies the National Research Council will rationalize its activities and eliminate some activities of decreasing cost-effectiveness. NRC will continue to introduce measures that ensure the relevance of NRC

programs to their clients, be they industrial companies, university scientists, or other government departments. Emphasis will be placed on strongly collaborative activities to ensure that all sectors of the Canadian economy are working together towards the common goal of technology diffusion and the effective use of technology in the private sector.

Extracts from Part II of The Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $401,775,000 in support of the 1985-86 Scientific and Industrial Research Program. The remaining expenditures, estimated at $17,434,000 for contributions to employee benefit plans will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates

Section I
Program Overview

A. Highlights

An Integrated Approach to Technology Development and Diffusion: NRC is organizing its programs to ensure the active participation of all sectors in their operation and in the setting of goals. In particular

- A strategic plan has been developed for the Biotechnology Research Institute in Montreal that sets out the organizational structure and the mechanisms for consulting and involving partners in other sectors in the choosing and review of projects and programs. Contract and contribution funding will be used to develop a network of associated groups and laboratories in all sectors. A significant fraction of the staff of the Institute will be guest workers from industry and the universities. The majority of the NRC professional staff will be term employees who will take their acquired expertise to the industrial and university sectors following their terms of employment.

- Similar plans are being developed for the Institute for Optics that NRC has been given government approval to establish in Quebec City at a total capital cost of $16 million. The Institute for Optics is scheduled for completion in 1988.

- The Institute for Marine Dynamics now nearing completion in St. John's, Newfoundland will also encourage the close involvement of the industrial and university sectors.

Support for Private Sector Technology Diffusion: NRC will provide an annual contribution ($500,000 in 1985-86) to support the operation of the National Manufacturing Technology Information Centre and Network, which will be run by the private sector to make the latest information on manufacturing technology available to Canadian industry.

Canadian Astronaut Program: Under the overall program direction of an interdepartmental review board, NRC is responsible for the training of 6 Canadian astronauts, who have been selected from over 4,000 applicants, to participate in missions of the U.S. Space Shuttle. (For further information see page 2-34).

B. Financial Summary by Activity

Figure 1: Financial Summary By Activity ($000)

	Estimates 1985-86			Forecast 1984-85			
	Expend.	Revenue Credited to Vote	Net Expend.	Expend.	Revenue Credited to Vote	Net Expend.	For Details See Page
National Competence in the Natural Sciences and Engineering	40,877	118	40,759	40,403	162	40,241	2-19
Research on Problems of Economic and Social Importance	65,996	1,092	64,904	87,727	1,480	86,247	2-23
Research in Direct Support of Industrial Innovation and Development	193,579	1,254	192,325	227,194	1,327	225,867	2-29
National Facilities	77,791	2,835	74,956	85,044	3,301	81,743	2-40
Research and Services Related to Physical Standards	8,586	253	8,333	8,505	276	8,229	2-47
Administrative and Special Support Services	44,340	6,408	37,932	45,281	8,688	36,593	2-50
	431,169	11,960	419,209	494,154	15,234	478,920	
Authorized person-years			3,198			3,323	

The decrease in the 1985-86 requirements from the 1984-85 forecast is made up of the following major items:

- decrease in cash flow of $31.9 million for major capital projects including the Institute for Marine Dynamics, Institute for Manufacturing Technology and the Biotechnology Research Institute.
- decrease of $1.6 million and 29 person-years in X-rays and Nuclear Radiation research.
- decrease of $3.4 million and 10 person-years in Space Science Research.
- decrease of $1.1 million and 15 person-years in environmental quality R&D.
- decrease in Institute for Manufacturing Technology operating resources of $8.7 million and 58 person-years.
- decrease in Energy Panel funding of $32.0 million and 44 person-years.

Figure 2: Percentage Distribution of 1985-86 Estimates (dollars) by Activity

C. Background

1. Introduction

The Scientific and Industrial Research Program is the vehicle through which the National Research Council fulfils its role as the primary research and development organization of the federal government. The Program carries out research and development in the natural sciences and engineering in support of government priorities and goals in science and technology. These goals include the increased adoption of new technologies particularly by industry, increased interaction and collaboration among the various R&D performing and funding sectors, emphasis on the relevance and responsiveness of programs to their clients, and attention to the needs of small firms. These immediate priorities for NRC exist within the context of continuing support for the national scientific and technological infrastructure through such activities as the maintenance of national competence and expertise, the operation of national facilities, work on physical standards, technical work in support of regulatory agencies, and work on problems of social importance.

The Program is designed to complement the activities of those government departments that undertake scientific research in pursuit of their specific missions. For example, NRC conducts little or no research in the field of communications because that research is carried out by the Department of Communications.

The Program also promotes science and engineering. Public interest in and support for science and technology are encouraged through such vehicles as the annual NRC Open House, through publications such as Science Dimension, which describes recent scientific advances in layman's language, and through the publicity associated with particular programs such as the Canadian Astronaut Program.

The NRC industrial support programs are designed to stimulate scientific and engineering research and its application to Canadian economic and social needs. The programs provide financial assistance to companies undertaking innovative research. These programs also improve the technical competence of industry by supporting the transfer of technologies developed in government laboratories and by providing advice in the field to companies with technical problems. The NRC laboratories are also heavily involved in helping Canadian industry to introduce better processes and new products and techniques. Direct assistance to industry is provided through helping companies to solve technical problems, through collaborative projects, and through the contracting of research to industry.

2. Legal Mandate

The National Research Council Act provides the legal mandate for all operations carried out in the Scientific and Industrial Research Program. Under this Act, the Program is mandated to undertake, assist or promote scientific and industrial research.

3. Program Objective

Objective: To create, acquire, and promote the application of scientific and engineering knowledge to meet Canadian needs for economic, regional, and social development.

Sub-Objectives:

- to foster a milieu in Canada for the search for new scientific and technical knowledge;
- to promote, contribute to, and provide support for a strong and viable scientific and engineering research and development capability in Canadian industry;
- to develop and maintain a capability to respond rapidly and effectively to forthcoming needs for scientific expertise, engineering know-how and in-depth analysis of problems in science and technology both nationally and internationally;
- to provide and maintain a capability to carry out major scientific and technological research and development programs to meet perceived national needs and priorities;
- to meet Canadian needs for major national facilities for science and engineering; standards and criteria; and
- to contribute to meeting regional needs for research and development in science and technology in a coordinated and effective manner in cooperation with federal and provincial research organizations, universities and local industry.

4. Program Organization for Delivery

Activity Structure: Figure 3 shows the six activities into which the Program is divided and sub-activities for these activities.

Figure 3: Activity Structure

Organization Structure: The relationship between the organization and the activity structure is shown in Figure 4.

Figure 4: 1985-86 Resources by Organization/Activity ($000) and (P-Y)

D. Planning Perspective

1. Environment

The Program operates in an international milieu of rapid technological and social change in which Canada faces increasing competition from other countries for a share of the world economy. Among industrialized countries, Canada suffers from an unfavourable trade balance in technology-based goods, from low productivity growth, and from a decrease in the relative contribution made by the manufacturing sector to the GNP. R&D is considered to be one of the most important elements in alleviating this unfavourable economic situation, and the Program is an important performer, supporter and promoter of R&D in Canada. The size, nature and emphasis of the Program is affected by these conditions as follows:

Economic Development: In cooperation with other government departments and agencies and the technology-intensive industries, the Program has expanded its efforts to contribute to and support the national goals of industrial growth and increased productivity. The role of the Program is to undertake fundamental and applied research and to promote and support the development and diffusion of new or improved technologies that will open up new opportunities for the industrial sector.

Social Development: Rapid technological change is often accompanied by unwanted side-effects such as pollution, new health problems, and threats to public safety. There is an increasing need to preserve and improve the quality of life. The Program assists and complements the activities of government departments that have responsibilities in these areas, and provides relevant scientific and engineering expertise and impartial advice to governments, industry and other organizations.

International Involvement: Many of the areas of research undertaken by the Program are not unique to Canada. A continued awareness of scientific and technical progress must be maintained to ensure competitiveness and to take full advantage of research in other countries. The Program encourages the international exchange of ideas and discoveries in both basic and applied research. Collaboration and participation in such endeavours as the U.S. and European space programs have resulted in significant benefits both to the scientific community and to Canadian industry. Another reason for involvement at the international level is the opportunity it affords Canadian scientists to maintain state-of-the-art knowledge and expertise in their various fields.

2. Initiatives

Biotechnology: The construction of the Biotechnology Research Institute in Montreal is proceeding rapidly and should be close to completion by the end of 1985-86. The total capital cost for construction and equipment will be $58 million. The Institute will house industrially related research programs in pharmaceutical and veterinary products and processes, in industrial and municipal waste processing, and in agrifood, forestry, and chemicals. The common disciplines of biochemical engineering, genetic engineering, cell fusion and enzyme systems will be used in these applications.

The newly completed $6 million expansion of the Plant Biotechnology Institute in Saskatoon will house redirected programs in plant cell technology, plant and microbial productivity, plant products technology, bio-organic chemistry, and plant molecular genetics. Topics will include modification of cell species, nitrogen fixation, and fertilizers.

Industrial Optics: The government has approved the construction and equipping of a $16 million Institute for Optics in the Quebec City region. The Institute is scheduled for completion in 1988. It will concentrate on industrial applications in a field that promises to be as pervasive in its importance as microelectronics. There will be emphasis on the design, fabrication, and testing of optical components and systems, on electro-optics, and on image science including holography. The training of skilled manpower will be a major objective.

The programs of these institutes will interact strongly with the private, university, and provincial sectors to address national needs and priorities.

3. Program Effectiveness

The effectiveness of the Program must be assessed on the basis of how well it fulfils its role of creating, acquiring and promoting scientific and engineering knowledge to meet Canadian needs for economic, regional, and social development. Key factors which must be addressed include the relevance and quality of R&D undertaken, the extent of the Program's efforts to promote R&D work outside the federal government, and the results achieved in transferring new technology from the public to the private sector.

In large part, the Program must work in close cooperation with other government agencies, private industry and other research organizations, both in Canada and abroad, to ensure that its objectives are successfully pursued. Thus, many of the results achieved are the product of cooperative efforts and must be evaluated in that context.

Relevance and Quality of R&D: Because of the high risk factor inherent in research and development and the long time that is typically needed to realize benefits, it is imperative that the areas of research be chosen in a judicious way. Continuous assessment of the quality of research and the progress made is necessary to ensure that funds are directed to those areas which are likely to provide maximum benefits.

All proposals for new resources and new initiatives are subject to ministerial and Cabinet approval and are also subjected to detailed scrutiny in a consultative process with the central agencies. There is a careful examination of the economic, scientific, and technical contents of each proposal; its conformity with government priorities, policies, and processes; and the appropriateness of the associated resource levels.

Before being submitted for consideration by the Cabinet, NRC proposals are given a rigorous examination within the Council. Proposals can originate at the level of the working scientist in NRC's laboratories, at the management level, as a result of studies of specific subject areas by a task force, or from submissions to NRC by external agencies and organizations. All these types of proposal are examined by the NRC Program Selection Committee, a body composed of managers and expert working scientists from all the Council's disciplinary areas. The Committee receives written summaries, interrogates a representative of each proposal, rates the proposal according to established criteria, and makes recommendations to the NRC Management Committee, which in turn submits a report to the Council for its approval.

The relevance and quality of established programs are monitored through a system of committees. Program assessment and advice are provided to NRC management and to the governing Council by Associate and Advisory Committees, which are listed in Section III, Sub-section D. These Committees are composed of scientists, engineers, and managers drawn from industry, government, and the universities.

The quality of work done in NRC laboratories and its relevance to program objectives are subject to examination by a number of Review Committees. Each laboratory Division is examined within a five-year cycle. The members of the Committee are expert in the disciplines under review, and are drawn from organizations outside the Program, even outside the country on occasion. The Chairman of the Review Committee is usually a member of Council. The process is essentially one of peer review. A report is provided to Council on the quality and relevance of the research and the effectiveness of procedures. A year later, Council receives a further report describing actions taken to implement the recommendations of the Review Committee.

The rationale of the Program, its objectives, and its effectiveness in meeting them are examined in retrospect by the Program Evaluation Office in the light of the intended and unintended results achieved by the Program. Each component of the Program is evaluated periodically and a report is submitted to the President. The report may provide a basis for reallocating resources, modifying program objectives and measurement criteria, redesigning a program component, or even eliminating it. The Program Evaluation Office was established in 1982, and has completed several studies.

- A program evaluation study of the Industrial Research Assistance Program (IRAP) reported in March 1984 that over 90% of IRAP funding did not displace money that could otherwise be obtained from other sources. It was found that there was a significant demand for IRAP services that could not be satisfied with currently allocated resources. Clients who had also had R&D support from other federal government programs tended to rate IRAP much better in terms of speed of decision making, simplicity of paperwork and technical advice given. Both clients and IRAP staff identified a need for more interactions with laboratory staff, and for a more systematic effort in staff training and development.

- An evaluation study of the Program for Industry/Laboratory Projects (PILP) reported (March 1984) a need to augment staff expertise in economics and business finance. PILP was reported to have generated technical benefits (for example, enhanced R&D capacity, or even unique capabilities on a world-wide basis) by 90% of client firms. Over the period 1975-81, PILP was found to have a benefit-cost ratio of either 0.5 or 1.1, depending on the method used to assess the actual attribution of benefits. The effect of changes in program delivery introduced in 1981-82 will be investigated in the next evaluation study scheduled for 1987-88.

- A March 1984 program evaluation study of Laboratory Support for Industrial Innovation and Development (INDL) identified a large number of qualitative and quantitative benefits reported both by client firms and by NRC laboratories. The industrial clients rated highly the technical assistance they received, although there was some criticism of the contracting process, and occasionally of slowness of response by NRC.

Promotion of R&D: Another important aspect of the Program's objective is the promotion of R&D outside federal government laboratories. The mechanisms used to achieve this aim include: contributions to industry to promote industrial R&D through the Industrial Research Assistance Program and the Program for Industry-Laboratory Projects;

contributions to universities and non-profit organizations to operate major national facilities for scientific research, such as TRIUMF (the Tri-University Meson Facility) and the CFHT (Canada-France-Hawaii Telescope); contracting R&D to industry, university and other sectors in support of specific areas of R&D such as biotechnology and industrial materials research; and procurement of capital equipment and devices, e.g., the Canada Space Arm (Canadarm) and other space research equipment for collaborative work with NASA and the European Space Agency. A summary of expenditures by external performers from 1981-82 to 1985-86 is shown in Figure 5.

Figure 5: Program Expenditures to External Performers ($000)

Description	Estimates 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83	Actual 1981-82
Industrial development programs	72,553	74,527	57,693	51,896	43,462
National facilities	28,968	27,288	25,572	22,792	19,290
Energy R&D	21,869	38,997	28,502	20,093	11,215
Space science program	15,000	14,529	7,819	4,395	3,051
Space technology program	2,819	5,135	911	1,441	4,023
Biotechnology Research	1,378	5,608			
Other	6,256	9,016	5,486	6,782	8,365
Total	148,843	175,100	125,983	107,399	89,406

Technology Transfer and Development: Another measure of the Program's effectiveness is the extent to which new technology is generated in collaboration with industry or transferred from the public to the private sector. Although general indicators demonstrating the overall effect of technology development do not exist, many examples of successful cases are available:

Unmanned Submersible Vehicles: A company in B.C. has captured 50% of the world market for unmanned non-military submersibles. It has sold 101 so far. The tethered remote operated vehicle (one model of 10) was supported in part by IRAP.

Passport Security: Two Ontario companies jointly have announced a breakthrough in passport designs. A novel printing process integrates the photograph image into the document's paper thus making passport forgeries extremely difficult.

New Adhesives from Waste Products: A Quebec company has announced a joint venture to build a $4.5M plant to produce up to 60 tons per day of spray dried lignin based resin for the waferboard industry. These would be blended with phenol formaldehyde.

Improved Level Sensor: An Ontario electronics company has developed an ultrasonic system to measure levels in bins, silos and tanks. Previously it used a U.S. source of technology which was limited to use in silos up to 100 ft in diameter. Now with a 200 ft limit, a significant increase in market potential has opened up especially in grain handling operations.

Postal Coders: An Ontario company has won a $20M contract to supply the Swiss Post Office with 4,700 encoders. The optical character recognition technique invovled was derived in part from an IRAP project.

New Food Testing Technique: An Ontario company has developed a testing method to detect common bacteria in food. This technique gives a turn-around of 1 to 2 days instead of up to 7 days. One of the initial 3 bacteria tests approved for food testing was developed with IRAP support. The concept originally comes from a federal government laboratory. It is one of the most significant microbiological developments in many years.

New Batteries: A company in B.C. has unveiled plans to manufacture long life rechargeable lithium batteries. Several other federal programs have also been involved in assistance of various facets of this technology.

Hydrogen Peroxide: An Ontario company has developed improved electrodes for use in a joint development with Dow Chemical to make hydrogen peroxide. The process is claimed to produce peroxide for on-site production at lower cost than standard methods for use in bleaching pulp and paper.

Embryo Transplants: An Alberta company has developed improved methods for embryo transplants in cattle. Previously a success rate of 1 in 3 only was possible. With an improved technique in the freezing process, success rates of 1 in 2 have resulted.

Improved Jet Engine Seals: An Alberta company had developed metal powders for use as abradable seals in jet engines. Because of their superior temperature performance, they have led two major aircraft engine manufacturers to use them on their production engines. Powders are now also being exported.

Petro Chemical Exploration: An Ontario company has received IRAP support to developed a novel airborne geophysical/geochemical system for oil and gas exploration. It detects hydrocarbon leakage in geochemical "chimneys" found in geological structures.

Section II
Analysis by Activity

A. National Competence in the Natural Sciences and Engineering

Objective

To foster a milieu in Canada for the search for new scientific and technical knowledge and to develop and maintain a capability to respond rapidly and effectively to forthcoming needs for scientific expertise, engineering know-how, and in-depth analysis of problems in science and technology both nationally and internationally.

Resource Summary

This Activity accounts for approximately 9.7% of the net 1985-86 Program expenditures and 17.5% of the person-years. The breakdown of the Activity expenditures is shown in Figure 6.

Figure 6: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Physical and Chemical Sciences	**18,747**	**268**	19,762	289	19,794	304
Biological Sciences	**14,221**	**186**	12,529	174	10,652	166
Engineering	**7,909**	**107**	8,112	119	6,251	104
Gross Program cost	**40,877**	**561**	40,403	582	36,697	574
Receipts and revenues credited to the Vote	**118**	**-**	162	-	70	-
Net expenditures	**40,759**	**561**	40,241	582	36,627	574

1985-86 resources include $35.6 million for operating and $5.3 million for capital; 1984-85 resources include $35.9 million for operating and $4.4 million for capital; 1983-84 resource include $32.8 million for operating and $3.8 million for capital.

Description

The research effort for this Activity is undertaken to build and maintain national competence in the natural sciences and engineering, to acquire knowledge, and to gain the understanding that is essential to future applications in science and technology.

Science is the process of developing explanations of initially incomprehensible effects and phenomena. To be acceptable these explanations must successfully predict the existence of other effects arising from the same underlying causes. In this way new understanding and knowledge are gained and new practical applications developed.

The work involves activities that are many and various. Thinking, reading, manipulating materials or living cells in a laboratory, observing with massive radio telescopes or sophisticated electron microscopes, developing mathematical models, processing data in a computer, writing scientific papers, exchanging information and ideas with other scientists - all these and more make up this Activity.

Performance Information/Resource Justification

The standard of excellence set by the participation in basic research by Canadian scientists is an important component of Canada's international status and prestige, but such fundamental understanding is essential to even the most applied research because it is the foundation on which all future applications are based. If Canada is to achieve and maintain a position as a technologically advanced and competitive trading nation, its scientists in every discipline must keep pace with the progress of science by devoting a portion of their time to understanding and contributing to current advances. Knowledge for the sake of knowledge is also knowledge for the sake of survival in an increasingly complex technological world.

The benefits to Canada of this Activity are intangible but real. They include an increased competence in the use of science and technology to solve problems and anticipate national needs and an increased ability to assess new opportunities for Canada. An enhanced international status in science and technology provides Canadian scientists with access to new developments in the laboratories of other countries, and gives Canadian technology a credibility that is esential to successful participation in national and export markets.

In Canada, there is an urgent industrial requirement for basic scientific information related to technological processes. Even high technology companies can afford to spend only a tiny fraction of their efforts on basic R&D, their activities being overwhelmingly concentrated on product development. Basic understanding can be obtained only through the type of long-term research that is not being

performed by industry and that is often not best suited to university programs which are adapted to a turnover of graduate students and which cannot maintain large complementary programs of industrial support and technology transfer.

NRC relies upon peer review through the medium of its Review Committees to assess the quality of its fundamental research (see Section III - D.2). Also much of the justification of this Activity must lie in the products and results of the other Activities that it supports.

A few examples of recent successes are given here to indicate the type and range of work carried out in this Activity:

Discovery of a Third Black-Hole: Theory predicts that under certain conditions a star can collapse under its own weight into such a small space that matter is crushed into a formlessness so dense that even light cannot escape the gravitation pull. Two NRC astronomers and an American colleague have found strong evidence for what is believed to be only the third such black-hole ever discovered in space.

Discovery of Distant Galaxies: An NRC and an American astronomer made a major and surprising discovery in December, 1983, forcing scientists to reassess their concepts of galaxies. The two discovered distant galaxies that emit infrared energy 50 to 300 times greater than the visible light they give off. Until now, the most extreme example of this type of galaxy radiated only about 10 times more infrared than visible light. Galaxies, for the most part, emit as much infrared as visible energy.

Noise Source Identification in Complex Machinery: Research carried out by NRC scientists on sound intensity measurement using two closely spaced microphones is contributing to practical and cheaper ways to identify the sources of noise in complex machinery.

Antioxidation Research: NRC scientists have successfully identified and elucidated chemical mechanisms in deterioration of inorganic and organic materials through oxidation. Based on this understanding, methods and materials have been developed for retarding oxidative degradation of food stuffs, edible oils and plastics leading to considerable commercial and economic benefits.

Tests for Carcinogenicity: NRC research on the mechanism of cell proliferation has led to practical methods for testing the carcinogenicity of substances suspected of causing cancer.

Inorganic Semiconductor materials: NRC scientists studying the preparation and properties of semiconductors have contributed to and acquired fundamental knowledge about the preparation and characterization of gallium arsenide. There is world-wide commerical interest now in the development of micro-circuitry based on thin films of gallium arsenide.

Machine Vision: Engineers and technologists at NRC have developed a machine vision system that could be used to provide information on the position and orientation of a remote object in space. The machine vision system is proving to be a powerful tool, not only for the control of manipulators in space but also for the control of industrial manipulators and robots used in inspection or manufacturing tasks on earth.

Figure 7: Resource Allocation to Disciplines and Areas of Research ($000) and Person-Years

B. Research on Problems of Economic and Social Importance

Objective

The prime objective of this Activity is to provide and maintain a capability to carry out major scientific and technological research and development programs to meet perceived national needs and priorities.

Resource Summary

This Activity accounts for approximately 15.5% of the net 1985-86 Program expenditures and 22.6% of the total person-years. The breakdown of this Activity is shown in Figure 8.

Figure 8: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Building and Construction	11,834	172	9,719	146	8,673	150
Energy	25,929	162	50,284	232	45,275	237
Environmental Quality	4,421	51	5,365	66	4,463	64
Food and Forestry	8,580	101	8,025	98	7,031	103
Health	6,405	92	5,998	88	5,848	96

Transportation	6,628	107	6,242	107	5,941	98
Gross Program cost	65,996	721	87,727	773	78,958	781
Receipts and revenues credited to the Vote	1,092	-	1,480	-	615	-
Net expenditures	64,904	721	86,247	773	78,343	781

Explanation of Change

1985-86 resources include $50.8 million for operating, $6.0 million for capital, and $9.2 million for transfer payments; 1984-85 resources include $67.1 million for operating, $11.5 million for capital, and $9.2 million for transfer payments; 1983-84 resources include $60.7 million for operating, $9.8 million for capital, and $8.4 million for transfer payments.

Decrease in resources from 1984-85 to 1985-86 resulted from reduced energy R&D and elimination of the Environmental Secretariat.

Description

R&D carried out in this Activity is aimed at the solution of problems of economic and social importance, including building and construction, energy, environmental quality, food and forestry, health, public sector, and transportation requirements.

Building and Construction: Building and construction R&D, primarily carried out in the Division of Building Research (DBR), is focused on construction problems peculiar to Canada, including permafrost, ice engineering, and the behaviour and performance of buildings and building materials under Canadian climatic conditions. DBR is also responsible for building and construction standards including the National Building Code and the National Fire Code.

Energy: Much of the Energy R&D is performed under the aegis of the Interdepartmental Panel on Energy R&D (PERD); these portions are coordinated by NRC's Division of Energy and are carried out in various NRC divisions and by Canadian industry, universities, and other organizations under contracts or contributions. NRC also provides resources to supplement and complement the R&D conducted and managed under the auspices of PERD.

PERD has assigned to NRC the coordination responsibility for all renewable energy R&D including solar, wind, and biomass energy. NRC also has program management responsibility for R&D related to nuclear fusion, heat pumps, hydrogen and energy storage, and energy conservation in buildings, as well as many sub-programs.

A considerable body of knowledge has now been amassed in most of these areas so the PERD resources will be phased out over a two year period and energy R&D will diminish proportionately. Future work will concentrate on developing areas of partial knowledge, such as fusion, or on areas of immediate need and application, such as tar sands and coal.

Environmental Quality: The Atlantic Research Laboratory and the Division of Chemistry develop methods and produce calibration samples to assist Canadian governments and industry in detecting and measuring, at the level of accuracy required by federal and provincial legislation, minute quantities of toxic metals and chemical substances such as PCB's and dioxins in foods, seawater, marine vegetation and sediments, and other aspects of the environment. The Division of Biology studies the means by which toxic substances inflict metabolic damage and are distributed through environment. Various divisions conduct research in atmospheric and noise pollution.

Food and Forestry: R&D related to food and forestry is conducted primarily by the Plant Biotechnology Institute and the Atlantic Research Laboratory. This work is directed toward developing new and improved crop strains and enhancing their production and utilization.

Health: Health-related R&D includes the development of electronic aids and communication devices for use by the physically handicapped; studies of health problems caused by vibration and sound; the development of medical and clinical devices; and studies of biological responses and control mechanisms related to cancer and toxins. The Divisions of Electrical Engineering, Biological Sciences, and Physics undertake most of this work.

Public Sector: Public Sector R&D is conducted primarily by the Divisions of Physics and Electrical Engineering, and by the National Aeronautical Establishment. Included is work related to air transportation safety and to the development and application of computer-aided learning systems and techniques.

Transportation: The Division of Mechanical Engineering, the National Aeronautical Establishment, and the Institute for Marine Dynamics carry out most of the transportation R&D under this Activity. Major areas encompass surface, air, and marine transportation technologies including transportation systems and power plants, aircraft performance enhancement, aircraft structural and materials behaviour, marine hydrodynamics, and hydraulic studies of rivers, harbours, and offshore structures. Much of the R&D is carried out using NRC's national facilities.

Performance Information/Resource Justification

Building and Construction: Research areas include building technology, building codes and standards, and other areas such as permafrost, avalanche engineering, and tunnelling and underground construction. Figure 9 lists resources allocated to these areas for fiscal years 1983-84, 1984-85 and 1985-86.

Figure 9: Building and Construction R&D Resource Allocation ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Building technology	10,006	147	8,188	122	7,066	124
Codes and standards	1,550	22	1,409	21	1,364	22
Other	278	3	272	3	243	4
Total	11,834	172	9,869	146	8,673	150

Research and development in building technology is carried out both intramurally and under contract. The selection of projects is based on the urgency of demand from the construction industry, coupled with the appropriateness of the work in question for application in Canada. The research subjects include building materials; building structures; geotechnical aspects of building and construction; fire research; energy and services; environmental aspects of buildings, such as noise, comfort and lighting; socio-economic aspects of building and construction; and building performance measurements.

The production and distribution of the National Building and National Fire Codes and related documents provide an important service to local governments, the Canadian construction industry and to the public. NRC provides technical advice to these committees, as well as a secretariat to produce and distribute the codes and their associated documents. Broad input is sought from interest groups across Canada in the preparation of the codes.

Energy: About 91% of the energy expenditures are allocated to projects undertaken by external performers under contract or through contribution agreements, while 9% of the expenditures are for NRC laboratory R&D and management of extramural projects. Intramural R&D projects make use of expertise or facilities within various laboratory divisions.

Resources allocated to NRC through the Interdepartmental Panel on Energy R&D amount to $17.0 million and 30 person-years in 1985-86. PERD supported research by and through NRC is being largely discontinued as part of the government's restraints on program expenditures. The PERD expenditures through NRC in 1985-86 represent commitments to existing contracts and contribution agreements. In addition NRC will provide $8.9 million to carry out continuing research in areas of work of immediate need and application.

Included in the resources allocated to this sub-activity are $9.0 million of contributions employed for the following purposes:

International Energy Agency Implementing Agreements: International collaborative R&D work is supported under the aegis of the International Energy Agency for the development and exchange of information relating to energy conservation and renewable energy. NRC participates on behalf of Canada in R&D Implementing Agreements that relate to all major NRC energy R&D activities.

Institut de recherche d'Hydro-Québec (IREQ) - Magnetic Confinement Fusion Research and Development Program: Contribution to IREQ to develop a magnetic confinement fusion research and development facility in support of the national fusion program. The national fusion program is aimed at scientific awareness and industrial preparedness with respect to fusion energy systems for Canada, in cooperation with national and international organizations.

Research on Materials for Fusion: Contribution to Ontario Hydro for collaborative R&D in fusion materials research. The specific objective is to establish a technical capability in tritium handling which will serve as a base for Canadian industry to exploit international markets in tritium technology.

The Institute of Man and Resources for Operation of the Atlantic Wind Test Site: The purpose of the contribution is to provide a facility for testing and evaluating the performance of wind energy systems. Standards for the safety, performance, reliability and durability of wind energy systems may also be proposed and verified at this facility.

Manitoba HVDC (High Voltage Direct Current) Research Centre: This contribution is provided to support the development of a new generation of HVDC simulator for use in the design of large electric power stations and distribution systems. Technological advancement in this field will assist Canadian industry.

Environmental Quality: Research areas in this category include:

- dispersion of pollutants; and
- reaction of living organisms to toxic compounds.

Food and Forestry: Research areas in this category include:

- development of new and improved crop strains; and
- enhanced crop production and utilization.

Health: Research areas in this category include:

- electronic aids and devices for the physically handicapped;
- development of medical and clinical devices; and
- biological responses and control mechanisms related, e.g., to cancer and toxins.

Public Sector: Research areas in this category include:

- air transportation safety; and
- computer-aided learning (CAL).

Transportation: R&D is conducted in the areas of air, marine, and surface transportation. Figure 10 lists resources allocated to these areas for fiscal years 1983-84, 1984-85, and 1985-86. Most of the work is performed within the NRC laboratories.

Figure 10: Transportation R&D Resource Allocation ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
Area of R&D	$	P-Y	$	P-Y	$	P-Y
Air transportation	3,354	56	3,180	56	2,310	40
Marine transportation	1,457	26	1,361	26	1,964	29
Surface transportation	1,817	25	1,701	25	1,667	29
	6,628	107	6,242	107	5,941	98

R&D projects carried out under air transportation include investigations of the aerodynamics, performance, stability, control, and operations of airborne vehicles; airborne navigation and remote sensing; operating loads and life of aircraft; fatigue of materials and structures; aerodynamic measurement and analysis techniques; engine analysis; and performance verification.

Marine transportation R&D projects include mooring forces on large vessels; computer modelling and simulation of marine passages, structures, and vessels; model testing of ocean structures, platforms, oil rigs, and ice-breaking and ice-transiting vessels; and hydraulic studies of rivers, estuaries, harbours, and offshore structures.

Surface transportation R&D projects include surface vehicle technology; computer modelling and simulation of surface vehicles and structures; analysis of vehicle dynamics; and drag reduction techniques for surface vehicles.

C. Research in Direct Support of Industrial Innovation and Development

Objective

The prime objectives of this Activity are to promote, contribute to and, provide support for a strong and viable scientific and engineering capability in Canadian industry; to contribute to meeting regional needs for research and development in science and technology in a coordinated and effective manner with federal and provincial research organizations, universities, and local industry; and to provide and maintain a capability to carry out major scientific and technological research and development programs to meet perceived national needs and priorities.

Resource Summary

This Activity accounts for approximately 45.9% of the total 1985-86 Program expenditures and 29.7% of the total person-years. The breakdown of this Activity is shown in Figure 11.

Figure 11: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Laboratory R&D and Services	100,815	769	125,705	774	60,955	653
Energy R&D	12,194	68	19,672	68	13,435	76
Industrial Development Programs	80,570	114	81,817	114	63,217	92
Gross Program cost	193,579	951	227,194	956	137,607	821
Receipts and revenues credited to the Vote	1,254	-	1,327	-	503	-
Net expenditures	192,325	951	225,867	956	137,104	821

Explanation of Change

1985-86 resources include $66.9 million for operating, $52.3 million for capital, and $74.3 million for transfer payments; 1984-85 resources include $80.4 million for operating, $68.8 million for capital, and $78.0 million for transfer payments; 1983-84 resources include $58.5 million for operating, $23.7 million for capital, and $55.4 million for transfer payments.

Decrease in resources from 1984-85 to 1985-86 resulted from the cancellation of the Institute for Manufacturing Technology and reduction in energy R&D.

Description

This Activity consists of the performance and promotion of research, development and related activities for the advancement of technology required for industrial development, including technology transfer, financial assistance, cooperative projects and technical services aimed directly at strengthening the research, development and innovative capacity of industry in Canada.

The three main components of this Activity are: R&D and associated industrial support work conducted and/or managed by NRC's laboratories; industrial support for energy-specific projects; and the major programs of industrial R&D support, namely, IRAP and PILP.

Laboratory R&D and Services: All NRC laboratory divisions are involved in conducting R&D and managing R&D contracts aimed at the development of industrial products and processes; in technology transfer to industry; and in providing scientific and technical information and advice to Canadian industry. Laboratory industrial R&D is broadly based, and includes the fields of industrial technology, advanced manufacturing technology, transportation, biotechnology, and space technology.

As well, a considerable amount of work is carried out by the various laboratories of NRC to develop measurement and test methods, conduct testing for industry, and provide calibration services for equipment used for monitoring and measuring the performance of industrial equipment and processes.

Energy R&D: The NRC Division of Energy is responsible for coordinating all federal government research on renewable energy that is funded through the Interdepartmental Panel on Energy R&D (PERD). The Division of Energy also coordinates all PERD funded R&D carried out by scientists and engineers in NRC's disciplinary Divisions, and manages a large volume of energy research contracts with Canadian industry and universities. The disciplinary Divisions provide some additional resources to supplement the PERD-funded R&D and to carry out some research activities in complementary areas. The PERD funded R&D is now being phased out as part of the government's restraints on program expenditures.

Industrial Development Programs: This sub-activity includes the Industrial Research Assistance Program (IRAP) and the Program for Industry/Laboratory Projects (PILP).

IRAP's objectives are to enhance the research and development capabilities of Canadian industry, and to facilitate its access to current technology. The program is designed to increase the scope and calibre of research done in Canadian firms by providing financial contributions and technical assistance for selected research projects expected to lead to significantly new or improved products or services.

It is also aimed at increasing the effective use of state-of-the-art technology by Canadian firms in their solving of specific problems as well as in developing new and improved products, processes, systems, and materials.

PILP is designed to transfer technology from government and university laboratories to industry for commercial exploitation. A key feature of PILP is the extensive collaboration between scientists and selected companies in commercializing the research results.

Performance Information/Resource Justification

Laboratory R&D and Services: Research and development conducted by NRC laboratories in support of industry provides the basis for new industrial products and processes. Consequently, the major outputs of this sub-activity are new and improved knowledge, understanding, techniques, and technologies that contribute to industrial innovation and development in Canada.

As well as providing technical input to many PILP and IRAP projects, the laboratories also offer daily technical support to Canadian industry in many different ways. A survey conducted for NRC by a consultant found that in 1982-83 NRC laboratories had about 2,000 formal and informal interactions with approximately 1,100 companies through such mechanisms as collaborative activities, research contracts, and technology transfer projects, and in addition dealt with over 21,000 technical enquiries from industry of varying degrees of complexity.

Expenditures and person-years allocated by NRC laboratories to industrial research are shown in Figure 12.

Figure 12: Laboratory R&D Expenditures in Support of Industrial Innovation and Development ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
Laboratory	$	P-Y	$	P-Y	$	P-Y
Building Research	2,905	48	2,870	48	2,752	52
Electrical Engineering	5,311	88	5,034	87	4,898	88
Mechanical Engineering	10,571	169	9,759	167	8,736	152
National Aeronuatical Establishment	9,169	97	11,195	94	7,701	106
Industrial Materials Research Institute	12,323	137	10,933	137	10,391	91
Chemistry	4,944	56	6,706	49	3,442	44

Biotechnology Laboratories	36,184	120	43,841	96	14,828	71
Institute for Manufacturing Technology	7,441	-	27,576	44	5,092	2
Institute for Optics	7,800	-	-	-	-	-
Other	1,545	21	5,301	20	686	11
Total	100,815	769	125,705	774	60,955	653

A small sampling of the research work currently in progress within each laboratory are listed in Figure 13.

Figure 13: Examples of Industrial Research By NRC Laboratories in support of Industrial Innovation and Development

Laboratory	Research Areas
Atlantic Research Laboratory	• Materials and processes in ore extraction and metal making
Electrical Engineering	• Software and facilities for computer-aided design and manufacturing systems, and technologies for interactive computer graphics • Prosthetic equipment: development of prototypes

Mechanical Engineering	• Interactive computer modelling and simulation of industrial processes • Industrial instrumentation and microprocessors • Application of fluid and plasma dynamics to industrial processes • Gas turbine technology and testing
Industrial Materials Research Institute	• Plastics technology and performance testing • Industrial ceramics • Non-conventional metallurgy and metals technology
National Aeronautical Establishment	• Wind-tunnel investigations and wind effects on structures • Aerodynamic investigations of aircraft and surface vehicles • Structures and materials tests and analyses • Aircraft instrumentation and sensors • Machine Vision • Wind engineering
Chemistry	• Inorganic semiconductors • Corrosion research • Laser photochemistry • Degradation and stabilization of polymers
Physics	• Acoustical measurements and standards for loudspeakers • Photogrammetry: automation and instrument development
Biotechnology Laboratories	• Production of methane from organic wastes • Mechanisms of genetic transformation and expression • Fermentation technology • Alkaloid production from plant cell cultures

Canadian Astronaut Program: Six Astronauts were selected to fly aboard the U.S. Space Shuttle as payload specialists to conduct Canadian experiments including the Space Vision System Experiment and the Space Adaptation Syndrome Experiment. The six candidates began training for the missions in January, 1984.

NASA has given Canada one spot on each of three Space Shuttle missions. The first mission flew in October, 1984. The second is scheduled for spring 1986, and the third for fall 1986. Dr. Marc Garneau was selected as the crew member for the first mission with Dr. Robert Thirsk as the backup. Dr. Garneau conducted several experiments during the October mission in space technology, space science and the life sciences. The area of space technology involves important development tests for the NRC Space Vision System experiment to be flown on a later mission; space science studies will deal with the physical characteristics of the space environment and of the earth's upper atmosphere; and the life sciences component includes several Space Adaptation Syndrome experiments as preparation for more detailed investigations on a future flight.

Energy R&D: Many of the resources for energy R&D projects conducted and managed by NRC are allocated from the energy envelope based on priorities set by the Interdepartmental Panel on Energy R&D and its various task and program committees. In addition, NRC provides resources directly from its own appropriations for R&D in supplementary and complementary project areas consistent with its objectives and sub-objectives under this sub-activity. PERD supported R&D is being phased-out.

The energy project areas include wind energy systems, tar sands, coal, and transportation, including vehicle aerodynamics and engine performance.

The outputs of the Energy R&D sub-activity include the development of new and improved devices, techniques, processes, systems, and products. Examples of current projects include:

- development and testing of a large capacity vertical axis wind turbine in collaboration with l'Institut de recherche d'Hydro-Quebec;
- hydraulic energy;
- aeroacoustics of fans and blowers;
- coal beneficiation;
- truck aerodynamic drag; and
- tar sands.

Included in the resources allocated to the energy R&D is a $4.5 million contribution for the Institut de recherche d'Hydro-Québec - Large Capacity Vertical Axis Wind Turbine Program. The purpose of this contribution is to construct and evaluate the design, fabrication, and

operation of a prototype megawatt-scale vertical axis wind turbine and to generate performance and economic data that will establish the basis for using such devices in electrical utility networks. The contribution represents an equal sharing with Hydro-Québec of the costs of this cooperative project.

Industrial Development: The resources allocated to this sub-activity are utilized primarily by the Industrial Research Assistance Program (IRAP) and the Program for Industry/Laboratory Projects (PILP).

IRAP: IRAP provides support for research and technological innvoation in Canadian industry in two main ways. First, technical information, guidance, and assistance is provided for increasing companies' technological awareness, helping solve their technical problems, and encouraging their use of new technology. And second, financial contributions and technical assistance are provided for specific research projects to be conducted in, or on behalf of, incorporated companies.

Assistance in the first category is provided under two program components. These are IRAP-C, a Field Advisory Service to Canadian companies, maintained by a network of technical specialists across Canada; and IRAP-F, a Technical Information Service that assists Canadian firms to solve specific technical problems by drawing on scientific and engineering expertise in NRC, other government laboratories, universities, research institutes, and various private laboratories, as well as on the scientific and technical literature in NRC's Canada Institute for Scientific and Technical Information. These services are particularly appropriate to small companies or those with limited technical facilities, staff, or library facilities.

Assistance in the second category is provided under four program components as a means of better targetting NRC's support. The IRAP-H component provides support to small companies for employing university or technical college undergraduates hired for up to four months to solve specific technical problems. The IRAP-L component provides support of up to $4,500 to small firms for contracting for Laboratory Investigations with research institutes, universities, or consulting firms to solve specific or engineering problems. The IRAP-M component provides support of up to $30,000 to small companies for undertaking short-term, small R&D projects. The IRAP-P component provides support to larger companies for longer-term R&D projects.

Allocation of IRAP contributions to each of the six components and operating resources for Field Advisory Service and Technical Information Service are shown in Figure 14.

Figure 14: Allocation of IRAP Resources ($Millions)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
	$	$	$
Contributions to:			
Field Advisory Service (IRAP-C)	5.5	6.0	3.9
Technical Information Service (IRAP-F)	1.0	1.6	1.3
Firms employing undergraduates (IRAP-H)	4.3	4.5	3.7
Laboratory investigations (IRAP-L)	4.8	6.0	3.0
Small projects (IRAP-M)	7.7	6.8	5.0
Large projects (IRAP-P)	24.0	25.3	25.4
Total contributions	47.3	50.2	42.3
IRAP-C Operating expenditures and (P-Y)	3.6(50)	3.1(50)	1.85(32)
IRAP-F Operating expenditures and (P-Y)	0.9(15)	0.8(15)	1.0(15)

Field Advisory Services (IRAP-C) are delivered both by NRC staff members and by personnel of Provincial Research Organizations, research institutes, and other organizations with which NRC has made contribution arrangements. The Field Advisory Service operates from 20 centres across Canada. Requests from industry for assistance under IRAP-F may also be channeled through these offices. The number of responses to enquiries and consultations provided to industry through IRAP-C and IRAP-F are shown in Figure 15.

Figure 15: Field Advice and Technical Information Enquiries and Consultations provided to Industry

	Forecast 1984-85	Actual 1983-84	Actual 1982-83
Number of enquiries and consultations	40,000	36,000	37,965

Financial contributions and the provision of appropriate technical expertise to industry under IRAP-H, IRAP-L, IRAP-M, and IRAP-P are arranged on a project-specific basis depending upon individual needs. The number of projects and the amounts provided through each of the four categories of financial assistance are shown in Figure 16.

Figure 16: IRAP Financial Assistance To Canadian Companies ($Millions)

PILP: Financial assistance to facilitate the transfer of technology from NRC, other federal government laboratories, and universities to industry for commercial exploitation is available to Canadian-based companies through contracts and contributions. This assistance is provided on a project-specific basis that involves close collaboration between the recipient company and the government or university scientists or engineers to help ensure an effective transfer of the technology.

Proposals received from client companies are evaluated against a set of criteria designed to determine such factors as the economic and social benefit to Canada, level of risk, market potential, company abilities, and contribution to regional development.

Projects are generally supported from the conceptual stage through to prototype or pilot-plant development within the company in order to provide a clear indication of whether the technology can result in a commercially viable product or service. Contribution arrangements involve cost sharing between PILP and the company.

The annual expenditures and number of projects supported by PILP from 1981-82 to 1984-85 are shown in Figure 18. PILP contributions and contract resources for 1985-86 are $25.3 million.

Figure 18: PILP Annual Expenditures ($000)

D. National Facilities

Objective

The objective of this Activity is to meet Canadian needs for major national facilities for science and engineering.

Resource Summary

This Activity accounts for 17.9% of the net 1985-86 Program expenditures and 7.8% of the total person-years. A breakdown of this Activity is shown in Figure 20.

Figure 20: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Engineering Facilities	20,975	137	28,692	127	33,203	107
Scientific Facilities						
Managed by NRC	27,848	113	28,664	123	21,345	120
Managed externally	28,968	-	27,688	-	25,572	-
Gross Program cost	77,791	250	85,044	250	80,120	227
Receipts and revenues credited to the Vote	2,835	-	3,301	-	945	-
Net expenditures	74,956	250	81,743	250	79,175	227

Explanation of Change

1985-86 resources include $25.3 million for operating, $23.5 million for capital, and $29.0 million for transfer payments; 1984-85 resources include $24.1 million for operating, $33.2 million for capital, and $27.7 million for transfer payments; 1983-84 resources include $19.3 million for operating, $35.2 million for capital, and $25.6 million for transfer payments.

Decrease in resources from 1984-85 to 1985-86 resulted from the cancellation of the Rocket and Balloon Facilities, X-rays and Nuclear Radiation research and reduced cash-flow requirement for the construction of the Institute for Marine Dynamics.

Description

Engineering Facilities: Facilities are operated and maintained by NRC primarily for use by industry and governments in testing the design of models and prototypes and in confirming the performance of full-scale machines, systems, and structures. Transportation equipment (including aircraft, railway equipment, ships, and road vehicles as well as their propulsion systems) accounts for most of the applications of these facilities, along with fixed and floating coastal and offshore structures. Facilities are also available for assessing certain aspects of building performance. The major facilities include:

- wind tunnels;
- airborne facilities;
- railway test facilities;
- marine testing facilities;
- gas dynamics test facilities;
- hydraulics facilities;
- engine test facilities;
- low temperature test facilities; and
- a fire research field station.

A description of these facilities is provided in Section III, Supplementary Information, (page 2-64).

Scientific Facilities - Managed by NRC: Facilities are operated and maintained by NRC primarily for conducting fundamental research in physics, astrophysics, and space science. These facilities provide the scientific community in Canada with specialized equipment and installations needed in the search for new knowledge. The major scientific facilities are:

- Dominion Astrophysical Observatory, Victoria, B.C.;
- Algonquin Radio Observatory, Algonquin Park, Ontario;
- Dominion Radio Astrophysical Observatory, Penticton, B.C.;
- Acoustic Facilities, Ottawa; and
- Cooperative International Facilities for Space Science.

A description of these facilities is provided in Section III, Supplementary Information (page 2-66). Their operation includes the provision of operating personnel, data reduction services, and advice on the design, implementation and interpretation of specialized experiments and tests; and the selection and scheduling of these experiments and tests. The maintenance by NRC includes routine servicing and repairs, as well as the introduction of updated electronic and mechanical hardware and occasionally the reconfiguration of major portions of the facilities themselves to meet continually changing test methods.

Scientific Facilities - Managed Externally: Facilities in this category are used for carrying out fundamental research in physics and astrophysics. Operation and maintenance of these facilities are conducted by dedicated managing organizations. NRC supports the operations through annual financial contributions. The facilities are:

- the Tri-University Meson Facility (TRIUMF), Vancouver, B.C.; and
- Canada-France-Hawaii Telescope (CFHT), Mauna Kea, Hawaii

For details of these facilities see page 2-67.

Performance Information/Resource Justification

Engineering Facilities: Engineering research and test facilities are used for the testing of model and prototype aircraft, railway equipment, ships, and road vehicles to assess and improve their structural strength, aerodynamics, and handling characteristics; the testing of full-scale vehicles and their components and power plants to confirm their performance and to identify areas for improvement; the testing of model harbour and offshore breakwaters, drill rigs, and other marine structures to assess their performance, stability, and durability; and the testing of building structures and materials to prevent and reduce fire damage. Usage of the facilities by industry and governments frequently requires the development and application of new test methods and continually more precise means of recording and monitoring data. As part of its own useage of the facilities, NRC conducts research to develop these new methods, and collaborates with outside users to help apply these and other new methods to their testing requirements.

Resources required for these facilities and the extent of facility utilization by and for external users is detailed in Figure 21.

Figure 21: Utilization of Engineering Facilities for External Users

Facility	1985-86 Resources ($000)	1985-86 Resources P-Y	Estimated Utilization by and for external users (percent) 1983-84	Estimated Utilization by and for external users (percent) 1982-83
Wind tunnels	6,423	42	85	85
Airborne facilities	1,277	21	82	77
Railway test facilities	552	6	84	84

	20,975	137		

(1) Under construction
(2) No. 4 test cell (icing facility)
(3) Helicopter spray rig

Scientific Facilities - Managed by NRC: These Scientific facilities are provided to NRC and other researchers.

Facilities for Space Research: These facilities relate to international collaborative projects with NASA and other international organizations and foreign countries. The operation of rocket and balloon launching facilities will be phased out in 1985-86.

The cost, significant outputs, and milestones of the space science research program for 1985-86 are listed in Figure 22. Launch and completion schedules are subject to considerable variation because successful completion depends upon the ability of all participating members to discharge their undertakings on schedule.

Figure 22: Space Science Outputs for 1985-86

Component	1985-86 Resources $(000)	1985-86 Resources P-Y	Specific Outputs and Milestones for 1985-86
Cooperative International facilities	15,735	13	
i) Shuttle Instruments			Development contracts to industry in progress. First Shuttle flight scheduled for 1988-89.
ii) Viking Satellite Instruments			Flight model of Canadian instrument completed Launch of Viking-Spot (Sweden- France) satellite scheduled for mid 1985.
iii) Data Analysis Network; Canadian Auroral Network			Analysis Network development contract complete, network operational. Auroral Network instrument contracts complete, network installation in progress.
iv) Microgravity Experiments			Material processing cooperative flight with Sweden scheduled for early 1986. Materials processing Shuttle flight scheduled for mid 1986.
v) UARS Satellite Instrument			Instrument development contract to industry in place. UARS launch (NASA) scheduled for 1989.
vi) EXOS D'Satellite Instrument			Instrument development contract to industry in place. EXOS D launch (Japan) scheduled for 1989.

vii) HILAT Satellite Ground Station			The Canadian data receiving ground station for the U.S. HILAT satellite is scheduled to begin operation.
Rocket & Balloon Facilities	2,480	7	Being phased out in 1985-86.

Astrophysical Facilities: The astrophysical facilities of the Herzberg Institute of Astrophysics are made available to researchers outside the Program for research in astronomy and astrophysics. Extensive collaboration takes place among facility users, both internal and external, in the design and conduct of experiments; in the interpretation of data; and in improving the methods and systems used at the facilities. The utilization of these facilities by and with external researchers is shown in Figure 23. The decline in the use of the Algonquin Radio Observatory should be reversed by the program of refurbishment that is currently being completed.

Figure 23: Utilization of Astrophysical Facilities for External Researchers

Facility	1985-86 Resources $(000)	P-Y	Estimated Utilization by and with External Researchers (percent) 1983-84	1982-83	1981-82
Algonquin Radio Observatory (ARO)	5,500	44	50*	25	28
Dominion Astrophysical Observatory	2,459	28	54	50	50
Dominion Radio Astrophysical Observatory	1,134	13	85	85	50
Total	9,093	85			

* Data based on partial year. The 46-meter telescope at ARO was shut down for a major overhaul for several months during 1983-84.

Scientific Facilities - Managed Externally: The operations of the Tri-University Meson Facility (TRIUMF) and the Canada-France-Hawaii Telescope (CFHT) are the responsibility of the TRIUMF Board of Management and of the CFHT Corporation respectively.

TRIUMF: This facility is used by particle physics and nuclear researchers from universities, federal and provincial institutes, other research organizations in Canada, and researchers from abroad. The details are available in the TRIUMF annual report.

Canada-France-Hawaii Telescope (CFHT): The CFHT was scheduled for use on 302 nights in 1983, the remaining nights being devoted to various engineering tasks. The distribution of observing time in 1983 among astronomers sponsored by the three collaborating partners was as follows:

- NRC (Canada) 43.7%
- CNRS (France) 44.4%
- University of Hawaii (U.S.A.) 11.9%

The annual reports of the CFHT Corporation provide more detailed information on scientific activities at the facility.

E. Research and Services Related to Physical Standards

Objective

To meet Canadian needs for physical standards in science and engineering.

Resource Summary

This Activity accounts for 2.0% of the net 1985-86 Program expenditures and 3.8% of the total person-years. Activity expenditures and person-years are shown in Figure 24.

Figure 24: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Gross Program cost	8,586	121	8,505	135	8,107	142
Receipts and revenues credited to the Vote	253	-	276	-	111	-
Net expenditures	8,333	121	8,229	135	7,996	142

1985-86 resources include $6.9 million for operating and $1.7 million for capital; 1984-85 resources include $7.4 million for operating and $1.1 million for capital; 1983-84 resources include $7.2 million for operating and $0.9 for capital.

Description

Pursuant to its role in support of the Weights and Measures Act, NRC provides national reference-level measurement standards for Canadian governments and their regulatory agencies, consumer and industrial organizations, universities, and other scientific and technical communities in Canada, as well as to the Canadian public. These standards are maintained as the key elements in a national infrastructure which is essential to ensure sufficient measuring accuracy in trade and commerce, manufacturing, health, occupational safety, and other components of the national economic and social system. The primary standards of time, mass, length, electrical resistance and voltage, temperature, and luminous intensity, as well as a large number of derived physical standards, are maintained by NRC's Division of Physics. Standards related to high voltage electricity and

to electromagnetics are maintained by the Division of Electrical Engineering. Standards related to force and acceleration are maintained by the National Aeronautical Establishment. Standards related to fluid viscosity are maintained by the Division of Mechanical Engineering.

This Activity comprises work in the setting of standards, whereby methods and procedures are developed in order to maintain world-class levels of measuring accuracy for Canada; and the calibration of meters and instruments used by NRC clients to make precise measurements.

Work in the setting of standards is closely correlated with the work of other national standards laboratories around the world and with the Bureau international des poids et mesures (BIPM). The calibration of measuring instruments derives from these primary standards and is provided to Canadian industry, universities, and government agencies. Fees are charged for these calibrations.

Performance Information/Resource Justification

Standards: The level of effort required by NRC in setting standards is governed primarily by the need to keep pace with ongoing changes in fundamental measuring technologies. These changes are introduced periodically as a result of decisions by the BIPM, over which NRC has no direct control. The frequency and degree of these changes influence the intensity and duration of NRC workloads. Resources are allocated to this work on the basis of maintaining an acceptable rate of progress in converting to new standards while continuing to provide services related to standards and to conduct research into methods of improving existing standards.

Calibrations: Resources allocated to these areas are determined by the need to adapt primary standards to the specific measurement needs of Canadian industry, government departments and regulatory agencies, and universities; and by the need to meet demands for calibrations and measurement services. The number of calibrations and measurements performed is shown in Figure 25.

Figure 25: **Number of Calibrations and Measurements Performed by the Division of Physics**

Sector Served	1983 Number Performed	1982 Number Performed	1981 Number Performed
Industry	297	277	321
Governments	58	76	61
Universities	8	26	24
Total	363	379	406

F. Administrative and Special Support Services

Objective

To provide management, administrative and special support services to both programs of the National Research Council.

Resource Summary

This Activity accounts for 9.0% of the net 1985-86 Program expenditures and 18.6% of the total person-years. A breakdown of this Activity is shown in Figure 26.

Figure 26: Activity Expenditures ($000) and Person-Years

1985-86 resources include $40.3 million for operating, $1.4 million for capital, and $2.6 million for transfer payments; 1984-85 resources include $41.6 million for operating, $1.4 million for capital, and $2.3 million for transfer payments; 1983-84 resources include $37.2 million for operating, $2.7 million for capital, and $2.0 million for transfer payments.

Description

Management and Administration: Includes the Executive Offices, the Council Secretariat, Internal Audit Services, Administrative Services, Financial Services, Employee Relations, Personnel Services, Program Evaluation Office and Program Services Secretariat.

External Relations: The Bureau of International Relations arranges international collaborations and exchanges and administers grants in support of international affiliations. The office for Relations with Universities promotes increased collaboration between NRC and Canadian universities.

Computation Centre: The Computation Centre provides computing services to the NRC laboratories, the Canada Institute for Scientific and Technical Information (CISTI), the National Library and the Natural Sciences and Engineering Research Council (NSERC).

Plant Engineering Services: The Plant Engineering Services Branch is responsible for the operation and maintenance of NRC buildings and facilities.

Public Relations and Information: The Public Relations and Information Service Branch is responsible for promoting public awareness and understanding of NRC activities.

Performance Information/Resource Justification

Figures 27 and 28 show the ratio of Administrative and Special Support Services to NRC totals. It should be noted that this activity provides support to both the Scientific and Industrial Research Program and the Scientific and Technical Information Program.

Figure 27: Ratio of Administrative and Special Support Services to Total Person-years

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Scientific and Industrial Research Program	3,198	3,323	2,545

Total	443,289	501,814	396,504
Administrative and Special Support Services	37,932	36,593	37,417
Percentage of Total	8.6	7.3	9.4

In addition, the following grants are administered:

International Affiliations Grants: The grants include: affiliation fees paid by NRC to those organizations of which NRC is the Canadian adhering member; grants to non-federal government employees to serve as official delegates at General Assemblies or scientific and technical working groups of international and non-governmental organizations of which NRC is the Canadian adhering member; and grants to cover expenses for scientists selected for collaborative research under a reciprocal agreement with le Centre national de recherche scientifique de France. In 1985-86 the grants will amount to $583,000.

Grants to Municipalities in Lieu of Taxes: Pursuant to the Municipal Grants Act, NRC pays grants to those municipalities in which it owns real property and receives municipal services. The amount by municipality is shown in Figure 29.

Figure 29: Grants to Municipalities

* Differences in salary range due to NRC being a separate employer

Note: The person-year column displays the forecast distribution by occupational group of the authorized person-years for the Program. The current salary range column shows the salary ranges by occupational groups at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Capital expenditures constitute 21.5% of the total Program expenditures. Figure 34 provides an analysis of the capital expenditures for the type of asset to be acquired.

A listing of major capital projects is shown in Figure 35.

Figure 34: Allocation of Capital Budget ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Construction

B. Cost Analysis

The Scientific and Industrial Research Program's 1985-86 Estimates include only those expenditures to be charged to the NRC's voted appropriations and statutory payments. Other cost items as well as revenue must be included when considering the actual costs to operate the Program. Figure 37 shows the total net cost of the Program obtained by adding the cost of accommodation provided without charge by Public Works and NRC and other services provided without charge by other departments, and by deducting receipts and revenues earned by this Program.

Figure 37: Net Cost of Program by Activity for 1985-86 ($000)

	1985-86 Expenditures	Add Other Costs	Total Cost	Deduct Receipts and Revenue	Total Net Cost	Total 1984-85
National Competence in the Natural Sciences and Engineering	40,877	3,537	44,414	118	44,296	43,896
Research on Problems of Economic and Social Importance	65,996	4,568	70,564	1,092	69,472	91,101
Research in Direct Support of Industrial Innovation and Development	193,579	6,004	199,583	1,254	198,329	231,870
National Facilities	77,791	1,577	79,368	2,835	76,533	83,313
Research and Services Related to Physical Standards	8,586	768	9,354	253	9,101	9,077
Administrative and Special Support Services	44,340	3,760	48,100	6,408	41,692	40,530
	431,169	20,214	451,383	11,960	439,423	499,787

Other costs in Figure 37 include:

Accommodation by Public Works and NRC	= $17.56 million
Employer's share of health and unemployment insurance premiums paid by the Treasury Board	= $ 2.15 million
Employee Compensation under Workman Compensation Acts paid by the Department of Labour	= $ 0.18 million
Cheque issue cost by Dept. of Supply and Services	= $ 0.32 million

C. Revenue Analysis

Receipts and revenues earned and credited to the Program expenditures are summarized in Figure 38.

Figure 38: Revenues and Recoveries by Type ($000)

Revenue Type	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Testing, standardization and other scientific services	5,192	6,146	226
Computational services to the National Library and others	5,866	7,685	5,858
Sale of NRC publications	360	400	361
Others	542	1,003	276
Total Program	11,960	15,234	6,721

Others include monies received as adjustments to prior year's expenditures, conference registeration fees and miscellaneous revenues and recoveries.

D. Additional Information

1. National Facilities

Engineering Facilities: NRC operates a number of major national engineering facilities to support engineering R&D in selected areas of national need and priority. A brief description of the major facilities follows:

Wind Tunnels: The National Aeronautical Establishment (NAE) operates and maintains a number of wind tunnels as national facilities for use by industry and government. The three principal tunnels are a 2m by 3m low-speed wind tunnel, which began operations in the early 1940s; a 1.5m by 1.5m trisonic blowdown tunnel, which was commissioned in 1962; and a 9m by 9m low-speed tunnel, which was commissioned in 1970. Major industrial users of these facilities are the aircraft manufacturing companies but there is increasing demand from other users for wind engineering studies on buildings and bridges, for developing urban core wind profiles, for measuring the wind drag of surface vehicles such as trucks and cars, and for other applications.

Airborne Facilities: The National Aeronautical Establishment operates and maintains test facilities mounted in specially configured aircraft, for use, primarily by Canadian aircraft manufacturers and government departments, in simulating the performance of new aircraft design features; in investigating hazardous aircraft operating conditions or failure occurrences; in conducting detailed studies of turbulence and other atmospheric conditions; in testing navigation systems; and in testing other flight-related conditions, systems, and equipment. The facilities include a flight mechanics airborne simulator, two atmospheric studies aircraft, and a remote sensing and navigation systems aircraft.

Railway Test Facilities: The Division of Mechanical Engineering operates and maintains national test facilities for use in rail-related research by railway operators, car and locomotive builders, railway users, and government regulators on problems related to lubrication, car dynamics, structures, and other specialized subjects. This research is aimed at improving the performance of locomotives, rolling stock, and related equipment; and reducing wear, damage to cargo, and the incidence of train derailments. The facilities currently include a curved track simulator, a vibration test facility, a vehicle squeeze frame, and an impact test ramp. A wheel, brake, and bearing test rig is under development to permit the study of fatigue and failure of these components under controlled conditions.

Marine Testing Facilities: NRC provides national facilities in marine hydrodynamics for use by Canadian researchers in fields such as marine propulsion, manoeuvering, seakeeping, hydrodynamics, ocean environment, and Arctic modelling techniques. The main facilities currently operating in Ottawa are a towing tank, a manoeuvring basin, and a cavitation tunnel, with associated computer-based equipment for data gathering and analysis.

The growing offshore activity on Canada's east coast and Arctic regions has expanded the requirement for facilities and related expertise in all aspects of naval architecture and marine engineering, especially as applied to northern and ice-covered waters. As a result the Institute for Marine Dynamics is being established in St. John's, Newfoundland, and is expected to be fully operational by 1985-86. The Ottawa-based capabilities will be transferred to the new Institute, which will provide Canadian industry, governments, and universities with facilities and technical support needed for the design, development, and construction of vessels and fixed structures for operation on or below ice-covered waters, and for conducting model tests on all types of vessels and on fixed structures operating on or below ice-covered waters. The main facilities will be an ice towing tank, an open water towing tank, a computer-controlled model-making facility, and associated data gathering systems, design offices, and machine shops.

Gas Dynamics Test Facilities: The Gas Dynamics Test Facilities of the Division of Mechanical Engineering are centered around a very large air compressor and exhauster plant that generates the high volume air and gas flows needed in gas dynamics testing and research. This research focuses on the dynamics of very high temperature gases flowing through machinery, and is done largely by Canadian manufacturers in developing and testing gas turbine engines and aeronautical, marine, and railway equipment and power plants. The testing facilities include combustion facilities, a propulsion tunnel, and an altitude test chamber.

Hydraulics Facilities: The national facilities maintained and operated by the Hydraulics Laboratory of the Division of Mechanical Engineering include the Deep Water Wave Basin and the Coastal Wave Flume.

The Deep Water Wave Basin provides for scale model testing of ocean engineering structures intended for use in deep water. The associated wave machines generate long and short crested waves that simulate the wind and wave environments necessary for the accurate performance appraisal of off-shore oil drilling rigs, production platforms, etc.

The Coastal Wave Flume is provided for the simulation of coastal or shallow water conditions. The major problem areas are shoreline erosion and sedimentation as well as the effect of waves and currents on coastal structures such as breakwaters and other harbour facilities.

Engine Test Facilities: The Division of Mechanical Engineering operates and maintains facilities consisting of a calibrated gas turbine test cell, an engine icing test cell, and an anechoic test cell for use by Canadian industry and governments in monitoring and improving the performance of gas turbine aircraft engines. The testing capabilities include the measuring of such factors as thrust and fuel consumption, the effect on in-flight performance of passing through icing clouds, and the operating noise levels of these engines. Testing at the facilities is a means of accurately simulating flight conditions, and is among the Transport Canada flight certification procedures for aircraft engines.

Low Temperature Test Facilities: The Division of Mechanical Engineering operates and maintains national facilities for conducting tests on various types of machinery, primarily transportation equipment, under controlled low-temperature conditions. The facilities are used by Canadian aircraft and vehicle manufacturers, railways, and government departments and agencies. One of the three facilities is a climatic engineering test facility, a large chamber built to accommodate locomotives, railway and subway coaches, off-road vehicles, and building modules and other large structures. It can provide temperatures as low as -43°C, winds over 60 km/hr, snowfall up to 3 cm/hr, and freezing rain conditions. A second facility is the helicopter icing facility, a spray rig used to test the effectiveness of de-icing systems on full size helicopters that are flown under the continuous spray. The third facility, an icing tunnel, is used by Canadian industry and governments to test aircraft components and other equipment under low temperature conditions.

Fire Research Field Station: The Division of Building Research operates and maintains a facility located at Carleton Place, Ontario for use by government departments, regulatory agencies, and Canadian building and furniture supply manufacturers. It permits full-scale studies of the generation and spread of fire and smoke, both from room-to-room and floor-to-floor in houses, mobile homes, and high-rise buildings, and allows testing the effectiveness of fire retardant materials and extinguishing systems. The facility consists of a large hangar-like structure, 30m by 60m by 12m high; a ten-storey high-rise structure; and associated data gathering and workshop support service areas.

Scientific Facilities - Managed by NRC:

Facilities for Space Science: The Canada Centre for Space Science coordinates and plans space science activities at the national and international level, including the provision of scientific instrumentation and systems for flights on NASA's Space Shuttle and on satellites launched by other countries.

Astrophysical Facilities: The Herzberg Institute of Astrophysics (HIA) operates and maintains the Dominion Astrophysical Observatory (DAO) in Victoria, B.C., the Dominion Radio Astrophysical Observatory (DRAO) at Penticton, B.C., and the Algonquin Radio Observatory (ARO) in Algonquin Park, Ontario.

The DAO facility is an optical observatory that provides three telescopes for use by Canadian scientists (including HIA staff) in astronomical research. The detection and data processing systems include spectrographs, computers, and measuring engines. The facility is also used for processing data obtained at the Canada-France-Hawaii Telescope. DAO is a world centre of excellence in the design of large telescopes and the polishing of large mirrors. Work done at the observatory includes research into supernovas, interstellar matter, stellar atmospheres, and black holes. The DRAO facility provides two radiotelescopes for detecting and analyzing radio waves from space. Work at the observatory includes studies of the distribution and velocity of gases in order to determine the structure and evolution of objects such as galaxies and supernova remnants. The ARO facility is the major Canadian radio observatory. It possesses the largest fully steerable parabolic reflector in North America. Work at this observatory includes research into the distribution and formation of molecules in space, and studies of quasars and distant galaxies.

Other Scientific Facilities: The Division of Physics operates and maintains an acoustics facility used for research into sound reproduction and human hearing. Among the more applied uses of this facility are the testing and calibration of high-fidelity loudspeakers by Canadian industry.

Scientific Facilities - Managed Externally: There are two relatively large national scientific facilities which receive funding from the Federal Government through NRC: the Canada-France-Hawaii Telescope (CFHT) and the Tri-University Meson Facility (TRIUMF).

Canada-France-Hawaii Telescope: The CFH telescope is jointly sponsored by the National Research Council of Canada, le Centre national de la recherche scientifique of France, and the University of Hawaii. To carry out the construction of the telescope and its subsequent operation, the three founding members entered into a tripartite agreement and formed a non-profit Corporation incorporated in the State of Hawaii. According to the terms of the agreement, construction costs of the telescope were equally shared by Canada and France, with the University of Hawaii contributing local facilities and services. Observation time on the completed telescope is shared by the partners in the proportions of 44, 44, and 12 per cent respectively. Payment of the NRC share of operating costs is in the form of a contribution to the Canada-France-Hawaii Telescope Corporation.

Tri-University Meson Facility: TRIUMF is a world class centre for research in intermediate energy physics and related disciplines. It is located on the campus of the University of British Columbia, Vancouver, and operated as a joint venture by the University of British Columbia, Simon Fraser University, the University of Victoria and the University of Alberta. The central feature is a uniquely designed sector-focused cyclotron that accelerates negative hydrogen ions to an energy of up to 500 MeV in a continous mode. The unique design permits the extraction of proton beam through as many as six separate ports for experiments with protons, mesons and neutrons in a highly diversified program of basic and applied research.

The land, buildings and some administrative services have been provided by the universities; the accelerator, beam lines, experimental equipment and operations have been funded by the federal government. AECB was the responsible federal agency from the founding of TRIUMF in 1968 until March, 1976. NRC assumed responsibility at that time. Funds for operating, maintaining, and developing the facility are provided by NRC by means of an annual contribution. The research program is funded largely by granting agencies such as NSERC and to a lesser extent by NRC and external supporters of the applied program such as AECL, the B.C. Cancer Foundation, and NOVATRACK Inc.

2. NRC's External Review Mechanisms

NRC has always relied heavily on the constituencies that it serves for advice on the content and application of its laboratory research, services and information programs. To ensure the availability of expert external advice NRC has traditionally used a wide variety of mechanisms, including Council itself, committees of Council, symposia, and special studies. In recent years, the Council has taken positive action to focus this process of evaluation and apply it more systematically to all laboratory activities by supplementing the existing external advisory committees with an additional mechanism for external review, namely the Review Committees of Council. All told, there are almost a thousand external experts involved each year in providing advice and comment through the medium of Review, Associate, and Advisory Committees. Very briefly, the various committee mechanisms are summarized below:

Review Committees: These committees, generally chaired by a Council Member, and composed of members mainly from industry and universities, are convened for a limited time with the following general mandate:

- to review the research and service activities of selected components of NRC in relation to the role and objectives of NRC;

- to assess the overall quality, effectiveness and future promise of these activities; and

- to make recommendations to Council concerning the future direction and future level of effort of these activities.

Special tasks can be added to the terms of reference of a particular Review Committee. NRC senior management is available to the Committee before, during or after the actual review to clarify the extent of the review and to respond to any questions which may arise.

Associate Committees of Council: The network of Associate Committees continues to provide an effective means of coordinating scientific activities across the country, as well as contributing to the exchange and dissemination of scientific knowledge. An Associate Comittee may concern itself with an immediate or short-term problem, or it may have a continuing responsibility in a particular area of science or engineering. There are currently 26 Associate Committees of Council:

- Associate Committee on Agricultural and Forestry Aviation
- Associate Committee on Astronomy
- Associate Committee on Biotechnology
- Canadian Committee on Building Research
- Associate Committee on Consulting Engineering and Technology Transfer
- Canadian National Committee on Earthquake Engineering
- Associate Committee on the Occupational Application of Ergonomics Research
- Canadian Committee on Fats and Oils
- Canadian Committee on Forest Fire Management
- Associate Committee on Geotechnical Research
- Associate Committee on Hydrology
- Associate Committee on Instructional Technology
- Associate Committee on Machinery Noise
- Associate Committee on Meteorites
- Associate Committee on the National Building Code
- Associate Committee on the National Fire Code
- Associate Committee on Propulsion
- Associate Committee on Research and Development for Rehabilitation of the Disabled
- Associate Committee on Research for the Fire Services
- Associate Committee on Research for Shoreline Erosion and Sedimentation
- Associate Committee on Scientific Criteria for Environmental Quality
- Associate Committee on Solar Energy
- Associate Committee on Standards of Physical Measurements
- Associate Committee on Space Research
- Associate Committee on Toxicology
- Associate Committee on Tribology

Advisory Committees: Although similar in some respects to Associate Committees, Advisory Committees are less general in their mandate and are established to advise NRC primarily on laboratory activities. There are currently 11 Advisory Comittees:

- Atlantic Advisory Committee
- Advisory Committee on Aerodynamics
- Advisory Committee on Energy
- Advisory Committee on Fusion-related Research
- Advisory Committee on the Institute for Manufacturing Technology
- Advisory Committee on Research with Human Subjects
- Advisory Committee on the Industrial Materials Research Institute
- Committee on International Scientific and Technological Affiliations
- Advisory Board on Scientific Publications
- Advisory Board on Scientific and Technical Information
- Advisory Board on TRIUMF

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $23,015,000 in support of the 1985-86 Scientific and Technical Information Program. The remaining expenditures, estimated at $1,065,000 for contributions to employee benefit plans will be made under existing statutory authority.

Financial Requirements by Authority

Section I
Program Overview

A. Highlights

In 1985-86 the Scientific and Technical Information Program plans:

- to perform studies and gather data necessary for implementing policy and operational changes aimed at ensuring in the area of document delivery the optimum level of service possible in the face of a predicted increase in workload of more than 10%;

- to continue to maintain a base of scientific and technical information that reinforces and supplements other collections so that the Canadian industrial and research community requirements for scientific and technical documentation can be supplied 90% of the time from Canadian sources and within an acceptable time frame for utilization; and

- to support a predicted 8% increase in the number of printed pages for the Canadian Journals of Research.

Authorized person-years			**251**			245

C. Background

1. Introduction

The activities and associated resources comprising the Scientific and Technical Information Program include the publishing of the Canadian Journals of Research and the operation of the Canada Institute for Scientific and Technical Information (CISTI).

Publication of scientific journals within NRC began in 1929 when the first Canadian Journal of Research was published. The Program now supports 13 titles. Promotion of the journals over the last few years has increased their visibility, improved sales, and attracted additional submissions.

The purpose of CISTI is to satisfy the needs of the Canadian scientific, engineering and health service communities for scientific and technical information.

CISTI has focused its attention on the development and application of electronic techniques to expedite and facilitate the retrieval and dissemination of information. Sources of information have been continually developed in close cooperation with all major libraries in Canada. These sources together with associated services have been designed to complement and supplement local collections and also to provide an essential backup to the information services provided by CISTI's staff of information specialists. The collections of university, federal, provincial and industrial libraries are linked and made available on a national basis. To this extent, Canadian scientific and technical communities have ready access to the contents of the different publications and journals that constitute the vast majority of the world's scientific and technical literature.

2. Legal Mandate

The National Research Council Act provides the legal mandate for all operations carried out in the Scientific and Technical Information Program.

3. Program Objective

Objective: To promote and provide for the use of scientific and technical information by the people and government of Canada to meet Canadian needs for economic, regional and social development.

Sub-Objectives:

- to develop and maintain a national resource in scientific and technical information that can respond to national needs and priorities;
- to provide and maintain services associated with scientific and technical information to meet the needs of the people and government of Canada;
- to coordinate the resources of the National Research Council with those of other information transfer institutions both national and international, and participate in the development and maintenance of scientific and technical information networks; and
- to provide and maintain a capability and carry out research into the need for and methods of accomplishing the transfer of scientific and technical information in response to user needs.

4. Program Description

The Scientific and Technical Information Program contributes to the overall NRC mandate by operating a nation-wide network of scientific and technical information services and by providing information services in support of all NRC-related activities. In support of the program objective, "to promote and provide for the use of scientific and technical information" there is a wide spectrum of activities that can be divided into two main functions: the publishing of the Canadian Journals of Research, and the provision of information services by the Canada Institute for Scientific and Technical Information (CISTI).

NRC provides the editorial and publishing functions for 13 world-class scientific periodicals known collectively as the Canadian Journals of Research. These journals publish research papers and notes authored and refereed by scientists in many disciplines, who may work in laboratories anywhere in Canada or in other countries.

The development and maintenance of the CISTI national collection includes the selection, acquisition, analysis, storage, retrieval and transfer of published and machine-readable scientific and technical information regardless of the language or country of origin. Journals are the most important form of publishing. Next in importance are conference proceedings and books. Subscriptions to over 22,000 journal titles are maintained, and approximately 1,400 new titles are added each year. The collection also grows by some 20,000 books and 13,000 conference proceedings annually. The present collection has evolved over the last 50 years and would be extremely difficult, if not impossible, to develop today since many publications are printed in limited numbers and soon become out-of-print.

Each item received is recorded in various catalogues, indexes and reference systems, and is stored, ready to be retrieved for loan, photocopy or reference and subsequently reshelved. Journals and other periodical literature are bound into sets to preserve them during frequent use.

In addition to print and microform, the collection also contains machine-readable data in the form of indexes, abstracts and evaluated data that is used as a source for computer-based information services. As well as serving as a reference to the CISTI collection in a particular subject area, these databases identify the international information available on a subject.

Through its national Canadian Selective Dissemination of Information (CAN/SDI) service, CISTI continuously alerts subscribers to the existence of recent papers covering their specific fields of interest. This service is augmented by the Canadian On-Line Enquiry (CAN/OLE) service which allows retrospective searching of large bibliographic files via computer terminals located across Canada. Hence, users are able to search the world's scientific and technical literature very quickly to determine what has been recently published in all major fields of science and technology.

The Canadian Scientific Numeric Databases (CAN/SND) service, consisting of a machine-readable collection of critically evaluated scientific numeric data and computer programs, allows researchers to search, retrieve and manipulate data in a wide range of theoretical and experimental applications.

The Health Sciences Resource Centre within CISTI is used to coordinate, strengthen and make readily available existing medical literature and information resources throughout Canada. Access to biomedical information in the Medical Literature Analysis and Retrieval (MEDLAR) system databases of the U.S. National Library of Medicine is also available through the Health Sciences Resource Centre. In addition, the Centre answers health-related reference questions.

CISTI provides several other accessory and coordinating services which are national in scope. Some of these services are: a computerized inventory of federally funded research carried out at all Canadian universities; the provision of English or French versions of foreign-language scientific papers; the maintenance of a Reference and Research staff to answer requests for scientific and technical information and to carry out literature searches and compile bibliographies; and a referral centre for seekers of scientific and technical information.

CISTI branches have developed in parallel with the NRC laboratories they serve. As a result, a full range of information services is provided in direct support of laboratory activities to all research, technical and administrative staff. These branches are vital to the scientific and engineering staff of NRC in providing access to CISTI's central collection and services, to current research, and to scientific and technical developments.

5. Program Organization for Delivery

The Program is sub-divided into two operations, namely CISTI and the Research Journals. The breakdown of resources by organizational components is shown in Figure 2.

Figure 2: 1985-86 Resources by Organization/Component ($000 and Person-Years

The Vice-President, External Relations, has overall responsibility for the Program. The Director of CISTI is responsible for the design and implementation of the CISTI program, and the Manager of the Research Journals is responsible for the publication of the 13 research journals.

D. Planning Perspective

1. Environment

The following factors significantly affect the direction and nature of the Scientific and Technical Institute (STI) Program.

Canadian Research and Development: The level of activity and the nature of scientific and technological activities in Canada directly affect both the demand for services provided by the STI Program and the level of cooperative efforts required to coordinate a national network of STI services.

The increasing level of R&D activity in Canada, particularly in the industrial sector, as well as increasing emphasis on information, continues to generate increased demand for STI services. This increase in overall demand, combined with increases in specialized requirements and a proliferation of systems, products and applicable technology, continues to present challenges to the Program in maintaining a balance between demand and service in an environment of constant change and limited resources.

Technological Climate: In the 1960s, spectacular technological changes and rapid advances in the telecommunications field gave new and powerful tools to large-scale library operations that offer convenient and reliable services to a national clientele.

The application of modern information technology has affected a large percentage of the work processes over the past two decades. These new automated storage and retrieval services depend on systems which must be refined, improved and modified according to changing user needs. These systems also incur on-going costs associated with storage of the machine-readable records. Use of automated systems provides greater throughput per hour of work. However, use also translates into longer learning curves for new employees and a greater need for on-going training to accomodate system changes and maintain staff competence in the efficient use of the systems.

One increasingly important function of the Program is the national document delivery service. Much of the activity consists of retrieving copying, mailing and reshelving materials. These activities are labour intensive so that modern technology offers limited assistance. Electronic mail services have made access easier for the user, raising expectations and encouraging additional demand.

Economic Climate: Coping with an average overall growth approaching 20% is exceedingly difficult under current economic constraints. This situation is compounded by restraint measures in other sectors that result in demands for more customized service from the national centre.

2. Initiatives

Studies will be initiated and data gathered related to internal operations in an attempt to optimize resources available to respond to demand for documents, a service that continually experiences rapid growth. New technology, such as electronic mail, has facilitated access by the user on a 24-hour per day basis.

The studies to be initiated in 1985-86 are being designed to ensure that the realities of the mid-80's are reflected in operational routines and policies and that the Institute is realizing the maximum benefit from technology presently available or technologies that can be modified or adapted to assist with the delivery of STI to client groups. In addition to these studies, work will continue on the application of technologies developed in other sectors for the solution of problems in the information storage and dissemination sector. Systems will be modified and machine-readable files expanded to facilitate use. By so doing, some users can become more self-sufficient and the Program services can concentrate more on sectors less equipped or otherwise less capable of helping themselves.

3. Program Effectiveness

Overall Program effectiveness is the degree to which user demand can be satisfied. Since this is the only national program with a mandate "to promote and provide for the use of scientific and technical information" the Program must respond to a national demand represented by discrete requests from organizations or individuals.

$$\text{Satisfaction Rate} = \frac{\text{Items Supplied}}{\text{Items Requested}} \times 100\%$$

The Satisfaction Rate above is the principal measure of effectiveness for the collection, maintenance and document delivery activities. Based on an international comparison, NRC has set for itself the goal of 90% from all Canadian sources within five working days.

In the case of other services, the standard measures of effectiveness include reliability of computer supported systems, turnaround times on customized searches, and client satisfaction. In addition, three advisory groups, namely the Advisory Board on Scientific and Technological Information, the Advisory Committee on the Health Sciences Resource Centre, and the Advisory Committee on Automated Storage and Retrieval Services, provide advice and guidance on the effectiveness of present services and the need for modifications or enhancements. Growth in the use of all services and an almost total lack of complaints related to the services for which the client is billed are indicators of effectiveness and relevance of the activity.

4. Performance Information/Resource Justification

The overall performance of the CISTI national collection can be measured by its ability to respond to an ever increasing demand from a constantly changing profile of users whose demands vary with ever changing national concerns.

Figure 3: Profile of User Requests

	1983-84	1982-83	1981-82	1980-81
Industry	42%	48%	44%	45%
Government	37%	30%	34%	33%
University	21%	22%	22%	22%

The percentage of items requested that can be located in the CISTI collection or in another location in Canada is an indication of the effectiveness of the collection policy.

Figure 4: Collection Performance

	1983-84	1982-83	1981-82	1980-81
Number of requests	239,225	220,484	197,930	183,985
Located in CISTI collection	75.4%	74.9%	73.4%	75.5%
Located in other Canadian collections	14.4%	14.6%	15.2%	14.8%
Located in Canada overall	89.8%	89.5%	88.6%	90.3%

On-line Retrieval Systems: The program has developed and now maintains an on-line storage and retrieval system as a means of making available to Canadians nationwide the machine-readable data it creates related to the CISTI collection and the machine-readable data it acquires as part of the national collection. The system, called Canadian On-Line Enquiry (CAN/OLE), has experienced constant growth as measured by a steady increase in the number of users and the time they use the system (connect hours).

Figure 5: CAN/OLE Utilization

	1983-84	1982-83	1981-82	1980-81
Connect hours	11,400	8,968	7,476	6,324
Subscribers	713	533	436	353
Size of file (millions of citations)	16	14	11	11

For the Canadian health sciences community, CISTI has established a network of service centres connected to the information storage and retrieval system (MEDLARS) offered by the U.S. National Library of Medicine under a special agreement negotiated by CISTI. All training and customer support is performed by CISTI. This suite of files complements the files covered by CAN/OLE.

Figure 6: MEDLARS Utilization

	1983-84	1982-83	1981-82	1980-81
Connect hours	8,303	6,543	6,252	4,924
Subscribers	192	167	152	110
Size of file (millions of citations)	8.0	7.6	6.9	6

For the scientist and engineer working with data, the Canadian Scientific Numeric Databases (CAN/SND) service offers a suite of files containing critically evaluated data that can be manipulated in an on-line environment.

Training courses in the use of CAN/OLE, MEDLARS, and CAN/SND are offered in Ottawa and major centres across Canada. The courses cover the scope of files available, a detailed explanation of system features and hands-on training in use of the systems.

A listing of files presently available is included in Supplementary Information, Sub-section D.

Current Awareness: One of the initial automated services, Canadian Selective Dissemination of Information (CAN/SDI), complements the on-line services by offering on a regular basis a listing of recently published items of potential interest. The user prepares a profile of his interests which is searched against appropriate subject-oriented files. Relevant references are sent to the user weekly, bi-monthly or monthly. As user interests change, so do the profiles. Over the past four years, subscribers have increased from 2,179 to 2,445.

Customized Services: A question and answer service is available. Staffed by six qualified librarians, this service prepares bibliographies, locates factual data, performs on-line searches and identifies centres of expertise and experts.

Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 8: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	7,636	6,946	6,607
Contributions to employee benefit plans	1,065	900	929
Goods and services			
Transportation and communication	452	375	302
Information	2,471	2,678	2,111
Computer and data processing	4,316	3,318	2,782
Other professional and special services	1,850	1,422	1,193
Rentals	3,012	2,032	1,573
Purchased repair and upkeep	243	170	59
Books, periodicals and other publications		8,550	7,272
Other utilities, materials and supplies	8,758	414	367
Total operating expenditures	29,803	26,805	23,195
Capital			
Construction and acquisition of machinery and equipment	220	124	232
Transfer payments	78	78	78
Gross budgetary expenditure	30,101	27,007	23,505
Receipts and revenue credited to the Vote	6,021	4,113	3,663
Net budgetary expenditure	24,080	22,894	19,842

2. Personnel Expenditures

Personnel expenditures account for 29.2% of the total operating expenditures for the Scientific and Technical Information Program. This includes the statutory contributions to employee benefit plans. Figure 9 shows the person-years and annual salary by category.

Figure 9: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current* Salary Range	1985-86 Average Salary Provision

Casuals and others	4	4	4	- -	18,250

* Differences in salary range due to NRC being a separate employer

Note: The person-year column displays the forecast distribution by occupational group of the authorized person-years for the program. The current salary column shows the salary range by occupational category at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual

increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

A contribution is made to the Canadian Film Institute to maintain a collection of science films and video materials and to operate a distribution service for government departments and for the scientific community in Canada.

Figure 10: Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contribution			
Canadian Film Institute	78	78	78

B. Cost Analysis

The Scientific and Technical Information Program's 1984-85 Estimates include only those expenditures to be charged to NRC's voted appropriations and statutory payments. Other cost items as well as revenue must be included when considering the actual costs to operate the Program. Figure 11 shows the total net cost of the Program by adding the cost of accommodation provided without charge by Public Works and NRC and other services provided without charge by other departments and deducting receipts and revenues credited to this Program.

Figure 11: Net Cost of Program for 1985-86 ($000)

Activity	1985-86 Expenditures	Add Other Costs	Total Cost	Deduct Receipts and Revenue	Total Net Cost	Total 1984-85
Scientific and Technical Information	30,101	2,384	32,485	6,021	26,464	25,141

Other costs in Figure 11 include:

Accommodation by Public Works and NRC	= $2,177,000
Employer's share of health and unemployment insurance premiums paid by the Treasury Board	= $ 169,000
Employee Compensation under Workman Compensation Acts paid by the Department of Labour	= $ 14,000
Cheque issue cost by the Department of Supply and Services	= $ 24,000

C. Revenue Analysis

Receipts and revenues credited to the Program are summarized in Figure 12.

Figure 12: Sources of Revenue ($000)

Revenue Source	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Proceeds from sales of Canadian Journals of Research and other publications	2,190	1,985	1,786

1985–86 Estimates

Part III

Expenditure Plan

3027

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Natural Sciences and Engineering
Research Council of Canada

3031

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts, provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $294,813,000 in 1985-86 for Natural Sciences and Engineering Research Council. The remaining expenditures, estimated at $679,000 for pensions and other employee benefits, will be made under existing statutory authority.

Financial Requirements by Authority

Vote (thousands of dollars)		1985-86 Main Estimates	1984-85 Main Estimates
	Natural Sciences and Engineering Research Council		
25	Operating expenditures	10,123	8,313
30	Grants	284,690	271,531

3035

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The Natural Sciences and Engineering Research Council does not plan any major change in either the nature or the direction of its Program in 1985-86. The emphasis will be on continuing the general direction set out in the Council's first Five-Year Plan, while maintaining an appropriate balance in the funding of the various interrelated program elements.

The Council is planning the following changes and adjustments for 1985-86:

- increased operating grant support for young researchers, for first-time applicants and for selected disciplines at an additional cost of $7.1 million (see page 16);
- expanding the industry-oriented cooperative R&D activities and R&D manpower programs at an additional cost of $1.4 million: support for the National Microelectronics Facility is scheduled to decline by $7.6 million and, as a result, the overall budget for the University-Industry Program will show a net decline of $6.2 million (see page 17);
- a small increase in the number of postdoctoral and university research fellowships at an additional cost of $2.1 million (see page 15);
- a decrease in various research-related activities will reduce expenditures by $1.1 million (see page 17);
- a further decrease in the number of research infrastructure grants resulting in a net reduction of $0.3 million (see page 17); and
- expansion of selected developmental activities at an additional cost of $0.8 million (see page 17).

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Grants and Scholarships	284,690	282,254	2,436	21
Administration	10,802	9,308*	1,494	29
	295,492	291,562	3,930	
Authorized person-years	148	138	10	

* Includes $54,000 in employee benefits not specified in Supplementary Estimates

Explanation of Change: The financial requirements for 1985-86 are 1.3% or $3,930,000 higher than the 1984-85 forecast expenditures. The increase in each activity is the result of:

Administration:

- wage and salary increases — $132,000
- increases in operating costs and authorized person-years — $1,362,000

Grants and Scholarships

- a reduction in the budget available for grants and scholarships — ($5,856,000)
- inflation allowance — $8,292,000

Explanation of 1984-85 Forecast: The 1984-85 forecast is $11,210,000 or 4% higher than the 1984-85 Main Estimates of $280,352,000 (see Extracts from Part II of the Estimates, page 4). The difference is the additional resources being sought through Supplementary Estimates:

- $10,723,000 for increased grants and scholarships;
- $487,000 for increased administrative costs and authorized person-years.

B. Recent Performance

1. Highlights

In 1983-84 the Council launched two major new initiatives and achieved significant progress in strengthening and expanding its priority programs as a result of the supplementary funding totalling $40.6 million that was authorized for the program of Grants and Scholarships during the year:

- Increased numbers of students, postdoctoral fellows and young research fellows received support for university-based research training and career development. The total investment in research manpower awards exceeded the amount shown in the 1983-84 Main Estimates by 6.2 million (see page 18);

- Funding in support of discipline research and strategic research activities was $8.0 million higher than the amount shown in the 1983-84 Main Estimates. In addition to the necessary adjustments for cost increases, special emphasis was given to providing significantly increased support for the most promising researchers, for new researchers entering the system for the first time, and for selected disciplines that are of increasing importance to Canada or are growing rapidly;

- The launching of a new program of university-industry interface initiatives and the establishment of the new national microelectronics network was accompanied by new funding of approximately $7.2 million (see page 18);

- The industry-based research manpower awards were transferred to the new university-industry program. Actual expenditures were lower than estimated and the resulting budget reduction amounted to $1.4 million;

- Expenditures on developmental initiatives were $0.6 million lower than initially estimated;

- The major change occurred in the funding for equipment purchase and for infrastructure support. Instead of the estimated net reduction of $1.6 million, Council was able to increase the actual funding by $22.7 million over the estimated amount by allocating in excess of 55% of the total supplementary funding to this category (see page 18); and

- Funding in support of general research activities was $1.5 million below the initially estimated amount.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-1984		
	Actual	Main Estimates	Change
Grants and Scholarships	274,621	234,013	40,608
Administration	6,567	6,107	460
	281,188	240,120	41,068
Person-Years	101	97	4

The difference between actual expenditures and Main Estimates consists of additional resources, totalling $41,068,000, approved through Supplementary Estimates to provide increased grants and scholarships and to meet the associated increase in administrative costs (see pages 22 and 29).

C. Background

1. Introduction

The Natural Sciences and Engineering Research Council of Canada is a federal departmental corporation consisting of a president and not more than 21 other members appointed by the Governor in Council for terms normally not exceeding three years.

The Council reports to Parliament through the Minister of State for Science and Technology, who is designated by the Governor in Council to act as the Minister for purposes of the Council's founding Act. Other agencies in the science and technology area are the National Research Council of Canada, the Science Council of Canada and the Ministry of State for Science and Technology.

3039

The Council is involved primarily in the support of research and research training activities in the natural sciences and engineering. It does this through the provision of grants and scholarships, mainly but not exclusively, in Canadian universities and affiliated institutions.

The Council is one of three federal research granting councils; the other two are the Medical Research Council and the Social Sciences and Humanities Research Council. The latter two Councils report to Parliament through different Ministers.

2. Legal Mandate

The Natural Sciences and Engineering Research Council was established on 1 May, 1978, when Part III of the Government Organization (Scientific Activities) Act, 1976 was proclaimed.

The following extract from the Act describes the legal mandate of the Council, including its functions and powers:

"It is the function of the Council to:

- promote and assist research in the natural sciences and engineering other than the health sciences; and
- advise the Minister in respect of such matters relating to such research as the Minister may refer to the Council for its consideration.

The Council, in carrying out its functions, may:

- expend, for the purposes of the Act, any money appropriated by Parliament for the work of the Council, or received by the Council through the conduct of its operations; and
- publish and sell or otherwise distribute such scholarly, scientific and technical information relating to the work of the Council as the Council considers necessary."

3. Program Objective

The general objective of the Natural Sciences and Engineering Research Council is to promote and support the development and maintenance of research and the provision of highly qualified manpower in the natural sciences and engineering.

4. Program Organization for Delivery

Activity Structure: The Natural Sciences and Engineering Research Council has identified two activities which best describe its operation: Grants and Scholarships, and Administration. The Grants and Scholarships Activity is broken down further into six sub-activities: Research Grants, Research Infrastructure Grants, University-Industry Program, Developmental Grants, General Research Support, and Research Manpower Awards. These are described in greater detail in Section II, Analysis by Activity. Figure 3 illustrates the activity structure.

Figure 3: Activity Structure

Organization Structure: Within the general policy framework and the budget envelope approved by Cabinet, the Natural Sciences and Engineering Research Council has ultimate responsibility for setting priorities, allocating budgets, developing appropriate support mechanisms, selecting grants and awards, determining the value of grants and awards, and disbursing the funds.

To effectively perform these tasks and to liberate the Council from the day-to-day administration of its programs, the Council has delegated some of its responsibilities to a network of committees as illustrated in Figure 4. The permanent or advisory committees advise and assist the Council in all policy, budgetary and, where applicable, operational matters pertaining to the specific programs for which responsibility has been delegated by the Council. Chaired by a Council member, these committees are composed of Council members and non-Council members from universities, industry and government. They are responsible for making recommendations to the Council on policies and priorities and, where applicable, to the President on grants and scholarships to be made from a pre-determined budget allocated by the Council to the program under their purview.

Recommendations on grants and scholarships to be awarded are made following an extensive review of applications through the peer adjudication process. A large number of selection committees, composed of between 400 and 500 experts drawn from universities, industry and government are appointed for this purpose.

In addition to the selection committees appointed by the Council, the peer review process relies heavily on the advice of some 2,500 to 3,000 external referees from Canada and abroad who are consulted annually. Selection committees also provide advice on policy issues to a permanent or advisory committee, to the Council itself or to the President of the Council.

As a result of the operation of this network of committees whose membership is renewed on a regular basis, the Council arrives at its final budget allocations through an iterative process. The preliminary allocations projected in the Estimates reflect the Council's priorities and intentions, but these are modified and refined at various times throughout the year on the basis of increasingly more accurate information on the actual requirements, taking account of the volume and quality of applications as assessed by the selection committees.

Figure 4: Resources by Organization/Activity ($000)

						TOTALS
GRANTS AND SCHOLARSHIPS		220,308	3,462	28,733	32,187	294,690
ADMINISTRATION	10,802					10,802
	10,802	220,308	3,462	28,733	32,187	295,492

The resources of the Grants and Scholarships Activity are shown in Figure 4 by the committee that reviews and selects the grants and has the authority, delegated by the Council, to make recommendations to the President on the grants and scholarships to be awarded from those resources.

The resources shown for the Administration Activity represent the operational cost of the work of the Council, its committees and its staff. Council staff provide advice, assistance and support to the Council and to all its committees in the planning, management, evaluation and administration of the Council's programs.

The Council has final authority over all matters pertaining to the management and administration of its programs and resources. However, in accordance with the NSERC Act, the President of Council is the Chairman of the Council and the Chief Executive Officer responsible for directing the work and the staff of Council.

D. Planning Perspective

1. Environment

Federal Government Priorities for Research and Development: Achievement of the federal government's goal to increase the investment in R&D over the next few years is very much dependent upon the universities' research capacity and on the number of highly skilled researchers that will be available to do the research in industry, government and universities. The Council has developed estimates of the required numbers of researchers under various scenarios and is developing a new Five-Year Plan proposing various new initiatives to improve and expand the universities' research and research-training capacity consistent with that increased R&D effort.

Economic Conditions: There is now a growing consensus that a major and sustained emphasis on research and on technological development is an essential component of a sustained economic recovery. The more efficient development and use of Canada's natural resource base and the new high-growth technologies are seen as the major factors in such recovery. But behind those growth factors lies the challenge of providing the necessary numbers of highly-trained people. The supply of highly qualified research manpower is a critical factor in Canada's technological and economic future.

The research and technology intensive sectors of the economy appear to be coming out of the last economic recession at a much faster pace than the resource-based industries or the more traditional manufacturing firms. Nevertheless, it is expected that industry as a whole will attain eventually the growth rates in R&D spending that were seen prior to the economic downturn. For the medium and longer term, it is anticipated, therefore, that the demand for highly trained researchers in the economy will increase rapidly and the universities will then be called upon to provide those researchers.

Federal/Provincial Relations: The renegotiations of the Established Program Financing arrangements and possible changes in the federal transfers in the area of post-secondary education are raising jurisdictional and financial matters which may affect the role of the Council.

Government restraint: The Council's programs provide grants in aid of research and research training and as such, they are intended to cover only a portion of the total costs associated with the university research effort. Traditionally, some direct costs and all indirect costs are paid by the universities from their own operating budgets. Because of the very tight financial situation in many universities, it is becoming increasingly difficult for them to maintain their traditional share of the total funding. Pressures on the Council to support more of the direct and indirect costs have increased and are anticipated to keep growing. This will reduce the effective levels of funding available for research and research-training activities through the Council.

The Council's first Five-Year Plan still stands as the basic planning document for the Council's initiatives and funding priorities, and serves as a gauge by which to judge the effectiveness and consistency of the Council's actions and expenditures. Although the program received significant funding increases during the first four years of the Plan, some of these increases were either temporary or not large enough to allow the Council to introduce all the new initiatives and the growth envisaged in the original Plan. As a result, it is becoming increasingly difficult for the Council to adhere closely to the priorities and courses of action outlined in the original Plan. Although the 1985-86 budget shows an increase in the number of dollars, the purchasing power is less than the 1984-85 budget as a result of inflation. Therefore, the plans and expenditure projections for the upcoming year reflect the government's response to fiscal restraint as well as the Council's attempt to preserve as much as possible the major priorities of the Plan, especially the training of highly qualified manpower. The Council's actions and budget allocations must be viewed, therefore, in the framework of the issues and objectives identified in the Plan and in the context of the available resources.

2. Initiatives

To meet the program objectives and to preserve the priorities of the Five-Year Plan, the Council is planning to take the following actions in 1985-86, all of which will require internal re-allocation of existing resources.

Increasing the supply of highly qualified research manpower: The highly qualified manpower initiatives within this area fall into three broad categories, each of which serves a different purpose.

- The provision of a useful research experience in universities and selected industrial firms during the summer to undergraduate students in order to promote research as a challenging career alternative and to attract more students into postgraduate training (Undergraduate Summer Research Awards). The Council plans to maintain this career introduction program at approximately the same level as last year.

- The provision of a basic stipend to all highly recommended applicants for postgraduate scholarships and postdoctoral fellowships to support their full-time pursuit of advanced research training and development in universities (Postgraduate Scholarships, 1967 Science and Engineering Scholarships, Postdoctoral Fellowships). It is anticipated that the number and the cost of the Postgraduate Scholarships will remain approximately, at last year's level. However, in view of the expected increase in the number of applications for postdoctoral fellowships in 1985-86, the program may require an increase in the number of new fellowships which, in addition to increased commitments for renewal applications, may require additional funding of about $1.5 million. This would bring the total expenditures on postdoctoral fellowships to $4.7 million. The total net increase in expenditures in support of research training and development will amount to $1.8 million.

- The provision of extra opportunities to a select number of the best young researchers to launch and advance their research careers in universities (University Research Fellowships). Fifty new awards are planned in addition to the 279 awards currently held in universities. This increase, plus the effect of attrition from the program, will increase the total cost of this special career development program slightly by $0.3 million.

The overall increase in the Research Manpower Awards program is estimated at $2.1 million (see Figure 5, page 21).

Increased Research Grants:

- minor adjustments and the continuation of a special allocation to provide selective budget increases to various Grant Selection Committees at a cost of $3.3 million; and

- the provision of adequate support for new researchers entering the Discipline Research Grants system for the first time and for new university research fellowship holders at a net additional cost of $3.8 million.

The projected increase in the total budget for discipline research activities and strategic research projects is $7.1 million (see Figure 5, page 21).

Changes in the University-Industry Program:

- the Council is continuing with the implementation of a major technology development and training initiative in the area of microelectronics. The special funding provided in 1983-84 has enabled the Council to proceed with the establishment of Part I of the National Microelectronics Facility. Funding for this special initiative is scheduled to decrease by $7.6 million next year because the facility will be nearing completion; and

- the budget for joint university-industry activities, including the industry-based research manpower programs, is projected to increase by $1.4 million (or about 10%).

The total budget for the University-Industry Program is projected to decline by $6.2 million (see Figure 5, page 21) as a result of the phasing down of the support for the National Microelectronics Facility which will be close to completion.

Reduction in funding of research equipment and increased support for infrastructure services:

- the equipment budget is projected to decrease further by $0.7 million, and thus the budget available for equipment purchase will remain at an extremely low level in 1985-86. Unless the Council's overall financial situation improves soon, the budget allocations for future years will have to be reviewed and changed significantly to ensure an adequate equipment budget in future years; and

- increased support for infrastructure support services, such as equipment maintenance and technical support, will require an additional $0.4 million.

The total budget available for research equipment and infrastructure support services will decline by about $0.3 million from the 1984-85 level (see Figure 5, page 21).

Other Changes:

- the budget for Developmental Grants will increase by $0.8 million next year, mainly in support of development of research in francophone universities, small universities and forestry schools (see Figure 5, page 21); and

- expenditures in the various general research support programs will show a reduction of approximately $1.1 million, mainly in the support for publications grants and conference grants (see Figure 5, page 21).

3. Update on Previously Reported Initiatives

The supplementary funding received in 1983-84 has enabled the Council to continue with the implementation of Year 4 of the Five-Year Plan and launch two major new initiatives.

The budget available for research equipment purchases and for infrastructure support services, which had to be set at a very low level at the beginning of the year because of a lack of funds, received the major portion of the additional funding. As a result, the funding rates for equipment applications and infrastructure support applications reached a level which was regarded by the Council as very appropriate in view of the high quality of the applications received (see Figure 6, page 22).

The research manpower programs also benefitted significantly from the additional funding. The Council's investment in Canada's young research talent increased by 18% (or $6.2 million) over the initial Main Estimates level (see Figure 6, page 22).

Finally, the additional funding enabled the Council to launch major initiatives within a new University-Industry Program:

- The new University-Industry Program is designed to promote and support increased collaboration between university researchers and private industry. It represents a major expansion of the Council's activities at the university -industry interface. The new program consists of three major components: Cooperative R&D Activities, (including the former PRAI program), Scholarships and Fellowships (including the former industry-based research manpower awards) and University-Industry Links. The major component, the Cooperative R&D Activities, supports miscellaneous jointly-funded efforts with industry, such as R&D projects, shared equipment and facilities, industrial research chairs and exchanges of researchers.

- The second major initiative is the establishment of a nation-wide microelectronics facility managed by the Canadian Microelectronics Corporation. The facility consists of a computer-linked network of workstations covering many universities. The special workstations are used for the design and testing of very large scale integrated circuits by professors and students. The major purpose of the network is to train the large number of design experts required by industry.

4. Program Effectiveness

The effectiveness of the programs of the Natural Sciences and Engineering Research Council must be viewed in the context of the Council's general objective, which is "to promote and support the development and maintenance of research and the provision of highly qualified manpower". Seen in this light, the Council's results and contributions do not lend themselves easily to quantification and objective measurement.

To overcome this difficulty and to ensure the ongoing as well as the longer term effectiveness of its programs and operations, the Council has adopted an operational and organizational structure that relies heavily on ongoing external input, feedback and advice on policies and programs and on peer review and peer adjudication of grants and awards made in national competitions.

As discussed in the section on organization structure, the Council operates a granting system based on peer review through an interlocking multi-level committee structure with extensive external membership. As a result of this committee structure, which involves directly many members of the research community, and the extensive person-to-person interactions of Council staff and committee members with the researchers, feedback on the Council's decisions regarding priorities, budget allocations, grant selection results and funding practices is immediate, very direct and very effective. Therefore, measures to ensure the effectiveness of the Council's policies and programs are built into the operations of the Council and form an integral part of the organizational structure.

The Council also conducts special reviews of important issues that have major policy or expenditure implications. Examples of special reviews conducted by external experts are the Manpower Task Force, the Task Force on Research Equipment, the Ad-Hoc Committee on Research Computing, the Task Force on Research Infrastructure and the Task Force on Eligibility. The results of these special reviews normally produce changes in the Council's policies, programs or procedures. The reports including the recommendations are distributed to the research community for comment and reaction prior to submission to the Council.

In addition to these measures, the Council conducts systematic and regular effectiveness evaluations of its programs under the auspices of a permanent committee of the Council called the Program Evaluation and Audit Committee. The Committee will be looking at four basic program evaluation issues: Program Rationale, Impact and Effects, Objectives Achievements, and Alternatives. In particular, the Committee will be evaluating the changes that have occurred in the Council's programs and impacts as a result of the significant program expansions and expenditure increases during the first four years of the Council's Five-Year Plan.

The focus of the Council's first formal evaluation study were the Project Research Applicable in Industry (PRAI) and Senior Industrial Fellowship (SIF) programs. The major conclusions of this study were summarized in Part III of the 1984-85 Main Estimates.

Currently nearing completion is an evaluation of NSERC's manpower programs. This study is also being conducted by independent consultants.

The results of the study should provide the Council with an understanding of the impacts of its programs vis-à-vis training and provision of highly qualified manpower for Canada's university, government and industry laboratories and research facilities. A preliminary report presenting the major findings and conclusions is now being drafted by the consultants for submission to the Council in the near future. The Council will report on the research manpower program evaluations in detail next year.

Section II
Analysis by Activity

A. Grants and Scholarships

Objective

To promote and support the development and maintenance of research and the provision of highly qualified manpower in the natural sciences and engineering.

Resource Summary

The Grants and Scholarships Activity accounts for approximately 96.3% of the total 1985-86 program expenditures of the Natural Sciences and Engineering Research Council. In Figure 5, this activity is broken down into its six sub-activities.

Figure 5: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Research Grants	184,558	177,487	160,103
Research Infrastructure Grants	16,938	17,227	45,821
University-Industry Program	16,231	22,409	13,756
Developmental Grants	4,903	4,107	3,672
General Research Support	11,801	12,899	11,083
Research Manpower Awards	50,259	48,125	40,186
	284,690	282,254	274,621

3051

Past Financial Performance

Figure 6: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Research Grants	160,103	152,107	7,996
Research Infrastructure Grants	45,821	23,082	22,739
University-Industry Program	13,756	7,895	5,861
Developmental Grants	3,672	4,314	(642)
General Research Support	11,083	12,598	(1,515)
Research Manpower Awards	40,186	34,017	6,169
	274,621	234,013	40,608

The changes result from the large increase in funding received through supplementary estimates. In excess of 50% of the increase was allocated by the Council to research equipment purchases and technical support services, while the support for research manpower training, for discipline-based and strategic research activities and for the new university-industry program also received major increases.

Description

The Natural Sciences and Engineering Research Council's Program of Grants and Scholarships awards grants and scholarships to selected individuals and groups in support of research, highly qualified manpower training and research-related activities. The program can be described in terms of its six operational sub-activities: Research Grants, Research Infrastructure Grants, University-Industry Program, Developmental Grants, General Research Support and Research Manpower Awards.

Research Grants: These grants are awarded to individuals and groups for expenses in support of research activities.

The overall goal of the Research Grants Sub-activity is to promote and support the development and maintenance of excellence in research for the creation and application of knowledge and the training of research manpower in the natural sciences and engineering. Within this sub-activity, the Council supports a whole spectrum of research ranging from pure research, to applied research, to developmental work. In addition, most of the research training takes place through the research supported within this sub-activity, and a significant portion of the research equipment needed by the researchers is purchased out of the research operating grants awarded under the various programs within this sub-activity.

Research Infrastructure Grants: These grants are awarded to individuals, groups and institutions to support the acquisition of research equipment and the development of major research facilities, and to support their effective use, operation and maintenance.

In addition to the equipment grants, other grants within this sub-activity are the infrastructure support grants. They provide support for the maintenance and operation of major research equipment facilities, but they also provide support for the maintenance of non-capital major research resources such as specialized technical support.

University-Industry Program: This program supports a wide range of activities that promote collaboration between university researchers and Canadian industry. The program consists of various jointly funded initiatives such as cooperative R&D programs, shared equipment and facilities, industrial research chairs, scholarships and fellowships, affiliations and workshops. Although the program is new as a separate and identifiable unit within the Council's program structure, many components of this new program were transferred from other programs, such as project research applicable to industry from Research Grants and the industry-based research manpower awards from the Research Manpower Awards sub-activity.

A special initiative within the University-Industry Program is the National Microelectronics Facility managed by the Canadian Microelectronics Corporation. The facility consists of a multi-university computerized network of stations for the design and testing of very large scale integrated circuits.

Developmental Grants: These are grants in support of selected manpower, infrastructure and research initiatives, negotiated with individuals, groups and institutions to ensure more balanced development of the research and research-training capability in selected regions, institutions, disciplines and fields of research.

On the basis of after-the-fact analyses of the Council's program expenditures within the Research Grants, Research Manpower Awards and Research Infrastructure Grants sub-activities, it may become apparent that researchers in certain universities, disciplines or fields of research consistently receive a relatively lower share of the funds provided by the Council.

If it appears in those cases that there is a potential for accelerated development of the existing research and research-training capability, the Council may decide to establish a special developmental program to improve that capability. At the present time the Council has identified three major segments within the university research community that have a requirement but also the potential for accelerated development. The programs identified by the Council are:

- development of research in francophone universities in Quebec and in the small universities;

- special assistance to small universities through isolation supplements; and

- development of research in forestry.

General Research Support: This sub-activity consists of grants provided to university presidents in support of local research, research infrastructure and research manpower initiatives and other research-related efforts, and grants to support scientific conferences and publications, travel, international programs and other miscellaneous or special endeavours.

Research Manpower Awards: These grants consist of undergraduate awards, scholarships and fellowships provided to students, postdoctoral fellows and scientists and engineers in universities for advanced study or research and professional development.

Performance Information/Resource Justification

The performance and the resource justification of the Grants and Scholarships Activity must be viewed in the context of the Council's legal mandate and the framework within which policy, priority and funding decisions are made.

Within a general policy framework and an overall budget envelope approved at the macro-level by a policy committee of Cabinet for the Program as a whole, the Council's responsibilities and the results of the Council's actions fall into four major key areas:

- the setting of priorities for funding and the allocation of budgets at the micro-level;

- the development of appropriate support mechanisms;

- the selection of grants and awards to be funded and the determination of the amount of the grant and award; and

- the disbursement of funds.

In support of its overall long-term objective, which is "to promote and support the development and maintenance of research and the provision of highly qualified manpower in the natural sciences and engineering", the Council has identified the following medium-term goals:

- to increase the supply of highly-trained Canadian researchers in the natural sciences and engineering;

- to update obsolete scientific equipment in universities so as to improve the level and productivity of research efforts and to train postgraduate students with state-of-the-art technology;

- to direct a larger share of the research budget to activities having a direct relevance to identified area of national concern; and

- within the context of the above, to expand and improve the Council's major program of "free" or "curiosity-driven" discipline research which is largely unique to the university community and which is essential for any balanced program of national research effort.

In order to achieve those medium-term goals, the Council has identified the following funding priorities and strategies for each of the sub-activities.

Research Grants: Continued emphasis on the development and long-term maintenance of a balanced national capacity for research and research training, and on further improvements in the level and quality of the discipline-based and targeted research and research-training effort, through the provision of appropriate operating support to the best researchers and best research projects.

Research Infrastructure Grants: Improvement in the rate of replacement of outdated research equipment and, if possible, expansion of the research equipment base, as well as more effective and efficient use of the available research infrastructure resources, through the allocation of an appropriate budget share to the provision of research equipment and infrastructure support for the best researchers and research groups.

University-Industry Program: Improved interactions between university researchers and industry and increased transfer of knowledge and research results from universities to industry, through the provision of a range of flexible mechanisms that encourage joint efforts and joint funding.

Developmental Grants: Ongoing identification of the need for development of the research and research training capacity in selected areas, identification of the potential for development, and negotiation of developmental initiatives and selection of particular researchers, research groups or research proposals to be supported at certain levels of effort.

General Research Support: Maintenance of a limited degree of flexibility and discretionary funding for research and research training activities given to the president of each participating university through the provision of a formula-based general research grant; development and maintenance of miscellaneous national and international activities in research and research-related areas deemed necessary and appropriate by the Council.

Research Manpower Awards: Increased supply of highly qualified research manpower through the provision of (a) direct financial support to assist an increasing number of students and postdoctoral research trainees in acquiring the appropriate research training and research experience, and (b) special opportunities for further career development to the best young research talent.

Figure 7 presents details of the actual, forecast and estimated expenditures broken down by the various sub-activities and by major groupings of program components within those sub-activities.

The past and present funding priorities of the Council are reflected in the actual and forecast expenditures for 1983-84 and 1984-85. It should be stressed that the expenditure breakdown estimated for 1985-86 represents preliminary plans and tentative funding projections of the Council. Because the majority of the grant and scholarship applications for 1985-86 are received and processed in October, November and December of 1984, the detailed information on the volume and quality of the applications required to determine firm budget allocations is not available at this time of the year. Firmer budget allocations can be made within the overall priority framework by the Council in January 1985 when the volume of applications is known and estimates of the probable overall quality of those applications can be made. Following the review meetings of the selection committees during the competition week in February 1985, definite budget allocations are approved within the Council's expenditure framework by the President before the start of the new fiscal year. Throughout the year, all budget allocations are continuously updated and fine-tuned to reflect changing circumstances, requirements and opportunities.

Although the estimates for 1985-86 are subject to change as explained above, the expenditure patterns during the three years shown in Figure 7 are representative of the Council's priorities: large increases in research manpower support (25% over 1983-84) and significant increases in the level of regular research and research training effort supported within the Research Grants Sub-activity (15.3% increase). However these increases are accompanied by a large reduction (63% from the 1983-84 level) in the acquisition of research equipment funded through the Research Infrastructure Grants Sub-activity. The significant decrease in research equipment funding must be corrected in future years. However, for 1985-86, the Council feels

that it must maintain the growth in its highly qualified research manpower programs and it is operating on the expectation that supplementary funds will become available to permit a proper level of equipment investment.

Figure 7: Details of Grants ($000)

B. Administration

Objective

To provide management and administrative support to the Grants and Scholarships Activity.

Resource Summary

Expenditures for the Administration Activity will account for about 3.7% of the Council's total budget in 1985-86.

Figure 9: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Administration	10,802	148	9,308	138	6,567	101

Of the total expenditures, 50.3% are for personnel, 19.0% for transportation and communications, and 30.7% for other costs. The increase in the 1985-86 requirements results from increased operating costs as a result of increases in the size and scope of the Council's programs, as well as from the effect of inflation on salaries and wages.

Past Financial Performance

Figure 10: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change

	6,567	6,107	460

Description

The Administration Activity includes all operations in support of the granting process required to ensure the effective functioning and operation of Council and its committees, and the provision of administrative support by Council staff.

The Administration Activity is composed of the following components:

Office of the President: Executive management of all aspects of the Council's programs, operations and resources on behalf of the Council.

Secretariat and Communications: The provision of secretariat services for the Council and its senior committees; planning and implementation of the Council's public information activities; administration of general promotion grants programs.

Planning and Budgeting Directorate: The provision of planning, budgeting and allocations services for the Council and all committees.

Research Grants Direccorate: The development, modification and management of the programs of Discipline Grants, Research Infrastructure Grants and Developmental Grants; management and administration of the peer review and award selection process; day-to-day management of the granting process.

Research Manpower Directorate: The development, modification and management of the Research Manpower programs, management and administration of the review and award selection process; day-to-day management of the granting process.

Targeted Research Directorate: The development, modification and management of Strategic Grants, the University-Industry Program and the national microelectronics facility (Canadian Microelectronics Corporation); management and administration of the review and grant selection process; day-to-day management of the granting process.

Evaluation and Information Systems Directorate: Planning and management of program evaluation activities; development, modification and maintenance of information and data processing systems.

Finance and Administration Directorate: The provision of financial, personnel and administrative services; planning and implementation of the Council's official language, privacy and access to information policies; organization of site visits for selection committee members.

Other Functions: This component includes miscellaneous activities such as the work of a senior visiting research officer and a special adviser attached to the President's Office.

Performance Information/Resource Justification

The level of resources required for the Administration Activity is determined on the basis of the workloads of committees and staff in the various sub-activity components and on the basis of the level of advice, assistance and services required by Council and its committees to plan, administer and evaluate effectively its policies, programs, grants and expenditures. Various new program initiatives introduced in recent years, have resulted immediately in significant workload increases in the program development and management area. However, the workloads in the corporate service functions such as Council's secretariat and in the financial, program evaluation and data processing areas are now experiencing major increases.

Figure 11 shows the ratio of overhead costs to the Program total. The ratio has increased from 1983-84 to 1985-86 and is now at a level of 3.7%.

Figure 11: Ratio of Administration Expenditures to Total Program Expenditures ($ millions)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Total Program expenditures	295.5	291.6	281.2
Administration expenditures	10.8	9.3	6.6
Percentage of total	3.7	3.2	2.3

The major reason for the increase in the ratio of overhead costs to total program expenditures is that the new programs and program expansions introduced in recent years are much more labour-intensive than the existing programs, requiring higher levels of person-years and operating resources. Also, the Council moved away from the National Research Council campus and is now operating independently having to pay for many services that used to be provided free of charge by the National Research Council.

Section III
Supplementary Information

A. Analysis by Object

1. Transfer Payments

The Council receives annually in excess of 18,000 applications for grants and scholarships (including requests for the next instalment of multi-year awards) and makes in excess of 13,000 awards following review and evaluation of the quality of the applications by the peer review committees in national competitions as discussed earlier. The decisions on most grants and awards are made in February and March immediately prior to the start of each fiscal year. Therefore, the Council cannot, at this stage of the budgetary cycle, provide a list of those grants and awards that will be made in the upcoming year. However, each year the Council publishes a report on all grants and scholarships awarded in the preceding fiscal year.

In order to provide additional information on the Council's programs, a breakdown of selected expenditures in 1983-84 for equipment and highly qualified manpower awards is given in Figures 12 and 13. The breakdown of expenditures in the Discipline Grants area were given in Figure 8.

Figure 12: Details of Research Infrastructure Grants, 1983-84 ($000)

Committee	Equipment and Infrastructure Grants					
	Equipment Grants		Major Equipment Grants		Infra-structure Grants	
	No.	$	No.	$	No.	$
Animal Biology	37	977			2	61
Cell Biology	62	1,560	3	574	4	98
Plant Biology	31	895	3	482		
Population Biology	29	539			4	113
Psychology	24	407			1	76
Chemistry	65	2,769	13	2,972	9	237

Mechanical Engineering	25	1,008	1	221	2	37
Industrial Engineering	3	84			1	20
Earth Sciences	36	1,150	3	668	6	208
Computing and Information Science	14	797	1	166	9	540
Pure and Applied Mathematics	1	19				
Statistical Sciences	2	30			4	83
Interdisciplinary	2	42			1	18
	492	16,459	43	9,105	87	7,002
Grants and Scholarships			17	10,033	29	3,222
Totals	492	16,459	60	19,138	116	10,224

The category "Equipment" in Figure 12 includes equipment items costing between $7,000 and $100,000. The category "Major Equipment" covers all items costing between $100,000 and $275,000, while "Major Installations" include all equipment and facilities costing in excess of $275,000. The latter category often represents multi-disciplinary and national or regional facilities to be acquired or constructed over a number of years.

Figure 13 presents details on the values of the stipends and on the numbers of research manpower awards held during the year as well as the total expenditures.

Figure 13: Details of Research Manpower Awards, 1983-84

	Value of Award	Total Expenditures	
	Approximate $	No.	$000
University-based Awards			
Undergraduate Summer Research Awards	2,860	1,494	4,177
Postgraduate Scholarships	11,100	2,422	24,733
1967 Science and Eng. Scholarships	16,700	107	1,652
Postdoctoral Fellowships	22,250	156	3,162
Research Fellowships	29,000	225	6,462
Total		4,404	40,186

Previous figures provided detailed information on the expenditures and the numbers of awards within the various sub-activity components or, for selected sub-activity components, a breakdown was provided by scientific or engineering disciplines.

Figure 14 and 15 provide information on the breakdown of expenditures by primary field of application or primary area of relevance of the research and research training activities undertaken within the Strategic Grants and Discipline Grants components.

Figure 14 shows the breakdown of the numbers of grants and expenditures in each of the strategic areas identified by the Council.

Figure 14: Details of Strategic Grants, 1983-84 ($000)

	Operating Grants		Equipment Grants		Total	
Strategic Area	No.	$	No.	$	No.	$
Energy	116	7,066	19	756	135	7,822
Environmental Toxicology	61	3,010	4	60	65	3,070
Oceans	48	2,617	5	165	53	2,782
Communications and Computers	44	3,179	4	296	48	3,475
Food-Agriculture	80	4,109	8	204	88	4,313
Open	45	3,141	6	312	51	3,453
Biotechnology	59	3,246	4	95	63	3,341
	453	26,368	50	1,888	503	28,256

The results of the research and research training activities supported by the Council through the Discipline Research Grants cover the entire spectrum from the discovery of very fundamental and abstract knowledge to the experimental development of products and processes.

Figure 15 shows the distribution of Discipline Grants by area of socio-economic activity where the research results are likely to find primary application. This Figure indicates that in 1983-84, in excess of 50% of the research dollars that could be assigned to an area was for research directly relevant to one or more identified areas of socio-economic interest. The other 50% involved the general category of "advancement of knowledge". However, it should be noted that about one-third of that research also had a degree of direct relevance to at least one identified area.

Figure 15: Details of Discipline Grants, 1983-84 ($000)

Primary area of Application of Research	Number of Grants	Expenditures
Agriculture, fisheries, forestry, food	450	9,696
Energy	342	7,590
Environment: management, protection, restoration	264	5,108
Solid earth, hydrosphere and atmosphere: exploration and exploitation	270	5,554
Health	348	6,887
Construction: urban and rural planning	269	5,483
Social development and services	215	3,078
Industrial productivity and development	566	11,265
Transport and telecommunications	192	3,634
Space and aeronomy	43	1,334
Northern development	39	842
General advancement of knowledge	2,781	56,251
Total assigned distribution	5,779	116,722
Not assigned	400	14,741
Total distribution	6,179	131,463

2. Expenditures by Object

The expenditures by object are presented in Figure 16.

Figure 16: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	4,853	4,323	3,095

Other	3	3	3		20,558
Casual and Term Employees	13	12	10		

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3066

B. Cost Analysis

Net Program Cost

The Council's 1985-86 Estimates include only authorities to be voted and statutory authorities. Other items to be considered are some refunds of previous years' grant monies to the Consolidated Revenue Fund and services provided without charge by other departments, such as accommodation provided by the Department of Public Works, certain personnel services provided by the National Research Council, and various services provided by the Department of Supply and Services and by the Treasury Board.

Figure 18: Net Cost of the Program for the Year 1985-86 ($000)

	1985-86 Expenditures	Services Provided Without Charge	Receipts Credited To Revenue	Net Cost	Total 1984-85
Natural Sciences and Engineering Research Council Program	295,492	1,133	(250)	296,375	291,916

The adjustments made to the voted budgetary expenditures to arrive at the total net cost include services provided without charge by the National Research Council ($66,000), Supply and Services ($10,000) Public Works ($958,000) and Treasury Board ($99,000) and estimated refunds to the Consolidated Revenue Fund ($250,000).

1985–86 Estimates

Part III

Expenditure Plan

3071

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Northern Pipeline Agency
Canada

3075

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are Extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $1,285,000 in the fiscal year 1985-86 in support of the Northern Pipeline Agency. The remaining expenditures, estimated at $157,000 for pensions and other employee benefits, will be made under existing statutory authority.

Financial Requirements by Authority

3079

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

Since the southern portions of the pipeline and the facilities required to transport Canadian gas to markets in the United States have been completed (see page 10), the major goal of the Northern Pipeline Agency in 1985-86 is:

- to maintain a skeleton organization as required by legislation pending resumption of pipeline construction; and
- to facilitate any pre-construction activities that may be necessary.

All costs of the Northern Pipeline Agency are recoverable from Foothills Pipe Lines (Yukon) Ltd.

2. Financial Summary

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change
Regulation of construction of the Alaska Highway Gas Pipeline	1,442	3,789	(2,347)
Person-years	11	30	(19)

On May 1, 1982 the sponsoring companies in the United States and Canada announced their decision to delay completion of the pipeline to 1989. Accordingly, the Northern Pipeline Agency has significantly reduced its resource requirements and has moved to a stand-by status until construction recommences. As shown in the Resource Summary from Inception (page 14), all costs are fully recoverable.

B. Recent Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	Actual 1983-84	Main Estimates 1983-84	Change
Regulation of construction of the Alaska Highway Gas Pipeline	5,414	5,576	(162)
Person-years	63	75	(12)

The underutilization of person-years resulted from a successful effort on the part of the Northern Pipeline Agency to move to a stand-by status until a decision is made to complete the construction of the Alaska Highway Gas Pipeline. During 1983-84, the Agency closed its Vancouver and Fort Nelson offices and at year-end, was in the process of closing the Whitehorse office and relocating the Calgary office to smaller quarters.

C. Background

1. Introduction

The Northern Pipeline Agency was created to oversee the planning and construction of the Canadian portion of the Alaska Highway Gas Pipeline Project by the Foothills Group of Companies. The Agency was designed to function as a "single window" to streamline and expedite the approval process. This allows for the many federal acts which apply to the construction of the pipeline in Canada to be administered by a single regulatory authority - the Northern Pipeline Agency.

The powers of the National Energy Board are exercised within the Agency by the Designated Officer.

2. Legal Mandate

The Northern Pipeline Agency was established by Act of Parliament in April 1978 in accordance with the Agreement between Canada and the United States of September 1977. The international joint agreement committed both governments to the efficient and expeditious construction of the Alaska Highway Gas Pipeline.

3. Program Objective

The objective of the Program is "to facilitate the efficient and expeditious planning and construction of the Alaska Highway Gas Pipeline in a manner consistent with the best interests of Canada as defined in the Northern Pipeline Act".

4. Program Organization for Delivery

Activity Structure: The Northern Pipeline Agency is presented as one Activity: Regulation of Design and Construction of the Alaska Highway Gas Pipeline.

Organization Structure: The Northern Pipeline Agency reports to Parliament through the Minister responsible for the Agency.

Offices of the Northern Pipeline Agency are located in Ottawa and Calgary. The Commissioner of the Agency who serves on a part-time basis is located in Ottawa. The operational headquarters is located in Calgary. It is headed by an Administrator and Chief Operating Officer, who also serves as Deputy Administrator and Designated Officer, and a Deputy Administrator, Policy and Programs. During the period of reduced activity the Deputy Administrator, Policy and Programs has been seconded to another government department on a part-time basis. Other members of staff in the Calgary office represent the minimum requirement to maintain an organization.

All formal communications between the operational headquarters of the Northern Pipeline Agency and industry, the general public, other government bodies and the Foothills Group of Companies are handled by the Executive Secretary, Operations who reports to the Administrator in Calgary.

There are two federally appointed advisory councils made up of business people, natives and others who are representatives of their communities in northern British Columbia and the Yukon Territory. The councils report directly to the Minister responsible for the Agency.

Figure 3 illustrates the multidisciplinary aspects of the Agency. Many of these functions are not staffed pending resumption of construction of the pipeline.

Figure 3: Organization

5. Program Description

The Program is described in Part II of the Estimates as follows: to carry out and give effect to the Agreement of September 20, 1977 between Canada and the United States; to facilitate the efficient and expeditious planning and construction of the pipeline, taking into account local, regional and national interests, including those of the native people, and carrying out federal responsiblities in relation to the pipeline; to facilitate consultation and co-ordination with the governments of the provinces and the territories; to maximize social and economic benefits while minimizing any adverse social and environmental effects; to advance national economic and energy interests and to ensure the highest possible degree of Canadian participation in all aspects of the planning, construction and procurement for the pipeline.

The Alaska Highway Gas Pipeline Project is a large diameter pipeline system designed to transport natural gas across a Canadian land bridge from the North Slope of Alaska to the lower 48 states. Provision is made in the design to accommodate Canadian gas from the Arctic region as and when such facilities are required.

In 1980 Canadian and U.S. authorities approved the early construction of parts of the Western and Eastern Legs that make up the southern portions of the system, initially to permit the export of surplus Canadian gas to U.S. markets. Construction of both these Legs has been completed and gas began flowing to U.S. markets in the west on October 1, 1981 and to eastern markets on September 1, 1982. The pipeline project detail chart (Figure 4) and the map (Figure 5) present the various portions of the project.

The mainline system in Canada will be built in five segments by five companies:

Foothills Pipe Lines (South Yukon) Ltd.
Foothills Pipe Lines (North B.C.) Ltd.
Foothills Pipe Lines (Alta.) Ltd.
Foothills Pipe Lines (South B.C.) Ltd.
Foothills Pipe Lines (Sask.) Ltd.

Before construction of any portion of the pipeline can begin in Canada, each segment company of Foothills must obtain Agency approval of plans outlining steps the company proposes to take to comply with the socio-economic and environmental terms and conditions.

The Agency reviews the draft plans in consultation with the company, the respective provincial or territorial government and with native and other interest groups. Comments received from these bodies are taken into account in the finalization of the company's plans. One of the Agency's major endeavours has involved the development of detailed socio-economic and environmental terms and conditions and technical requirements which will govern the actual construction of the pipeline by the Foothills Group of Companies. In addition to the specific technical requirements which apply to the various segments of the system in Canada, the socio-economic and environmental terms and conditions are segmented to reflect the different areas through which the pipeline passes, i.e., Yukon, North British Columbia, Alberta, Saskatchewan and South British Columbia. The terms and conditions include provisions for local business opportunities, equal access to pipeline employment and related training programs for native people and women, compensation to landholders for property damage, plans to minimize adverse environmental impact and protection of traditional native harvesting and cultural areas. In developing the terms and conditions the Agency took into account the concerns expressed by many Canadians in the Berger, Lysyk and Hill Inquiries, the National Energy Board Hearing Report, as well as the undertakings made by Foothills to the National Energy Board before the certificates to build this pipeline were declared to be issued.

In order to establish the safety and integrity of the system such matters as the detailed engineering design, including specific operations and maintenance procedures which have application to design considerations, project scheduling and cost control procedures and construction and inspection procedures are reviewed, and when acceptable are approved by the Designated Officer on behalf of the Northern Pipeline Agency.

Prior to submitting detailed engineering designs, each segment company is required to submit for approval the results of several different types of tests which, if appropriate, are witnessed by Agency personnel. These involve such matters as tests for frost heave, thaw settlement, pipe fracture control and slope stability in addition to studies on seismic disturbance and terrain assessment. These assessments set out the particular locations for the pipeline that might be susceptible to any hazards and the tests are undertaken by the company in an effort to ensure that its design will deal adequately with these hazards.

The location of the right of way and the depth of its pipe at each location are also approved by the Designated Officer, who has the authority to direct the company to divert or re-locate its pipeline where it is considered to be in the public interest to do so.

Compliance with federal regulations, environmental and socio-economic terms and conditions, and technical requirements to be applied in building the pipeline, as well as the construction and testing schedule, are monitored on site by teams of surveillance officers, who in turn report any problems or delays to the Calgary office of the Agency.

Figure 5: The Alaska Highway Gas Pipeline Project

3087

D. Planning Perspective

1. Environment

The remaining portions of the pipeline project were placed on hold in May 1982 by reason of the forecast slow economic growth in the United States, relatively high interest rates, uncertainties with respect to the demand for gas in the near term and possible fluctuations in the prices of alternate sources of energy, particularly oil. Most of these factors continue to influence the situation at this time, particularly the lack of markets for Alaskan gas.

2. Initiatives

As reported in previous years, Foothills and the Agency have reduced to skeleton organizations to carry out certain pre-construction work under way at that time and to facilitate rapid reconstitution when construction of the Northern portion of the pipeline recommences. The resources in 1985-86 reflect the skeleton organization.

3. Program Effectiveness

At this time the effectiveness of the Northern Pipeline Agency can be measured by its ability to wind down without undue hardship and to put on the shelf, for ready access when the project recommences, all of its plans, records and correspondence. These objectives are being attained.

4. Resource Summary from Inception

Under sub-sections 2.(2) and 2.(3) of the National Energy Board Cost Recovery Regulations, Foothills Pipe Lines (Yukon) Ltd. pays the costs incurred by the Agency in respect of the pipeline.

In 1982 the Northern Pipeline Agency placed key employees on a part-or full-time basis with federal departments and others during the period of reduced activity. The costs are recovered from the other parties involved. The majority of these contracts were completed during 1984.

Because billings are prepared at the end of each quarter, expenditures in the last quarter of each fiscal year are not recovered until the first quarter of the following fiscal year. Figure 6 illustrates the Agency's resource summary from inception showing actual person-year utilization, expenditures and recoveries until March 31, 1984.

Figure 6: Resource Summary from Inception ($000)

	1978 -1983 (Actual)	1983-84 (Actual)	1984-85 (Forecast)	1985-86 (Estimates)	Total Recoveries from Inception	Total Expenditures from Inception
Total person-years	390	63	30	11		494
Total expenditures	26,991	5,414	3,789	1,442		37,636
Recovered from:

Other	636	1,409	806	108	2,977	
Amount to be recovered in the first quarter of the fiscal year 1986-87					788	
Total					37,636	

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

All costs are recovered either from Foothills Pipe Lines (Yukon) Ltd. or from others (mainly government departments). The recovery from other government departments represents Agency staff seconded on a part-time basis.

Figure 7: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	794	1,548	2,992
Employer's contributions	157	301	426
Termination payments	328	826	655
Other personnel costs	11	23	46
	1,290	2,698	4,119
Goods and services			
Transportation and communications	58	264	252
Information	4	12	21
Professional and special services	74	170	231
Rentals	8	599	728
Purchased repair and upkeep	2	14	20
Utilities, materiel and supplies	5	30	30
All other expenditures	1	1	5
	152	1,090	1,287
Total operating	1,442	3,788	5,406
Capital	-	1	8
Total Program	1,442	3,789	5,414
Recoveries - Foothills	1,334	2,985	4,005
- Other	108	804	1,409
Net cost of Program	0	0	0

It should be noted that recoveries are not necessarily completed during the same fiscal year as corresponding expenditures and are presented in this format in order to make the reader aware that the cost of the Northern Pipeline Agency is not borne by the taxpayer.

2. Personnel Expenditures

Figure 8: Authorized Person-Years and Salary

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	2	4	9	63,000 - 88,350	76,343
Other	2	3	3	-	-
Scientific and Professional	-	3	7	-	-
Administrative and Foreign Services	2	9	20	58,050 - 74,050	64,893
Technical	1	5	10	40,300 - 47,600	42,173
Administrative Support	4	6	26	24,170 - 49,200	37,628

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated based salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

1985–86 Estimates

Part III

Expenditure Plan

3091

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

**Office of the
Chief Electoral Officer**

3095

Preface

This Expenditure Plan is designed to be used as a reference document and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $1,856,000 to carry out the planned activities of the Chief Electoral Officer in 1985-86. Additional expenditures of $1,319,000 are forecast for 1985-86 under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

- The Chief Electoral Officer will carry out an in-depth evaluation of the effectiveness of training aids which were developed for the training of election officials (see page 12).

- The Chief Electoral Officer will commence the process of selecting outside public relations and advertising expertise and the development of a voter information program for the next election (see page 12).

- The Chief Electoral Officer will complete a publications manual for future applications of the new corporate image incorporating the design elements which were identified in 1984-85 (see page 13).

- The Chief Electoral Officer will prepare to implement any amendments to the Canada Elections Act which may have been approved by Parliament following the tabling of his statutory report (see page 13).

- The Chief Electoral Officer will organize a series of post-electoral evaluation meetings with returning officers in order to receive feedback on the conduct of the election so as to prepare for the difficult task of revising the many forms and procedures which takes place after every general election (see page 13).

3038

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Administration	2,175	2,107	68	18
Elections	1,000	97,039	(96,039)	21
	3,175	99,146	(95,971)	
Person-years	51	51	-	

Administration: The increase of $68,000 is to provide for salary and related fringe benefit increases in the coming year of $72,000 as well as a decrease of $4,000 in other administrative costs.

Elections: The 1984-85 forecast amount of $97,039,000 reflects the current estimate of funds needed to defray the cost of the general election held in 1984. The $1,000,000 in 1985-86 is provided as an indicator of significant statutory expenditures which may be incurred for activities under the Canada Elections Act.

These and additional funds to carry out statutory responsibilities under the Canada Elections Act and the Electoral Boundaries Readjustment Act will be drawn under existing statutory authority should it become necessary.

B. Recent Performance

1. Highlights

- All administrative, technical and financial support was provided to the eleven Electoral Boundaries Commissions responsible for preparing adjustments required in electoral district boundaries in accordance with the formula outlined in the Constitution Act. By the end of 1983 all commissions had presented their reports which were tabled in the House; as required by law, the debates on each report were started within the time prescribed, but to this date these debates have not been completed and this whole matter is therefore in abeyance until the new Parliament decides on the course of action which it will take.

- The development of new and improved training packages for election officials was completed in the early part of 1984 and these were used successfully at the election called on July 9, 1984. The training manuals in both official languages along with the appropriate sets of transparencies were distributed to all returning officers and additional election clerks. An evaluation of the effectiveness of these aids is currently being carried out, so as to get the views of the users and recommend improvements where needed.

- A number of courses were organized for new returning officers so as to ensure that at the call of an election, as much as possible, all returning officer positions would be occupied by trained persons. This is actually what happened when the most recent general election was called on July 9, 1984. Moreover, regional briefings had been held with all returning officers across Canada between January and March 1984 to brief them on amendments to the Act and the impact of these on their duties; these changes resulted from the enacted Bill C-58 and Bill C-169 which came into effect in August 1982 and May 1984 respectively.

- A rationalization of forms management and purchasing procedures was completed during the early part of 1984. In this regard, a forms management register was updated to permit better retrieval of the camera ready copy and negatives; a customer item cardex and filing system was also developed to initiate complex purchases through the most cost effective methods. In addition, all forms re-ordered during the period were systematically upgraded to comply with a new corporate image.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Administration	1,921	2,078	(157)
Elections	4,320	2,000	2,320
Total	6,241	4,078	2,163
Person-Years	46	51	(5)

Administration: The decrease of $157,000 was due to the office being unable during the period to recruit suitable qualified people to fill certain vacant positions.

Elections: The increase of $2.3 million in statutory election expenses is related to three factors: an increase in costs of $1.7 million to prepare for the 1984 general election and to cover the cost of two by-elections held during the period, an amount of $.4 million to cover the cost of the N.W.T. general election held in November 1983 and, an amount of $.2 million to cover additional costs related to the electoral boundaries commissions.

C. Background

1. Introduction

The Chief Electoral Officer is responsible for exercising general direction and supervision over the preparation, administration and reporting aspects of federal elections and the election expenses provisions of the Canada Elections Act. He must also ensure that all those involved in the electoral process comply with the Act. He is appointed by resolution of the House of Commons to which he is directly accountable and communicates with the Governor in Council through the member of the Queen's Privy Council for Canada designated by the Governor in Council for that purpose (currently the President of the Privy Council).

In addition to federal elections, the Chief Electoral Officer has entered into an agreement with the Commissioner of the Northwest Territories to conduct elections to the Council of the Northwest Territories. General elections are held in the Northwest Territories every four years, the most recent one having been held in November 1983.

Enforcement of the provisions of the Canada Elections Act and the Northwest Territories Elections Ordinance is carried out by the Commissioner of Canada Elections under the general supervision of the Chief Electoral Officer by whom he is appointed.

The Chief Electoral Officer also provides the necessary data and assistance to enable the eleven Electoral Boundaries Commissions to discharge their responsibilities with respect to each province's representation in the House of Commons.

2. Legal Mandate

The legal mandate of the Chief Electoral Officer is contained in the Canada Elections Act, the Electoral Boundaries Readjustment Act and the Northwest Territories Elections Ordinance.

3. Program Objective

To enable the people of Canada, eligible to vote, to elect members to the House of Commons, in accordance with the Canada Elections Act and to the Council of the Northwest Territories, in accordance with the Northwest Territories Elections Ordinance, to ensure compliance with all provisions of the Canada Elections Act, to ensure representation of the provinces in the House of Commons in accordance with the Constitution Act, 1982 and to provide the necessary technical, administrative and financial support to the eleven electoral boundaries commissions in accordance with the Electoral Boundaries Readjustment Act.

4. Program Organization for Delivery

Activity Structure: The Office of the Chief Electoral Officer is composed of an Administration Activity and an Election Activity. Details of both activities are provided in Section II of this Plan. (see page 18)

Organization Structure: The Chief Electoral Officer is appointed by resolution of the House of Commons and reports through the Speaker to that body. He is assisted by the Assistant Chief Electoral Officer, appointed by the Governor in Council and the Commissioner of Canada Elections who is appointed under the statutory authority of the Chief Electoral Officer. The Director of Operations, the Director of Election Financing and the Director of Administration and Personnel, all of whom are public servants, also report to the Chief Electoral Officer.

The Commissioner of Canada Elections is responsible for ensuring compliance and enforcement of all provisions of the Canada Elections Act and the Northwest Territories Elections Ordinance.

The Director of Operations is responsible for the preparation, conduct and reporting of general elections, by-elections and Northwest Territories elections as well as co-ordination of the activities of the eleven Electoral Boundaries Commissions.

The Director of Election Financing is responsible for both the financial management of the organization and for satisfying all statutory requirements of the Act and the Northwest Territories Elections Ordinance concerning election financing.

The Director of Administration and Personnel is responsible for the provision of all administrative, personnel, purchasing and registry services to the organization.

The Office and permanent staff of 51 person-years are located in Ottawa. Although there are no permanent regional offices, the 282 returning officers, who are appointed by Order in Council upon the recommendation of the Minister designated for that purpose, do establish offices in their electoral districts for the conduct of an election. The eleven Electoral Boundaries Commissions also

maintain offices in their respective provinces and the Northwest Territories during their tenure.

Figure 3 depicts the allocation of 1985-86 resources by organization and activity.

Figure 3: Resources by Organization/Activity ($000)

						Total
Administration	99	250	413	326	1,087	2,175
Elections	30	-	20	-	950	1,000
Total	129	250	433	326	2,037	3,175
Person-Years	2	7	8	9	25	51

D. Planning Perspective

1. Environment

Several factors can significantly affect the Program.

Uncertainty as to the Timing of General Elections and By-Elections: Although there is provision for a maximum period between general elections, it is possible that an election could be launched at any time. Therefore, the Chief Electoral Officer must be ready to conduct a general election on very short notice, and at times, with very little time since the previous one. The May 1979 and February 1980 elections are a case in point. He must also be ready to conduct by-elections on very short notice at any time between general elections.

Minimum Statutory Period: A minimum period between the commencement of a general election or by-election and polling day is set by statute at 50 days. Consequently, the Chief Electoral Officer must be ready to administer a general election or by-election within that period. Administration of a general election involves providing the 282 returning officers with all material and the necessary

funds to recruit and train some 250,000 election officers, developing and distributing documents, guidelines and instructions to the approximately 1,500 candidates, their official agents, and to all officially registered political parties. As well, the Commissioner of Canada Elections must be ready to ensure that the provisions of the Canada Elections Act are met.

Readjustment of Electoral Districts: Under the Electoral Boundaries Readjustment Act, the Chief Electoral Officer must, following a decennial census, calculate the number of Members of the House of Commons to be assigned to each province. Following the establishment of the Electoral Boundaries Commissions he must provide them with the necessary administrative, technical and financial support that they require.

Legislative Changes: Changes to existing legislation as well as the implementation of new legislation can have an impact upon the administration of elections. Provision of material and services in both official languages, as provided for by the Official Languages Act, and improved access for the physically handicapped to polling stations in accordance with the Canadian Human Rights Act, and amendments to the election expenses provisions of the Act are recent examples of the type of legislative change which can have an effect upon the Program.

2. Initiatives

Development of Training Aids: As emphasized earlier, the Program is organized to respond to a call for a general election or by-election on very short notice. Therefore, the Chief Electoral Officer must maintain his Office in a state of readiness at all times. Consequently, a continuing concern is the maintenance of the capability of both the nucleus headquarters staff and the Returning Officers to efficiently administer elections when called upon to do so. This is achieved through improvements to procedures, guidelines and instructions, and their continual review, to ensure their consonance with approved legislation as well as through the conduct of a thorough training program for election officers. During fiscal 1983-84, the Office hired a firm specialized in the area of training and communications to develop a package for the training of enumerators and deputy returning officers. These training packages which were distributed to returning officers prior to the 1984 general election were utilized extensively for the training of election officers. As a result, an in-depth evaluation of the effectiveness of these aids has been undertaken and will be completed during the planning period, so as to get the views of the users and recommend improvements where needed.

Assessing and planning the voter information program: The voter information program for the 33rd general election (1984), comprising paid messages in the print and electronic media, as well as media and public relations activities worth in total some $2.5 million, will be assessed in terms of its effectiveness and the way it was administered. In keeping with the importance the Chief Electoral Officer places on informing the electorate of their democratic rights and voting opportunities and using the results of the aforementioned analysis, work will commence in 1985-86 on the selection of outside public relations and advertising expertise and the development of a voter information program for the next general election.

Implementing a design concept for a corporate image: Design elements for a corporate image were identified in 1984-85 after surveys had proven a notable lack of awareness on the part of the electorate of the role and mandate of the Office in the federal democratic system, an awareness considered essential to the credibility and effectiveness of the voter information program at election time. The design elements will gradually be applied during the 1985-86 planning year to all publications, both statutory and non-statutory and to other visual aspects of the Office's activities. All design specifications will be incorporated into a manual for future applications of the new corporate image.

Implementing Amendments to the Canada Elections Act: Following the tabling in the House of Commons of the Statutory Report of the Chief Electoral Officer in the Fall of 1984, it is anticipated that several recommendations for amendments to the Canada Elections Act will receive the approval of Parliament in the latter part of fiscal 1984-85. The Office will therefore be devoting much time and energy to the implementation of these changes in the 1985-86 planning period.

Implementing changes to election procedures: Following the September general election, a series of twelve post-electoral evaluation meetings will be held in eight cities across Canada between January and March 1985. It is at these meetings that returning officers will provide their views on the conduct of the election and make recommendations for changes, especially in the area of forms and procedures, so as to facilitate the taking of the votes. This feedback will serve during the following months to guide the headquarters staff in the difficult task of revising the many forms and procedures which takes place after every general election.

Accommodating New Electoral Districts: Another important task planned for 1985-86 is the implementation of the new electoral districts following the proclamation of the Representation Order. This will involve such things as the training of 310 Returning Officers, some of whom will not have had prior experience and a complete revamping of administrative and technical support systems to accommodate 28 additional districts and several districts whose boundaries will have changed.

Preparations are being made to transpose the results of the 1984 general election into the new electoral districts established by the redistribution commissions; this project is being held in abeyance however, until Parliament decides which route it will take in this area. This exercise is needed to establish which party will have the right to designate urban enumerators when a general election is held on the new boundaries.

3. Program Effectiveness

Effectiveness of the Program in achieving its objective which is to provide persons who are eligible to vote with the opportunity to exercise that right, in accordance with the provisions of the Canada Elections Act can be gauged in five key result areas.

Enumeration: The lists of voters who will be eligible to vote at a general election or a by-election are established through the enumeration process as specified in the Canada Elections Act.

The degree to which this process is effectively administered is difficult to determine without significant expenditures of funds to ascertain the actual number of persons eligible to vote on the days that enumeration takes place. The best information which is available at a reasonable cost is the population data from the most recent census conducted by Statistics Canada. A census is, however, taken only every 10 years whereas elections may be held at any time. Consequently, changes to the size and mix of the population between census day and election day introduce a significant degree of uncertainty to the accuracy of the population estimates.

Two factors which contribute to the effectiveness of the enumeration process are the methods used and the opportunities provided to review the lists through the revision process. In addition to door-to-door enumeration carried out from the 38th to the 32nd day before polling day, prospective voters are provided with the opportunity to submit changes to the preliminary lists on the 19th, 18th and 17th days before polling day and to cause their name to be included if appropriate.

One indicator of the effectiveness of the enumeration process is the number of prospective voters who, as a result of the revision process, have their names added to the preliminary lists. Figure 4 shows the number of prospective voters appearing on the preliminary lists and on the official lists after the revision period had expired during the 1972, 1974, 1979 and 1984 general elections. An additional 535,929 names were added to the official lists of electors during the 1984 revision process. A factor which has contributed to the increased number of prospective voters taking advantage of the revision period is the comprehensive information program undertaken during recent general elections.

Figure 4: Names on Preliminary and Official Lists of Electors at the 1972, 1974, 1979 and 1984 General Elections*

Election	Names on Preliminary Lists	Names on Official Lists	% Added to Preliminary Lists
1984	16,164,636	16,700,565	3.31
1979	14,865,893	15,234,997	2.48
1974	13,358,576	13,620,353	1.95
1972	12,818,806	13,000,778	1.42

* Enumeration data for the 1980 election have been excluded as the preliminary lists were based upon 1979 official lists because the usual door-to-door enumeration did not take place which makes a comparison impossible.

Voting: Access to the polls for eligible voters is provided on polling day as well as through advance polls held on the 9th, 7th and 6th days before polling day. Electors unable to vote at an advance poll or on polling day at a general election may cast their ballot in the office of the Returning Officer between the 21st day and the last Friday before polling day (except Sundays and any day fixed for an advance poll).

Thus, with the exception of Sundays and the Saturday immediately prior to polling day, an elector may cast his ballot on any one of the other 17 days preceding the general election.

In addition, at a general election many electors such as members of the Armed Forces, veterans undergoing hospital treatment and members of the Public Service of Canada employed outside Canada as well as dependants of those members are entitled to vote under the Special Voting Rules contained in Schedule II of the Canada Elections Act.

As a result of these provisions many electors who otherwise may not have the opportunity are able to vote. The number of eligible voters who exercised their right under these provisions during the past five general elections is summarized in Figure 5.

Figure 5: Votes Cast Prior to Polling Day at General Elections

Votes Cast	1972	1974	1979	1980	1984
At advance polls	154,380	444,334	301,978	427,503	585,102
In offices of Returning Officers	*	*	28,231	47,607	125,232
Under special voting rules	53,923	49,149	50,714	52,652	49,529
Total votes cast prior to polling day	208,303	493,483	380,923	527,762	759,863
Percentage of total votes cast	2.09%	5.10%	3.30%	4.79%	6.01%

* Not applicable for general elections prior to 1979

Procedures: Clarity of information provided and simplicity of the procedures required to complete the ballot paper also contribute to the effectiveness of the Program. One indicator of the effectiveness of the procedures and information

provided is the number of rejected ballots. It should be borne in mind that the data contained in Figure 6, which displays the number and percentage of rejected ballots at the five most recent general elections, includes those which have been deliberately spoiled. The extremely low percentage and the decrease in the percentage of rejected ballots over the five year period can be in part attributed to improvements in the clarity of information and election procedures.

Figure 6: Number and Percentage of Rejected Ballot Papers

Election Year	Total Votes	Rejected Ballots Number	%
1984	12,634,482	89,009	0.70
1980	11,016,899	67,440	0.61
1979	11,537,909	85,289	0.74
1974	9,671,002	165,094	1.71
1972	9,974,661	307,172	3.07

Review of the Canada Elections Act: The Chief Electoral Officer and his staff with the interests of the elector in mind, continually review the Canada Elections Act and propose amendments to reflect new legislation which impacts upon the Canada Elections Act and to improve those aspects which, during the conduct of an election, have been found to be deficient. Various types of review are undertaken. These reviews include those carried out on an ongoing basis by an Ad Hoc Committee, composed of representatives of each political party represented in the House of Commons and senior staff of the Chief Electoral Officer and post-election sessions with returning officers which are held after each general election to discuss improvements to procedures and application of the provisions of the Act.

Some of the recent improvements which have been made include the extension of proxy voting, voting in the office of the returning officer, selecting premises to make it easier for handicapped persons to have access to the polls and the introduction of a special template to enable the blind to vote by themselves. A most recent example of the work of the Ad Hoc Committee is Bill C-169 amending the election expenses provisions of the Act which was recently passed in the House of Commons. Among the major changes introduced in this Bill are the indexing of the spending limits of political parties and candidates and changing the basis of reimbursement of election expenses for both parties and candidates.

Compliance with the Canada Elections Act: The Chief Electoral Officer and his staff, in concert with the Ad Hoc Committee, regularly produce a set of guidelines which serve to interpret and clarify various sections of the Act dealing with candidates and political parties. The Office of the Chief Electoral Officer also produces a Manual of Information directed at candidates, official agents and

auditors, covering the duties and responsibilities of each and providing specific guidance in the area of election expenses. In addition, during an election, the Office conducts half-day seminars on various topics dealing with election expenses and political contributions. These seminars are presented at various locations throughout the country to candidates, their official agents, their auditors and certain campaign workers. All of the above initiatives are designed to assist candidates and political parties in complying with the provisions of the Canada Elections Act.

Section II
Analysis by Activity

A. Administration

Objectives

To ensure that all administrative requirements of the Canada Elections Act and the Electoral Boundaries Readjustment Act are met.

Resource Summary

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Administration	2,175	51	2,107	51	1,921	46

Description

The Administration Activity involves the maintenance of a nucleus of permanent staff at Ottawa Headquarters in a state of readiness to conduct an election within the minimum statutory period specified in the Canada Elections Act. This nucleus staff is responsible for performing a wide variety of statutory functions outside the election period, including:

- preparing, procuring and maintaining all necessary financial, training and other materials required to conduct an election or redistribution;
- training election officers in all aspects of their duties and advising them of their statutory responsibilities under the Act;
- providing data required by Members of the House of Commons, political parties and parliamentary committees;
- providing advice and assistance to the House of Commons Standing Committee on Privileges and Elections;
- undertaking the review and study of electoral procedures and the election expenses provisions of the Act; and

- compiling and preparing statutory and statistical reports and books of instructions for election officers, candidates and political parties.

Performance Information/Resource Justification

Preparation of Election Material: The preparation and organization of the material required for the conduct of a general election or by-election are carried out during the periods between elections. Changes to the documentation usually result from either amendments to the Canada Elections Act or through improvements suggested by permanent staff and returning officers. For example, the changes contained in Bill C-169, an Act to amend the Canada Elections Act which was passed by Parliament in the Fall of 1983, necessitated major revisions to the election expenses Guidelines and the Manual of Information produced for candidates, official agents and auditors. Also, these changes necessitated a major revision of the candidates' reports respecting election expenses as well as certain other forms used by official agents. Some of these changes also required a revision of certain instructions provided to returning officers in relation to their duties.

The number of different types of forms and documents which are supplied to returning officers, candidates, enumerators and other persons during an election are listed in Figure 8.

Figure 8: Election Forms, Documents and Supplies

Forms	
• used by returning officers	39
• used by candidates	9
• used by enumerators	13
• used for revision	14
• used at the poll	14
Supplies	
• envelopes for poll	23
• envelopes for election expenses	5
• tags	4
• other material	41
• reference books	12
• specimens	6
Total number of pieces	180

The actual quantity of forms, supplies and other material varies according to the number of electors in each electoral district. Normally the material is organized into 15 to 20 lots which are shipped to returning officers as they are required during the election period; the majority of enumeration supplies must be

sent ahead of the election so as to ensure readiness for this first task. During the 1984 general election 30,365 parcels, bags or cartons of supplies were shipped to the 282 returning officers. The total weight of the supplies shipped amounted to 617 tons for an average of 40.61 lbs (18.5 kgs) per piece. Preparation, organization and distribution of the material requires the continuing efforts of nine full time employees who are supplemented by casual or temporary personnel when necessary.

Provision of Information: The activity also provides information concerning elections to prospective candidates and to the general public upon request. Information is provided either through statutory and statistical reports on such topics as details of contributions to candidates or election expenses of candidates and of political parties or through the preparation of documents addressing specific topics such as a voters' guide, information on becoming a candidate and the dissemination of maps showing the distribution of electoral districts in Canada. A list of reports and other publications which are available to the general public is contained in Section III. At each general election, the Chief Electoral Officer develops an all-encompassing information program which comprises advertisements in the majority of newspapers, both dailies and weeklies, along with spots on television and radio. There is also a public relations component to this program which involves various meetings with the media, and in 1984, the production of a new film entitled "Elections Canada at work". The total cost of this information program is in the area of $2.5 million, most of which was spent on advertising in the media.

Training Courses: In order to prepare new returning officers for their duties and to ensure that other returning officers are fully advised of the impact of changes to legislation and procedures which may have occurred, the activity conducts training courses and briefings during the periods between elections. Depending on whether the debates in the House of Commons on the reports of the eleven electoral boundaries commissions are concluded during the next year or whether they are delayed for an indefinite period, as soon as the new boundaries are proclaimed and the returning officers are appointed, this Office will be conducting several four-day courses for inexperienced returning officers and a number of shorter courses for experienced (previous) people. In total, 310 returning officers will attend one or other of these courses. If the boundaries are not proclaimed during the 1985-86 fiscal year, several courses for newly appointed returning officers will be required as part of normal training activities. In 1984-85, there were 7 courses for 30 new returning officers and at 8 locations across Canada 12 one-day briefing sessions were held for experienced returning officers. All returning officers attended one or the other of the above courses in which the staff from Operations and Finance participated extensively. As well, briefings, seminars and training sessions are prepared and conducted as required prior to each election to inform candidates, official agents and auditors of their respective financial and reporting responsibilities pursuant to the Canada Elections Act. During the 1984 election, 21 such seminars were held in different locations across the country. These seminars were attended by over 650 candidates and their representatives.

B. Elections

Objectives

To direct and supervise the administration of and reporting on elections and to co-ordinate the endeavours of the Electoral Boundaries Commissions.

Resource Summary

Figure 9: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Elections	1,000	-	97,039	-	4,320	-

Uncertainty as to the timing of a general election or by-elections does not permit an accurate estimate of statutory expenditures. The above amount is a provision only.

Description

Canada Elections Act: This sub-activity provides general direction and supervision over the administrative conduct of elections, including the training of federal and territorial returning officers, the revision of the boundaries of polling divisions and the acquisition of election material and supplies for transmission to returning officers when required. In addition, the activity is responsible for issuing directives and providing guidelines to candidates and political parties, enforcing all provisions of the Act and making statutory payments to election officers, auditors, political parties and official agents where specified by the Act.

Electoral Boundaries Readjustment Act: This sub-activity consists of calculating the number of members of the House of Commons to be assigned to each of the provinces and to provide the eleven Electoral Boundaries Commissions with the necessary statistics, maps and other documentation as well as the financial competence to discharge their mandate.

Performance Information/Resource Justification

Election Costs: There have been three general elections during the past 5 years. Figure 10 shows the total cost of each general election and the cost per elector

expressed in both current year dollars and 1979 constant dollars using the Consumer Price Index for all items as published by Statistics Canada.

There was no door to door enumeration at the 1980 general election as the necessary supplies could not be distributed in time. As an alternative, the official lists for the previous general election held in May 1979 were used. The resulting decrease in cost per elector, however, was partly offset by an increase in activity during the period provided for the revision of the preliminary lists. The overall effect of this change in procedures was a decrease in both the current and constant dollars cost per election in 1980.

This trend continued to a certain extent in 1984 where the cost per elector in 1979 constant dollars, although slightly up from 1980, indicates a noticeable decrease when compared to the 1979 election.

Figure 10: Cost of 1979, 1980 and 1984 General Elections Expressed as Cost Per Elector

	1979	1980	1984
COST OF ELECTION			
Preliminary duties	$ 1,588,402	$ 385,400	$ 1,313,522
Enumeration and revision	23,543,714	16,037,078	30,866,427
Polling stations	13,491,925	13,636,155	19,114,031
R.O.'s & E.C.'s fees and allowances	7,196,781	9,226,247	12,019,855
Headquarters and printing of ballots	6,160,730	8,777,815	15,003,446[1]
Information program	1,120,827	2,762,175	2,500,000
Reimbursement of candidates and parties	11,092,062	11,780,218	15,844,000[2]
Special Voting Rules	254,997	311,644	378,077
TOTAL COST OF ELECTION	$64,449,438	$62,916,732	$97,039,358
TOTAL NUMBER OF ELECTORS	15,234,897	15,890,416	16,700,565
Cost per elector			
In current dollars	$ 4.23	$ 3.96	$ 5.81
In 1979 constant dollars	$ 4.23	$ 3.72	$ 3.78

1 This includes an estimate of $3 million to cover final year-end adjustments.
2 This represents an estimate as the actual expenditure is not yet known.

Compliance and enforcement of the provisions of the Canada Elections Act are the responsibility of the Commissioner of Canada Elections and his staff. Formal requests for information and interpretation of the legislation are received prior to, during and after elections from the general public, official agents of candidates and representatives of political parties.

The number of formal requests for information and interpretations of the Canada Elections Act received and responded to by the Commissioner during the 1984 election was in the neighbourhood of 250. In addition, the Commissioner and his staff have responded to several thousand telephone calls for information dealing with all aspects of the legislation. The marked increase over previous elections was in fact due to a media information programme.

Complaints alleging violations of the Canada Elections Act are received during and after each election. All complaints are investigated by the Commissioner and his staff who if necessary will request an in-depth police investigation of the complaint, which may lead to prosecution of the potential offender.

At the 1984 general election, a total of 258 complaints alleging violations of the Canada Elections Act by members of the general public, candidates, representatives of political parties, non-political organizations or associations and election officials were received. All complaints were investigated either by the Commissioner of Canada Elections or the RCMP. Some of the complaints were concluded because they were unfounded or the evidence available was so marginal as to make further action unjustified. The balance of the complaints (150) are either being processed or were referred to the R.C.M. Police for investigation. The results of five investigations have been received and they justified charging five persons for offences under the Act.

At the 1980 general election, 290 complaints were received. The outcome of investigations into these complaints justified the laying of 103 charges for various offences under the Act. Forty eight convictions were registered. One case is still before the courts; the other charges were either withdrawn or dismissed.

Electoral Boundaries Readjustment: The Chief Electoral Officer is responsible for providing the eleven Electoral Boundaries Commissions with the number of members to be attributed to each province. The Office of the Chief Electoral Officer has five primary areas of responsibility with respect to the Electoral Boundaries Commissions:

- it must provide the Commissions with all relevant population statistics, maps and other data relating to their province;
- it acts as the intermediary between the Commissions and the agencies who have a responsibility under the Electoral Boundaries Readjustment Act. These are Statistics Canada and the Director of the Surveys and Mapping Branch of the Department of Energy, Mines and Resources;

- it acts as liaison between the Commissions and the House of Commons for the transmission of their reports;
- it makes available, to be used at the discretion of each Commission, various technical, administrative and financial assistance which may facilitate the accomplishment of the Commissions' work; and
- it must tax all invoices received for expenses incurred by the various Commissions prior to payment of the accounts.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 11: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	1,727	1,678	1,500
Contributions to Employee benefit plans	230	207	238
	1,957	1,885	1,738
Goods and Services			
Transportation and communications	55	55	75
Professional and special services	80	80	70
Rentals	14	14	9
Purchased repairs and upkeep	26	26	7
Utilities, material and supplies	25	25	19
All other expenditures	1,000	1,004	4,320
	1,200	1,204	4,500
Total operations	3,157	3,089	6,238
Capital	18	18	3
Total expenditures	3,175	3,107	6,241

2. Personnel Expenditures

Figure 12: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Executive	5	6	5	50,350 - 96,300	70,325
Administrative and Foreign Service	14	14	16	13,330 - 63,870	43,180
Technical	2	2	2	12,635 - 57,691	25,845
Operational	9	9	9	13,253 - 40,676	21,730
Administrative support	21	21	18	12,636 - 31,946	23,742

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Figure 13: Program Cost by Activity for 1985-86 ($000)

	1985-86 Operating Expenditures	Add Other Costs	**Total Cost 1985-86**	Total 1984-85
Administration	2,175	579	**2,754**	2,707
Elections	1,000	-	**1,000**	97,039
	3,175	579	**3,754**	99,746

Costs added to operating expenditures to obtain the total net cost for 1985-86 include accommodation provided without charge by the Department of Public Works ($459,000) and services provided without charge by other departments ($120,000).

C. Additional Information

1. List of Statutory Reports and Other Publications Available to the General Public

- Canada Elections Act, 1984
- Reports of The Chief Electoral Officer Respecting Election Expenses
- Statutory Reports of the Chief Electoral Officer pursuant to subsection 59(1) of the Act
- Federal Elections in Canada
- Voter's Guide
- Student Voter's Guide
- Voting in The Office of The Returning Officer
- Duties and Responsibilities of The Returning Officer
- Election Expenses and You
- Manual of Information (1984): A Digest intended for Candidates, Official Agents and Auditors
- Guidelines and Procedures Respecting Election Expenses
- Important Considerations for Prospective Candidates
- Alphabetical List of Electoral Districts
- List of MPs with Political Affiliations
- List of Provincial Chief Election Officers
- Electoral Boundaries Readjustment Act
- Representation in the Federal Parliament
- Northwest Territories Elections Ordinance

In addition, various maps, indexes and statistics such as those relating to by-elections and general elections are available.

The Chief Electoral Officer also prepares and publishes detailed statistics of general elections and by-elections on a poll by poll basis as required by the Canada Elections Act.

2. Administration of a General Election or By-Election

A general election is launched through the issuance of the following proclamations:

- a proclamation of dissolution of the House of Commons;
- a proclamation fixing polling day and the date for the return of the writs;
- a proclamation establishing a pro-forma date for convening Parliament.

The main steps that have to be taken in connection with the conduct of an election are:

- the nomination of urban enumerators designated by the two candidates entitled to do so not later than noon of the 45th day before polling day;
- the enumeration which, by statute, must begin on that Friday which is the 38th day before polling day;
- the last day for reproducing copies of the preliminary lists of electors for distribution to candidates must, by statute, be on Thursday, the 25th day before polling day;
- the revision of the preliminary lists of electors which, for urban polling divisions, is held on Wednesday, Thursday and Friday, the 19th, 18th and 17th days before polling day and in rural polling divisions mainly on Wednesday, the 19th day before polling day;
- nomination day is held on Monday, the 28th day before polling day unless that Monday happens to be a holiday as defined in the Interpretation Act, in which case nomination day is deferred to the following Tuesday;
- advance polls which are open on Saturday, Monday and Tuesday, the 9th, 7th and 6th days before polling day;
- voting in the office of the returning officer for electors unable to vote at the advance poll and on polling day takes place from Monday the 21st day preceding polling day and ends on the last Friday before polling day (except on a Sunday and any day fixed for an advance poll);
- polling day which by statute is always on a Monday unless that Monday happens to be a holiday as defined in the Interpretation Act, in which case polling day only is deferred to the following Tuesday;

- the official addition of votes that cannot be held earlier than the 3rd day following polling day to ensure that the official result of the votes cast for each candidate under the Special Voting Rules and related documents are available for the official addition of the votes and for a judicial recount, if necessary. At a by-election, the official addition can take place earlier since the Special Voting Rules do not apply; and

- the declaration of election issued by each returning officer, at the earliest on the 7th day following the official addition of the votes unless, in the meantime, there was a petition to a judge for a recount.

The Constitution Act provides that no Parliament should continue for more than five years following the date fixed by Order in Council for the return of the writs at a general election. This date usually follows polling day by approximately three weeks.

1985–86 Estimates

Part III

Expenditure Plan

3123

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Office of the Commissioner
for Federal Judicial Affairs

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included is an extract from Volume II of the Public Accounts. It is provided as an aid in assessing the Program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is requested in these Estimates to spend $3,253,000 in support of the Commissioner for Federal Judicial Affairs. The remaining expenditures, estimated at $103,280,000 for Judges' Salaries, Allowances and Annuities and $158,000 for contributions to employee benefit plans, will be made under existing statutory authority.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The Federal Judicial Affairs Program has identified the following highlights for 1985-86:

- The Judges Administration section will administer all salaries, allowances and annuities as authorized by the Judges Act to 1,100 recipients (see pages 15 and 18).

- The Language Training Program for judges will be continued with particular emphasis upon legal terminology not available in the Public Service Commission language training program (see pages 14 and 17).

- The Federal Court Reports Section will continue to publish legally significant reasons for judgment rendered by the Federal Court of Canada; the work of the section has been greatly increased due to the quantity and complexity of recent cases; the complement of the Federal Court bench has been enlarged from 22 to 24 Judges; and a substantial change in the roles and activities of the Court, as well as an anticipated increase in the number and average length of judgments handed down in 1984 over 1983, will also contribute to increased workload (see pages 13 and 17).

2. Financial Summary by Activity

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast* 1984-85	Change	For Details See Page
Administration	3,079	2,775	304	15
Canadian Judicial Council	332	255	77	19
Judges' Salaries, Allowances and Annuities	103,280	84,910	18,370	20
	106,691	87,940	18,751	
Authorized person-years	32	31	1	

* The 1984-85 Forecast is $9 million or 9% less than the 1984-85 Main Estimates of $97 million. (Extracts from Part II of the Estimates, page 4). This decrease is due primarily to the unused Judges pool positions established under section 19.1 of the Judges Act.

Explanation of Change: The financial requirements for 1985-86 are $19 million or 21% higher than the 1984-85 forecast expenditures. This increase is due primarily to:

- Judges pool of 49 positions — $ 4.5 million
- Vacancies and new positions — $ 2 million
- Adjustments of salaries and supernumerary positions — $ 9 million

B. Recent Performance

1. Highlights

- Pursuant to the Judges Act a commission was established on April 6, 1983 to inquire into the adequacy of the salaries and other amounts payable under the Judges Act and into the adequacy of the Judges benefits generally. A report was presented to the Minister of Justice in the fall of 1983.

- The Language Training Program for Judges which began in 1978 was continued and emphasis was given to tailoring it to the needs of the Judiciary with particular emphasis upon legal terminology not available in the Public Service Commission language training program (see page 17).

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Administration	2,452	2,904	(452)
Canadian Judicial Council	222	273	(51)
Judges' Salaries, Allowances and Annuities	79,242	80,484	(1,242)
	81,916	83,661	(1,745)

Explanation of Change: The actual financial requirements for 1983-84 were $1.7 million or 2% less than planned. This decrease was due primarily to:

- Judges' Salaries (Statutory) — $1.2 million
- Decrease in Judges' Travel and Language Training costs due to a lower demand than anticipated — $ .5 million

C. Background

1. Introduction

The Commissioner is responsible for the administration of Federal Judicial Affairs with respect to all federally appointed judges, the Federal Court of Canada, the Tax Court of Canada and the Canadian Judicial Council.

Figure 3: Responsibilities of the Commissioner for Federal Judicial Affairs

The purpose of this Office is to provide central administrative services for all federally appointed judges of the superior, county and district courts of the provinces and territories as well as administrative services for the Canadian Judicial Council. Specifically, the Program includes the administration element consisting of the provision of personnel, financial and other administrative services; the Canadian Judicial Council; and the Judges' salaries, allowances and annuities as well as annuities to spouses and children of deceased Judges.

It should be noted that the Federal Court of Canada and the Tax Court of Canada are not resourced through this Program.

2. Legal Mandate

Section 44 of the Judges' Act provides for the establishment of an officer called the Commissioner for Federal Judicial Affairs who shall have the rank and status of a deputy head of a department. Section 45 sets out the duties and functions of the Commissioner.

3. Program Objective

To provide central administrative services for the Canadian Judicial Council, and federally appointed judges of the superior, county and district courts of the provinces and territories.

4. Program Organization for Delivery

Activity Structure: The Administration of Federal Judicial Affairs Program consists of the following three activities, which are described in detail in Section II of this Plan.

- Administration;
- Canadian Judicial Council; and
- Judges' Salaries, Allowances and Annuities; and Annuities to Spouses and Children of Deceased Judges.

Organization Structure: The Program is headed by the Commissioner for Federal Judicial Affairs who is assisted by a Deputy Commissioner, responsible for financial, personnel and administrative matters and language training, as well as a Senior Editor who is responsible for editing Federal Court reports. Also under the direction of the Commissioner is the Administrator of the Federal Court of Canada and the Registrar of the Tax Court of Canada. Also reporting to the Commissioner is the Executive Secretary of the Canadian Judicial Council which is an independent statutory body composed of Chief Justices and Chief Judges.

Figure 4 shows the distribution of resources by organization and activity.

Figure 4: Resources by Organization/Activity ($000)

	Executive Secretary, Canadian Judicial Council	Deputy Commissioner	Senior Editor, Federal Court Reports	Total
Judges' Salaries, Allowances or Annuities		103,280		103,280
Canadian Judicial Council	332			332
Administration		2,470	609	3,079
Total	332	105,750	609	106,691
Person-years	2	22	8	32

D. Planning Perspective

1. Environment

The principal factors which influence the nature and scope of the Administration of Federal Judicial Affairs Program are the content of the Judges' Act and amendments thereto, the demand for judicial services in both official languages and the number and nature of cases heard by the Federal Court of Canada.

As the principal responsibility of the Program is to provide administrative services to federally appointed judges with respect to salaries, annuities, expenses and benefits, changes to the Act which have a direct bearing on the above matters will tend to increase the administrative workload associated with the provision of these services.

Provision of judicial services in both official languages has a direct impact upon the Program. The need to provide training which encompasses legal terminology is being satisfied through the development and conduct of language courses tailored to the special needs of the judiciary.

The extent of the Program is directly affected by the nature and the quantity of litigation dealt with by the Federal Court of Canada. The broadening of the Court's jurisdiction, the proliferation of the Federal boards and tribunals (from which appeals lie to the Federal Court), recent legislative activity -- in particular the Charter -- and a further enlargement of the Bench have combined to substantially increase the volume and complexity of the judgments -- all of which must be edited or digested by the staff of the Federal Court Reports. Not only are the cases more numerous but, on account of the important new issues involved, the average length of the judgments has increased by about 50% over the last two years. Formerly, the great majority of cases in the Federal Court concerned specialized areas of the law so that the judgments were of interest mainly to the parties and the Bar. This is no longer the case as the Court deals with matters of general interest such as the Cruise Missile case.

2. Initiatives

In view of the environmental setting of the Program no major new initiatives are planned for 1985-86.

3. Update on Previously Reported Initiatives

- In 1983-84 legally significant cases were published in both official languages to standards of legal and linguistic accuracy and clarity required in a law reporting series.

- During 1983-84, through private courses, intensive immersion courses and sessions 19,410 hours of language training were provided to 227 judges.

4. Program Effectiveness

The effectiveness of the program is directly related to the following key factors:

- selection of the more legally significant judgments of the Federal Court, their editing and headnoting to the highest standards and publication, in both official languages, within a reasonable time of their release (approximately 12 months); and

- the level of fluency and ability of judges to carry out their duties in both official languages.

Federal Court Reports: Reasons for judgment rendered by the Federal Court of Canada are reviewed by the Senior Editor to determine which judgments or portions thereof merit publication as valuable precedents. Those selected are subjected to a most thorough editorial process by the Legal Editors who ensure that the contents and references are accurate. They also prepare "captions" (key words) and "headnotes" (summaries) for publication. Since law students, professors, lawyers and judges all rely heavily on the various series of law reports -- and especially on an "official" series such as the Canada Federal Court Reports -- along with the statutes as the primary sources of the law, it is of the greatest importance that the selection of cases be expert, the editorial functions be carried out in a most thorough fashion and the reports be published on a timely basis.

With reference to the accuracy of the editorial functions, the following figure demonstrates the number of mistakes noted subsequent to publication:

Figure 5: Accuracy of Federal Court Reports

	1983-84	1982-83	1981-82
Total pages published	1,350	1,542	1,716
Number of errata	1	6	-
Average errata per 1,000 pages	0.74	3.89	-

The average time required to publish a Federal Court report in 1983-84 was 16 months. The goal for 1985-86 is 10 to 12 months.

Judges' Language Training: In keeping with the intent of the Official Languages Act and provisions of the Criminal Code relating to the right to trial in either official language, the Program conducts language training courses which provide special training in legal terminology for federally appointed judges.

The purpose of the training courses is to improve the ability of judges to carry out their duties in either official language. Different types of courses are provided. For example, immersion courses consisting of two-week sessions twice yearly for anglophone judges and annually for francophone judges as well as a one week specialized course in legal terminology are provided. Between sessions all judges taking second languages courses can obtain three to five hours per week of private tutoring.

Section II
Analysis by Activity

A. Administration

Objectives

The Administration Activity has the following objectives:

- to administer Part I of the Judges' Act, which provides for the payment of salaries, allowances and annuities to federally appointed judges, and for the payment of annuities to spouses and children of deceased judges;
- to provide central administrative services to the Canadian Judicial Council;
- to develop and provide a language training program to federally appointed judges;
- to edit and publish the Federal Court Reports; and
- to keep under review the Judges' Act and to recommend appropriate amendments.

Resource Summary

Figure 6: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Policy and Management Services	1,055	12	942	12	834	12
Federal Court Reports	609	8	545	8	481	8
Judges' Language Training	1,225	4	1,106	3	977	3
Judges' Administration	190	6	182	6	160	6
	3,079	30	2,775	29	2,452	29

Past Financial Performance

Figure 7 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 7: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Policy & Management Services	834	1,069	(235)
Federal Court Reports	481	487	(6)
Judges' Language Training	977	1,168	(191)
Judges' Administration	160	180	(20)
	2,452	2,904	(452)

Explanation of Change: Actual financial requirements for 1983-84 were $452,000 or 16% lower than planned. This decrease was mainly due to a lower than anticipated demand for Judges' Travel and Language Training.

Description

This activity includes all of the administrative tasks necessary to meet its objectives as stated above. These objectives are accomplished through the work of four units.

Policy and Management Services: This unit provides the Program with policy direction, as well as financial, personnel and administrative services.

Editing Federal Court Reports: Reasons for judgment of cases heard by the Federal Court of Canada are edited and published by this unit.

Judges' Language Training: This unit is responsible for planning, organizing and conducting language training programs for judges.

Juuges' Administration: This unit attends to the disbursement of salaries, allowances and annuities for judges and their dependents.

Performance Information/Resource Justification

Editing Federal Court Reports: The output of the Federal Court Reports Section is the publication of reasons for judgment rendered by the Federal Court. All reasons for judgment are reviewed by the section to determine those which should be published as important precedents. Those chosen are then the subject of extensive editing and review to ensure that their contents and legal references are accurate. The number of written reasons for judgment produced, the number selected for publication and the cost of editing and publication are shown in Figure 8. The costs of printing and distribution are determined by the DSS Printing Bureau on a full cost-recovery basis. Editing costs include the salaries of the Senior Editor, three Editors and four Editorial Assist

Figure 8: Number and Cost of Federal Court Cases Published

	1985-86 (Estimated)	1984-85 (Forecast)	1983-84 (Actual)	1982-83 (Actual)
Number of written reasons for judgment	850	739	574	544
Number of digest published of unreported cases	663	614	268	311
Number of cases published	180	163	133	180
Number of pages published	2,484	2,615	1,350	1,542
Cost of printing and distribution	$276,000	$245,000	$221,890	$193,000
Cost of editing	$333,000	$300,000	$258,460	$153,264
Total cost of publication	$609,000	$545,000	$480,350	$346,264

Judges' Language Training: The major output of the Language Training unit is courses provided to judges to improve their capabilities in both official languages. Particular emphasis is placed upon the use of legal terminology in all courses.

Courses provided are of three types: two-week immersion sessions for anglophone and francophone judges, private tutoring for judges from three to five hours a week between immersion sessions, and three-to-four month total immersion courses for anglophone judges.

Figure 9 shows the number of participants at each session and the cost of each type of course in 1983-84, 1984-85 and 1985-86. Many of the judges who attend both sessions held each year for anglophone judges also take advantage of the private tutoring sessions.

Figure 9: Cost of Training and Number of Participants by Type of Course ($000)

	1985-86 (Estimated)		1984-85 (Forecast)		1983-84 (Actual)	
Type of course	$	Number	$	Number	$	Number
Immersion sessions	640	240	590	230	492	163
Private tutoring	393	300	374	286	308	235
Total immersion	10	1	8	1	7	1
Cost of training*	1,043	541	972	517	807	399

* These costs do not include the salaries and operating expenses of the Judges' Language Training Section. The total estimated cost for 1985-86 is $1,225,000.

Judges' Administration: The purpose of this unit is to administer all salaries, allowances and annuities to judges of the Federal Court of Canada, the Tax Court of Canada and all other federally appointed judges of the superior, county and district courts of the provinces and territories as authorized by the Judges' Act. This unit also administers gratuities to spouses of such judges who die while in office and it also pays annuities to spouses and children of deceased judges. Expenditures in this activity include salaries and allowances for over 750 judges and 350 recipients of annuities. In 1983-84, 192 Orders in Council dealing with salaries, pensions, appointments and transfers were prepared for submission and the requisite documentation processed to give effect to these Orders in Council when approved. In addition, 8,772 expense claims were processed during that fiscal year. The direct cost of providing the above services in 1983-84 amounted to $160,000 and six person-years.

B. Canadian Judicial Council

Objective

To provide for the administration of the Canadian Judicial Council as authorized by the Judges' Act.

Resource Summary

Figure 10: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Canadian Judicial Council	332	2	255	2	222	2

1983-84 Financial Performance: Actual financial requirements for 1983-84 were $51,000 or 17% lower than planned. Refer to figure 2 on page 9.

Description

This activity provides administrative support to the Canadian Judicial Council, which is a statutory body composed of the Chief Justices and Chief Judges whose aim is to promote efficiency and uniformity and to improve the quality of the judicial service in superior and county courts. The Council achieves its aim by organizing conferences of Chief Justices, seminars for the continuing education of judges, and when necessary, making enquiries and investigating complaints and allegations against members of the federal judiciary.

Performance Information/Resource Justification

Administrative services to the Council are provided by this activity which assists the Council by organizing annual seminars such as the newly appointed Judges' Seminar.

Assistance with the preparation of publications, such as the Book for Judges and administrative support for studies conducted by the Council is also provided.

C. Judges' Salaries, Allowances and Annuities

Objective and Description

To pay salaries, allowances and annuities to judges of the Federal Court of Canada, the Tax Court of Canada and other federally appointed judges of the superior, county and district courts of the provinces and territories as authorized by the Judges' Act; to provide gratuities to spouses of such judges who die while in office and annuities to spouses and children of deceased judges.

Resource Summary

Figure 11: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Salaries and wages	78,794	64,170	60,222
Transportation	4,022	5,069	4,437
Other expenditures	1,114	664	653
Pensions	19,350	15,007	13,930
Total	103,280	84,910	79,242

Past Financial Performance

Figure 12: 1983-84 Financial Performance

	1983-84		
	Actual	Main Estimates	Change
Salaries and wages	60,222	60,604	(382)

Other expenditures	653	780	(127)
Pensions	13,930	15,600	(1,670)
	79,242	80,484	(1,242)

Explanation of Change: Actual financial requirements for 1983-84 were $1.2 million or 1.5% lower than planned. This decrease was due primarily to unused Judges pool positions.

Performance Information/Resource Justification

Payments as described in the objective are made under statutory authority in accordance with the Judges' Act.

2. Personnel Expenditures

Figure 15: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	2	2	2	50,350 - 96,300	66,155
Scientific and Professional	7	6	5	13,609 - 88,120	41,629
Administrative Services	4	5	5	13,912 - 57,987	37,691
Technical Support	1	1	-		
Administrative Support	18	17	17	12,636 - 31,946	21,300

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 16: Details of Grants

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Administration			
Gratuities to a surviving spouse of a judge who dies while in office or to such dependants as may be approved by Treasury Board, in an amount equal to one-sixth of the annual salary payable to the judge at the time of his death	**89,000**	89,000	81,000
Judges' salaries, allowances and annuities; and annuities to spouses and children of deceased judges			
(S) - Annuities under the Judges' Act (RSc. J-1 as amended)	**19,350,000**	15,007,000	13,930,000
	19,439,000	15,096,000	14,011,000

B. Cost Analysis

Figure 17: Program Costs by Activity ($000)

	1985-86 Expenditures	Add Other Costs	**1985-86 Total Cost**	1984-85 Total Cost
Administration	3,079	289	**3,368**	3,074
Canadian Judicial Council	332	-	**332**	255
Judges' Salaries, Allowances and Annuities; and Annuities to Spouses and Children of Deceased Judges	103,280	-	**103,280**	84,910
	106,691	289	**106,980**	88,239

Other costs added to 1985-86 expenditures include accommodation provided without charge by the Department of Public Works ($200,000) and other services provided without charge by other departments ($88,832).

1985–86 Estimates

Part III

Expenditure Plan

3151

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Office of the Commissioner of
Official Languages

Preface

This Expenditure Plan is designed as a reference document, and contains several levels of detail to respond to the varied needs of its users.

The Plan is divided into two sections. Section I presents an overview and a description of the Program, background information, the planning objectives and perspectives, and performance information justifying the resources requested. Section II provides additional information on costs and resources as well as special analyses to help the reader understand the Program more fully.

Section I is preceded by extracts from Volume II of the Public Accounts and from Part II of the Estimates so as to maintain continuity with the other Estimates documents. On the basis of these extracts, the Program's performance in financial terms for the current year can be evaluated.

This document is designed to permit easy access to specific information that the reader may desire. The table of contents provides a detailed guide to the contents of each section. Moreover, references are made throughout the Plan to enable the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $9,154,000 in support of the 1985-86 Office of the Commissioner of Official Languages (OCOL). The remaining expenditures, estimated at $770,000, will be made under existing statutory authority.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The Office of the Commissioner of Official Languages has established the following objectives for 1985-86.

- A new Commissioner took up his duties in September 1984, just as a new majority government came to power. Taking into account the ongoing evaluations of the official languages program as a whole, and the new government's apparent intention to take a different approach, the Commissioner, concerned with effectively guaranteeing stronger and better-organized protection of language rights has undertaken to redirect the OCOL's activities. All OCOL branches are currently reviewing their work plans in keeping with the new guidelines inspired by this reorientation and the pertinent sections of the November 5, 1984 Throne Speech.

- The Office will organize a national conference of representatives of the official languages communities, and, in conjunction with the Canadian Comissioner for UNESCO and other bodies, an international conference on linguistic planning (see page 15).

- All complaints received in 1985-86 will be investigated (see pages 16 and 17).

- The OCOL will carry out some thirty audits and studies, and approximately twenty-four systematic follow-ups (see pages 16 and 17).

2. Financial Summary

Figure 1: 1985-86 Financial Requirements ($000)

	1985-86 Main Estimates	1984-85 Forecast	Difference
Office of the Commissioner of Official Languages	9,924	9,455	469
Planned person-years	141	139	2

The 1985-86 Estimates are 5% higher than the forecast for 1984-85. However, they are 1% below the 1984-85 Estimates ($9,994,000).

B. Recent Performance

1. Highlights of the Program's Performance in 1983-84

In 1983-84, the OCOL took steps in a number of areas to improve the federal government's performance with respect to language of work.

The Commissioner also met with senior officials of the Treasury Board, the Public Service Commission and the Privy Council Office and with the Joint Committee on Official Languages in order to gain acceptance for the analysis and proposals in the OCOL report on language of work; the report was made public in February 1983.

All 1209 complaints received in 1983-84 were investigated and 843 of them were resolved to our satisfaction during the year. In addition, 494 previous complaints were settled, for a total of 1337.

The OCOL evaluated the linguistic performance of 104 federal institutions (departments, agencies and Crown corporations), and published the results in its 1983 Annual Report.

The foundations were laid for an information program aimed particularly at making minority official language communities aware of their language rights. Our regional offices and the associations and centres serving these communities sent messages to their members reminding them of the obligation of federal institutions to provide services in French and English.

2. Review of 1983-84 Financial Performance

Actual expenditures in 1983-84 were 7% below the level forecast in the Estimates.

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-1984		
	Actual	Main Estimates	Difference
Office of the Commissioner of Official Languages*	8,840	9,515	675

* See the breakdown by activity of 1983-84 expenditures, page 22.

C. Background

1. Introduction

The Commissioner of Official Languages is appointed by commission under the Great Seal after approval of the appointment by resolution of the Senate and House of Commons, for a seven-year term. Each year, the Commissioner submits to Parliament a statement relating to the conduct of his office and the discharge of his duties.

Three other agencies carry out activities which complement those of the Office of the Commissioner of Official Languages:

- the Treasury Board Secretariat develops government policies with respect to official languages and controls their implementation;
- the Public Service Commission provides language training to public servants and determines the level of language knowledge of candidates for bilingual positions; and
- the Department of the Secretary of State promotes minority language education and second language education, supports the efforts of official language minorities and provides translation and interpretation services to the federal government.

2. Legal Mandate

Section 25 of the Official Languages Act describes the Commissioner's mandate as follows:

> It is the duty of the Commissioner to take all actions and measures within his authority with a view to ensuring recognition of the status of each of the official languages and compliance with the spirit and intent of this Act in the administration of the affairs of the institutions of the Parliament and Government of Canada and, for that purpose, to conduct and carry out investigations either on his own initiative or pursuant to any complaint made to him and to report and make recommendations with respect thereto as provided in this Act.

3. Program Objective

The objective of the Office of the Commissioner of Official Languages is to ensure recognition of the status of each of the official languages and compliance with the spirit and intent of the Official Languages Act.

4. Program Description

The Commissioner essentially has a threefold role:

- first, he is the protector of the language rights of individuals or groups who believe that their rights have not been respected by a federal agency;

- second, he is an auditor general who ensures that all federal agencies are applying the Act properly and, at the same time, determines the progress they are making in the area of language reform;

- third, he is a spokesperson on language reform issues in the broad scope preferred by the legislator, making Canadians aware of their linguistic rights; he encourages the appropriate officials in the National Capital and across Canada, as well as Canadians in general to adopt more open attitudes toward the other official language and the community which speaks it.

He is supported by four main branches: Complaints and Audits, Information, Policy Analysis and Liaison Services, and Resource Management.

Policy Analysis and Liaison Services: The Policy Analysis group provides the Commissioner and his main associates with advice and analyses concerning official policies, legislation and regulations, and local and special events which could be related to official languages issues. For example, the group analyses any proposed amendments to the Official Languages Act, special action taken and government reports on progress in general. It also examines studies and documents from various sources pertaining to language problems, and helps prepare speeches for the Commissioner and Deputy Commissioner and draft parts of the Annual Report concerning the federal government's overall policy.

The liaison function is essentially carried out by five regional offices, whose activities are co-ordinated from OCOL headquarters. The main task of the liaison officers is to be as responsive as possible to interested groups, and to give them advice suited to their environment and their concerns. OCOL regional offices are also responsible for doing on-site investigations of a number of complaints, as well as conducting ad hoc audits and ensuring follow-up at regional offices of federal institutions.

Complaints and Audits: In his role as ombudsman, the Commissioner receives a varying number of complaints each year from individuals who feel that their language rights have not been respected by the federal government. An investigation must be conducted in each case and, if necessary, recommendations concerning appropriate corrective action are made to the institutions at fault and the implementation of these recommendations is monitored.

A linguistic audit is a thorough examination of the way an institution fulfills its obligations under the Official Languages Act in terms of its organization, the services it provides to its public, the opportunities it affords its employees to work in the language of their choice, and the hiring practices it uses to ensure that there is equitable participation of Anglophones and Francophones.

The methodology used in these audits includes the standard techniques, such as individual interviews with the institutions's staff and clients, direct observation, surveys, and studies of files and administrative procedures.

The recommendations and suggestions of the audit reports are discussed with the institution concerned and periodic follow-ups are conducted in order to determine whether the shortcomings brought to light have been remedied.

Information: The objective of this function is to encourage recognition of the equal status of the two official languages. In addition to producing the Annual Report, the Commissioner's Office makes available to the general public the quarterly magazine Language and Society and a wide variety of publications and audio-visual documents dealing with the Act and language matters. The Office also distributes two kits especially designed to make young people aware of Canada's bilingual nature and the international status of English and French: "Explorations", for young people from 13 to 17 years of age, and "Oh! Canada 2", for children from 7 to 12 years of age. A list of information materials currently available is given in the Annual Report.

The Information Branch not only responds to requests for information and documentation, but also maintains a mailing list of individuals and organizations interested in receiving regular publications and new materials as they are produced. This list is also used for correspondence from the Office. The Information Branch provides research and referral services to organizations and individuals requesting information on various matters pertaining to official languages. Special efforts are made to seek out media contact when the Commissioner travels outside the National Capital Region. A reference library is open to members of the public wishing to do research.

Resource Management: This function covers the offices of the Commissioner and Deputy Commissioner, and the financial, administrative and personnel services.

5. Program Organization for Delivery

Activity Structure: The Office of the Commissioner of Official Languages has only one activity - the Program itself. However, the Program is administered by four main units, which are shown in Figure 3 along with the resources to be allocated to them.

Organization: The Office of the Commissioner of Official Languages has five branches, as indicated in Figure 3. In addition to the Ottawa headquarters, there are five regional offices: Moncton, Montreal, Sudbury, Winnipeg and Edmonton.

Figure 3: Resources for 1985-86, by Principal Function and Responsible Unit

D. Planning Perspective

1. Environment

The planning process in the Commissioner's Office takes into account both the statutory responsibilities and the general development of all official languages programs in Canada.

Under the Official Languages Act, the Commissioner's Office must be able to examine and act on all valid complaints against federal institutions. A five-year cycle of linguistic audits of all federal institutions is also part of the thorough review process. Where appropriate, these audit and complaint investigation activities are supported by recommendations, which are the subject of around one hundred follow-ups each year.

The Commissioner must also be in a position to analyse demographic data and any other language-related information, and to measure their impact on the application of the Official Languages Act.

On the other hand, the work of the Special Joint Committee of the Senate and House of Commons on Official Languages has further increased public interest in the official languages program.

2. New Initiatives

The Office of the Commissioner of Official Languages does not foresee changing the nature of its mandate during 1985-86. In keeping with the spirit of continuity, efforts will be directed to continuing and expanding the initiatives already mentioned, in all instances striving for economy and administrative severity, as well as the adaptations rendered necessary by the policies of the new government plus the internal re-examination mentioned above. Particular emphasis will be placed on all research that could contribute to the efficiency of the Office of the Commissioner. The key objectives for 1985-86 are given on page 6.

3. Progress Report on Previous Initiatives

- In its audits, the OCOL has focussed on language of work, by providing more detailed questionnaires on obstacles to the use of one language or the other and recommending ways to eliminate the problems identified.

- The OCOL has participated in a number of working groups involving departments and central agencies for the purpose of developing and circulating practical ideas to help federal institutions improve their performance with respect to language of work.

- For all practical purposes, the first five-year audit plan has been completed this year.

- The control system for the receipt, investigation and follow-up of complaints has ensured better communication with complainants by providing them with a periodic update of their particular case. In some cases, this system has also resulted in faster settlement of complaints, owing to more regular contact with the institutions concerned. Moreover, a method for measuring the time required by officers to deal with complaints, conduct audits and studies and carry out other activities has been developed and was implemented in late 1984.

- The Office, in consultation with a committee of educators recommended by the Canadian Council of Ministers of Education, reviewed its information programs for young Canadians between the ages of seven and seventeen. It is pursuing its development of new information materials in order to make this sector of the population more aware of the

bilingual nature of Canada, the international status of English and French, and language issues in general. However, the development of better materials to replace the "Explorations" and "Oh! Canada 2" kits has been postponed until completion of the research on target groups and the cost-effectiveness report on ways of achieving the youth program's objectives (see page 18).

- A methodology for standardized and regular follow-up activities was tested in 1984, and nine follow-ups were undertaken using it. The results will be analysed in early 1985, and this methodology is expected to come into wider use.

4. Program Effectiveness

Since there are no universally accepted indicators for accurately measuring the effectiveness of institutions such as the Office of the Commissioner of Official Languages, the Commissioner asked the Auditor General in the spring of 1982 to conduct an integrated audit of the OCOL's operations.

We now evaluate the effectiveness of our program from two distinct perspectives: the application of the Official Languages Act in the departments, Crown corporations and other institutions that come under the Act, and the Office's performance in investigating complaints, conducting audits, ensuring consultation, seeking solutions and producing information materials.

The Commissioner indicates the progress made by the federal institutions through his annual reports and other reports to Parliament.

In addition to conducting the established cycle of audits and performance evaluations in the various federal bodies, the OCOL carries out special research projects to determine the availability of federal government services in the two official languages, study the obstacles to equitable use of English and French in the work place, define trends in the participation of Anglophones and Francophones in the public service and evaluate the effectiveness of supporting activities such as the identification of bilingual positions, language training and translation. Annual reports and other public reports also give information on these special projects.

The following pages deal with the OCOL's performance in investigating complaints, conducting audits, ensuring consultation, seeking solutions, producing information materials and providing leadership in the implementation of official languages policies.

5. Performance Information and Resource Justification

Policy Analysis and Liaison Services: The objective of this twofold function is to follow closely the national linguistic situation and, more specifically, government actions relating to official languages, in order to co-ordinate the OCOL's positions with respect to Parliament and the Canadian public. Through its regional officers, the OCOL maintains contact with the official language communities, federal and provincial authorities and private groups in various parts of Canada. This activity accounts for 18% of the total Program expenditures.

Policy Analysis: This function involves data collection and analysis through a network of contacts both inside and outside the government. Its 7 person-years are utilized to carry out the following responsibilities:

- preparation of briefs, speeches and public presentations for the Commissioner and Deputy Commissioner (an average of 100 per year);
- preparation of correspondence with MPs and federal, provincial and other officials (some 600 items per year);
- analysis of documents, plans and proposals submitted to the Commissioner for comment or follow-up (around 50 per year);
- conceive position papers and draft policies for internal use or, on occasion, with meetings with other organizations (20 per year, on average);
- co-ordination of research projects, including a survey of the actual capacity of certain federal bodies to provide their services adequately in both official languages; and
- organization of conferences, including, in 1985, a national conference of representatives of the official language communities and an international conference on linguistic planning, in conjunction with the Canadian Comissioner for UNESCO and other bodies.

Liaison and Regional Operations: This function accounts for twenty-one person-years allocated to six offices (Ottawa headquarters and five regional offices). These offices are generally responsible for:

- recording and transmitting some 600 complaints each year;
- holding some 500 information sessions with various associations, service clubs, the media and students in order to encourage the minority groups, public servants and the general public to support and participate actively in language reform;

- responding to some 1,500 requests each year for information and documentation;

- participating in an average of 100 working sessions per year with regional managers primarily to study the best ways of serving the public in the appropriate language;

- taking part in approximately 10 language audits each year, following up around 100 recommendations and carrying out 120 ad hoc audits at the regional level.

Complaints and Audits: The objective of this function is to ensure compliance with the spirit and the letter of the Official Languages Act through the investigation of complaints related to language rights and through audits and follow-ups in the federal institutions. This area accounts for 29% of the total Program expenditures.

Two main indicators are used to measure performance. The first is the number of persons assigned to the investigation of complaints in relation to the number of complaints resolved. However, changes in the complexity of the complaints over the years has directly affected the resources and the time required to resolve complaints. For example, complaints about signage, which were easily resolved, were numerous in the beginning but have decreased in number. However, there has been a significant increase in complaints about language of work and the lack of government policies, which take more time and effort to settle. A survey carried out in 1982 by the Office of the Auditor General on our complainants indicated a 78% satisfaction rate. Half of those not satisfied cited the fact that the Office's recommendations are not binding; the others felt that their complaints took too long to resolve and that some responses were too vague.

The other indicator is the number of audits or studies, which depends on the scope of the activities concerned. Since the same people work on complaints, investigations and audits, more time can be spent on audits if fewer complaints are received. The number of audits and studies conducted in a year depends on these two indicators and on the availability of staff (see Figure 4).

Figure 4: Numbers of Complaints Received and Resolved, Audits and Studies Carried Out and Person-Years Allocated to These Activities

	Complaints Received	Complaints Resolved(*)	Person-Years Allocated to Complaints	Audits and Studies Carried Out	Person-Years Allocated to Audits and Studies
1985 forecast	1,500	1,700	21	31	39
1984 forecast	1,500	1,700	21	27	35
1983 actual	1,209	1,337	18	27	34
1982 actual	1,337	1,580	18	23	34
1981 actual	1,696	1,622	23	17	26

* "Resolved" means that the shortcoming was corrected or that the organization concerned took steps to prevent the situation from arising again.

Information: The objective of this activity is to encourage recognition of the two official languages by providing information on the provisions and the spirit of the Official Languages Act and on the role of the Commissioner in implementing the Act. The Branch also distributes information materials to make the Canadian public more aware of the country's bilingual nature. This area accounts for 33% of the total Program expenditures.

The intended long-term result is a Canadian public that is better informed about the Official Languages Act and more receptive to the other official language and the community that speaks it.

The success of the Information Activity can be measured by:

- conducting surveys and other research to gauge the target groups' reaction to the information materials and, as far as possible, determine the effectiveness of these materials; and

- measuring the degree of public interest as indicated by the number and nature of the requests for information and materials and the responses and documents provided (see Figure 5).

Since 1981-82, the Information Branch has received an average of 2,760 requests each month for publications or information on language matters. A personal reply was required in 10% of the cases, while the others were answered by sending documentation. The Branch sent out some 64,000 information documents monthly in response to these requests (see Figure 5).

Figure 5: Breakdown by Fiscal Year of the Information Requests Received and Documents Distributed

	1985-86 Forecast	1984-85 Forecast	1983-84 Actual	1982-83 Actual	1981-82 Actual
Requests received	38,000	36,000	33,335	31,476	34,507
Documents distributed	1,150,000	1,050,000	943,752	713,693	652,069

Figure 6: Breakdown of Operating Expenditures by Program, 1980-81 to 1984-85 ($000)

	1985-86 Estimates	1984-85 Forecast	1983-84 Actual	1982-83 Actual	1981-82 Actual
1. Programs for young people (ages 7 to 17)	**1,680**	1,410	263	941	800
2. General programs (all publics)	**686**	825	366	331	455
3. Other operating costs*	**110**	109	52	36	44
Total	**2,476**	2,344	681	1,308	1,299

* Living expenses, travel, publication of audits and library expenses, including general administrative expenses.

The differences between the actual expenditures and budgets in the above table stem from the fact that the information program was carried out for a number of years using supplementary budgets intended primarily for the youth program. The 1983-84 expenditures represent the remaining funds of a three-year supplementary budget. The information budget for this area was standardized in 1984-85 in keeping with the Commissioner's mandate.

Resource Management: This function provides the financial, administrative and personnel services required to implement the Program, and is responsible for the administration of the offices of the Commissioner and Deputy Commissioner as well as the common services mentioned above. Resource Management accounts for 20% of the Program expenditures.

An overall indicator of performance in this activity is the percentage of expenditures it represents in relation to the total cost of the Program, since the objective is to offer the best possible services at the lowest cost (see Figure 7).

Figure 7: Expenditures of the Resource Management Branch in Relation to Total Program Expenditures ($000)

	1985-86 Estimates	1984-85 Forecast	1983-84 Actual	1982-83 Actual	1981-82 Actual
Resource Management	1,993	2,033	1,939	1,660	1,434

A. Analysis by Object

1. Expenditures by Object

Figure 8: Expenditures by Object ($000)

	1985-86 Estimates	1984-85 Forecast	1983-84 Actual
Personnel			
Salaries and wages	5,499	5,127	4,638
Contributions to employee benefit plans	770	678	761
Goods and services			
Transportation and communications	1,007	890	544
Information	1,174	1,170	1,547
Professional and special services	1,125	1,150	864
Rentals	72	106	135
Purchased repair and upkeep	68	48	69
Utilities, materials and supplies	120	110	105
Other expenditures	2	-	2
Total operating costs	9,837	9,279	8,665
Capital	87	176	175
Total expenditures	9,924	9,455	8,840

2. Personnel Expenditures

Figure 9: Planned Person-Years and Salary Provision

	Planned* Person-Years			Current Salary Range	1985-86 Average Salary Provision
	1985-86	1984-85	1983-84		
Executive	16	16	14	50,350 - 96,300	63,096
Administrative and Foreign Service					
Administrative Services	53	53	62	13,912 - 57,987	41,293
Information Services	7	7	6	13,579 - 57,980	35,762
Program Administration	17	13	12	13,912 - 57,987	46,526
Other	7	8	-	12,766 - 66,252	36,699
Administrative Support					
Clerical and Regulatory	23	24	23	12,932 - 31,743	22,301
Secretarial, Steno and Typing	18	18	16	12,636 - 31,946	21,764

Note: The person-year column displays the forecast distribution by occupational group of the authorized person-years for the program. The current salary ranges for each occupational group are those in effect on October 31, 1984. The average salary column reflects the estimated base salary costs, including allowance for collective agreements, annual increments, promotions and merit increases, divided by the person-years for the occupation group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

* Under an agreement reached in June 1984 with the Treasury Board, person-years in the Office of the Commissioner of Officials Languages are no longer subject to controls.

M 51

B. Cost Analysis

Figure 10: Net Cost of the Program ($000)

	1985-86 Expenditures	Add Other Costs	1985-86 Total Net Cost	1984-85 Total
Office of the Commissioner of Official Languages Program	9,924	973	10,897	10,954

* Other costs include the cost of accommodation ($862,000) provided by the Department of Public Works and services provided without charge by other departments.

C. Supplementary Information

In 1984-85, the Office of the Commissioner of Official Languages received authorization to reduce the number of budget items in its estimates, which were presented under four activities in 1983-84. To facilitate the analysis of the financial results shown in this form (no longer used), the actual expenditures in relation to the estimates are shown by activity in Table 11.

Figure 11: 1983-84 Actual Expenditures in Relation to Main Estimates, by Activity ($000)

	1983-84 Actual Expenditures	1983-84 Main Estimates	Change
Policy Analysis and Liaison Services	1,236	1,205	(31)
Complaints and Audits	2,759	3,219	460
Information	2,906	3,180	274
Administration	1,939	1,911	(28)
	8,840	9,515	675*

* The surplus of approximately $600,000 in salaries and wages is due mainly to under-utilization of person-years in the Complaints and Audits, and Information branches.

Offices of the Information and Privacy Commissioners

1985-86 Estimates

Part III

Expenditure Plan

3175

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Offices of the Information
and Privacy Commissioners

Preface

This Expenditure Plan is designed to be used as a reference document and, as such, contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $2,938,200 to carry out the activities of the Offices of the Information and Privacy Commissioners of Canada in 1985-86. Contributions to employees benefit plans of $294,000 will be made under existing statutory authority.

Section I
Program Overview

A. Highlights

No significant changes are foreseen in the level of operations of the Offices of the Information and Privacy Commissioners during 1985-86.

Information Commissioner:

- The Commissioner anticipates completing approximately 240 complaints investigations during 1985-86 and responding to some 550 inquiries (see page 13).

Privacy Commissioner:

- The Commissioner expects to complete the investigation of approximately 320 complaints and deal with some 1,450 inquiries (see page 16); and

- investigate personal information in two exempt personal information banks and in the open personal information banks of 10 government institutions to determine whether the institutions are complying with the Privacy Act (see page 17).

B. Financial Summary by Activity

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast* 1984-85	Change	For details see page
Information Commissioner	902	787	115	12
Privacy Commissioner	1,309	1,111	198	15
Administration	1,021	995	26	18
	3,232	2,893	339	
Authorized person-years	53	46	7	

* There is no significant change from the 1984-85 Main Estimates. (Extracts from Part II of the Estimates, page 5).

Explanation of Change: The financial requirements for 1985-86 are $.3 million or 12% higher than 1984-85 forecast expenditures. This increase is due primarily to salaries for additional staff offset, in part, by a reduced requirement for special investigators retained on contract.

C. Background

1. Introduction

The Information and Privacy Commissioners' positions were created respectively under the Access to Information and Privacy Acts, proclaimed in force on July 1, 1983. The Commissioners were appointed by the Governor in Council following approval by the Senate and the House of Commons.

The function of Privacy Commissioner was formerly performed by one of the human rights commissioners, designated for the purpose by the Minister of Justice with reference to Part IV of the Canadian Human Rights Act.

The Offices of the Information and Privacy Commissioners were designated by Order in Council as a department for purposes of the Financial Administration Act. The Commissioners share administrative support services while operating independently under their separate statutory authorities.

3185

2. Legal Mandate

Under the Access to Information Act, the Information Commissioner is required to receive, investigate, and report on complaints from persons who have been refused access to a record requested under the Act, or who have complaints about the time taken to deal with a request for information, the fees payable, the official language of the record, or other matters relating to obtaining access to records under the Act.

The Privacy Act requires the Privacy Commissioner to investigate and make findings on complaints from individuals who allege they have been denied their rights under the Act. Complaints range from allegations of delay and incorrect information, to denial of access and misuse of personal information.

In addition, the Privacy Commissioner has a mandate to investigate federal government institutions to determine compliance with the Privacy Act in their collection, retention, use and disposal of personal information. Exempt banks established under Section 18 of the Act and all open banks are subject to this compliance audit.

3. Program Objective

Information Commissioner: To investigate complaints to ensure that federal government institutions comply with the Access to Information Act; to foster open information practices by government institutions; and to respond to requests from the public for information about the rights of individuals under the Act, and the Commissioner's mandate.

Privacy Commissioner: To investigate complaints to ensure that federal government institutions comply with the Privacy Act; to review the performance of government institutions in the collection, use, retention and disposal of personal information for compliance with the Privacy Act; to foster fair information practices by government; and to respond to requests from the public for information about the Commissioner's mandate and the rights of individuals under the Act.

4. Program Organization for Delivery

Activity Structure: The Offices of the Information and Privacy Commissioners comprise three activities: Information Commissioner; Privacy Commissioner; and Administration. The structure reflects the separate statutory basis for each Commissioner's operations.

Organization Structure: The Commissioners are accountable and report directly to Parliament for their respective activities. The Administration Activity (Corporate Management) is the responsibility of a Director who reports jointly to the Commissioners for the common services provided. The Assistant Commissioner positions provided for in the Acts have not been filled.

Figure 2: Organization Structure

D. Planning Perspective

1. Environment

Information Commissioner: During the initial period of operation, complaints often resulted from difficulties experienced by government institutions in becoming familiar with the Access to Information Act and setting new procedures in motion. Recently, however, the majority of complaints have raised more fundamental problems of interpretation and freedom of information principles. As well, the complex issues of third party interests have become increasingly time-consuming.

Privacy Commissioner: Although publicity surrounding passage of the new acts and the arrival of Orwell's 1984 generated initial attention for the Privacy Act, most Canadians know little or nothing about their privacy rights. The perception that privacy is under assault by governments and the private sector is more widespread than an awareness that there is any protection. Yet more than 23,000 individuals have already applied to see their personal information held by various government institutions.

There are two factors which have created a degree of dissatisfaction and frustration among individuals seeking information under the Act, and among some "privacy advocates". First, although the principle of some closed information banks is generally accepted, individuals may not see personal information in 19 closed or "exempt" banks, or sensitive information in other banks. Second, there is the insistence by some provinces on confidential treatment of all the personal information they provide the federal government, thereby preventing individuals from receiving that information.

Both the Access to Information and Privacy Acts require a review of their administration on a permanent basis by a Parliamentary Committee. This Committee will be called upon to undertake, by July 1, 1986, a comprehensive review of the provisions and operation of the Acts and to formulate recommendations for changes.

2. Initiatives

No major changes in the nature or extent of the Program are planned in 1985-86.

3. Program Effectiveness

Information Commissioner: The objective of the Information Commissioner is to receive, investigate and report on complaints from individuals who allege they have been denied their rights under the Act. In any case of non-compliance with the Act, the Commissioner may file a formal report to the Minister responsible and add recommendations. The Information Commissioner may seek court review on behalf of a complainant.

At the end of the nine-month period following proclamation of the legislation on July 1, 1983, the Information Commissioner had completed 46 investigations and 104 complaints were under active investigation. Of the completed investigations, 15 were not supportable, 25 were resolved during the course of the investigation and 6 resulted in representations to heads of institutions before their completion.

Privacy Commissioner: The Privacy Commissioner's office pursues its main objective of determining compliance with the Act by investigating complaints, by reviewing the content of government information banks and by monitoring the way in which government institutions handle personal information.

In nine months of operations in 1983-84, 198 individuals complained to the Privacy Commissioner that government institutions were not complying with the law. During that period 113 of those files representing 141 investigations (each file may contain more than one complaint) were completed. Sixty-nine of the investigations revealed that the complaint was justified (62 of these were delays, i.e., a government institution had not provided the information within 30 days of receiving the request nor given notification that it will need a 30-day extension to do so) and 72 were dismissed.

During his first months, the Privacy Commissioner did not have the resources to review the performance of government institutions in the collection, use, retention and disposal of personal information to ensure compliance with Sections 4 to 8 of the Act. It is noted, however, that none of the completed investigations of complaints concerned irregularities in the government's collection, retention or disposal of information or the accuracy nor completeness of the listing of banks in the Privacy Index.

General Program: Both Commissioners seek to foster fair government information practices by making recommendations to government institutions and by encouraging public awareness of the issues. However, public awareness has, at best, been only marginally increased by the Commissioners' speaking engagements and media interviews. The Offices continue their efforts to expand lines of communication with academics, ombudsmen, Members of Parliament, business, privacy and access advocates.

During the nine-month period of operation in 1983-84, the Offices handled 1,487 inquiries; 957 concerned Privacy, 327 concerned Access to Information, and 203 involved both. Callers inquired about a wide range of matters which did not warrant a full complaint investigation or had no connection whatsoever with the Commissioners' mandates. Inquiries were generally handled by experienced investigators in order to provide the caller with prompt service.

Section II
Analysis by Activity

A. Information Commissioner

Objective

The Information Commissioner has three objectives:

- to investigate complaints to ensure that federal government institutions comply with the Access to Information Act;
- to foster open information practices by government institutions; and
- to respond to requests from the public for information about the rights of individuals under the Act and the Commissioner's mandate.

Resource Summary

This Activity accounts for approximately 28% of total Program expenditures and 25% of person-years.

Figure 3: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84*	
	$	P-Y	$	P-Y	$	P-Y
Information Commissioner	902	13	787	11	287	6

* For the nine-month period, July 1, 1983 to March 31, 1984.

Salaries and related costs represent 76% of total expenditures. The remainder represents other operating items.

Description

The Information Commissioner investigates, reports and makes recommendations to Ministers and heads of agencies that report directly to Parliament, based on complaints from individuals who allege non-compliance with the Access to Information Act. The Commissioner appears on behalf of complainants, with their consent, or as a party, in applications before the Federal Court, on review of

decisions of federal government institutions to refuse access under the Act. The Commissioner reports directly to Parliament annually and may make special reports.

The Information Commissioner acts as an impartial mediator and must be seen to be independent of government in dealing with disputes between a complainant and the government and assess conflicting interests in sensitive areas such as national security or international affairs as well as business interests. The Commissioner will be involved in litigation arising from the review process established in the Act.

Performance Information/Resource Justification

The Access to Information Act represents a reversal of previous government policy with respect to the release of information. It confers legal rights of access subject to specified discretionary or mandatory exemptions. The Commissioner began operations without the benefit of established precedents, policies, procedures or workload volumes.

The Office of the Information Commissioner consists of the Commissioner's office with a staff of five including the Commissioner, and the Directorate of Information Complaints with a director, secretary, and six investigators.

In the initial organizational planning before the legislation came into force, it was assumed in the allocation of resources that the number of complaints would be much the same as for the Privacy Commissioner but that the scope of the issues and volume of records to be dealt with by the Office of the Information Commissioner would be much greater in that it deals with the release or exemption of all government records. Only the latter assumption proved correct.

Figure 4: Forecast Workload - Complaint Files

	Actual	Forecast	
	1983-84[1]	1984-85[2]	1985-86
Received	150	200	210
Completed	46	254	239
Under investigation	104	50	21

1 For the nine-month period, July 1, 1983 to March 31, 1984.

2 Estimate, based on actual results to October 31, 1984.

The number of files under investigation is forecast to be reduced from 104 to 50 by March 31, 1985. Files reported as under investigation in 1986 and subsequent years represent a 10% allowance for work in progress.

A second category of workload is inquiries. During 1983-84 the Office of the Information Commissioner received 313 inquiries plus an additional number of access/privacy inquiries of which 61 were allocated to this Office; a total of 374 inquiries that were responded to. This workload is also expected to show an increase above current levels over the next several years.

Resource requirements have been estimated on the basis of projected time required to complete complaint and inquiry investigations. Peak workload demands and some specific needs will be met by special investigators engaged on contract.

B. Privacy Commissioner

Objective

The Privacy Commissioner has four objectives:

- to investigate complaints to ensure that federal government institutions comply with the Privacy Act;
- to review government institutions' collection, use, retention and disposal of personal information for compliance with the Privacy Act;
- to foster fair information practices by government; and
- to respond to requests from the public for information about the Commissioner's mandate and the rights of individuals under the Act.

Resource Summary

This Activity accounts for approximately 41% of total Program expenditures and 36% of person-years.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84*	
	$	P-Y	$	P-Y	$	P-Y
Privacy Commissioner	1,309	19	1,111	15	355	4

* For the nine-month period, July 1, 1983 to March 31, 1984.

Salaries and related costs represent 76% of total expenditures. The remainder represents other operating items.

Description

The Privacy Commissioner investigates, reports and makes recommendations to the heads of government institutions and, in the case of complaints, reports his findings to the complainant. He reviews material held in government information banks (including the 19 closed banks) and audits the institutions' collection, use, retention and disposal of the personal information. He may, with a complainant's consent, appear on his or her behalf in an application for Federal Court review of an institution's decision to deny access. The Commissioner also undertakes special

studies for the Minister of Justice, reports annually to Parliament and may initiate special reports at any time.

Performance Information/Resource Justification

The Office of the Privacy Commissioner consists of the Commissioner, executive assistant and secretary, legal advisor and secretary, the Privacy Complaints Division with a director, secretary, and six investigators, and the Privacy Compliance Division with a director, secretary, and four investigators.

The Complaints Division is responsible for investigating complaints and handling inquiries. The experience of the Privacy Commissioner while operating under Part IV of the Canadian Human Rights Act provided some guidance in the determination of workload and resource levels for the new entity.

While it is difficult to predict accurately, the workload is expected to increase because of the expanded scope of the Privacy Act. There is also a 50% increase in the number of government institutions subject to the Act, and there is a heightened public interest in the way personal information is held and used by government institutions.

Figure 6: Forecast Workload - Complaint Files

	Actual	Forecast	
	1983-84[1]	1984-85[2]	1985-86
Received	198	265	292
Completed	113 [3]	320	317
Under investigation	110 [4]	55	30

1 For the nine-month period, July 1, 1983 to March 31, 1984.

2 Estimate, based on actual results to October 31, 1984.

3 As each file may contain more than one complaint the 113 files represent 141 completed investigations.

4 Includes 25 files carried forward under Part IV, Canadian Human Rights Act.

During 1983-84 the Office of the Privacy Commissioner responded to 903 inquiries plus an additional 125 combined access/privacy inquiries for a total of 1,028 inquiries. This workload is also expected to increase above current levels over the next several years.

Resource requirements to deal with complaints and inquiries have been estimated on the basis of projected time for completing investigations. Peak workload demands and some specific needs will be met by special investigators engaged on contract.

The Compliance Division investigates the manner in which the 139 government institutions under the jurisdiction of the Privacy Act collect, use, keep and dispose of personal information in the 2,200 information banks they control.

The Division may carry out systematic auditing of a particular bank, or may sample individual files selectively to determine whether the information is relevant to the institution's program and is properly classified.

The Division has been assigned four investigators until the demands of the compliance function can be assessed on the basis of additional experience.

C. Administration

Objective

To provide central administrative support services to the Offices of the Information and Privacy Commissioners.

Resource Summary

This Activity accounts for approximately 31% of total Program expenditures and 39% of person-years.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84*	
	$	P-Y	$	P-Y	$	P-Y
Administration	1,021	21	995	20	726	13

* For the nine-month period, July 1, 1983 to March 31, 1984.

Salaries and related costs represent 70% of total expenditures. The remainder represents other operating items (28%) and capital (2%).

Description

The Administration Activity provides administrative support services to both the Information and Privacy Commissioners. The services include finance, personnel, public affairs and general administration, including records management, procurement, library, word processing and management services. To minimize the accounting, administration is charged with all expenses that are not easily identified to either Commissioner's Office, such as telephone expenses and materials and supplies. The 21 person-years allocated to administration report to the Director, Corporate Management.

Performance Information/Resource Justification

The records management function is considered extremely important in the light of the Commissioners' duties and responsibilities. Just as they are empowered to examine and obtain copies of any record under the control of a government institution, they are also specifically required by the legislation to take every reasonable precaution to avoid the disclosure of any protected information that comes into their possession in carrying out investigations. A Registrar of Complaints is

in place whose duty it is to control the process for receiving, investigating, and reporting of complaints. In addition, modern technology will be used to ensure that records management is conducted in an exemplary manner.

Plans for developing and testing automated office systems are already in place. A task force, directed by the Senior Management Committee, identified 10 possible applications which are being developed; evaluation of 3 test applications will be completed in December, 1984. Contingent upon the results of the tests, the purchase of additional micro-computers with related software and training is planned in 1985-86.

1985–86 Estimates

Part III

Expenditure Plan

3201

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Privy Council Office

3205

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information on costs and resources as well as special analyses that the reader may require to understand the program more fully. Section III provides supplementary financial information regarding expenditures by object, personnel expenditures, capital expenditures, and grants and contributions.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is sought in these Estimates to spend $38,613,000 for the 1985-86 program expenditures of the Privy Council Program. The remaining expenditures, estimated at $3,593,000, for contributions to employee benefit plans, the salaries and motor car allowances of the Prime Minister, the Deputy Prime Minister and President of the Privy Council, and the Leader of the Government in the Senate as well as motor car allowances for Ministers without Portfolio or Ministers of State will be made under existing statutory authority.

Section I
Program Overview

A. Highlights

The Privy Council Program comprises the activities required to support the Prime Minister in the fulfillment of his responsibilities as head of government and chairman of Cabinet. These include provision of secretariat and administrative support for the Governor in Council and the Cabinet decision-making process and of information and advice concerning the organization of government, government management systems, senior appointments, federal-provincial relations, national security, and foreign intelligence. In addition the Program includes the activities necessary to support the Deputy Prime Minister and President of the Privy Council, the Leader of the Government in the Senate, and the Minister of State (Government House Leader). The following highlights are specific to 1985-86:

- to complete the Royal Commission on the "Ocean Ranger" Marine Disaster, at a cost of $419,000 (see page 13); and

- to complete the Royal Commission on the Economic Union and Development Prospects for Canada, at a cost of $1,580,000 (see page 13).

B. Financial Summary by Activity

Funding requirements for the Privy Council Program for the Estimates year and the current fiscal year are presented by activity in Figure 1.

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Office of the Prime Minister	6,682	5,943	739	14
Ministers' Offices	4,576	3,257	1,319	15
Privy Council Office	10,349	9,398	951	17
Federal-Provincial Relations Office	4,747	4,045	702	19
Administration	12,918	15,107	(2,189)	21
Commissions of Inquiry and Task Forces	2,058	11,767	(9,709)	24
Security Intelligence Review Committee	876	317	559	26
	42,206	49,834	(7,628)	
Authorized person-years	594	564	30	

Explanation of Change: The financial requirements for 1985-86 are 15% or $8 million lower than the 1984-85 forecast expenditures. This decrease is attributable to:

- a decrease of $(2,261,000) in the budgetary requirements of the Royal Commission on the "Ocean Ranger" Marine Disaster due to its completion in 1985-86;
- a decrease of $(7,120,000) in the budgetary requirements of the Royal Commission on the Economic Union and Development Prospects for Canada due to its completion in 1985-86;
- a decrease of ($3,704,000) to reflect the transfer of responsibility for the cost of production of the Canada Gazette to the Supply Administration, Supply and Services Canada;

- increases of $260,000 and 16 person-years and $982,000 and 14 person-years (excluding inflationary increases) in the Prime Minister's Office and Ministers' Offices, respectively, to reflect the expanded organizations and the addition of three Ministers of State;

- an increase of $859,000 for capital purchases;

- an increase of $2,466,000 attributable to salary increases (inflationary) and $152,000 for other salary allowances and benefits; and

- other miscellaneous items amounting to a net increase of $738,000.

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $5 million or 10% higher than the 1984-85 Main Estimates of $45 million (Extracts from Part II of the Estimates, page 4). The difference is primarily due to:

- a Supplementary Estimate of $4,163,000 to support new or expanded organizations following the change in government in September of this fiscal year;

- a Supplementary Estimate of $623,000 following the winding-up of the Ministry of State for Social Development and the Ministry of State for Regional and Economic Development;

- an increase of $1,000,000, in excess of the budgetary amount, for production costs of the Canada Gazette; and

- a reduction of $1,120,000 in the resource requirements of the two Royal Commissions.

C. Background

1. Introduction

The role of the Privy Council Office can be described as one of providing services, information and advice to the Prime Minister, of providing secretariat and administrative support for Cabinet and its Committees, and of supporting the decision-making process of Cabinet. Figure 2 presents the Cabinet Committees reporting to Cabinet.

The Deputy Prime Minister and President of the Privy Council is responsible for carrying out various tasks assigned by the Prime Minister. Current activities include a review of government programs, regulatory reform and review of the Guidelines on Conflict of Interest. The Minister of State (Government House Leader) is responsible for the management of the Government's legislative program in the House of Commons and for coordinating the preparation of replies to Parliamentary Inquiries. The Leader of the Government in the Senate is responsible for the management of the Government's legislative program in the Senate.

The Federal-Provincial Relations Office provides information and expert advice to the Prime Minister and Cabinet on all matters of federal government policy from the point of view of federal-provincial relations.

The Program also has responsibility for the Security Intelligence Review Committee, pursuant to section 34 of the Canadian Security Intelligence Service Act. The Committee was established on November 30, 1984 by Order in Council P.C. 1984-3877 of the same date.

The responsibility for the Disaster Financial Assistance Program which formerly rested with this department, has now been transferred to the Department of National Defence. This program was established to provide provinces with financial assistance to ease the provincial fiscal burden resulting from damages caused by disasters.

The priorities and workload of the various elements of the Program are difficult to plan since they are subject to sudden and unpredictable changes as a consequence of the issues which the Government has to confront in the conduct of its day-to-day business and as a consequence of changes in Government priorities, policies or direction.

Figure 2: Cabinet Committees Reporting to Cabinet

- Economic and Regional Development

- Legislation and House Planning
- Priorities and Planning
- Public Service
- Security and Intelligence
- Social Development
- Special Committee of Council
- Communications
- Treasury Board

It should be noted that the Treasury Board Secretariat is a separate department of government and provides the secretariat support to the Treasury Board.

2. Legal Mandate

The Clerk of the Executive Council of the Province of Canada was sworn Clerk of the Privy Council on July 1, 1867 by the Governor General at the first meeting of the Governor in Council.

In 1940, the Clerk of the Privy Council was, by Order in Council P.C. 1940-1121 of March 25, 1940, given additional duties and also made Secretary to the Cabinet.

On January 1, 1975, the Act respecting the office of the Secretary to the Cabinet for Federal-Provincial Relations and respecting the Clerk of the Privy Council established the Federal-Provincial Relations Office and the position of Secretary to the Cabinet for Federal-Provincial Relations.

3. Program Objective

To provide for the operation and support of the central decision-making mechanism of the government.

4. Program Organization for Delivery

Activity Structure: As shown in Figure 3 below, the Privy Council is divided into seven activities. Since the preparation of last year's PART III, an additional activity "Security Intelligence Review Committee" has been added.

The Program activities are described in detail in Section II of this Plan (see page 14).

Figure 3: Activity Structure

Organization Structure: The organization parallels the Program's activity structure. The Privy Council Program is carried out through the various offices which are located in Ottawa, with the exception of Commissions of Inquiry and Task Forces which may be located across Canada as required. The Prime Minister, who is responsible for the Privy Council Program, is aided by the Clerk of the Privy Council and Secretary to the Cabinet, by the Secretary to the Cabinet for Federal-Provincial Relations, and by a Principal Secretary and Chief of Staff.

The Privy Council Office is further subdivided into two main branches: Plans and Operations. The Plans Branch provides support to the Prime Minister, as chairman of the Priorities and Planning Committee, to assist him in discharging his responsibilities with respect to the objectives and priorities of the government and to assist him in determining the organization of Cabinet and the government, including the appropriateness of departmental and ministerial mandates. The Operations Branch is responsible for supporting the operations of Cabinet and of Cabinet sectoral policy Committees. Each Cabinet Committee has a corresponding secretariat which provides the committee with operational support. Two other secretariats do not form part of the two main branches: the Security and Intelligence Secretariat provides information and advice to the Prime Minister and support for the Cabinet Committee on Security and Intelligence; the Senior Personnel Secretariat provides information and advice to the Prime Minister to assist him in discharging his prerogatives for senior appointments.

The Federal-Provincial Relations Office, headed by the Secretary to the Cabinet for Federal-Provincial Relations, is the principal agency responsible for advising the government on federal-provincial and constitutional matters. The functions of the Office are to assist the Prime Minister in his overall responsibility for federal-provincial relations, to support Cabinet in its examination of federal-provincial issues of current

and long term concern, to promote and facilitate federal-provincial cooperation and consultation and to provide assistance to federal Ministers, departments and agencies in the conduct of their relations with provincial governments. The Office is organized into five Secretariats. The Social and Economic Policy Secretariats ensure that a federal-provincial perspective is brought to bear in the development of social and economic policies and/or programs at the federal level. The Policy Development Secretariat formulates policy recommendations relating to constitutional change and reform of governmental institutions. The Integration and Liaison Secretariat provides information and analyses relating to the state of federal-provincial relations and on emerging issues in the field. The Office of Aboriginal Constitutional Affairs provides advice on aboriginal matters generally and is responsible for coordinating all federal government activities relating to the ongoing process of aboriginal constitutional reform.

The Administration activity provides common departmental financial, personnel, administrative and information management services to all activities within the program.

The Security Intelligence Review Committee, an external review mechanism established by section 34 of the Canadian Security Intelligence Service Act, consists of a Chairman and four members. Its function is to report from time to time to the Solicitor General and annually, through the Minister, to Parliament as to whether the operations of the Canadian Security Intelligence Service and the conduct of the Minister in relation thereto are lawful and free of abuse. In addition, it will investigate security related complaints.

The organization structure of the program parallels the activity structure, presented in Figure 3.

D. Planning Perspective

1. Environment

The components of the Program operate in an environment which is very dynamic. The program responds to government priorities which are in turn a function of a variety of factors including economic, social, international, and intergovernmental. Since the program must react quickly to the needs of government, pressures of time and effectiveness of response are important considerations.

2. Initiatives

The program has identified the following initiatives for 1985-86:

Completion of the Royal Commission on the "Ocean Ranger" Marine Disaster: This Commission will produce a two-part report addressing the causes of the loss of the Ocean Ranger, and more generally the safety of offshore drilling operations in Eastern Canada. The work of the Commission will be accomplished at a total estimated cost of $13,056,000, of which $419,000 will be expended in 1985-86 (see page 25).

Completion of the Royal Commission on the Economic Union and Development Prospects for Canada: The mandate of the Commission is to examine Canada's economic position and provide salient recommendations on its betterment. Total expenditures for the Commission are estimated at $20,000,000, including $1,580,000 for 1985-86 (see page 25).

3. Program Effectiveness

The primary operational characteristics of the program is the provision of secretariat support to Cabinet and information and advice to the Prime Minister. The efficient operation of Cabinet and the Cabinet system depends on the level of support provided by the Privy Council Program.

Since the Program exists basically to provide staff support in response to demand and to maintain a system to support Cabinet decision-making, program effectiveness indicators are not defined.

3217

Section II
Analysis by Activity

A. Office of the Prime Minister

Objective

To provide support services, information and advice to the Prime Minister.

Resource Summary

This area accounts for 15.8% of the program's expenditures and 20.2% of the person-years.

Figure 4: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Office of the Prime Minister	6,682	120	5,943	104	4,352	90

The increase in resources is due to new functions assumed in the Prime Minister's Office.

Description/Resource Justification

This Activity provides for the administration of offices providing personal support services, information and advice to the Prime Minister. The Activity also includes costs of operating the Official Residence of the Prime Minister. The Principal Secretary to the Prime Minister is responsible for the management of the Prime Minister's Office.

B. Ministers' Offices

Objective

To provide support services, information and advice to the Deputy Prime Minister and President of the Privy Council, to the Leader of the Government in the Senate, and to the Minister of State (Government House Leader).

Resource Summary

This area accounts for 10.8% of the program's expenditures and 11.6% of the person-years.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Office of the Deputy Prime Minister and President of the Privy Council						
Office of the Leader of the Government in the Senate						
Government House Leader						
Ministers without Portfolio and Undesignated Ministers of State	4,576	69	3,257	55	1,809	39

The increase in resources is due to the existence of a new sub-activity "Government House Leader", coupled with the fact that there will be full person-year complements in 1985-86 for each of the sub-activities. As well, there are three additional Ministers of State.

Description/Resource Justification

This Activity provides for the administration of offices providing support services, information and advice to:

- the Deputy Prime Minister and President of the Privy Council, the Leader of the Government in the Senate, and the Government House Leader.

The Chief of Staff for the Office of the Deputy Prime Minister and President of the Privy Council is responsible for the management of the Minister's Office.

In the Office of the Leader of the Government in the Senate, the Chief of Staff is responsible for its management.

The Chief of Staff for the Government House Leader is responsible for the management of the Minister's Office, including the Legislative Unit and the Parliamentary Returns Section.

Ministers without Portfolio and Ministers of State are appointed to the Cabinet to discharge specific responsibilities assigned by the Prime Minister.

C. Privy Council Office

Objective

To support the Prime Minister and Cabinet in the operation of the central policy decision-making process and to provide information and advice to the Prime Minister in the discharge of his responsibilities as head of government and Chairman of Cabinet.

Resource Summary

This area accounts for 24.5% of the program's expenditures and 26.3% of the person-years.

Figure 6: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Privy Council Office	10,349	156	9,398	150	7,676	142

The increase in resources is attributable to the transfer of person-years from the Ministry of State for Social Development and the Ministry of State for Economic and Regional Development to the Privy Council Office, following their wind-up in 1984-85.

Description/Resource Justification

The overall responsibilities of the Privy Council Office may be summarized as follows:

- co-ordination and provision of material related to the meetings of Cabinet and committees of Cabinet for the use of the Prime Minister, the chairpersons of committees, and members of committees (committees reporting to Cabinet are presented in Figure 2, page 10);
- liaison with departments and agencies of government on Cabinet matters;
- undertaking special studies related to matters of current public policy concern as required. This includes participation in interdepartmental committees of officials through the provision of chairpersons, members

and secretariats and the preparation of papers for, and on behalf of, such committees;

- provision of support and advice to the Prime Minister respecting his prerogatives and responsibilities for the organization of the Government of Canada and for making recommendations to the Governor in Council on senior appointments;

- provision of support and advice to the Prime Minister in his constitutional role as advisor to the Crown;

- provision of advice to the Prime Minister on national security and foreign intelligence matters; and

- contributions for the preparation of case studies in public administration.

While the above functions are expected to remain stable throughout the current timeframe, the priorities of the Privy Council Office can be altered dramatically and unpredictably as a consequence of changes by the government to its established priorities, policies or direction, either in response to externally induced pressures or by a conscious decision to pursue a different policy objective.

D. Federal-Provincial Relations Office

Objective

To assist the Prime Minister in discharging his overall responsibility for maintenance of effective federal-provincial relations and for the ongoing review of constitutional matters.

Resource Summary

This area accounts for 11.2% of the program's expenditures and 10.8% of the person-years.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Federal-Provincial Relations Office	4,747	64	4,045	60	3,029	49

In fiscal year 1984-85 the responsibility for the Aboriginal Services Delivery Task Force was transferred from the Ministry of State for Social Development to the Federal-Provincial Relations Office. Resources of $280,000 and 5 person-years will be required for its operations in 1985-86. The balance of the increase in the Estimates as compared to the 1984-85 Forecast is due to inflationary increases for salaries and wages.

Description/Resource Justification

The Federal-Provincial Relations Office provides information and expert advice to the Prime Minister and Cabinet on matters of federal government policy from the point of view of federal-provincial relations. In particular it undertakes the following:

- Formulates appropriate longer term policy on federal-provincial relations relating to the management of the Federation, constitutional change and reform of governmental institutions;

- Provides information and analyses relating to the current state of federal-provincial relations and on emerging issues which require development of appropriate policies;

- Ensures that a federal-provincial perspective is brought to bear in the development of social and economic policies and/or programs at the federal level;

- Provides expert advice on aboriginal constitutional matters, and maintains effective relations with representatives of aboriginal peoples, provincial and territorial governments and with federal departments in respect to aboriginal issues;

- Provides administrative support and coordinates preparations and the development of policy proposals for federal participation in First Ministers' Conferences; and

- Coordinates preparations for the Prime Minister's bilateral and multilateral meetings with his provincial counterparts.

The resource needs of the Federal-Provincial Relations Office vary with the number of Federal-Provincial First Ministers, Ministers, and Official Conferences to be supported.

E. Administration

Objective

To provide efficient and effective financial, administrative, information management and personnel services in support of departmental operations and systems.

Resource Summary

This area accounts for 30.7% of the program's expenditures and 31.1% of the person-years.

Figure 8: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Administration	12,918	185	15,107	195	14,286	206

The decrease in resource requirements (financial) is mainly attributable to the transfer of the costs of producing the Canada Gazette to the Department of Supply and Services effective April 1, 1985 ($3,704,000). This is offset by increases, in 1985-86, for capital purchases, continued implementation of the department's Long Range Information Systems Plan, and inflationary increases for salaries and wages.

The decrease in person-years is to reflect a stabilization of person-years in the activity, which were over-utilized in 1984-85, mainly in the area of Word Processing. This was in response to workload demands in this area.

Description/Resource Justification

The administration activity renders common financial, administrative, information management, and personnel services within the entire Program. These services are offered through the following area: Financial Management, Administration, Information Systems and Services, Personnel, Orders in Council, Cabinet Papers Distribution and Control, and Access to Information. This includes the following tasks:

Financial Management:

- to provide effective and efficient financial services and reporting systems; and
- to provide factual and timely advice to management on the impact and implications of decisions related to financial matters.

Administration:

- to provide and plan adequate accommodation, telecommunications and office equipment requirements; and
- to organize and deliver the required administrative services effectively and efficiently to meet the operational requirements.

Information Systems and Services:

- to provide and plan a full range of services for the acquisition, organization, processing, transmission, storage and retrieval of information;
- to plan and implement new information systems and programs; and
- to provide technical advice and support services in areas of data and video communications.

Personnel Management:

- to provide effective and efficient personnel services and reporting systems; and
- to provide factual and timely advice to management on the impact and implications of decisions related to personnel matters.

Orders in Council:

- to provide administrative services in connection with regulations made under the Statutory Instruments Act, including the examining, editing, registering, and arranging for publication of federal statutory regulations in Part II of the Canada Gazette; and

- to examine submissions to the Governor in Council to ensure conformity with policy and legal requirements, and undertake the preparation of draft orders.

Cabinet Papers Distribution and Control:

- to co-ordinate the printing, distribution, and control of all documents submitted to or emanating from Cabinet or Cabinet Committee meetings and to schedule such meetings.

Access to Information:

- to respond to requests for access to information under the Access to Information and Privacy Acts.

F. Commissions of Inquiry and Task Forces

Objective

To gather information and to report under specific terms of reference as well as to carry out short term projects.

Resource Summary

This area accounts for 4.9% of the program's expenditures.

Figure 9: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Royal Commission on the "Ocean Ranger" Marine Disaster	419	2,680	4,518
Royal Commission on the Economic Union and Development Prospects for Canada	1,580	8,700	8,691
Commission to Review Salaries of Members of Parliament and Senators	59	187	-
Commission of Inquiry into Marketing Practices for the Potato Industry in Eastern Canada	-	200	-
	2,058	11,767	13,209

Description/Resource Justification

Inquiries are of various kinds but the common denominator is the autonomy and independence of the body given the responsibility of inquiring into and reporting upon whatever terms of reference are given. The most important inquiry is one under Part I of the Inquiries Act which gives to Commissioners extensive powers and broad terms of reference. Task Forces usually are set up under ministerial authority with strictly limited terms.

Certain Commissions of Inquiry for which Ministers have been designated are reported in the Part III document for that Minister's department. In the case of the Privy Council Program, the Prime Minister has been designated as the Minister responsible for the following:

Royal Commission on the "Ocean Ranger" Marine Disaster: This Commission was established by the Government of Canada, under Part I of the Inquiries Act on March 17, 1982 and by the Government of Newfoundland under the Enquiries Act of that Province. Its mandate is to inquire into and report upon the loss of the semi-submersible self-propelled drill rig "Ocean Ranger", together with all members of her crew, on or about the 15th day of February 1982 on the Continental Shelf of Canada, the reasons and causes therefore and, without restricting the generality of the foregoing, to inquire into, report on and make recommendations on means of improving the safety of Eastern Canada offshore drilling operations.

The Commission will wind-down its operations in 1985-86, following production and submission of the final report in May or June, 1985. Forecasted expenditures chargeable to the Federal Government for 1985-86 are $419,000, bringing total expenditures for the Commission to $13,056,000.

Royal Commission on the Economic Union and Development Prospects for Canada: This Commission was established under Part I of the Inquiries Act on November 5, 1982 to inquire into and report upon the long-term economic potential, prospects and challenges facing the Canadian federation and its respective regions, as well as the implications that such prospects and challenges have for Canada's economic and governmental institutions and for the management of Canada's economic affairs.

The Commission will wind-down its operations in 1985-86, following publication of the final report, which is targetted for June 1985. Forecasted expenditures for 1984-85 are $8,700,000 and for 1985-86 are $2,100,000, bringing total expenditures for the Commission to $20,000,000.

Commission to Review Salaries of Members of Parliament and Senators: This Commission was established under subsection 34(7) of the Senate and House of Commons Act on October 25, 1984 to inquire into the adequacy of the annual variations of sessional allowances payable to members of the Senate and House of Commons and other allowances payable to them and report to the Governor in Council by April 25, 1985.

Total expenditures for the Commission are estimated at $246,000, which includes $59,000 for 1985-86.

G. Security Intelligence Review Committee

Objective

To review and report on the operations of the Canadian Security Intelligence Service and to investigate security clearance related complaints.

Resource Summary

This area accounts for 2.1% of the program's expenditures.

Figure 10: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Security Intelligence Review Committee	876	317	-

The resources in 1985-86 represent a full year of operations, while the resources for 1984-85 are for 4 months of operation following the establishment of the Committee on November 30, 1984.

Description/Resource Justification

The Security Intelligence Review Committee is the external review mechanism established by section 34 of the Canadian Security Intelligence Service Act, and consists of five members appointed by the Prime Minister.

Its functions are to report from time to time to the Solicitor General and annually, through the Minister, to Parliament as to whether the operations of the Canadian Security Intelligence Service and the conduct of the Minister in relation thereto are lawful and free of abuse. It will also review general complaints made against the Service, as well as complaints arising out of the denial of security clearances in the public service or to applicants for Canadian citizenship or immigration.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Privy Council expenditures by Object are presented in Figure 11.

Figure 11: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and Wages	24,309	21,226	17,926

Operations	21	24	24	13,253 - 40,676	21,011

Note: The person-year column displays the forecast distribution by occupational group of the authorized person-years for the program. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated based salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

	25,000	25,000	23,882
	90,000	90,000	128,882

B. Cost Analysis

Net Program Cost

The Privy Council Program 1985-86 Estimates include only authorities to be voted and statutory authorities. Also to be taken into consideration are services provided without charge by other departments, primarily for accommodation provided by Public Works ($4,030,000). The Privy Council Program recovers fifty percent (50%) of expenditures incurred by the Royal Commission on the "Ocean Ranger" Marine Disaster (excluding Commissioners' Emoluments paid by the Federal Government) from the Province of Newfoundland. This will amount to approximately $200,000 in 1985-86. The revenue generated is credited directly to the Consolidated Revenue Fund and is not available for use by the program.

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Public Archives
Canada

3239

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The Public Archives of Canada anticipates a complete revision of its 1912 Act as new legislation is presently under consideration.

Specific goals in 1985-86 for the Public Archives Program include the following:

- to have in place a fully operational function in support of access and privacy legislative requirements, within the Archival Operations Activity, with 12 person-years and $459,000 in operating funds (see page 27);

- to have in place a fully operational function for the evaluation of records management operations in government institutions, with evaluations completed on the state of records management in 15 government institutions at a cost of three person-years and $77,000 in operating funds (see page 34);

- to begin the microfilming of the 325 metres of Papers of the Right Honourable John G. Diefenbaker at a cost of $55,000 in operating funds (see page 26); and

- to code into an automated data base 560,000 index cards to land patents issued by the Crown in Western Canada, between 1867 and 1930, at a cost of $60,000 (see page 25).

Government Records Management	12,215	11,374	841	28
Departmental Services	14,774	13,727	1,047	35
Total	43,777	41,771	2,006	
Less revenues credited to the Vote (Central Microfilm Operations)	1,900	1,725	175	28 and 41
	41,877	40,046	1,831	
Authorized person-years	816	826	(10)	

* There has not been significant change from 1984-85 Main Estimates. The 1984-85 forecast is $609,000 or 1.5% more than the 1984-85 Main Estimates of $39,437,000. (Extracts from Part II of the Estimates, page 4.)

Explanation of Change: The financial requirements for 1985-86 are 4.6% or $1.8 million higher than the 1984-85 forecast expenditures. This increase is due primarily to:

	$ million
• Allowance for inflation	1.1
• Increased conservation, security and automated systems support for both the Public Archives and the National Library	0.7
• Miscellaneous increases in archival and records management operations	0.4
• Increase in revenue that is credited to the Vote	(0.2)
• Reduction in operating costs base imposed by Treasury Board	(0.2)

B. Recent Performance

1. Highlights

There is only one major change to the Program's 1984-85 Plan which is:

- to have in place a fully operational evaluation function for the evaluation of records systems, with evaluations completed in 6 rather than 15 government institutions as previously planned.

Highlights of the Program's performance during 1983-84 were:

- Step one of a feasibility study on the implementation of automated systems of control for all records within the Archival Operations Activity (a requirements analysis for each of the divisions and for the branch) was completed in 1983-84. Work is continuing on this project (see page 16).

- Initiatives were undertaken towards a more systematic and integrated process for the identification, selection, and acquisition of EDP records of the Government of Canada. An advisory section was established (see page 17). Pilot projects in three departments have begun to test various approaches. Considerable work was put into the development of procedures to carry out the mandatory scheduling of automated personal information banks.

- A study, within Archival Operations, of response times to written inquiries, indicated that the vast majority of replies were provided within a period of thirty days.

- In the Federal Records Centres increased production for the largest function (files returned to departments) was 3.6%. Growth was not as great as anticipated, largely due to lack of shelf space in several centres. In addition, the lower reference figure reflects an improved records management system, which eliminated needless requests.

- More than 95% of the 2,719 formal requests submitted by the public under Part IV of the Canadian Human Rights Act or under the Privacy Act, for information on personnel records of former federal employees, were completed in less than 30 days.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Expenditures			
Archival Operations	16,506	14,626	1,880
Government Records Management	10,122	10,449	(327)
Departmental Services	12,213	12,657	(444)
Total	38,841	37,732	1,109
Less : revenues credited to the Vote (Central Microfilm Operations)	1,872	1,623	249
	36,969	36,109	860
Person-years	807	795	12

The difference between actual expenditures and the Main Estimates is approximately $860,000 or 2.4%. The major items accounting for the difference are:

- Supplementary Estimates:
  - Purchase of archival collections $584,000
- Transfers from Treasury Board Vote 10 - Employment Initiatives:
  - Federal Summer Employment Opportunities Program $524,000
  - New Employment Expansion and Development (NEED) Program $165,000
- Additional Employee Benefit Plans funds $324,000
- Lapsed funds ($737,000)

C. Background

1. Introduction

Since 1872, the Public Archives of Canada has acquired, controlled and conserved archival records in such forms as manuscripts, federal government records, maps and plans, audio-visual records, iconographic items, and other material for historical research. During this time, the Public Archives has evolved a dual role as a national cultural institution responsible for archival records in all media and as an administrative arm of the federal government providing advisory and operational services in records management.

The Public Archives provides a memory to government by promoting sound records management practices and by preserving federal records of permanent value. Effective management of records facilitates decision making and the efficient administration of government programs. In particular, good records management assists in the administration of the Access to Information and Privacy Acts, by ensuring that information can be located quickly and easily. It also ensures that material of enduring value is segregated and preserved, for the benefit of both the government and the research community.

Through donations and gifts from the private sector, the Public Archives has acquired significant archival records relating to the development of the country. It is this collection from individuals and organizations, combined with the federal government archival record, that has provided a rich resource for the production of Canadian books, films, television and radio programs and local histories, as well as a research source for academics, media representatives, government officials, genealogists, and the general public. For more than a century the Public Archives of Canada has been preserving the collective memory of the Canadian people.

2. Legal Mandate

Under the Public Archives Act of 1912, the Program has the mandate to acquire and preserve "public records, documents and other historical material of every kind, nature and description . . . placed under the care, custody and control of the Dominion Archivist". The 1912 Act confirmed the cultural role of the Public Archives which had acquired, controlled and conserved archival records since 1872.

3249

Another mandate, assigned to the Public Archives through an Order-in-Council in 1903, was that of serving as official repository for the federal government archives. A 1966 Order-in-Council (the "Public Records Order", P.C. 1966-1749) conferred on the Dominion Archivist a pivotal role in the government records management program. The mandate has been further strengthened through issuance of records management and micrographics policies by Treasury Board in 1983 (Chapters 460 and 445 of the Administrative Policy Manual). The records management policy authorizes the Dominion Archivist to assess and approve proposals to destroy government records and to provide advice and training in records management. The Dominion Archivist is also authorized to operate storage facilities for government records, to provide secure sites for essential records, and to manage a National Personnel Records Centre. Authorization is also given for evaluating the records management function in government institutions, and for reporting annually to Treasury Board on the state of records management in the Government of Canada. The micrographics policy assigns the Public Archives responsibility for ensuring the good management of federal government microform records, the development and maintenance of technical expertise in micrographics, and the provision of microfilm services through its Central Microfilm Operations.

3. Program Objective

The objective of the Public Archives Program is the systematic preservation of government and private records of Canadian national significance in order to facilitate not only the effective and efficient operation of the Government of Canada and historical research in all aspects of the Canadian experience, but also the protection of rights and the enhancement of a sense of national identity based on archives as the collective memory of the nation.

The Public Archives acquires records of a permanent value from federal government institutions included within schedules "A" and "B" of the Financial Administration Act. It also acquires, on a negotiated basis, records from other government institutions such as crown corporations. From the private sector, the Public Archives selects for preservation archival material of enduring national significance and many local, municipal, institutional and provincial archives are devoted to the acquisition and preservation of public and private sector archival records within their jurisdiction.

4. Program Organization for Delivery

Activity Structure: The Public Archives Program consists of three activities: Archival Operations, Government Records Management and Departmental Services as shown in Figure 3. It should be noted that the Public Archives provides financial, administrative, personnel, exhibition and conservation services for the National Library of Canada through the Departmental Services Activity.

Figure 3: Activity Structure

Organization Structure: The Public Archives of Canada has its headquarters and main centre of operations located in the National Capital Region. In addition, records centres in Halifax, Montreal, Toronto, Winnipeg, Edmonton and Vancouver provide storage and service facilities to the regional operations of federal government departments and agencies. For security, the Public Archives has an Essential Records Site located outside the National Capital Region. Offices are also maintained in London, England and in Paris, France for the acquisition of archival records relating to Canada.

3251

Reporting to the Minister of Communications, the Dominion Archivist is aided by the Assistant Dominion Archivist and the Director General of Departmental Administration. The Directors General of the Archives, Records Management and Conservation and Technical Services Branches report directly to the Assistant Dominion Archivist. The organizational units follow the activity structure as shown in Figure 4.

Figure 4: 1985-86 Resources by Organization/Activity ($000).

					Activity Totals
Archival Operations 295 P-Y	–	–	16,788	–	16,788
Government Records Management 287 P-Y	–	–	–	10,315	10,315
Departmental Services 234 P-Y*	10,911	3,863	–	–	14,774
	10,911	3,863	16,788	10,315	41,877

D. Planning Perspective

1. Environment

There are a number of key factors which may significantly affect the Public Archives Program. These are:

The Information Explosion and New Technologies: Over the past decade, the volume of information produced by the government and by the private sector has increased tremendously. This information is being recorded on a variety of new media such as optical and magnetic discs, tapes and film, as well as on the more traditional medium of paper. At the same time, technology is multiplying the possibilities of storing large quantities of information in ever smaller formats.

The explosion of information challenges archives. Its abundance makes difficult the selection of appropriate records for longterm retention, and imposes new responsibilities on archives for the acquisition, care, custody and servicing of each new record medium. Of particular concern currently are the new automated media such as machine readable records. At the same time as more new records are created, others are destroyed by erasing or are rewritten before an archivist ever becomes aware of their existence. Access to those records which do come into an archives becomes complicated by the variety of media and micro formats making processing, storage, and indexing complex activities demanding specialized skills and technologies. Moreover, as archival information increases so does the public demand for access and use. To meet these demands, archives must turn to the new technologies for assistance, becoming themselves increasingly dependent upon automated systems for information control and retrieval, and upon the new media for information display and distribution.

Accommodation and Security Pressures: The present accommodation situation of the department remains critical. The Wellington Street site in Ottawa is shared with the National Library of Canada and was filled to capacity in the early 1970s. The ongoing program of installing a compact shelving system has substantially increased the storage capacity and provided some temporary relief. However, over the past decade, staff members of the Public Archives have been forced into a number of make-shift office and processing areas and historical records are now being stored under non-archival conditions throughout the National Capital Region. Within the National Capital Region, the Public Archives is housed in 13 buildings, most of which have inadequate storage and environmental conditions.

Security is a related factor in the department's concern for the safeguarding of its holdings and resources. There is a continuing need to update existing security procedures and devices in order to cope with increased risks and to protect the sensitive and irreplaceable records

being placed within its custody. At the same time the Public Archives must ensure that there is appropriate client access to these records. There is also a pressing requirement to ensure that continuing measures, resources and facilities are upgraded to provide timely and correct action in emergency and disaster situations.

Specialized Preservation Requirements: The collections of the Public Archives are unique treasures and are irreplaceable. Preservation is mandatory so that these collections can be enjoyed now and by future generations. Many archival items have deteriorated before they arrive at the Public Archives. These require remedial conservation and restoration. All records, even those in good condition at the time of their acquisition, require proper preservation and protection due to their fragile nature. Such requirements demand skilled conservators, technical expertise and specialized conservation equipment.

2. Initiatives

In 1985-86, the Public Archives Program will direct much attention to the following initiative:

Evaluation of records management operations: The Public Archives Program is responsible for the evaluation of records management operations in government institutions, and for reporting regularly to Treasury Board on the state of records management in the federal government. The department undertook this new function in 1984-85 using existing resources. Planning for its initiation has been undertaken with representatives of the Treasury Board Secretariat, the Office of the Comptroller General, and the Office of the Auditor General, as well as through consultation with the audit community in the federal government. In 1985-86, three person-years and $77,000 will be involved in the completion of evaluations of the state of records management operations in 15 government institutions. (See page 34.)

The Public Archives Program will also continue the following initiatives:

Automated Control: The requirements summary and analysis report of the feasibility study was completed in 1984. It recommended that the Archival Operations Activity proceed with systems development, using an existing facility to implement automated control systems by 1987. It is expected that work will begin in 1985-86 on systems development in those areas which do not have systems plans.

Access to Information and Privacy Legislation: This legislation requires the Program to respond to demands for information contained in government records under the control of the Dominion Archivist. A unit has been established to review records page-by-page to determine whether information contained in these records can be released under the terms of the legislation. A total of 210,000 pages were reviewed in 1983-84 after the promulgation of the legislation. It is expected that 400,000 pages will be reviewed in 1984-85 and 600,000 pages in 1985-86.

EDP Information Systems Section: The section was established in 1983-84 to assist departments in the identification, description and scheduling of EDP records. However, delays in staffing were experienced and the section will be fully operational in 1984-85.

Optical Disc: Extensive investigations were conducted in 1983-84 into the recording of machine readable data and motion picture images onto optical discs and back to computer tape or motion picture film. During the investigations the type of software and hardware required to transfer and regenerate the information was identified. Research will continue in 1984-85 into transferring and regenerating information contained on machine readable tape, motion picture film and black-and-white photographic images. The use of the optical disc as a practical means of archival conservation is being examined within an evaluation study of the conservation component being done in 1984-85.

3. Program Effectiveness

The program effectiveness of the Public Archives is related to its program objective - the systematic preservation of government and private records of Canadian national significance. The Public Archives Program Evaluation Unit has developed a five year evaluation cycle commencing in 1981-82 based upon the following components: acquisition, control, conservation, research and public service, and records management. A first program evaluation study of records centres within the records management component was completed in 1982-83. The Public Archives is currently undertaking a program evaluation study of its conservation component and its research and public service component.

Several criteria exist for measuring the effectiveness of the Public Archives Program.

Government Records Management: The objective of the Government Records Management Activity is the optimum management of records in government institutions. The Public Archives is responsible for facilitating a sound records management program in government departments and for providing cost-effective records centres and micrographics operational services. There are three criteria for the measurement of the effectiveness of this activity:

Departmental and Agency Compliance: The effectiveness of the Public Archives in promoting and making departments aware of sound records management can be measured by the extent to which departments comply with established administrative policies. The Dominion Archivist reports annually to Treasury Board on departmental and agency compliance. The 1983-84 report describes the initiatives undertaken by the Public Archives and specifically notes the initiation of the evaluation function and the development of automated support systems in records management. It comments also on steps taken to improve the records scheduling and disposal function in departments and agencies and on initiatives undertaken to bring the vast stores of EDP data in the federal government under records management and archival control.

Client Satisfaction: The effectiveness of the Government Records Management Activity can be measured in terms of client satisfaction. For example, one measure of the records management program is the extent to which client departments and agencies are satisfied with the micrographic and federal records centres services provided to them. The 1982-83 program evaluation study of records centres and their 850 client department and agency offices indicated a high level of satisfaction in all regions for retrieval and disposal timeliness.

Cost Savings: The Public Archives records centres seek to provide their services so as to produce cost savings against the alternative of having government departments and agencies maintain and service their records. These cost savings may be real savings or savings through cost avoidances. This benefit is monitored by the Program in an ongoing manner and the 1982-83 program evaluation study estimated 1981-82 cost savings at approximately seven million dollars under the assumption that in the absence of a records centres system client departments and agencies would seek and require equivalent services.

Archival Operations: There are two related basic responsibilities within the Archival Operations Activity: service to a variety of user groups and audiences, and preservation which includes acquisition, control and conservation functions. The cultural benefits of a preservation function include on-going and future accessibility. The service responsibility may be measured in part by user satisfaction. The specific effectiveness measures are now being developed and analyzed in a program evaluation of the research and public service component. These measures will be reported on at the conclusion of that evaluation study. Output volumes of major Archival Operations sub-activities are found in Figures 8 to 11 (pages 24 to 27).

Conservation and Technical Support: A program evaluation study of the conservation component, which began in 1984-85, identifies and examines criteria for program effectiveness. These criteria will be reported in the evaluation study report in 1985-86.

Section II
Analysis by Activity

A. Archival Operations

Objective

The systematic identification and preservation of government and private records which document the on-going Canadian experience, thereby protecting the national collective memory for the benefit and enrichment of present and future generations.

Resource Summary

Expenditures for the Archival Operations Activity will account for approximately 40% of the Public Archives' operating budget in 1985-86. For the non-capital expenditures of $16,613,000, about 68% are personnel related, 14% are for professional and special services, 5% for utilities, materials and supplies, and 13% for other expenses including the purchase of archival record collections from the private sector. Capital expenditures will be $175,000.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast* 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Archival Operations	**16,788**	**295**	16,670	307	16,506	291

* These figures include 12 person-years and $112,000 in operating costs for the summer student employment program.

Past Financial Performance

Figure 6: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		**Change**	
	$	P-Y	$	P-Y	**$**	**P-Y**
Archival Operations	16,506	291	14,626	282	**1,880**	**9**

The difference of $1,880,000 between actual expenditures in 1983-84 and the Main Estimates results from the following major items:

- Sponsorship and co-ordination of 15 Summer Canada projects in other archival institutions $336,000
- Summer student employment program and New Expansion and Development (NEED) projects $267,000
- Purchase of archival collections $875,000

The increase in person-years results from three additional person-years for the application of the Access to Information and Privacy legislation relating to government historical records and person-years for the summer student employment program.

Description

The Archival Operations Activity acquires, controls, and conserves federal government records considered to be of long-term historical value and a variety of other records from the private sector which document the development of Canada and are of enduring national value. Service to the public, to government, and to other institutions is provided through research facilities and reference endeavours, through the dissemination of information about the records, and through advice and assistance on archival matters.

The growth in the size of its holdings and the multiplication of the various media on which information is stored has led to an evolution of the Archival Operations Activity into distinct organizational entities as indicated in Figure 7.

Figure 7: Archival Operations Activity as Reflected by Organizational Entities and Record Holdings

Organizational Entity	Principal Record Holdings
Federal Archives	Government textual records
Machine Readable Archives	Government and private EDP records
Manuscript Division	Private sector textual records and the records of public officials
National Film, Television and Sound Archives	Government and private audio-visual records
National Map Collection	Government and private cartographic and architectural records
National Photography Collection	Government and private photographs
Picture Division	Government and private documentary works of art
Public Archives Library	Government and private publications

The sub-activities comprising the Archival Operations Activity and their functions are as follows:

Acquisition: involves locating, examining, selecting, and receiving by donation, transfer or purchase archival records in the federal government and private sectors. The acquisition sub-activity also involves the placement and registration of these records within the Public Archives.

Control: involves the actions and processes performed to reach an adequate level of physical management of archival records to ensure proper storage and to facilitate retrieval. The control function also involves the management of the information contained in these records through the maintenance of comprehensive documentation, the proper arrangement of the records, and the preparation of research tools (finding aids, indexes, inventories and guides).

Conservation: includes any procedures or processes performed on archival records which enhance their life-span. Most of the conservation measures which are carried out are palliative in nature as opposed to restorative (repairing of records in their original form). Palliative conservation processes depend on the medium of the record. Included are the insertion of textual records in acid-free file folders and boxes and the conversion of record holdings to safer formats. Examples in the latter category include the microfilming of textual records and the subsequent withdrawal of the original records from use by the public, and the copying of nitrate motion picture film holdings onto safety film. Other processes include the precision rewinding of machine readable tapes.

Service to the Public: includes the provision of advice, assistance or information to any individual, group or organization about the Public Archives, its holdings, services and activities, or about archives in general. There are three principal types of service. Researcher Services provide information from, access to, extracts from and copies of the records, and advice on the conduct of historical research and research opportunities, in response to or in anticipation of requests. Professional Services include the provision of advice, assistance, and training on archival methodology and management to members of the archival community and related disciplines. Outreach Services focus on the wide spectrum of the general public and include methods such as publications prepared to illustrate the range of holdings and exhibitions displayed in the main building and shown in other locations in Canada and abroad.

Performance Information/Resource Justification

The following data are based on a performance measurement system initiated in 1980 and still undergoing modification, revision and feasibility assessment. Outputs are expressed differently this year for acquisition, control and conservation. In order to render them more meaningful, they have been detailed in terms of the various media acquired and controlled and in terms of the different conservation processes actually carried out by staff of the activity or paid for by activity funds.

Acquisition: In 1985-86, the Archival Operations Activity will reduce slightly its acquisition outputs, with a decrease of 1 person-year available for this sub-activity. (See Figure 8.)

Because of accommodation constraints and pending the completion of an acquisition policy document, the activity has made an effort not to increase its level of acquisitions. The very large volume of 9,105 metres of textual government records transferred in 1983-84 results from a long-term accumulation in records centres. The activity was able to receive these records in that year as a result of the availability of a new satellite storage facility. A more normal level of some 3400 metres of government textual records is anticipated in 1985-86.

The large level of photographic records acquired in 1984-85 results from the receipt of a very large collection of some 350,000 photographs from a Montreal photographer, Pierre Gauvin-Evrard, and from the direct transfer of 120,000 photographs from Public Works Canada, in addition to the usual level of acquisitions.

Figure 8: Acquisition (Selected Outputs and Person-Year Utilization)

Outputs Description	Output Volumes		
	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Metres of government textual records	3,400	6,000	9,105
Metres of private textual records	950	950	1,170
Photographic records	275,000	650,000	141,726
Film, television and sound records (10-minute segments)	135,000	135,000	87,688
Cartographic records	65,000	55,000	70,858
Machine readable data files	150	150	124
Iconographic records	6,000	6,000	4,312
Published items	28,000	27,000	28,541
Person-Year Utilization	36	37	38

Control: In 1985-86, person-years available for this sub-activity will stay the same (see Figure 9) but expenditures for contractual services will decrease by $66,000. Specific focus in 1985-86 will be to increase somewhat the outputs of records under initial control such as 800 metres of Department of National Defence textual records and 130 metres of textual records from the General Correspondence series of Agriculture Canada. More detailed control processes will also be applied to 560,000 index cards for every land patent issued by the Crown in Western Canada, where land was controlled by the federal government from 1867 to 1930. These cards will be coded into Federal Archives Division's automated data base using contract services. This will allow more efficient access to the several million land patents and ensure the security of the records. The Program will then be able to share this information with the western provinces.

Figure 9: Control (Selected Outputs and Person-Year Utilization)

Outputs Description	Output Volumes		
	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Metres of government textual records	2,970	2,050	1,383
Metres of private textual records	900	900	848
Photographic records	275,000	250,000	141,726
Film, television and sound records (10-minute segments)	60,000	60,000	57,673
Cartographic records	55,000	50,000	61,880
Machine readable data files	75	75	59
Iconographic records	6,000	6,000	2,702
Published items	8,000	7,500	6,141
Person-Year Utilization	101	101	99

3263

Conservation: In 1985-86, conservation outputs will be constant as will be the person-years devoted to this sub-activity (see Figure 10). Operating costs for the procurement of specialized conservation services will increase by $5,000. Capital expenditures for the purchase of storage equipment and the replacement of other equipment will increase by $30,000. Of specific concern in 1985-86 will be the beginning of the conservation microfilming of the papers of the Right Honourable John Diefenbaker. Forty-two metres of the total 325 metres will be microfilmed at a cost of $55,000 in operating funds. The cyclical recopying of machine readable data files will also continue with 200 data files recopied in 1985-86, at a cost of $50,000.

The measures undertaken will be only a fraction of the work that would have to be carried out if all original items were to be preserved in their original form. Exact statistics on the degree and rate of deterioration of archival material are most difficult to obtain but it is certain that without some sort of conservation, all items will deteriorate and will eventually be lost. As the state of the art in conservation and restoration evolves and as new techniques are developed, deterioration will be more effectively combated. A survey of collections, completed in 1984, is an important first step toward permitting the Activity to identify its requirements for the restoration and protective copying of records.

Figure 10: Conservation (Selected Outputs and Person-Year Utilization)

Outputs Description	Output Volumes		
	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Items conserved or transferred to other formats by branch staff:			
Magnetic tapes rewound	4,000	4,000	939
Film, television and sound records processed	40,000	40,000	38,751
Cartographic records microfilmed	25,000	25,000	33,961
Items transferred to other formats by Central Microfilm Operations:			
Metres of government textual records microfilmed	140	140	142
Metres of private textual records microfilmed	82	45	44.5
Person-Year Utilization	28	28	28

Service to the Public: In 1985-86, no significant change in public service outputs is predicted (see Figure 11). One area of continuing activity in that year will be related to Access to Information and Privacy (ATIP) legislation. This legislation requires the Public Archives to respond to demands for information in government records under the control of the Dominion Archivist. With positions fully staffed in 1985-86, it is expected that approximately 600,000 pages of currently restricted federal government records will be reviewed in that year to determine whether these records can be made available to the public in a manner consistent with the provisions of ATIP legislation. This task will require 12 person-years and $459,000 in operating funds.

Figure 11: Service to the Public (Selected Outputs and Person-Year Utilization)

Outputs Description	Output Volumes		
	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Researchers registered	7,000	7,000	6,853
Researcher attendance	28,000	28,000	28,273
Inquiries responded to	95,000	95,000	96,603
Photocopies supplied	335,000	335,000	335,132
Photographs circulated	1,200,000	1,100,000	954,156

Microfilm reels supplied on interlibrary loan (copies of textual records)	17,000	17,000	17,238
Pages reviewed for access and privacy	600,000	400,000	210,000
Person-Year Utilization	130	129	120

3265

B. Government Records Management

Objective

The optimum management of government records, which the activity supports by the provision of advice and training, records storage, scheduling and disposal, reference services, micrographic operational services, and the evaluation of records systems.

Resource Summary

Expenditures for Government Records Management will account for approximately 25% of the Public Archives operating budget in 1985-86. For the non-capital expenditures of $10,974,000 about 76% are personnel related, 10% are for utilities, materials and supplies, 8% is for professional and special services, and 6% for other expenditures. Capital expenditures will be $1,241,000 and revenues credited to the Vote (Central Microfilm Operations) will be $1,900,000 (see page 41 for details).

The variance of person-years and financial resources results mainly from a departmental reorganization which occurred in 1983.

3267

Description

The Government Records Management Activity supports the effective and economic management of federal government records through the following sub-activities:

Federal Records Centres: stores, retrieves, and disposes of inactive and essential general records of government institutions. These functions are carried out in facilities located at Ottawa, Halifax, Montreal, Toronto, Winnipeg, Edmonton and Vancouver, as well as at an Essential Records Site located outside the National Capital Region. This sub-activity receives records in records centres for storage, returns records temporarily to institutions for administrative purposes, and disposes of a certain portion of records each year in accordance with approved retention and disposal schedules. In addition, stored microfilm records are inspected to detect deterioration.

Personnel Records: administers and provides reference services to federal institutions and to the general public on personnel and personnel-related records of former civilian and military federal employees, and former members of the Royal Canadian Mounted Police. In addition, this sub-activity assumes the responsibilities defined in current Privacy legislation for all non-current personnel records under its control.

Records Management and Micrographic Systems: advises, trains, and assists government institutions in the management of their records and the use of micrographics, evaluates and monitors the effectiveness of records management in government institutions and the ability of institutions to satisfy the requirements of Access to Information and Privacy legislation, undertakes and promotes research into technological developments, and ensures the effective scheduling (for retention and disposal) of government records. This sub-activity aims to increase administrative efficiency and to ensure that records of permanent value are preserved, through the optimum management of records in government institutions. In addition, it supports efforts aimed at the development of reprographic technology and national micrographic standards. The sub-activity mandate is limited by the fact that it has no role in the initial creation of government records. Records creation, including forms and reports management, is not part of the records management function in the federal government.

Central Microfilm Operations: provides government institutions with on-site and centralized microfilm and duplication services. This sub-activity handles all microforms, with special capacity in the area of microfiche and computer output microfilm. The service is on cost-recovery, through a net-voting arrangement.

Figure 14: Expenditures of the Government Records Management Activity for 1985-86

Performance Information/Resource Justification

Federal Records Centres: The workload of this sub-activity shows little change, as Figure 15 indicates. The volume of demand for return of files to departments on request is not forecasted to increase nor is the volume of records disposed of. However, the magnetic tape library service has become operational, as is indicated by the sizeable increase in number of reels "registered" into and "deregistered" out of the library each year.

In 1985-86, it is expected to have automated control systems in place in all records centres.

Figure 15: Federal Records Centres Productivity

	Forecast 1985-86			Forecast 1984-85			Actual 1983-84		
Outputs Description	Productivity (000)	P-Y	Output (000)	Productivity (000)	P-Y	Output (000)	Productivity (000)	P-Y	Output (000)

Microfilm reels inspected	2.8	6	17	2.8	6	17	3.2	6.4	20.4
Microfilm reels reboxed	20	0.5	10	21.4	0.7	15	22	1.1	24.2
Magnetic tapes registered	24.1	5.8	73	23.6	5.6	69	19.8	5.3	60.2
Magnetic tapes deregistered			67			63			44.5

Personnel Records: As indicated in Figure 16, the general productivity of the Personnel Records sub-activity is expected to increase only slightly. During 1985-86, strategies for handling EDP data files containing personal information concerning former employees of the federal government will be developed in the context of the implementation of the Treasury Board administrative policy in the management of EDP records.

Figure 16: Personnel Records Productivity

	Forecast 1985-86			Forecast 1984-85			Actual 1983-84		
Outputs Description	Productivity	P-Y	Output	Productivity	P-Y	Output	Productivity	P-Y	Output
Requests for personnel records from government departments	2,033	30	61,000	2,000	30.5	61,000	1,910	32.5	62,082
Formal requests for information from the public	1,058	37.8	3,600	1,051	37.3	3,200	898	39.9	2,719
Informal requests for information from the public			36,400			30,000			33,101
Accession of records (metres)	1,250	1.6	2,000	1,250	1.6	2,000	1,237	1.6	1,980
Disposal of records (metres)	500	1.6	800	500	1.6	800	898	1	898

Records Management and Micrographic Systems: This sub-activity is placing a priority on the implementation of Treasury Board administrative policies in records management and micrographics, and on the implementation of the regulations concerning the administration of Access to Information and Privacy legislation. It is also responsible for the evaluation of records management operations in government institutions. The total number of person-years devoted to this sub-activity in 1985-86 is 33, including 3 additional person-years devoted to the evaluation of records management in departments and research on automated records management systems.

Central Microfilm Operations: This sub-activity is composed of four distinct operational areas: source document microfilming, microfilm processing, roll and fiche duplication, and computer output microfilming. Service demands remain fairly constant, although 1983-84 had an abnormally large volume of source document filming. (See Figure 17.) In 1985-86, computer output microfilm (COM) and related fiche duplication should grow slightly. There will be no increase in person-years.

Figure 17: Central Microfilm Operations Productivity

	Forecast 1985-86			Forecast 1984-85			Actual 1983-84

C. Departmental Services

Objective

The provision of administrative support to the operational programs of the Public Archives of Canada and the National Library of Canada and the conservation of the holdings of these two organizations.

Resource Summary

The Departmental Services Activity accounts for approximately 20% of total program expenditures of both the National Library and the Public Archives for 1985-86 and 17% of person-years for both departments. Approximately 61% of the expenditures in this activity are for personnel costs, with 8% for tenant services necessary to fit out accommodations to meet the special technical requirements necessary to hold the collections, and 4% for capital.

It is estimated that in 1985-86, $5,137,000 and 81 person-years of the Departmental Services Activity will be devoted to general administration and conservation and technical support services to the National Library of Canada. The other resources will be devoted to the Public Archives of Canada. (See Figure 18.)

Note: Portion provided as services to the National Library	3,574	69	3,675	65	(101)	4

The variance of person-years and operating money in the Departmental Services Activity results mainly from a departmental reorganization which occurred in 1983.

Description

The Departmental Services Activity is composed of the following sub-activities:

General Administration: Within this sub-activity falls the organizational units which provide services uniquely to the Public Archives: the executive offices and secretariat, planning, public affairs and publications. Also included in this sub-activity are those parts of the organization which provide services jointly to the National Library and to the Public Archives: the office of the Director General of Departmental Administration, internal audit, program evaluation, exhibition services, financial services, personnel services, and administrative services.

Conservation and Technical Support: provides a comprehensive conservation program, photographic services, and optical disc applications research for both the Public Archives and the National Library of Canada. Computer systems services are provided to the Public Archives. The sub-activity carries out the numerous processes required to conserve the various records found in modern archives and libraries, including the mass deacidification of paper and books. It also provides a four to six-year training program to develop senior records conservators.

Performance Information/Resource Justification

General Administration: Figure 20 shows the ratio of General Administration person-year costs to the Program totals of both the National Library and the Public Archives. In both instances the ratios remain relatively constant over the three-year period.

Figure 20: Relationship of General Administration Requirements to Total Resources ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Total resources:						
Public Archives	41,877	816	40,046	826	36,969	807
National Library	32,857	549	31,743	540	29,621	543
	74,734	1,365	71,789	1,366	66,590	1,350
General Administration resources	10,911	170	10,175	173	9,425	179
Percentage of total	14.6	12.5	14.2	12.7	14.2	13.3
Note: Portion provided as services to the National Library	4,364	68	3,256	55	3,016	57

Conservation and Technical Support: At present, performance measurement information mechanisms are under development. The data in Figure 21 reflect current and anticipated performance including increased capacity and scope of book and manuscript deacidification. To achieve these workload volumes about 80% of the total sub-activity human resources indicated in Figure 22 will be used.

Figure 21: Workload Volumes (000s of Items)

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Public Archives expenditures by object are presented in Figure 23. Expenditures for 1985-86 have increased by $1,831,000 (4.6%) over 1984-85.

Professional and special services estimated at $5,306,000 in 1985-86 are distributed as follows: data processing services, $2,069,000; protection services, $955,000; archival researchers/consultants, $1,486,000; training, $531,000; and others, $265,000.

Figure 23: Expenditures by Object ($000)

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

The Public Archives is not a heavy user of capital and is not involved in major capital projects. The only significant continuing capital expenditure is the annual purchase of shelving for holdings. Other capital expenditures are usually for specialized archival conservation equipment.

Figure 25: Capital Costs ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Shelving	1,235	1,338	431
Other	716	958	1,219
	1,951	2,296	1,650

B. Revenue Analysis

Figure 26 presents a breakdown of revenue collected by the Public Archives for the years 1983-84, 1984-85 and 1985-86. The bulk of the Program's revenues are derived from the provision of microfilming services to other government departments. The remainder is received from the provision of photocopying and other reproduction services to research clients.

Figure 26: Revenue by Class ($000)

	Forecast 1985-86	Forecast 1984-85	Actual 1983-84
Revenues credited to the Vote Central Microfilm Services	1,900	1,725	1,872
Revenues credited to the Consolidated Revenue Fund Sundry	232	223	253
Total combined revenues	2,132	1,948	2,125

C. Cost Analysis

The Public Archives Program's 1985-86 Estimates include only those expenditures to be charged to the Program's voted appropriation and statutory payment. Other cost items as well as revenues must also be included when considering the actual costs to operate the Program. The adjustments made to the estimated operating expenditures to arrive at a total net cost include: services provided without charge to other departments ($14,846,000), accommodation provided without charge by Public Works ($12,343,370), other services provided without charge by other departments ($627,252), and inclusion of all revenues generated by the Program ($1,900,000 revenues credited to the Vote and $232,000 revenues credited to the Consolidated Revenue Fund).

Figure 27: Total Program Costs for 1985-86 ($000)

	1985-86 Operating Expenditures	Add Other Costs	Deduct Other Costs	Total Program Costs	Deduct Revenue	Total Net Costs	Total 1984-85
Archival Operations	16,788	5,188	-	21,976	-	21,976	20,380

1985–86 Estimates

Part III

Expenditure Plan

3281

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Public Service
Commission of Canada

3285

Preface

This Expenditure Plan is designed to be used as a reference document and, therefore, contains several levels of detail to respond to the various needs of its readers.

This Plan is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the Program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Table of Contents

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested to spend $113,091,000, in support of the Public Service Commission Program. The remaining expenditures estimated at $12,194,000 for contributions to employee benefit plans and additional working capital for the Staff Training and Development Revolving Fund will be made under existing statutory authority.

Parliament has previously authorized a total drawdown of $4,500,000 for the Staff Training and Development Revolving Fund. The projected use of this authority as related to these Estimates is as follows:

	$ thousands
Anticipated unused authority as of April 1, 1985	7,757
Less: 1985-86 Main Estimates (net cash required)	48
Anticipated unused authority as of April 1, 1986	7,709

Revolving Fund	200	13,806	250	14,056	14,008	**48**	8
Language Training	748	37,237	100	37,337		**37,337**	36,522
Administration	570	27,447	160	27,607		**27,607**	27,642
	2,676	138,659	634	139,293	14,008	**125,285**	119,680

* The Staff Training and Development activity is financed mainly by means of a Revolving Fund and in part, through a subsidy provided by the Commission's appropriation. The Estimates shown on this table refer to the cash requirements for the Fund over the fiscal year. These do not directly reflect the operating profit or loss that the Fund will realize since the latter is calculated on an accrual accounting basis. Therefore, some cash expenditures included in the Estimates do not impact upon the operating balance and certain other items that must be taken into consideration in calculating the profit or loss do not require a direct cash expenditure. The two can be reconciled as follows:

	$ thousands
Expected Operating profit	(190)
Less:	
Non-cash items included in the calculation of the operating profit	-
Plus:	
Cash expenditures not included in the calculation of the operating profit	
Decrease in working capital	(12)
New capital acquisitions	250
Total Estimates (net cash required)	48

For further information on the Staff Training and Development Revolving Fund, refer to the departmental Part III of the Estimates.

Statutory - Staff Development and Training Revolving Fund ...	101,000	101,000	(1,671,191)
Total Program	112,605,000	116,543,329	105,592,524

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

For 1985-86 the Commission has set the following goals:

- The Commission will continue to encourage a departmental approach to staffing and to career management by: implementing the approved framework for delegated staffing authority; providing human resource planning services; and increasing the flexibility of regulations, procedures and controls to strengthen management accountability (page 21).

- The Career Assignment Program, designed to prepare candidates for the Management Category through an integrated program of selection, training and assignment, is decentralizing its services, on a pilot basis, to the western provinces. This pilot project will enhance regional accessibility to and representation within the program (pages 20 and 27).

- The Commission will develop an approach for the planned movement of members of the management category experiencing work-related problems and/or requiring developmental experience. In this regard, the Commission will enhance the mechanisms and processes through which to identify and deploy employees. An interdepartmental consultation process has been developed to make decisions in respect of these employees and effect the required moves (page 26).

- The Commission will develop a redress communications program whose mandate will be to increase the knowledge of departmental managers, union officials and employees regarding the principles of merit, justice and equity in the Public Service (pages 20 and 39).

- The Commission will continue to promote the participation of officially designated under-represented groups in the Public Service, to administer affirmative action support programs and to monitor departmental affirmative action plans in order to provide advice and assistance where needed (pages 20, 32 and 33).

2. Financial Summary by Activity

Figure 1: Financial Requirements by Activity ($000)

	Main Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Management Category Programs	6,529	6,034	495	24
Non-Management Category Staffing Programs	43,721	39,956	3,765	28
Audit	2,552	2,326	226	35
Appeals and Investigations	4,606	4,307	299	37
Language Training	37,337	36,522	815	42
Staff Development and Training (Subsidy)	2,885	2,885	-	46
Administration	27,607	27,738	(131)	54
	125,237	119,768	5,469	
Staff Development and Training Revolving Fund				
Disbursements	14,056	13,294	762	
Less receipts	14,008	13,130	(878)	
	48	164	(116)	46
	125,285	119,932	5,353	
Authorized person-years	2,676	2,653	23	

Explanation of Change: The increase of $5.5 million in requested resources for 1985-86 over the 1984-85 forecast is due to:

- expansion of the Affirmative Action Program $ 1.9 million (page 28)

- establishment of the Redress Communications Program (page 37) — $ .2 million
- implementation of the Program Evaluation function (page 54) — $ .1 million
- termination of the Career Orientation Program (page 54) — ($ .8 million)
- program cuts imposed by Treasury Board — ($1.2 million)
- increase in salaries due to inflation — $5.3 million

B. Prior Years' Performance

1. Highlights

The following is an update of the initiatives that were planned for 1983-84:

The Establishment of Instruments of Delegation Reflecting the Departmental Career Management Approach to Staffing (Non-Management Category Staffing Program Activity): In order to help departments administer the staffing systems more efficiently and effectively and to eliminate unnecessary restrictions in the area of staffing, the Commission, in 1983, decided to tailor departmental instruments of staffing delegation, based on individual departmental needs. All departments have now been contacted and the Commission is negotiating specific items of interest with each of them.

The Establishment of Standards for Delegated Departmental Staffing Activities that will Permit Departments to Measure their Effectiveness in Personnel Management (Non-Management Category Staffing Programs Activity): The planned efficiency and effectiveness study in staffing will be completed in six departments in 1984 and the report will be reviewed with them. These departments, with support from the Commission, will be expected to develop and implement actions plans to improve the management of delegated staffing. Departments will be encouraged to establish their own standards of performance.

An Integrated Audit on Departmental Personnel Management Systems and Procedures (Audit Activity): The audit role has been strengthened as a result of the delegated authority given to the Commission by Treasury Board to conduct audits in all aspects of personnel management. The integration of audits has reduced duplication, made findings more comprehensive, established a better link between personnel disciplines, increased accountability and has enhanced the role of line management in personnel decisions. The first phase of implementation of the integrated auditing approach of personnel disciplines was conducted in five departments in 1983-84, as planned.

2. Review of Financial Performance

Figure 2: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Management Category Programs	5,894	5,732	(162)
Non-Management Category Staffing Programs	31,676	33,617	1,941
Audit	2,014	2,060	46
Appeals and Investigations	4,081	4,020	(61)
Language Training	33,650	33,901	251
Staff Development and Training (Subsidy)	2,900	3,022	122
Administration	27,049	30,152	3,103
	107,264	112,504	5,240
Staff Development and Training Revolving Fund			
Disbursements	11,193	12,691	1,498
Less receipts	12,864	12,590	274
	(1,671)	101	1,772
	105,593	112,605	7,012
Authorized person-years	2,497	2,545	48

Actual expenditures of $106 million were $7 million or 6.2% less than Main Estimates due to:

- implementation of Affirmative Action Program (page 29) — $ .9 million
- under-utilization of participant resources in the Northern Careers Program (page 29) — ($ .7 million)
- reduction in the Career Orientation Program (page 55) — ($2.8 million)
- reduction in person-years related to government-wide imposed cut for 1984-85 — ($ .5 million)
- use of contract and free resources from other departments to provide staff development and training services and delays in the replacement of staff in the Revolving Fund (page 47) — ($1.5 million)
- general reduction in requirement for recruitment advertising and professional and special services — ($2.4 million)

3. Overview of Resource Trends: 1977-78 and 1985-86

With respect to program expenditures (Figure 3), the authorized level in current dollars increased from $87 million in 1977-78 to $125 million in 1985-86, an increase of $38 million or 44%. However, if program expenditures are deflated in terms of 1977 constant dollars, current program expenditures of $125 million would decline to $61 million, a decrease of $26 million or 30%.

Figure 3: Authorized Expenditures

* Constant dollars based on Canadian Statistical Review published by Statistics Canada.

Between 1977-78 and 1985-86, the authorized person-years of the Public Service Commission (including the Revolving Fund) decreased from 3,847 in 1977-78 to 2,676 in 1985-86 (Figure 4), a decrease of 1,171 person-years or 30.4%. However, the authorized person-years would have declined by a further 260 person-years to 2,416, if the Treasury Board-initiated special programs for under-represented groups (Affirmative Action Program: 183 person-years and $7.0 million; and Northern Careers Programs: 74 person-years and $2.9 million) had not been delegated to the Public Service Commission, for operational delivery.

Figure 4: Person-Year Change since 1977-78

Between 1977-78 and 1980-81, the Staff Development and Training Revolving Fund operated at losses ranging from $800,000 to $2 million. Since 1981-1982, the Revolving Fund has been able to achieve operating surpluses by continuing to exercise strict cost control and by obtaining subsidy funding for those activities which are not deemed to be on the cost recovery system. (Figure 5).

Figure 5: Revolving Fund Net Profit (Loss)

C. Background

1. Introduction

The Public Service Commission is responsible for the interpretation and application of merit in staffing Public Service positions and is accountable to Parliament for the application of the Public Service Employment Act (PSEA). The Commission is designated as a department for purposes of the Financial Administration Act, reporting through the Secretary of State.

The PSEA governs staffing in the Public Service and gives the Commission exclusive authority to make appointments in all government departments and agencies that do not have separate staffing authority under specific legislation. The Commission does not appoint the employees of agencies with "separate employer" status, except in the case of the Public Service Staff Relations Board. The "separate employers," listed in Schedule I, Part II of the Public Service Staff Relations Act, comprise part of the Public Service - commissions and boards - not represented by the Treasury Board.

The Public Service Employment Act enables the Commission to delegate its exclusive authority to make appointments to departments and agencies. Through such delegation, the Commission has been able to entrust departments with a major role in selection and appointment; approximately 98% of all appointments under the Act have been delegated. In line with its service-wide responsibilities for staffing - delegated and non - delegated - the Commission has concentrated on areas such as external recruitment, policy development, providing guidance to departments, and tailoring delegation to departmental needs.

2. Legal Mandate

The Public Service Commission of Canada is a politically independent agency, accountable to Parliament for the administration of the Public Service Employment Act. Under this Act, the Public Service Commission must ensure that the merit principle, as defined by it, is upheld in all Public Service staffing operations.

3. Roles and Responsibilities of the Public Service Commission

In recent years, the Public Service Commission and the Treasury Board Secretariat have signed a number of joint agreements, which clarify and delineate their respective roles and responsibilities for the delivery of personnel services and personnel management within the Public Service.

In addition to a general agreement on the roles and responsibilities of the Treasury Board and the Public Service Commission, released in November 1981, the following agreements were released in June 1982: the Official Languages Program within the Public Service, Personnel Audit, Audit of Personal Service Contracts, Work-Force Adjustment, Human Resource Planning, Central Agency Programs of Staff Training, and Evaluation of Staffing Policies.

These seven agreements were the result of a detailed review of the way both agencies deliver personnel services and based on the recommendations and observations of both the Royal Commission on Financial Management and Accountability and the Special Committee on the Review of Personnel Management and the Merit Principle. These agreements were developed to rationalize personnel services and give responsibility for action to those best capable of delivering efficient and effective services.

A characteristic of these agreements is the concept of the delegation of responsibilities between the two agencies. There are numerous areas where Parliament has given statutory power to one or other of the agencies. For example, recruitment and selection is the responsibility of the Commission while Treasury Board handles labour negotiations. However, there are other areas where, for a variety of reasons, the statutory responsibility for a function has been delegated to another agency in order to improve the quality of the service delivered, or to enhance the overall use of the human resources of the Public Service. A prime example of this is the delegation of responsibilities to the Commission to provide language training. In this instance, while training and training policy is the statutory responsibility of the Treasury Board, it is more efficient and effective to have the Commission deliver the necessary language training services. In this respect, the Commission's financial requirements, which appear in the Estimates, reflect activities that do not fall under the statutory responsibilities of the Commission, but which the Commission has accepted from the Treasury Board in order to improve the quality of personnel services.

This concept of delegation does not mean that an agency gives up all responsibility for a function. Rather, through the specific terms and conditions of the various agreements, the agency accepting to do the job also accepts a number of conditions, which makes it directly accountable. For example, in accepting to perform a number of audit-related services for the Treasury Board Secretariat, the Commission agreed to adhere to standards developed by the Board and agreed to a reporting framework and schedule established by the Board.

Delineating roles and responsibilities and formalizing the delegation of some responsibilities were necessary to ensure the most efficient use of resources and improve accountability to Ministers and Parliament. By establishing roles and responsibilities, Treasury Board and the Commission have eliminated the overlapping of jurisdictions, thus reducing overhead costs and ensuring more efficient planning and management. This delineation, also, has made it easier for departmental managers to receive the information or direction they need. The formalization of delegation of responsibilities has improved accountability, by establishing clear lines of responsibility and by setting out clear objectives.

However, two important areas remain to be addressed: the management of the Management Category and the program for under-represented groups. In both these areas, a number of new programs have evolved, especially as a result of the implementation of the Affirmative Action Program. Progress has been made toward finalizing agreements in both these areas and early approval is expected.

In carrying out its responsibilities the Commission has divided the functions under three categories:

Exclusive Responsibilities: Exclusive statutory authority has been entrusted to the Commission to:

- make appointments to or from within the Public Service;
- develop and administer processes and standards for selection of candidates for positions in the Public Service;
- operate an appeals system for appointments and demotions or releases for incompetence or incapacity;
- audit of the exercise of staffing authority;
- investigate allegations of anomalies or inequities in staffing; and
- monitor political activities of public servants.

Delegated Responsibilities: The Public Service Commission is also accountable to the Government for the functions and activities assigned by the Governor in Council or the Treasury Board of Canada. Some of these, although provided for in the Act, are not exclusively within its domain. The responsibilities of the Commission in this area deal with:

- managerial and specialty training;
- language training;
- developmental courses and programs (Career Assignment Program, Interchange Canada, Northern Careers Program, National Indigenous Development Program and Handicapped Access Program); and
- audit of other personnel and related functions and activities.

Shared Responsibilities: The Commission performs other functions and activities that are necessary for the implementation of programs established by Treasury Board where they relate, in part, to the exclusive powers and responsibilities assigned to the Commission under the Act. The program-shared responsibilities are:

- human resource planning;
- participation of under-represented groups; and
- managing the Management Category.

Refer to Section III, page 63 for information on resources distributions among these categories.

4. Program Objective

The objective of the Commission is to ensure that the needs of the Public Service for qualified people are continuously met in accordance with the Public Service Employment Act, specifically by means of selection processes based on merit; and in accordance with the agreements with the Treasury Board of Canada on roles and responsibilities in personnel management, to improve the occupational competence of the Public Service employees and enable them to use their second official language in the performance of the duties of their present or future positions and to promote the equitable participation of under-represented groups in the Public Service.

5. Program Organization for Delivery

Activity Structure: The Public Service Commission Program comprises seven activities which are consistent with the organizational structure. For 1985-86, the number of program activities of the Public Service Commission has been increased to better reflect its operations. The following is a comparison of the 1984-85 Activity Structure with the 1985-86 Activity Structure:

Figure 6: Change to Activity Structure

1984-85 Activity Structure	1985-86 Activity Structure
Staffing Operations →	Management Category Programs
	Non-Management Category Staffing Programs
	Audit
	Appeals and Investigations
Training and Development →	Language Training
	Staff Development and Training
Administration →	Administration

It should be noted that financial and operational performance information is presented throughout the document on the basis of the new structure for all years covered by the PSC expenditure plan.

Organization Structure: The chairman, as chief executive officer, and two commissionners, have the status of a deputy head and are appointed by the Governor in Council for a ten-year period. They are responsible for interpreting the Act, monitoring its application and developing related policies.

The Public Service Commission is comprised of an Executive Secretariat and seven branches: Staffing Programs, Management Category Programs, Staff Development, Language Training, Appeals and Investigations, Audit and Corporate Systems and Services.

With headquarters in Ottawa, the Commission has regional and district offices in St. John's, Charlottetown, Halifax, Moncton, Quebec City, Montreal, Ottawa, Toronto, Regina, Winnipeg, Edmonton, Frobisher Bay, Vancouver, Yellowknife and Whitehorse. The Commission maintains these offices in order to guarantee the Canadian public full access to Public Service employment opportunities and to make its services available across Canada.

Figure 7 below, shows the organization chart of the Commission and its activities, as well as the resources required in 1985-86.

Figure 7: Resources Required by Organization and Activity ($000)

* In matters dealing with the PSEA, the Secretary of State is the Minister designated as spokesperson for the Commission in Parliament and is also the Appropriate Minister within the context of the Financial Administration Act.

** Resources ($1,825,000 and 39 person-years) for the Offices of the Chairman and Commissioners, Executive Secretariat and Legal Services have been included in Corporate Systems and Services and in the Administration Activity total.

D. Planning Perspective

1. Environment

The following are some recent trends that will have an impact on the Public Service Commission as a central agency:

- The forecasted increase in the number of employees entitled to appointment because of statutory or administrative priority, for such reasons as employees returning from leave of absence, or having been laid off or declared surplus as a result of government restraint means that the Commission will have to continue its efforts and resources to redeploy these persons in a climate of reduced departmental vacancies.

- The Charter of Rights and Freedoms will affect such staffing policies and practices as area of competition, mobility and citizenship, and may result in some modifications to the efficiency and effectiveness of the staffing process.

- The advent of new technology in the workplace means that the Commission will have to modify its training and development and recruitment programs and to update its management practices and systems to meet this changing environment. Job security and conditions of work will also be affected.

- The increasing trend towards part-time work and flexible hours as well as a greater focus on quality of worklife and on-the-job safety may alter the scope of central agency activities in staff relations, staffing, human resource planning, pay and benefits.

- The current economic climate will oblige central agencies and departments to focus their financial planning on funding new programs and policies from existing resources. An increased number of applicants for fewer jobs could put a strain on the staffing process. It could also affect employee morale.

- The present climate of restraint in government, which is unlikely to change in the near future, could cause difficulties for achieving the affirmative action objectives of the government.

- The current limits on pension growth will encourage employees to remain in the work-force until age 65 and further restrict employment mobility.

2. Initiatives

The following initiatives will be undertaken in 1985-86:

- Actions will be taken to improve the level of service in the area of redress. A program of information and advice will be instituted to develop a working environment in which open communication and mutual trust prevail and where the actions and situations which give rise to complaints will be minimized. The current use of the full disclosure approach between parties in appeals will be expanded so as to expedite hearings and reach settlements prior to hearings in a greater proportion of cases. The cost of this initiative is estimated at $.2 million.

- The Career Assignment Program is decentralizing its services to the western provinces, on a pilot basis. The pilot project is designed to enhance national accessibility to and regional representation within the Program. The cost of this initiative in 1985-86 is estimated at $.3 million.

3. Update on Previously Reported Initiatives

The Commission is engaged in a number of ongoing activities, which were identified in previous years' Expenditure Plans.

Affirmative Action: Special programs were implemented in 1983-84 to increase access of women, native people and handicapped persons to the Public Service mainly through measures for training and career development. Sixty-eight person-years and $2.9 million were allocated to the Affirmative Action Program in 1983-84. This will increase to 198 person-years and $8.2 million by 1987-88.

The National Indigenous Development Program intends to increase the representation of native people at middle and senior management levels in the Public Service by 228 persons between 1983 and 1987; the handicapped access program will increase the representation of physically handicapped persons by 400 between 1983 and 1988; the women's counselling and referral program will promote the accelerated development of middle managers and ensure that qualified women are considered in departmental selection processes. Counselling services will be provided to approximately 600 women a year. Additional data on the number of participants and trainees a year are presented on page 33.

Instruments of Delegation: A number of instruments of staffing delegation have been tailored to address specific management issues and all departments have been offered the opportunity to have their instruments of staffing delegation tailored to their needs. Five departments are involved in fundamental reviews of their staffing systems with a view to requesting special measures to effect a more timely and meaningful departmental staffing system. The tailoring of instruments of delegation is an ongoing process and it is expected in 1984-85 that four to five departments will request special measures in their instruments of staffing delegation as a result of the Staffing Audit Review.

Staffing Performance Assessment Techniques and Mechanisms: The Efficiency and Effectiveness Study in Staffing reported in 1983-84, is currently underway and six participating departments will, by December 1984, have received a debriefing on the final report. These departments, with support from the Commission, will develop and implement action plans to improve the management of delegated staffing. Departments will be strongly encouraged to establish their own standards of performance.

Implementation and Further Development of the National Applicant Inventory System (NAIS): Initiated in October 1981 to guarantee the Canadian public full access to Public Service employment in Canada regardless of location and to provide a more efficient and effective mechanism for managing the applicant inventory and to improve the Canada-wide referral and identification process, NAIS was successfully implemented in all regions in 1983-84 and is now part of the Commission's ongoing operations.

Prevention of Inequities: In order to improve personnel management practices in the Public Service and thereby reduce the number of appeals and complaints being received, the Commission has initiated action in 1983-84 for its officers to contact departments and agencies based on their redress records and to assist them in strengthening their capability to respond to complaints.

Language Training Needs: In 1983-84, the Commission developed a questionnaire to be used by managers to identify training needs of their employees slated for continuous language training. To date, managers have used this process to identify training needs for 97% of the students; thus the Commission is better able to adapt its courses to meet the needs of managers.

Audit: The Commission will continue to integrate its audits of delegated and non-delegated staffing with certain aspects of official languages, staff relations, pay and benefits, personal service contracts, delegated classification and training activities.

Mandatory Management Orientation Training Program: Training courses for senior and middle managers and supervisors are now mandatory. Since this program began in 1981, approximately 2,100 managers have been trained. The 1989 target date to have all managers trained has now been extended to 1991. In 1985-86, it is planned to provide 3,755 course-days of managerial and specialty training which will represent an increase of 8% over 1984-85.

4. Program Effectiveness

The Commission's Operational Plan Framework serves as a basis for resource and results planning and control to satisfy both internal management needs and those of the Policy and Expenditure Management System. In the continuing refinement of this framework the emphasis is on developing improved program effectiveness and related indicators. The indicators which are identified and reported upon in Performance Information/Resource Justification by Program Activity will be refined as increased experience is gained in their use.

In addition, the Commission has made substantial progress in the development of a corporate program evaluation function. In November 1982, the chief executive officer approved the Commission's policy on program evaluation and in January 1984, a proposal for the establishment of a formal organizational unit responsible for program evaluation was approved by corporate management. Moreover, the chief executive officer approved in August 1984, the Commission's Program Evaluation Component Structure. A comprehensive program evaluation plan is currently in preparation and will be finalized and approved for 1985-86, using the program evaluation component structure as a basis for its preparation. The Commission's program evaluation organization is currently being staffed and will be operational in early 1985-86.

The Commission has been directly supporting a Treasury Board of Canada study for the evaluation of the Management Category orientation program as requested by the Staff Training Council.

While not having formally implemented a program evaluation function in the Commission, the PSC has, in recent years conducted a number of evaluative management reviews or special studies pertaining to the effectiveness of certain PSC operations.

In February of 1983, a study of the education component of the Career Assignment Program was completed; the recommendations of this study were subsequently approved by the Staff Training Council in June 1983. Also in June 1983, the Commission completed a framework study pertaining to the pilot project of the Career Assignment Program which involved decentralization of its program operations to western Canada.

There have been a number of other significant management review and evaluation activities. In October 1983, an evaluation of the Interchange Canada program was completed. One study of the Personnel Psychology Assessment Centre was completed in 1983-84, and a second study of the Centre is planned to commence in January 1985. A review of the advice and assistance function of the Commission's Staffing Resources and Development Services has been conducted with the results being reported in April 1984.

In December 1984, a study on the validity of the appeals system and the level of confidence in the appeals system among public servants was finalized. The Commission is also currently supporting a Treasury Board of Canada evaluation of the Advanced Language Training Program. Validation studies of all Staff Development Branch courses are in progress.

Section II
Analysis by Activity

A. Management Category Programs

Objective

To ensure that the Management Category of the Public Service is staffed with highly qualified individuals in accordance with the Public Service Employment Act and pursuant to Treasury Board policies so as to meet departmental needs. In carrying out this objective, to promote fair and equitable representation of under-represented groups in the Management Category and to improve access for members of the Management Category to career opportunities inside and outside the Public Service, in and outside Canada.

Resource Summary

This activity represents 5% of the total operational expenditures and 4% of the total person-years of the Commission. The Main Estimates of $6.5 million (Figure 8) consists of $4.5 million or 69% for personnel costs.

Figure 8: Activity Expenditures ($000) and Person-Years

	Main Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Resourcing Program	3,856	69	3,858	69	3,988	69
Career Assignment Program	1,680	19	1,327	19	1,111	22
Interchange Canada	452	9	499	9	484	10
Policy and Program Development	541	13	350	12	311	8
	6,529	110	6,034	109	5,894	109

The increase in total resource requirements for 1985-86 over the 1984-85 forecast is due mainly to additional non-salary dollars requirements to meet increased costs for Western CAP ($.3 million) and allowances for salary increases due to inflation ($.2 million).

Past Financial Performance

Actual financial requirements were 3% higher than planned (Figure 9).

Figure 9: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Resourcing Program	3,988	3,554	(434)
Career Assignment Program	1,111	1,383	272
Interchange Canada	484	501	17
Policy and Program Development	311	294	(17)
	5,894	5,732	(162)

Description

The Management Category Programs Activity includes the provision of central/specialized services specifically aimed at the resourcing of the management cadre; the review, development and implementation of relevant policies; the administration of organizational enrichment and career development programs aimed at fulfilling the needs and requirements of the Public Service, Canadian institutions and/or foreign organizations; and secretariat and other coordination functions to assist executives and senior managers with high potential in the establishment of individual career paths linked to the needs of the Public Service, and to advise senior officials from departments to facilitate deployment of individuals in the Category.

The following is a more detailed description of the components of the Management Category Programs activity.

Resourcing Program: Develops, implements and operates a comprehensive and integrated process for the Management Category which will provide counselling, support appointments under the Public Service Employment Act, and facilitate appointments as a result of the planned movement of managers experiencing difficulties and managers requiring development experience.

3309

Career Assignment Program: Prepares candidates for the Management Category through an integrated process of selection, training and work assignments.

Interchange Canada Program: Plans, promotes and administers the exchange of senior personnel between the Public Service and other sectors of the Canadian economy.

Policy and Program Development: Develops, reviews, evaluates and recommends policies, directives and programs of relevance to the Management Category in response to specific needs identified by the Commission or by Senior Level Interdepartmental Committees. As well, relevant analyses/studies are undertaken on aspirants and members of the Management Category, thus providing the necessary information to Senior Level Interdepartmental Committees, the Commission or Departments to make a wide range of decisions (e.g. resourcing strategies, operational policies, etc.) impacting upon the Management Category.

Performance Information/Resource Justification

Resourcing Program: Workload volume for appointments and counselling and more significantly, for brokerage * of managers, is expected to increase slightly. Resources levels are determined for a range of workload volumes and therefore the slight increase in volume projected for 1985-86 is not expected to translate into a need for additional resources (Figures 10 and 11). The difference between the actual number of appointments made and staffing requests received is due mainly to cancellations of staffing requests by departments.

The projected number of managers to be offered brokerage services is based on the anticipated movement of executives and senior managers between various departments and agencies.

Figure 10: Workload Volume Pertaining to Appointments and Brokerages *

	Number of Staffing Requests Received	Number of Appointments	Number of Managers to be offered brokerage services
1985-86 Projected	1,332	1,255	350
1984-85 Forecast	1,332	1,255	124
1983-84 Actual	1,220	1,042	114

* Brokerage refers to the deployment of managers experiencing temporary employment difficulties or needing specific experience to fully realize exceptional potential.

Figure 11: Workload Volume for Counselling

	Career Counselling Sessions	Placement/"Brokerage" Counselling Sessions
1985-86 Projected	1,900	500
1984-85 Forecast	1,850	450

Career Assignment Program: Approximately 700 counselling sessions are provided annually to potential CAP candidates and approximately 200 assignments are arranged. It is expected that existing resource level will be sufficient to absorb the slight increase in workload volume (See Figure 12).

Figure 12: Workload Volume for Counselling and Assignments

	Number of Counselling Sessions	Number of Assignments Arranged	Number of Active Participants
1985-86 Projected	770	185	195
1984-85 Forecast	705	170	175
1983-84 Actual	627	176	169

Policy and Program Development: The Commission had identified in the 1983-84 expenditure plan two planned actions in this area. The planned action to review the Management Exclusion Approval Order has been completed and recommendations and supporting documentation are now being considered at the Commission level. The planned action to review the selection guidelines for the Management Category was re-examined and it was decided not to proceed with it at this time.

B. Non-Management Category Staffing Programs

Objective

To ensure that the Non-Management Categories of the Public Service are staffed with highly qualified individuals in accordance with the Public Service Employment Act. In carrying out this objective, to promote fair and equitable participation of under-represented groups and to assist departments in optimizing staffing processes and systems to meet departmental human resources management needs.

Resource Summary

This activity represents 35 % of the total operational expenditures and 34 % of the total person-years of the Commission. The Main Estimates of $43.7 million (Figure 13) consists of $35.2 million or 81% for personnel costs.

Figure 13: Activity Expenditures ($000) and Person-Years

	Main Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Operations	25,388	547	23,680	529	20,171	493
Resourcing Strategies and Services	14,499	279	12,644	253	8,080	185
Policy and Program Development	3,834	73	3,632	74	3,425	73
	43,721	899	39,956	856	31,676	751

The increase in resource requirements for 1985-86 over the 1984-85 forecast is due mainly to the expansion of the affirmative action programs approved in 1983-84 (45 person-years and $1.9 million), and allowances for salary increases due to inflation; offset by a transfer of resources to Health and Welfare Canada for pre-employment medicals ($.1 million) and a Treasury Board imposed program cut in non-salaries ($.9 million).

Past Financial Performance

Actual financial requirements were 6 % lower than planned (Figure 14).

Figure 14: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Operations	20,171	21,330	**1,159**
Resourcing Strategies and Services	8,080	8,649	**569**
Policy and Program Development	3,425	3,638	**213**
	31,676	33,617	**1,941**

Explanation of Change: Actual expenditures in 1983-84 were lower than provided for in the Main Estimates due mainly to delays in the opening of a new regional office in Frobisher Bay for the Northern Careers Program ($.7 million), and lower travel and relocation requirements, recruitment advertising and other operating costs ($2.1 million); offset by additional cost resulting from the establishment of the Affirmative Action Program ($.9 million)

Description

The Non-Management Category Staffing Programs Activity encompasses the administration of the Public Service Employment Act and Regulations; the establishment of staffing policies and procedures; establishment of selection standards including language selection standards and related tests and administrative procedures for all departments under the PSEA for all occupational groups and categories with the exception of the Management Category; the recruitment and referral of external candidates; the performance of staffing services for non-Management Category positions not delegated to departments; administration of programs for the re-appointment of persons benefitting from a statutory or administrative priority; support to departmental staffing activities to ensure application of the PSEA and Regulations; co-ordination of those parts of the Official Languages program for which the PSC is responsible; and the administration of equal opportunity and affirmative action programs to promote the participation of under-represented groups in the Public Service, i.e., Natives, Women and Handicapped Persons

The following is a description of the components of the Non-Management Category Staffing Program activity.

Operations: Comprises non-delegated staffing activities and services for all occupational categories except the Management Category. This includes all aspects of recruitment, referral, language assessment and for non-delegated staffing the competitive and non-competitive appointment processes. Included also are the administration of the staffing priorities system to facilitate the placement of persons identified as being entitled to a statutory or administrative priority (e.g. surplus, lay-off); post-secondary recruitment; advice and assistance to departments in support of delegated staffing; the administration of the programs for women, handicapped persons and black people in Nova Scotia; the management of the Appointment Information Management System; the conduct of staffing investigations; and the follow-up on appeals upheld in relation to PSEA 21(b) which concerns right of appeal

Resourcing Strategies and Services: Consists of human resources planning activities in support of departmental delegated staffing; language tests and standards; career counselling; assessment centre activities; the administration of the Management Resources Information System; and human resources planning projects. It also includes all activities related to the Indigenous Participation and Development Program

Policy and Program Development: Includes all activities related to the development and communication of staffing policy for both delegated and non-delegated staffing, including Official Languages policy, matters related to delegation of staffing authority including consultation, interpretation, staffing resources development, certification of staffing officers and the administration of the delegation system. Also included are activities involved in serving as the Commission's principle interface with its various publics on Official Languages matters taking in Official Languages audit and evaluation, communications services, joint PSC/TBS activities, the administration of the Official Languages Exclusion Order and activities regarding Official Languages Minority Participation.

Performance Information/Resource Justification

Operations: There are two major functions in this component - the staffing process and specific equal opportunity programs.

Staffing Process: Workload volume, average unit cost and throughput time for this operation are displayed in Figures 15 and 16. It includes the following non-delegated staffing services:

- Eligible lists: Those operations required to conduct a non-delegated staffing process and establish an eligible list.

- Appointments: Those operations required to authorize a non-delegated appointment

- Recruitment: Those operations required to process an application for employment

- Referral: Those operations required to respond to a request to refer candidates to a departmental position

- Language assessment: Those operations covering all aspects of second language assessment including Language Knowledge Examinations, Special Assessments and Exemptions, and Bilingual Bonus testing

- Priorities: Those operations required to document, verify, market and place public servants in priority status by departments and agencies under the Commission and Treasury Board Authority

Figure 15: Average Unit Cost (in Person-Days) and Volume for the Staffing Process

	Projection 1985-86		Forecast 1984-85		Actual 1983-84	
	Volume	Unit Cost*	Volume	Unit Cost*	Volume	Unit Cost*
Eligible Lists	185	7.90	185	7.90	241	7.00
Appointments	1,773	.49	1,773	.49	2,500	.47
Recruitment	156,500	.11	163,500	.11	157,685	.11
Referral	15,000	.71	14,000	.71	13,966	.70
Language Assessment	18,700	.39	18,700	.39	19,574	.37
Priorities	2,300	5.04	2,300	5.04	1,933	5.18

* Average unit cost is calculated by dividing the number of direct person-days utilized to deliver these services by the volume.

Figure 16: Throughput Time in Calendar Days for Eligible Lists and Referrals

	Projection 1985-86	Forecast 1984-85	Actual 1983-84
Eligible Lists *			
Open Competition	42	42	37
Closed Competition	120	120	113
Referral **			
Advertised	47	47	49
Non-advertised	6	6	6

* Throughput time refers to the average number of calendar days required for the establishment of an eligible list for both open and closed competitions.

** Throughput time refers to the number of calendar days required to complete a referral for an advertised or a non-advertised competition.

Specific Equal Opportunity Programs: This operation promotes equal opportunities for recognized under-represented groups i.e. - women, Native people, handicapped persons and Black people in Nova Scotia. Specifically, it provides technical aids and participant training person-years for the recruitment, placement and on-the-job training of handicapped persons; and career counselling and referral services for women.

The workload volumes for the Access Program for Handicapped Persons and Women's Career Counselling and Referral are displayed in Figures 17 and 18. The objective of these programs is to assist in the placement of 400 handicapped persons between 1983 and 1988 and in the counselling of 600 women annually.

Figure 17: Workload Volume - Access Program for Handicapped Persons

	Number of Training Requests Approved	Number of Post-Trainee Appointments
1985-86 Projected	170	119
1984-85 Forecast	86	151
1983-84 Actual	130	-

Figure 18: Workload Volume - The Women's Career Counselling and Referral Bureau

	Number of Counselling Sessions Given	Number of Referrals Made
1985-86 Projected	600	400
1984-85 Forecast	800	400
1983-84 Actual	427	124

Resourcing Strategies and Services: A major service element of this component relates to Indigenous Participation and Development Program. This service includes providing advice and assistance to departments and agencies on the implementation of the Increased Participation Policy; consulting with Native associations and counselling Native people on employment and career development matters; and recruiting Native candidates to the Public Service Commission Inventory (Office of Native Employment) providing training and development to Native people to prepare them for employment at middle-and-senior management levels in the federal Public Service.

The workload volume for this service is displayed in Figure 19. The goal of the National Indigenous Development Program is to increase Native representation at middle and senior levels in the Public Service by 228 persons between 1983 and 1987. The method of resourcing this program is presently being examined as the "Matching" person-year concept is not working as effectively as planned in this present environment of economic restraint. The objective of the Northern Careers Program is to have approximately 250 indigenous participants in the program between 1983 and 1986. A re-assessment of this program is planned for 1986.

Figure 19: Workload Volume for Indigenous Participation and Development Program

	National Indigenous Development Program		Northern Careers Program	
	Number of Participants	Number of Graduates*	Number of Participants	Number of Graduates*
1985-86 Projected	150	50	85	30
1984-85 Forecast	90	10	60	20
1983-84 Actual	-	-	47	22

* Graduates refer to participants who, following a maximum training period of 2 years, are appointed to positions in federal departments or agencies.

An update on the following planned actions reported in 1983-84 is covered on pages 21 and 22 of Section I: implementation and development of the National Applicant Inventory System; continued implementation of a departmental approach to staffing and career management; and establishment of standards for departmental staffing activities to measure efficiency and effectiveness in personnel management.

C. Audit

Objective

To ensure that staffing activities carried out under authority delegated to deputy heads by the Public Service Commission, as well as non-delegated staffing activities, have been conducted in accordance with the PSEA and Public Service Commission policies, to ensure that personnel management activities delegated to deputy heads under Treasury Board authority comply with Treasury Board policies and procedures; and to increase awareness of parliamentarians, the Treasury Board Secretariat, and the Public Service Commission on the effectiveness of the personnel system and the impact of policies, practices and regulations on the system.

Resource Summary

This activity represents 2% of the total operational expenditures and 2% of the total person-years of the Commission. The Main Estimates of $2.6 million (Figure 20) consists of $2.2 million or 85% for personnel costs.

Figure 20: Activity Expenditures ($000) and Person-Years

	Main Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Audit	**2,552**	**51**	2,326	51	2,014	43

The increase in total resource requirements for 1985-86 over the 1984-85 forecast is mainly the result of allowances for salary increases due to inflation ($.1 million).

Past Financial Performance

Actual financial resource requirements were 2% lower than planned (Figure 21).

Figure 21: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Audit	2,014	2,060	**46**

Description

The Audit Activity involves the examination of the management of staffing and other personnel management systems, including the assessment of the effectiveness and impact of policies, practices, procedures and regulations on these systems. Audits are carried out on a cyclical basis in all departments and agencies that come under the Public Service Employment Act (PSEA). The results are used by the Commission to improve its policies and practices and to determine the content and the duration of the instruments for delegation of staffing authority and to account to Parliament each year on the state of staffing delegation under Section 45 of the PSEA and by the Treasury Board of Canada to assess the departmental administration of personnel management policies and systems.

This activity includes Audit Operations; Audit Policy, Methodology and Training; and Branch Management and Administration.

Performance Information/Resource Justification

Audit Operations: Resource levels are based on the number of audits to be conducted as set forth in the cyclical audit plan and are managed on a project basis.

Figure 22: Workload Volume for Audits Completed

	Number of Special Audits	Number of Audits Completed*	Number of Post Audits Completed
1985-86 Plan	5	17	9
1984-85 Forecast	6	17	18
1983-84 Actual	3	12	12

* Completion is defined as publication of the National Report.

The 1983-84 planned actions calling for special audits to review recruitment and referral functions of Canada Employment and Immigration Centres, summer student employment practices in departments and Exclusion Orders in National Defense were completed as planned.

D. Appeals and Investigations

Objective

To ensure that appeals lodged by public servants and complaints lodged by outside applicants or public servants with respect to the administration of the Public Service Employment Act or on the grounds of prohibited discrimination or inequitable treatment in the work place are dealt with fairly, promptly and impartially and to contribute to an overall reduction in the number of such appeals and complaints on a continuing basis.

Resource Summary

This activity represents 4% of the total operational expenditures and 4% of the total person-years of the Commission. The Main Estimates of $4.6 million (Figure 23) consists of $3.9 million or 85% for personnel costs.

Figure 23: Activity Expenditures ($000) and Person-Years

	Main Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Appeals	2,063	43	1,954	44	1,949	40
Investigations *	1,939	40	2,018	40	1,839	39
Communication and Redress	269	5	-	-	-	-
Registrar	335	10	335	10	293	10
	4,606	98	4,307	94	4,081	89

* Investigations includes anti-discrimination activities.

The increase in resource requirements for 1985-86 over the 1984-85 forecast is due mainly to a new endeavour to undertake frequent and in-depth communications with departmental managers, union officials and employees on how staff relations capabilities can be improved so that employees will feel that they can obtain fair treatment in their own departments rather than having to come to the Commission ($.2 million) and allowances for salary increases due to inflation ($.1 million).

Past Financial Performance

Actual financial resource requirements increased by 1.5 % from planned (Figure 24).

Figure 24: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Appeals	1,949	2,190	241
Investigations	1,839	1,527	(312)
Registrar	293	303	10
	4,081	4,020	(61)

Description

The Appeals and Investigations Activity through the establishment of independent boards, hears appeals by public servants against alleged breaches of the Public Service Employment Act and Regulations in such matters as promotion, demotion and release. In addition, complaints of alleged discrimination in the Public Service both from employees and applicants for employment are investigated, as are alleged irregularities in staffing processes and inequitable treatment in the workplace. Training, advice and assistance are provided to departments on all of the foregoing matters.

The following is a more detailed description of the Appeals and Investigations activity components:

Appeals: Conducts inquiries into and renders decisions on appeals regarding the application of the PSEA and Regulations, and/or related policies, directives and bulletins of the Public Service Commission or departments.

Investigations: Investigates complaints from Public Service employees and applicants for employment in the Public Service alleging contravention of the Public Service Employment Act and Regulations. It also investigate complaints of discrimination and harassment on grounds proscribed by the Act. Where the findings of these investigations sustain the complaint attempts are made to conciliate an appropriate settlement.

The Appeals and Investigations components provide training, advice and assistance to departments to facilitate increased awareness and thereby contribute to a reduction in complaints alleging breaches of the Act and Regulations.

Communication and Redress: Conducts research and analysis and develops information/education programs which can be used by investigators to help departments and agencies improve their "in-house" redress capabilities.

Registrar: Processes appeal documents, schedules appeal board hearings, receives and acknowledges complaints and coordinates their distribution to appropriate units.

Performance Information/Resource Justification

Appeals: As a result of the loss during 1983-84 of experienced appeal board chairpersons to conduct inquiries into and render decisions on appeals, the unit cost in that year was higher than normal. However, as their replacements gain more on-the-job experience it is anticipated that the unit cost will decrease to a more acceptable level (Figure 25).

Figure 25: Appeals - Direct Operational Unit Cost (in Person-Days) and Level of Service for Closed Cases

	Unit Cost *	Number of Decisions Rendered	Percentage Rendered Within 10 days **	
			Sec 21	Sec 31
1985-86 Projected	3.9	1,150	80	60
1984-85 Forecast	4.0	1,100	75	60
1983-84 Actual	4.7	1,060	74	61

* The unit cost is calculated by dividing the number of direct person-days utilized for appeal board chairpersons by the number of decisions rendered.

** Eighty per cent of appeal board decisions under Section 21 of the PSEA (appeals against appointments) are to be rendered within 10 days of the last evidence being presented. Sixty percent of appeal board decisions under Section 31 of the PSEA (appeals against release decisions) are to be rendered within 10 days of the last evidence being presented.

Investigations: Because of the unexpected loss of experienced investigators to investigate complaints of contravention of the PSEA and Regulations during 1983-84, the unit cost for that year was higher than normal. However, unit cost is expected to decrease to a more acceptable level by 1985-86 (Figure 26), as investigators who joined the branch in 1983-84 and 1984-85 become more productive through training and experience.

Figure 26: Investigations - Direct Operational Unit Cost (in Person-Days) and Level of Service for Closed Cases

	Unit Cost*	Number of Investigations Closed	Percentage Closed Within Four Months**
1985-86 Projected	6.5	495	60
1984-85 Forecast	6.9	495	50
1983-84 Actual	7.3	457	43

* The unit cost is calculated by dividing the number of direct person-days utilized for investigators by the number of investigations closed.

** Seventy-five per cent of investigations are to be completed within four months of acknowledgement.

Anti-Discrimination: In investigating complaints alleging discrimination/harassment, considered to be complex and sensitive, the unit cost projected for 1985-86 is expected to decrease because of the experience being gained to handle these cases (Figure 27).

Figure 27: Anti-Discrimination - Direct Operational Unit Cost (in Person-Days) and Level of Service for Closed Cases

	Unit Cost*	Number of Investigations Closed	Percentage Closed Within Five Months**
1985-86 Projected	7.6	400	50
1984-85 Forecast	8.5	400	50
1983-84 Actual	11.2	275	43

* The unit cost is calculated by dividing the number of direct person-days utilized for investigators by the number of investigations closed.

** Seventy-five per cent of investigations into anti-discrimination complaints are to be completed within five months of their receipt.

E. Language Training

Objective

To enable employees in the Public Service of Canada to use their second official language in performing the duties of their present or future positions according to the needs identified by departments and agencies, in accordance with the Official Languages Act and the policies and conditions defined by the Treasury Board.

Resource Summary

This activity represents 30% of the total operational expenditures and 28% of the total person-years of the Commission. The Main Estimates of $37.3 million (Figure 28) consist of $32.7 million or 88% for personnel costs.

Figure 28: Activity Expenditures ($000) and Person-Years

	Main Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Provision of courses	30,463	598	29,914	598	27,020	587
Technical and Specialized Assistance	6,874	150	6,608	150	6,630	150
	37,337	748	36,522	748	33,650	737

The increase in resource requirements for 1985-86 over the 1984-85 forecast is due mainly to allowances for salary increases due to inflation, offset by a general decrease in non-salaries for the activity ($.7 million).

Past Financial Performance

Actual financial resource requirements decreased by 0.7% from the plan (Figure 29).

Figure 29: Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Provision of courses	27,020	27,283	263
Technical and Specialized Assistance	6,630	6,618	(12)
	33,650	33,901	251

Description

The Language Training activity provides language courses in both official languages and related specialized and technical services, in conformity with government policy, to meet the needs of departments and agencies in the federal Public Service, and occasionally those of outside clients (such as judges and the RCMP). The language courses enable students to achieve or further develop their required language proficiency. The specialized and technical services, for their part, allow the federal Public Service to have language training programs which best suit its training needs.

The following is a description of the components of the Language Training activity.

Provision of courses: Second language courses enable public servants to meet more effectively the language requirements of their present or future positions and to use their second official language as required by their work environment, with due regard for service to the public and the language of work.

Technical and Specialized Assistance: Produces programs, methods, courses and tests to enable the Commission, departments and agencies to provide pedagogical material which responds more to their needs; to enable teachers to acquire abilities and knowledge to better meet the students needs; and determine the students aptitudes to succeed in language training.

Performance Information/Resource Justification

Provision of courses: The forecasted decrease in continuous courses is explained by the reduction of non-imperative appointments to bilingual positions. This decrease will allow the standardization of teaching in terms of the composition of groups, resulting in fewer students per person-year while improving the quality of response to language needs.

Towards the end of 1984-85 and in 1985-86, responding to a growing demand, the Commission plans to introduce new courses and new options for the three types of courses other than continuous courses, which explains the forecasted increase in the number of students (Figure 30). A reallocation of certain person-years from continuous to other types of courses and the utilization of a portion of these person-years to develop new courses will result in a decrease in the number of students per person-year in 1984-85. However, a slight increase in this ratio is forecasted in 1985-86 since the new courses will be given throughout the full year (Figure 31).

Figure 30: Provision of courses - Number of Students per Type of Course *

	Continuous Courses	Courses other than continuous	Courses outside normal working hours	Special Courses
1985-86 Projected	2,929	4,950	5,250	440
1984-85 Forecast	3,163	4,213	5,004	341
1983-84 Actual	3,412	3,869	4,502	304

* This information includes students who receive their training through contractual agreements.

Figure 31: Provision of courses - Number of Students who attended courses provided by a person-year *

	Continuous Courses	Courses other than Continuous	Courses outside normal working hours	Special Courses
1985-86 Projected	7.45	31.00	227.13	8.55
1984-85 Forecast	7.50	30.03	224.44	8.05
1983-84 Actual	7.63	33.01	246.29	9.39

* Only those students trained by a person-year are included in the calculation of the ratio.

The following is an udpate of the 1983-84 planned action:

In February 1983, the Commission implemented a process designed to identify more precisely the language needs of students by means of a form completed by managers. At present, 97% of students taking continuous courses have their needs identified through this process, which allows courses to be better tailored to the requirements of the employer.

F. Staff Development and Training

Objective

To improve the occupational competence of federal public servants to meet the performance requirements of their positions or to better prepare them to assume new duties, in response to Treasury Board policies and departmental demand.

Resource Summary

This activity is financed mainly by means of a Revolving Fund with authority to draw up to $4.5 million from the Consolidated Revenue Fund and in part through a subsidy provided by the Commission's appropriation. For all training and related services, users are charged according to annually approved Treasury Board rates.

The Revolving Fund surplus and related performance data forecast for 1985-86 assume an overall increase of 3.6% in rates. The demand by departments and agencies for training services will maintain current trends and a reasonable level of subject matter expertise will be provided free of charge by other departments and agencies.

The activity expenditures for the Staff Development and Training Revolving Fund are presented on a cash basis (Figure 32) and on the accrual basis in Section III (page 62, Figure 47). The Main Estimates for 1985-86 (Figure 32) consists of $8.3 million or 58% for personnel costs and $5.7 million or 42% for non-salaries; offset by revenue of $11.1 million for revenue generated activities and $2.9 million in subsidy funding. (For further details on expenditures by object refer to page 59, Figure 44).

Figure 32: Activity Expenditures ($000) and Person-Years

	Main Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Staff Development and Training (Subsidy)	2,885	-	2,885	-	2,900	-
Staff Development and Training Revolving Fund						
Disbursements	14,056	200	13,294	200	11,193	175
Less receipts	14,008	-	13,130	-	12,864	-
Net cash required	48		164		(1,671)	-

Past Financial Performance

Disbursements were 12% lower than planned and receipts were 2% higher than planned (Figure 33).

Figure 33: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Staff Development and Training (Subsidy)	2,900	3,022	**122**
Staff Development and Training Revolving Fund			
Disbursements	11,193	12,691	**1,498**
Less receipts	12,864	12,590	**274**
Net cash required	(1,671)	101	**1,772**

Explanation of Change: Actual disbursements were lower than planned due to the use of contracted resources rather than hiring staff, obtaining free personnel resources from other departments as trainers, the transfer of the audit of training function to the Audit activity and delays in replacement of staff. These events have enabled the Revolving Fund to operate without using working capital advances.

Description

The Staff Development and Training Activity provides executive, managerial, supervisory and professional training and training services to federal public servants across Canada in response to Treasury Board policies and departmental demands. It provides courses and training events designed to meet the job-related training requirements of departments and a range of advisory, informational and co-ordinating services relating to training.

The following is a more detailed description of the components of the Staff Development and Training activity.

Management Category Training and Development: Delivers courses, workshops and seminars for members of Management Category, members of the CAP program, and selected members of affirmative action programs at the SM-minus-1 level. The majority of courses delivered are those for the Management Category Orientation Programs. These orientation programs have been established in accordance with Treasury Board policies (PMM Vol. 4, Ch. 8). Participation in these programs is mandatory and all members of the category will have undergone orientation training by 1991.

Professional and Job Competency Training and Development: Delivers courses to certain specialist categories: finance, EDP, materiel management and audit, personnel management, trainers and instructors and to non-specialists requiring basic knowledge of these specialty areas. Included are courses in non-specialist subjects necessary to improve the occupational competency of federal public servants. The majority of these courses are delivered through classroom instructions. A small portion is delivered through self-instructional methods.

Middle Management and Supervisory Training and Development: Delivers classroom courses to middle managers and supervisors. These courses focus on providing managerial and supervisory knowledge and skills. Included are the middle manager and supervisor orientation courses established under Treasury Board policy (PMM Vol. 4, Ch. 23) and further managerial/supervisory courses dealing with specialty areas of management and supervision in the Public Service.

Training Consulting Services: Provides advice and assistance to departmental managers regarding training problems. Such advice and assistance is carried out by consultant staff who undertake consulting contracts on a fee-for-service basis with client departments. Training consulting services contracts range from training needs analysis through to design and delivery of courses specifically to meet departmental needs.

Other: Includes Training Coordination, Information and Technology Services; Curriculum Design and Development; Occupational Analysis, Course Evaluation and Validation and Branch Management, and Administration.

Performance Information/Resource Justification

Management Category Training and Development: The productivity standard used to evaluate the efficiency of training courses for the Management Category is a ratio of 6 to 1 (6 instructor person-days per course-day) or a standard efficiency ratio of 0.167 (Figure 34).

Figure 34: Workload Performance Indicators for Management Category Training Courses

	Efficiency Ratio *	Training Course-days Provided	Number of Persons trained
1985-86 Projected	.167	863	1,394
1984-85 Forecast	.167	809	1,357
1983-84 Actual	.167	620	901

* This ratio is calculated by dividing the output, the number of training course-days provided, by the number of person-days utilized (the productivity standard varies with the type of course and the instructional method used) to deliver the courses.

Professional and Job Competency Training and Development: The productivity standard used to evaluate the efficiency of the professional and job competency training and development courses is a ratio of 2 to 1 (2 instructor person-days per course-day) or a standard efficiency ratio of 0.500. The projected decrease in efficiency (Figure 35) is the result of using less contracted resources and more in-house instructors to deliver courses where the use of contracted resources does not register person-day utilization but is less cost-effective; and also because several of the newly designed courses have a delivery productivity standard ratio of 4 to 1 as compared to 2 to 1.

Figure 35: Workload Performance Indicators for Professional and Job Competency Training and Development Courses

	Efficiency Ratio *	Training Course-days Provided	Number of Persons trained
1985-86 Projected	.500	2,253	8,447
1984-85 Forecast	.555	2,069	7,933
1983-84 Actual	.678	1,974	8,183

* This ratio is calculated by dividing the output, the number of training course-days provided, by the number of person-days utilized (the productivity standard varies with the type of course and the instructional method used) to deliver the courses.

Middle Management and Supervisory Training and Development: The productivity standard used to evaluate the efficiency of the middle management and supervisory training and development courses is a ratio of 3 to 1 (3 instructor person-days per course-day) or a standard efficiency ratio of 0.333. The projected increase in efficiency (Figure 36) is the result of the newly designed Management Orientation Programs for both Middle Managers and Supervisors, which has been designed according to the Systems Approach to Training.

Figure 36: Workload Performance Indicators for Middle Management and Supervisory Training Courses

	Efficiency Ratio *	Training Course-days Provided	Number of Persons trained
1985-86 Projected	.333	639	1,746
1984-85 Forecast	.333	612	1,860
1983-84 Actual	.299	665	2,055

* This ratio is calculated by dividing the output, the number of training course-days provided, by the number of person-days utilized (the productivity standard varies with the type of course and the instructional method used) to deliver the courses.

Training Consulting Services: The productivity standard used to evaluate the efficiency of the Training Consulting Services is a ratio of 1 to 1 (1 consultant person-day per/consulting-day services) or a standard efficiency ratio of 1.00. It is expected that workload will decrease with a slight improvement in efficiency (Figure 37).

Figure 37: Workload Performance Indicators for Training Consulting Services Contract Courses

	Efficiency Ratio *	Number of Consulting Days Delivered	Number of Persons Trained
1985-86 Projected	1.00	1,135	1,600
1984-85 Forecast	1.04	1,135	1,600
1983-84 Actual	1.04	1,258	1,584

* This ratio is calculated by dividing the output, the number of consulting days delivered under contract by the number of person-days utilized.

Two overall measures of the efficiency of this activity are expressed in Figures 38 and 39 below as total revenue obtained per person-year utilized and total course-days provided per person-year utilized (includes trainers, support staff and managers).

Figure 38: Total Revenues Obtained Per Person-Year Utilized

* Constant dollars based on the Canadian Statistical Review published by Statistics Canada.

Figure 39: Total Course-Days Provided Per Person-Year Utilized

The following is an update of the 1983-84 planned actions:

Occupational Analysis: The planned completion date of the occupational analysis (OA) study for the Management Category and for Middle Managers and Supervisors was achieved despite significant delays in return of questionnaires from departments. The OA reports were presented to Management Training Board and Staff Training Council and have laid the foundation for the development of training for managers. The reports were used to develop the objectives for the Management Orientation Programs for both middle managers and supervisors courses. Work is proceeding in the development of performance standards for the orientation courses of the Management Category. The electronic data processing OA study commenced in 1983-84 and the report will be submitted in October 1985 as planned.

Design of New Courses: The target to finalize the design of eight new courses and to undertake the design of seventeen additional new courses has been met.

Evaluation of Courses: One course was evaluated and three courses were validated. Although the planned results were not achieved in this area, other activities did occur; a total of 113 instructors and resource persons were evaluated with feedback provided to their supervisors. The "Guide on Evaluation of Period of Instruction" was completed in both languages.

Evaluation System of Participants' Assessments: The current participant course evaluation system was maintained for all courses conducted. This system was upgraded to improve the reporting aspects and is planned for a major review to be conducted in Fiscal Year 1984-85.

Restriction of Administrative Overheads: Reductions in person-years and salary costs were achieved through a comprehensive re-organization. Branch regional operations were rationalized and reduced to a much more viable organization. Certain managerial and other non-revenue producing person-years were reduced. Person-years in branch consulting operations were drastically reduced to bring them into line with business levels. All branch person-year requirements were reviewed against workloads, and productivity standards were established. Periodic reviews of the validity of these standards will take effect a planned yearly increase in efficiency. The secretarial support staff-to-officer ratio was reduced from one per two officers to one per four officers. The above action resulted in person-year reductions from 222 in 1980-81 to 200 in 1983-84. In salary and benefits costs, this represents an approximate saving of $850,000.

Restriction of Interest Charges on Working Capital Advances: There were no interest expense in 1983-84 on Working Capital Advance.

Quality of Work Life: The pilot project - Quality of Work Life - was implemented in October 1983 and is planned for an initial evaluation in 1984-85.

Performance Measurement System: As at the end of 1983-84, the branch has developed and was monitoring 62% of its person-year utilization through productivity standards.

G. Administration

Objective

To support the efficient and effective conduct of Public Service Commission program operations by providing required management systems and services, and to provide central policy direction and research support services for all the Commission's activities relating to Public Service Employment.

Resource Summary

This activity represents 22 % of the total operational expenditures and 21 % of the total person-years of the Commission. The Main Estimates of $27.6 million (Figure 40) consists of $ 20.5 million or 74% for personnel costs.

Figure 40: Activity Expenditure ($000) and Person-Years

	Main Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Executive Direction	1,825	39	1,931	40	1,748	38
Common Services	25,782	531	24,898	529	24,685	534
Career Orientation Program	-	-	813	16	536	13
Summer Student Youth Employment Program	-	-	96	10	80	8
	27,607	570	27,738	595	27,049	593

The net decrease in resource requirements for 1985-86 over the 1984-85 forecast is due mainly to the termination of the Career Orientation Program (16 person-years and $.8 million) offset by an increase in resources for program evaluation (2 person-years and $.1 million), and allowances for salary increases due to inflation.

Past Financial Performance

Actual resource requirements decreased by 10% over planned (Figure 41).

Figure 41: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Executive Direction	1,748	2,133	385
Common Services	24,685	24,656	(29)
Career Orientation Program	536	3,363	2,827
Summer Student Youth Employment Program *	80	-	(80)
	27,049	30,152	3,103

* Resources for the Summer Student Youth Employment Program were provided from TB Vote 10 (10 PYs and $96,000).

Explanation of Change: Resource utilization in 1983-84 was lower than provided for in the Main Estimates because of the reduction in the Career Orientation Program resulting from the transfer of person-years to other government departments.

Description

The Administration Activity includes the activities of the Chairman and Commissioners who establish overall Commission policy in conformance with the Public Service Employment Act and provide overall direction to Commission activities. Two types of support are provided to the Chairman and Commissioners in the execution of their activities: first, the provision of support services toward the attainment of PSC objectives through corporate policy and strategic planning, the administration of specific statutory requirements, and the publication of the PSC annual report; secondly, the delivery of specialized services to the organization in the areas of personnel, finance, EDP, administration, public affairs, corporate management systems and evaluation and audit; the provision of support to ensure that the PSC's resources are acquired, utilized, controlled and disposed of effectively and efficiently and that PSC management policies and systems are consistent with central agency.

The Administration activity consists of two sub-activities:

Common Services: Provides direction and support to ensure that the PSC's resources are acquired, utilized, controlled and disposed of effectively and efficiently and ensures that the Commission's internal management policies and systems are consistent with central agency requirements. It also includes the delivery of specialized services to the Public Service Commission. These services are divided along traditional lines of functional expertise, and include: administrative services, personnel services, financial services, EDP services, regional services, public affairs, corporate management systems and evaluation and audit.

Executive Direction: Establishes overall Commission policy in conformance with the Public Service Employment Act; provides overall direction to Commission activities; and provides the necessary support to the management objectives of the PSC through corporate policy and strategic planning, the administration of specific statutory requirements, and the publication of the Commission's annual report.

Performance Information/Resource Justification

The overall measure of efficiency for these sub-activities is expressed in terms of percentage of the total Commission person-year resources.

Figure 42: Total Person-Years in the Administration Activity (excluding COP) as a Per Cent of Total Program Person-Years

The following is a summary of resources allocated to components within the Sub-Activity for Common Services.

Figure 43: Common Services - Resource Summary ($000 and Person-Years)

	Main Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Administrative Services	7,772	171	7,582	171	7,613	181
Personnel Services	3,594	89	3,509	89	3,470	91
Public Affairs	2,260	42	2,162	42	2,136	45
Financial Services	2,309	60	2,090	60	2,017	58
EDP Services	6,453	90	6,305	90	6,307	88
Corporate Management Systems	513	10	529	10	456	9
Regional Services	1,935	48	1,866	48	1,897	47
Evaluation and Audit	887	19	797	17	789	15
Legal Services	59	2	58	2	-	-
	25,782	531	24,898	529	24,685	534

The following is an udpate on the 1983-84 planned actions.

Agreements Between the Treasury Board of Canada and the Commission: Progress has been made toward finalizing agreements with respect to under-represented groups and management of the Management Category.

Impact of Canadian Charter of Rights on the Commission's Mandate: A comparative study of the Public Service Employment Act and the Canadian Charter of Rights was made and submitted to the Commission.

Program Evaluation: A program evaluation organization proposal and a program evaluation component structure was developed and approved by the Commission in 1983-84.

Improvement in Management Practices and Control (IMPAC) Study: The Commission submitted its first IMPAC Action Plan progress report to the Office of the Comptroller General in early 1984. Outstanding developmental areas relate to program evaluation and corporate management information systems. With documentation completed of the Commission's Integrated Management Process and its Operational Plan Framework in 1983-84, further progress is planned in 1984-85 on the identification of corporate management information needs to serve as a basis for corporate information policy and systems development.

Comprehensive Internal Management Audits and Conduct of Functional Audits: These audits are part of the ongoing operations of the Internal Audit Directorate.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 44: Expenditures by Object ($000)

	Appropriation			Revolving Fund		
	Estimates 1985-86	Forecast 1984-85	Actual 1983-84	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

Note: The person-year column displays the forecast distribution of the authorized person-years for the Program by occupational group. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations. The current salary range column shows the salary ranges by occupational group at October 31, 1984.

B. Cost Analysis

Net Program Cost

Figure 46: Net Cost of Program by Activity for 1985-86 ($000)

	1985-86 Expenditures	Add Other Costs*	Total Cost	Deduct Revenue	Net Cost	Net Cost 1984-85
Management Category Programs	6,529	1,037	7,566	-	**7,566**	7,019
Non-Management Category Staffing Programs	43,721	6,964	50,685	-	**50,685**	46,480
Audit	2,552	405	2,957	-	**2,957**	2,706
Appeals and Investigations	4,606	732	5,338	-	**5,338**	5,010

D. Program Resource Summary By Category

The exclusive statutory authority entrusted to the Public Service Commission, to uphold the merit principle in all Public Service staffing operations, represents $ 52 million or 42% of the authorized program expenditures for 1985-86 as compared to $46.9 million or 44% in 1983-84. The remaining program expenditures relate to functions or activities delegated to the PSC by the Governor in Council or the Treasury Board such as managerial, specialty and language training and personnel audit; and, the implementation of programs established by the employer which are in the shared field of responsibility such as managing the Management Category, human resources planning and participation of under-represented groups. Program expenditures for delegated responsibilities are $68.2 million or 54% compared to $54.2 million or 52% in 1983-84. For shared responsibilities, program expenditures are $5.0 million or 4% compared to $4.4 million or 4% in 1983-84.

The following Figure 49 shows the Commission's resource requirements for each of the three categories.

1985–86 Estimates

Part III

Expenditure Plan

3347

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Public Service Staff
Relations Board

3351

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is comprised of three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the purposes requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is requested in these Estimates to spend $8,771,000 in support of the 1985-86 Public Service Staff Relations Board. The remaining expenditures, estimated at $911,000 for pensions and other employee benefits, will be made under existing statutory authority.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The Public Service Staff Relations Board has established for its two activities, the Staff Relations Administration and the Pay Research Bureau, the major goals for 1985-86 set out below:

Staff Relations Administration: To fulfill its mandate which is to facilitate the resolution of collective bargaining and other disputes, and more particularly grievance adjudication, falling under the purview of the Public Service Staff Relations Act (PSSRA). This will be done in a manner which best utilizes the human and financial resources of all concerned and which will expedite the disposition of all proceedings coming before the Board. Towards the achievement of this goal it will take the following steps:

- provide such mediation, conciliation and arbitration services contemplated by the PSSRA as are appropriate in the circumstances towards the goal of resolving the differences between the parties in the negotiation of collective agreements and all other types of disputes that fall within the jurisdiction of the Board (see page 13).

- actively encourage the parties to assess the merits of all grievances referred to adjudication in advance of their being scheduled for hearing with a view to their settlement on the basis of existing precedents established by the Board, where possible, and to make timely preparations for those grievances requiring a hearing and determination by the Board so as to avoid the need for the adjournment or postponement of hearings (see page 13).

- continue endeavours by the above and such other means as are feasible to reduce the backlog of outstanding grievances referred to adjudication (see page 13).

Pay Research Bureau

- meet the requirements of the parties to collective bargaining for compensation data through consultation with members of the Advisory Committee on Pay Research, for use during and beyond the current restraint program (see p. 13);

- undertake a feasibility review of difficult-to-compare Public Service classes in relation to outside job classifications with a view to providing the parties to collective bargaining with compensation data for select groups in the Administrative and Foreign Service category (see p. 14);

- continue the review of the Bureau's national universe and sample for the 1986 biennial survey of employee benefits and conditions of employment in the Canadian economy (see p. 14);

- develop further compensation survey activity for Senior Management and Executive levels in the Public Service (see p. 14).

2. Financial Summary

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast* 1984-85	Change	For Details See Page
Staff Relations Administration	5,506	5,120	386	17
Pay Research Bureau	4,176	3,903	273	22
	9,682	9,023	659	
Person-years	174	173	1	

* The forecast expenditures are at the same level as those originally tabled in the 1984-85 Main Estimates. (Extracts from Part II of the Estimates, page 4).

Explanation of Change: The increase in expenditures represents the effect of inflation on salaries and wages and other operating costs and the full restoration of collective bargaining under the Public Service Staff Relations Act.

Increase due to inflation	$379
Increase in other operating costs	280
Net increase in expenditures	$659

B. Recent Performance

1. Highlights

Highlights of the Program's Performance during 1983-84 and 1984-85 are:

- The Board's efforts to have the parties, and more particularly the Treasury Board and the Public Service Alliance of Canada, review pending adjudication cases prior to their being scheduled for hearing, developed into a regular practice. It has resulted in the settlement of numbers of grievances that have been referred to adjudication prior to their being scheduled for hearing. This advance consultation, nonetheless, has only marginally improved the percentage of hearings that have been cancelled subsequent to being scheduled for hearing. The principal impediment to a more rapid and substantial disposition of the backlog of adjudications, however, is due to the limited number of cases which the parties, and especially the PSAC, are prepared or able to schedule having regard to their current resources to represent grievors at Board meetings.

- The Bureau completed during both years its survey program for over 450 classes and levels in collective bargaining and for excluded classes as well. During 1983-84 the health classes survey activity was annualized from a previously biennial survey program. Survey results are used by the parties to monitor outside trends for over thirty-five elements of compensation and to prepare for future collective bargaining.

- The development of survey activity for senior levels in the Public Service continued on course over the two-year period with an increase of survey sample firms from 43 in 1983 to 53 in 1984, with the number increasing to 66 in early 1985. The number of job evaluations was increased from 488 in 1983 to 636 in 1984, a more appropriate number given the scope of the survey sample.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Staff Relations Administration	3,831	4,275	(444)
Pay Research Bureau	4,024	4,215	(191)
Total	7,855	8,490	(635)
Person-years	166	172	(6)

The major portion of the lapse was due to vacancies at the Board level.

C. Background

1. Introduction

The Public Service Staff Relations Board is the neutral, third-party, quasi-judicial tribunal responsible for the administration of the Public Service Staff Relations Act which in 1967 established a system of collective bargaining and grievance adjudication in the federal Public Service. The Board is designated as a department within the meaning and purpose of the Financial Administration Act and has been declared to be a Separate Employer.

A total of approximately 203,000 employees are encompassed in 134 bargaining units for which 17 employee organizations have been certified as the bargaining agent. The Treasury Board acts for the government as the employer for 76 units in the central administration. The employees of the remaining units are in the employ of nine separate employers, the two largest of which are the National Research Council and the National Film Board. In addition, there are several thousand public servants who are not subject to collective bargaining but who are entitled to remedial procedures before the Board.

2. Legal Mandate

The Board is the statutory tribunal whose mandate is to administer the Public Service Staff Relations Act. Most proceedings under the Act are conducted on a quasi-judicial basis. Its mandate is to facilitate the resolution of collective bargaining and other disputes, and more particularly, grievance adjudications falling under the purview of the Act. The Pay Research Bureau was organized in 1957 under the administrative jurisdiction of the Civil Service Commission (now the Public Service Commission). Upon the enactment of the Public Service Staff Relations Act in 1967 the Bureau became an activity of the Board.

3. Program Objective

The objective of the Public Service Staff Relations Board is to provide the framework within which the various rights and responsibilities of participants to collective bargaining in the Public Service are to be exercised and to provide information to participants on rates of pay and other conditions of employment in Canada.

4. Program Organization for Delivery

Activity Structure: The Public Service Staff Relations Board is comprised of two activities, the Staff Relations Administration and the Pay Research Bureau. These activities are described further in Section II, Analysis by Activity (see page 19).

Organization Structure: The Public Service Staff Relations Act provides for a Board composed of a Chairman, a Vice-Chairman, not less than three Deputy Chairmen and such other full-time and such part-time members as the Governor in Council considers necessary to discharge the responsibilities of the Board. At most times since its present structure was established by amendment to the Public Service Staff Relations Act in 1975, the Board has consisted of a Chairman, a Vice-Chairman, three Deputy Chairmen, six full-time members and from 18 to 25 part-time members who are located across Canada. Under the Act divisions of the Board, consisting of one or more members, may be established to carry out the powers and functions of the Board in particular proceedings. The Act requires that members sit alone on references to adjudication. In other types of proceedings the Board most often sits in divisions composed of three members. The Board has its offices in Ottawa.

The Chairman is the Chief Executive Officer and is responsible for all matters relating to the two activities administered by the Public Service Staff Relations Board. The Director General of the Pay Research Bureau is responsible for the functions performed by the Bureau and he reports directly to the Chairman. The Chairman is responsible to Parliament through such Minister of the Crown as may be designated by the Governor in Council, other than a member of the Treasury Board. During most of the years since the Board's inception the designated Minister has been the President of the Privy Council. The Minister has the responsibility of laying before Parliament each year the annual report of the Board covering its administration during the previous year. He is also the line of communication with the Governor in Council for purposes of appointments to the Board. Further, he signs such documents as the Board's operational plans, estimates, and submissions to Treasury Board of a non-routine nature.

Figure 3: 1985-86 Resources by Organization/Activity ($000)

Pay Research Bureau		4,176	4,176
	5,506	4,176	9,682

D. Planning Perspective

1. Environment

The environmental factors that have an influence on the operations and direction of the Public Service Staff Relations Board are briefly described below.

Economic Climate: Prevailing uncertain economic prospects will affect the operations of the Board. Public servants and their bargaining agents will be seeking to keep salaries in line with increases in the cost of living. The employers, on the other hand will be seeking to keep costs down in order to reduce overhead costs. There may be a willingness on the part of employees and their representatives to trade off increased benefits in favour of increased job security. These dynamics may result in some arduous negotiations and a substantial involvement of the resources of the Board in the collective bargaining dispute settlement processes provided for in the Act.

Social Climate: Job security and the maintenance of existing standards of living will continue to be among the primary concerns of employees. Uncertainty over the economic future discourages early retirement which, in turn, impedes the career progression of other employees. The impact of technological change may also be a factor affecting the social environment in which collective bargaining is conducted.

The Public Sector Compensation Restraint Act (PSCRA): During the 1985-86 fiscal year, the restraints imposed by the PSCRA will cease to have any effect on the collective bargaining process under the PSSRA as it relates to all but a few bargaining units. With respect to the Pay Research Bureau program, the

resumption of collective bargaining in mid-1984 has meant the updating of compensation survey results to meet the needs of the parties involved in the process. Throughout the restraint period, the Bureau continued to provide outside compensation information primarily for monitoring purposes.

2. Initiatives

The Public Service Staff Relations Board has identified the following initiatives for 1985-86.

Staff Relations Administration

Facilitate the Settlement of Collective Bargaining Disputes: The Board will be carrying out the full range of activities contemplated by the PSSRA in assisting the parties to collective bargaining in the negotiation of collective agreements. For those bargaining units that the bargaining agent has selected binding arbitration for the resolution of disputes in the negotiation of collective agreements, the Board will provide conciliation services as needed and render arbitral awards on those unresolved issues between the parties falling within the purview of its jurisdiction. For those bargaining units for which conciliation with the possibility of strike action is selected as the method of dispute resolution, the Board will provide conciliation services as needed which may include the appointment of individual conciliators and/or conciliation boards. As well, the Board will provide mediation services in all manner of disputes when deemed appropriate.

Encourage the Settlement of Grievances in Advance of Hearings and Reduce the Backlog of References to Adjudication: The Board will continue its efforts to have the parties of interest assess the merits of their positions on all grievances in advance of their being scheduled for hearing with a view to their possible settlement. This practice, if adhered to and developed, should sharply reduce the withdrawal of scheduled hearings due to last minute settlements. Also, early scrutiny of cases should prompt sufficient advance preparation of scheduled cases so as to avoid the need for postponements. The end result would be a more efficient utilization of human and financial resources as well as contributing to a more rapid reduction in the current backlog of references to adjudication.

Pay Research Bureau

Review Benefits Survey Sampling: An integral part of the Bureau's survey program centers on the non-salary elements of compensation. The biennial survey on benefits and conditions of employment will be undertaken in early 1986, and in preparation for it a major review of the cross-Canada sampling of organizations is underway. This review, the first since the mid-60's will result in as reflective as practicable a sample of the industrial and geographic mosaic of the Canadian economy. The results of this survey are used for analysis and review purposes at the bargaining table and by the National Joint Council, the advisory body on superannuation, and other forums.

Survey Feasibility Review for Difficult-to-Match Occupational Groups: While Bureau pay survey activity is regularly undertaken in the Canadian economy for a significant number of groups in the Public Service, there remains a small number for which outside occupations are difficult to match or evaluate. Examples of such groups are: Commerce, Foreign Affairs, Programme Administration, Administrative Services. Given the interest of the parties to collective bargaining for outside compensation data relatable to these groups, particularly the latter two, the Bureau will continue discussions in 1985 with representatives of the concerned parties on specific survey needs identification and priorities out of which further developmental work will be initiated.

Plan 1985-86 Compensation Survey Program: Based on deliberations at the Advisory Committee on Pay Research and at technical sub-committee meetings with representatives of the parties, any new requirements or special features impacting on the Bureau's 1985-86 and 1986-87 survey program will be addressed. Further, by July 1985, all groups certified under the aegis of the PSSRA will have exited from the current program of the Public Sector Compensation Restraint Act, resulting in the identification early that year of survey requirements for 1985-86, and beyond, for certain groups.

Develop Further Compensation Survey Activity: To provide the Treasury Board Secretariat with a Public Service source of external senior-level compensation information, the Bureau during 1985-86 is planning further survey developmental work with emphasis on certain aspects of sampling review and survey data requirements flowing from post-restraint period compensation policy determination.

3. Update on Previously Reported Initiatives

Staff Relations Administration: The Board's efforts to have the parties, and more particularly the Treasury Board and the Public Service Alliance of Canada, review pending adjudication cases prior to their being scheduled for hearing, has developed into a regular practice. It has resulted in the settlement of numbers of grievances that have been referred to adjudication prior to their being scheduled for hearing.

Pay Research Bureau: The Bureau completed its survey programs tailored to meet the requirements of the parties for bargained-for and excluded groups. In 1983-84 the Bureau met its commitment to the parties to annualize the survey of thirteen classes in the health area. In each of the fiscal years 1983-84 and 1984-85, the Bureau published or is publishing survey data on 450 occupational class levels. By comparison, in the mid '70's the number of survey class levels averaged 325. As for developmental work on isolated post allowances survey activity which findings would be used for the periodic review of these allowances by members of the National Joint Council, the Bureau completed its project during 1983-84.

As part of its program on classes excluded from bargaining the Bureau surveys Canadian industry for senior management and executive levels of classification, the EX/SM activity. The initiatives formulated for 1983-84 and 1984-85 have been met. With current emphasis for data primarily for the SM and EX-1 levels, no further increase in the number of job evaluations in each responding firm is projected.

4. Program Effectiveness

Staff Relations Administration: In the administration of the Staff Relations Activity, the Board is highly conscious of the need to maintain its neutral third party role in collective bargaining and all other proceedings for which it is responsible under the Act. The perception of the Board as an independent, neutral agency is essential to enable it to maintain its credibility and ultimately its effectiveness. The Board must not only be, but must be seen by the parties to be, without bias and independent of government in its capacity as the employer.

The volume and the variety of proceedings that come before the Board for determination are dependent on the use that the Board's client groups make of their respective rights and entitlements under the Act. Stated more simply, the case load of the Board is wholly dependent on the number of applications, complaints and references falling under the purview of the Act that are made by the Treasury Board as employer, the separate employers, the certified bargaining agents and the employees they represent. It follows that the control over the accumulation of backlogs in different types of proceedings are not by any means entirely within the control of the Board. Similarly the frequency with which the Board is called upon to act in a mediation or conciliation capacity and the scope and complexity of the impasses that the Board is called upon to try to resolve is equally dependent on the parties and the degree to which they are able to resolve their disputes without third-party assistance. Ultimately, the real test in evaluating the effectiveness of the Staff Relations Administration Activity is whether the Board has been able to command the respective trust of the parties and to maintain a climate among them which lends itself to the resolution of their differences.

To ensure the effective realization of its mandate, the Board closely monitors the proceedings coming before it to ensure their expeditious handling from initial application or reference to final disposition. The Board also ensures that its jurisprudence is available to assist individuals, the immediate parties to collective bargaining and the staff relations community at large through the publication and distribution of its decisions. The principal vehicle is the PSSRB Decisions. This publication contains a digest of all decisions. As well, the Annual Report of the Board includes significant developments in its jurisprudence. Finally, by way of conciliation, mediation or consultation the Board encourages the voluntary resolution of collective bargaining and all other kinds of disputes falling under the Act.

The Staff Relations Administration program has been granted an exemption from program evaluation by the Office of the Comptroller General. The exemption was based on the fact that the Board functions as a quasi-judicial body and it has no authority to alter or change the program.

Pay Research Bureau: To the extent that the effectiveness of the Pay Research Bureau Activity can be measured, the reliance which the parties to collective bargaining place on the compensation data produced by the Bureau in its survey reports is a criterion. Based on the requirements for data identified by the parties, the Bureau essentially continues to meet their needs. Through the Advisory Committee on Pay Research and its technical sub-committees, the parties have a significant input into the specifications of the surveys. Throughout the restraint period, extensive use was made by the parties of Bureau reports as compensation levels were being monitored. Representatives in the collective bargaining process significantly rely on Bureau findings in their analyses of compensation levels and in preparation for the period beyond the current restraint program. The historical reliance of the parties on Bureau reports in negotiations and at arbitration and conciliation board hearings is an indicator of the impartiality of its products and that the Bureau continues to fulfill its mandate of meeting the compensation requirements of the parties.

During 1984, the Pay Research Bureau activity was the subject of a program evaluation by an external consulting firm. The results have been reviewed by members of the Advisory Committee on Pay Research for further input and recommendations, as well as by senior staff of the Bureau. The evaluation results ascertain the extensive use made by the parties of Bureau compensation surveys and research activities in the process of collective bargaining and in the compensation-setting process for excluded or unrepresented classes in the Public Service. Further, the timeliness of the Bureau pay survey data was found to meet the needs of the parties. In addition, data-reporting was frequent enough to capture or reflect changes in the outside market. As well, research reports on the outcomes of Public Service collective bargaining are used to varying degrees by the parties, arbitrators and others.

Key recommendations in the program evaluation report focus on needs assessment for additional survey classes, benefits survey criteria review and assessment of level of details required, degree of survey data dissemination, and of communication to the parties of Bureau job-matching methods and procedures. In addition, the evaluation report recommends a review of the Bureau's executive and senior management survey in terms of additional usage and development, in addition to continued monitoring of the level of development of studies on the outcomes of collective bargaining. A plan of action has been implemented on all recommendations reported in the program evaluation study.

Section II
Analysis by Activity

A. Staff Relations Administration

Objective

The objective of the Staff Relations Administration Activity is to administer the Public Service Staff Relations Act in a fair and equitable manner which allows the employers, the bargaining agents and the employees they represent and others who have entitlements to exercise their rights as provided for in the Act.

Resource Summary

This Activity represents 57% of the total operating budget of the Public Service Staff Relations Board for 1985-86.

Figure 4: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Past Financial Performance

Figure 5: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Staff Relations Administration	3,831	4,275	(444)
Person-years	75	80	(5)

The lapse was primarily due to vacancies in the Board complement.

Description

Adjudication: Grievance adjudications, which represent the largest single component of the Board's workload, are dealt with by individual adjudicators, who may be part-time or full-time members of the Board, but are largely the latter. The assignment of cases is made by the Deputy Chairman who is responsible for the administration of the system of grievance adjudication. As stated in the Initiatives, the Board will continue in its efforts to utilize the resources of the Board and parties to best advantage, with a view to reducing the backlog of references to adjudication as expeditiously as possible. Figure 6 presents a record of the number of references to adjudication made to the Board from the 1978-79 fiscal year to 1984-85.

Figure 6: References to Adjudication

Fiscal Year	Brought Forward	Receipts from Post Office	Receipts from Other Sources	Overall Total	Dispositions Total
1984-85 (Forecast)	2,565	0	450	3,015	2,000
1983-84	2,730	0	675	3,405	840
1982-83	3,305	235	940	4,480	1,750
1981-82	1,875	1,150	1,800	4,825	1,525
1980-81	3,425	775	400	4,600	2,725
1979-80	2,150	2,475	350	4,975	1,550
1978-79	550	2,150	200	2,900	750

Figure 7 gives the projected adjudication hearing workload for 1985-86.

Figure 7: Adjudication Hearing Workload

	Estimates 1985-86	Projected 1984-85	Actual 1983-84	Actual 1982-83
Hearings scheduled (Number of days)	350 (470)	325 (440)	339 (520)	425 (635)
Hearings held (Number of days)	226 (306)	210 (285)	206 (281)	221 (331)

The above table reveals the discrepancies between the adjudications scheduled for hearing and those actually held, referred to in the Highlights (page 9).

Mediation Services: As part of the daily functioning of the Office of Mediation Services, the staff maintains on-going communication with the parties to collective bargaining in the Public Service. Members of the staff are appointed under the relevant provisions of the Act as conciliators or mediators in the majority of interest disputes where the parties have reached an impasse in their negotiations. In other situations, where it seems appropriate, an ad hoc mediator or conciliator may be appointed. Members of the staff also are available at various stages of bargaining to facilitate communications and help resolve differences between the parties. On a continuing basis the staff endeavours to settle unresolved proposals for managerial or confidential exclusions from bargaining units and conduct examinations and prepare reports for use by the Board when it is called upon to make such determinations. As indicated in the Initiatives the Board will be providing the third party services contemplated by the Act to assist the parties in resolving their collective bargaining and other disputes.

Dispute Resolution: Prior to the giving of notice to bargain, a bargaining agent must select either binding arbitration or conciliation with the possibility of strike action as the method of dispute resolution in the event of an impasse in direct negotiations. In the former a three person division of the Board, composed of a member to act as chairman and two members representative of the interests of the parties selected one each from two permanent panels, makes a binding determination on the issues in dispute. Under the other option, following unsuccessful efforts by an ad hoc conciliation board, the employees in the bargaining unit, other than "designated" employees, may lawfully participate in strike action seven days after the board reports its findings and recommendations to the Chairman of the PSSRB.

Other Proceedings: Three-member divisions of the Board are regularly established to deal with such proceedings as certification of bargaining agents and the determination of bargaining rights, complaints of unfair labour practices, the determination of managerial or confidential exclusions and persons designated as necessary for the safety or security of the public, and declarations of strikes as lawful or unlawful.

National Joint Council (NJC): The Board provides physical premises and administrative support services to the NJC which is a consultative body composed of representatives of the government on the official side and representatives of the employees on the staff side. It serves both as a consultation forum on, and as a mechanism for the negotiation of, terms and conditions of employment that do not lend themselves to unit by unit bargaining.

Performance Information/Resource Justification

Specific goals in 1985-86 include:

- fulfilling its primary mandate as a neutral third party in facilitating the resolution of collective bargaining and other disputes in as an effective manner as possible; and

- reducing the backlog of references to adjudication by encouraging the parties of interest to assess the merits of all of the grievances concerned with a view to their settlement prior to being scheduled for hearing and to expedite the disposition of cases requiring a determination by the Board.

The volume and variety of proceedings that come before the Board for decision are dependent on the applications, references and complaints coming from employees, bargaining agents and the various employers. Similarly, the frequency with which the Board is called on to provide its services, and the scope and complexity of the issues involved, depend on the degree to which the parties to collective bargaining have by themselves been able to resolve their differences on terms and conditions of employment. The resource requirements are directly related to the above considerations. To the extent that it is possible in advance to anticipate the demand for services, the Board forecasts its workload and resource requirements based on its past years experience in administering the PSSRA.

Average costs for the conduct of the various Board proceedings in which part-time Board members and outside specialists participate have been developed and are used against the projected workload to determine financial resource requirements. These resources, in combination with the non-discretionary human and financial resources required to support the full-time Board members, form approximately 31% of the Staff Relations Administration Activity's budget.

The balance of the resources provide the support functions to the operations of the Board. They include the offices of the Secretary Registrar, General Counsel, Mediation Services and Administration. The latter provides services to both the Staff Relations Administration and the Pay Research activities and is largely a mandatory overhead. It comprises the Personnel, Financial, Administrative and Library services. Indicators are being considered to measure resource requirements and usage for these support functions.

B. Pay Research Bureau

Objective

To collect and provide timely compensation data primarily to assist the parties to collective bargaining in establishing wage rates and terms and conditions of employment for bargaining unit employees. Such data are prepared also for guidance in the determination of compensation for excluded groups and more particularly persons employed in managerial capacities.

Resource Summary

This Activity represents 43% of the total operating budget for the Public Service Staff Relations Board for 1985-86.

Description

The Pay Research Bureau provides an independent and objective source of information on pay rates and conditions of employment for occupational classes found in outside sectors which are similar or comparable to those found in the Public Service. Primarily, such information is intended to meet the needs of the bargaining agents representing employees and the various employers in the collective bargaining process established by the Public Service Staff Relations

Act. Much of the most relevant information is gathered directly by Bureau officers in field surveys. In such surveys Bureau officers seek information on pay and other benefits applicable to comparable work on the outside. The Bureau has been making increasing use of automated techniques in keeping its pay information up-to-date. Through the Advisory Committee on Pay Research and its technical committees, the Bureau involves the representatives of employers and certified bargaining agents in the Public Service in the determination of programs and the development of research, survey methodology and policies. The compensation survey program measuring pay in the economy includes classes in the operational, administrative support, administrative and foreign service, technical, scientific and professional and management categories. Normally actual aggregate salary information is presented by level of occupation. Reports are generally published annually, or semi-annually for over 150 key classes and levels in all categories of employment.

To avoid duplication of effort, the Bureau, where it is feasible and consistent with its objectives, uses data from Statistics Canada and Labour Canada. However, this can be done for only a few classes as surveys from these two agencies are conducted for the Canadian community and not specifically for the Public Service. Thus, the activities of these organizations are not tailored to the specific needs of the parties to bargaining in the Public Service. On the other hand, the Pay Research Bureau has fully co-ordinated its activities with these two organizations to avoid duplication of effort. For example, the Bureau currently uses data for university teachers from Statistics Canada and for specific operational occupations from the Wage Rate Survey of Labour Canada. The data are processed within the Bureau to meet the requirements of the parties.

Performance Information/Resource Justification

Specific goals in 1985-86 include:

- providing pay and benefit survey data relevant to bargaining units;
- providing pay and benefit survey data for managerial personnel;
- measuring the outcomes of Public Service collective bargaining: analyses of collective agreement content, indices of issues dealt with in bargaining, adjudication processes; and
- on behalf of the Government of Canada answering requests from outside organizations participating in Bureau surveys, and other organizations, for Public Service compensation and related information.

The expenditures for the Pay Research Bureau Activity are principally comprised of salaries and the expenses involved in the conduct of surveys and the preparation of reports including reports measuring the outcomes of collective bargaining in the Public Service, and special studies. Figure 10 lists the planned nation-wide compensation surveys of industrial and other organizations during the upcoming year in addition to other research work.

Figure 10: Planned Compensation Surveys and Other Research Studies

Pay Survey Program	Eleven elements of compensation covering 464 or 97% of the total number (478) of occupational class levels in this program will be surveyed and reported on, at least once during this fiscal year.
Benefits and Working Conditions Survey Program	This year the benefits survey program will gather information on the incidence and characteristics for 58 or 85.3% of the total benefit items covering office, non office, scientific and professional and the executive group. As well, similar information for 38 benefit items gathered during the 1984-85 fiscal year will be reported on during the 1985-86 fiscal year.
Research Activities, Special Studies and Other Reports	In addition to reporting on the outcomes of collective bargaining, i.e. Public Service collective agreement analyses reports, index of issues dealt with in arbitral awards, final development of an index of issues dealt with in conciliation board reports is also planned. Seven other compensation and related special studies or reports will also be published: three on provincial government remuneration, one on Public Service benefits and conditions, two on highlights of compensation in industry, and one on school board pay and qualifications.

Note: Surveys can be carried out and reported on in the same fiscal year or carried out in one fiscal year and reported on in the next.

Information resulting from Bureau programs are presented in reports. Bureau reports, issued under various formats acceptable to the parties, contain either data collected through surveys or findings based on related research. The Bureau does not present an analysis of the data nor does it make recommendations to the parties. In this context, the quality of reports is directly related to the amount of data they contain. Thus, the number of occupational class levels surveyed, and the number of pages subsequently published in Bureau reports, are indicative of user requirements in terms of the need for data as well as the level of quality desired, and as such are selected as primary indicators of PRB output. When linked to resources expended in their production, these indicators provide a significant measure of Bureau productivity.

Since 1975-76, there has been a one-third increase in the number of class levels -or jobs - surveyed by the Bureau, from 338 to 458. During the period, the person-year allotment has increased by ten percent. In terms of report pages published by the Bureau, the number since 1980 has increased by seven percent, from 6190 to 6640. During the same period the number of person-years have increased by only half that amount. Increased output per resource expended has been effected through technological changes in the data processing methods and equipment, improvements in survey respondent information input processes into the Bureau's data bank, electronic and other printing and report production techniques, computer edit checks and other related procedures, administrative and organizational changes adapted to survey requirements and cycles.

Given the nature of Bureau activity, data on increased output should however be interpreted with caution. Certain Bureau projects require a great deal more research and resources allocation than others. For instance a difficult-to-survey class requires significant research input in early feasibility or development stages, in relation to other classes. Any resulting pilot study or survey could produce very little data or few report pages in relation to time and resources expended. For projects of this category and others as well, the Bureau must be prepared to devote resources in order to meet priorities and data requirements of the parties, regardless of the eventual quantity of output.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Public Service Staff Relations Board expenditures by object are presented in Figure 11.

Figure 11: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	6,509	6,207	5,624
Contributions to employee benefit plans	911	807	873
Other personnel costs	-	-	-
	7,420	7,014	6,497
Goods and services			
Transportation and Communications	536	526	467
Information	318	236	227
Professional and Special Services	595	555	391
Rentals	134	90	68
Purchased repair and upkeep	44	39	61
Utilities, materials and supplies	129	202	94
All other expenditures	457	323	1
	2,213	1,971	1,309
Total operating	9,633	8,985	7,806
Capital	49	38	49
Total expenditures	9,682	9,023	7,855

2. Personnel Expenditures

The Public Service Staff Relations Board is a labour intensive organization with personnel costs (including statutory contributions to employee benefit plans) constituting approximately 80% of total operating costs.

Figure 12: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Board Members and Management	22	22	22	50,350 - 105,050	72,430
Scientific and Professional	5	5	5	20,523 - 88,120	49,641
Administrative and Foreign Service	65	67	67	13,912 - 57,987	39,351
Technical	10	9	7	12,635 - 57,764	32,881
Administrative Support	72	70	71	12,636 - 31,946	23,046

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

C377

B. Cost Analysis

Net Program Cost

The Board's 1985-86 Estimates include only authorities to be voted and statutory authorities. When describing the Program on a full cost basis other costs must be considered.

Figure 13: Net Cost of Program ($000)

	1985-86 Operating Expenditures	Add Other Costs	**Total Cost**	Total 1984-85
Public Service Staff Relations Board Program	9,682	1,355	11,037	10,677

Other costs include services provided without charge by Public Works Canada for accommodation ($1,222,000), the Treasury Board for the employer's share of insurance premiums and costs (Group Surgical Medical Plan and Provincial Health Insurance - $117,000) and Supply and Services Canada for cheque issue, pay, superannuation, administration and financial management statements ($16,000).

1985–86 Estimates

Part III

Expenditure Plan

3379

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Public Works Canada

3383

Preface

This Expenditure Plan is designed to be used as a reference document and as such contains several levels of detail to respond to the various needs of its audience.

There are six chapters in this document. The first provides an introduction to the Department. The other five present the Expenditure Plans for each of the Department's programs.

Chapters 2 to 6 begin with extracts from Part II of the Estimates for the particular program being described. This is to provide continuity with the other Estimates documents.

Each Program Expenditure Plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

This document is designed to permit easy access to specific information that the reader may require. A general table of contents lists the various chapters, and detailed tables of contents are provided for each program. Within each Program Expenditure Plan, a financial summary provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Note: The Program/Activity Structrue shown in this plan represents a complete revision from that used in previous years. A table showing the totals for the old and new programs based on the Main Estimates for 1984-85 is shown on page 1-10.

In view of the new Program/Activity Structure, some of the data, such as details by Sub-activity, is not available. This will be remedied in future presentations.

Departmental Summary

3387

Roles and Responsibilities of Public Works Canada

The mission of Public Works Canada is to manage Real Property for the Government of Canada and to provide Planning, Design, Construction and Realty Services to government departments and agencies while contributing to the Government's wider social, economic, and environmental objectives in relation to that property. Real Property includes land, buildings (occupied or surplus), roads, highways, bridges and related works, marine works such as locks, dams and dry docks.

The Department's primary role is that of a Common Service organization in the provision of accommodation and services to clients within the requirements of legislation, policies and directives of the Treasury Board of Canada or other appropriate authorities, to achieve certain standards of prudence and probity and to conform with the socio-economic decisions of government.

The Department is expected to obtain the maximum value for money within the context of government-wide requirements as established primarily by the Treasury Board. The Department serves as an advisor to the Board on its directives, and to clients, on their effective use of the services available. The Treasury Board is responsible for issuing directives and guidelines which apply generally or approving specific variations from those directives and guidelines. Departments and agencies are responsible for determining what they need and, to the extent authorized, funding their requirements.

The Department is also responsible for the administration of all or portions of several statutes and for the fulfillment of a number of specific government mandates related to Real Property. These statutes include the Bridges Act, the Dry Dock Subsidies Act, the Expropriation Act, the Kingsmere Park Act, the Laurier House Act, the Municipal Grants Acts, the Official Residences Act, the Ottawa River Act, the Public Works Act, the Surplus Crown Assets Act and the Trans-Canada Highway Act.

To meet these requirements the Department has been structured into several Programs and has been organized into several organizational units and regions which are described in the following pages.

Program Structure

A significantly revised Program/Activity structure has been introduced for 1985-86. The number of programs has been reduced from seven to five, each of which relates directly to the role expected of the Department in relation to the several "businesses" the Department is involved in. See page 1-10, Figure 6 for a description of the major changes and comparison of the amounts using 1984-85 Main Estimates. These businesses are as follows:

Provision of Services

The Services Program: which fulfils the common service role to provide a wide range of professional, technical, operational services required by the Government in relation to the acquisition, management, and operation of Real Property.

Provision of Space

The Accommodation Program: which fulfils the common service role to provide the full range of office and other forms of accommodation required to support the operations of Government.

Fulfilment of Specific Government Mandates

The Government Realty Assets Support Program: which provides a central capability for the Government to achieve wider social, economic and environmental objectives related to real property.

The Marine Transportation and Related Engineering Works Program: which provides specific Marine Works and related infrastructure to facilitate marine transportation and related economic and social development goals.

The Land Transportation and Other Engineering Works Program: which provides certain highways, bridges and other engineering works to facilitate land transportation and related economic and social development goals.

Figure 1 shows this structure and the related activities within each Program. Figure 4 shows the spending plan for each Program. A detailed description of each program and activity can be found in Chapters 2 to 6.

Figure 1: Program Activity Structure

Funding Structure and Charging Practices

The introduction of the revised Program/Activity structure and the charging of clients for direct costs for all services provided by the new Services Program is part of the Department's initiative to improve management and control. This results in a major change in funding structure and charging practices being introduced in 1985-86 which is reflected in this Plan.

Funding/Vote Structure: This Plan reflects a completely revised vote structure to support the revised Program/Activity structure which has been described above (see Figure 6). The major features of the new funding/vote structure are:

- the operating expenses of the Services Program are funded through the Public Works Revolving Fund (Services and Management Account), with an appropriation to cover costs not recovered from client departments and agencies or other programs of the Department. A capital vote is provided for equipment for use in the Services Program.

- the Accommodation Program will continue to be funded from an operating vote with the authority to spend revenue, with a capital vote for the acquisition and improvements of assets.

- the expenditures for the other programs, that is, Government Realty Assets Support, Land and Marine Transportation, will be funded from the operating, capital, transfer payment appropriations, plus, payments to Crown Corporations and, statutory appropriations for contributions to employee benefit plans, Municipal Grants, etc.

Human Resource Allocation: This Plan shows the majority of the Person-years in the Services Program. Other Public Works Programs and other departments and agencies are treated as "clients". (as defined by the Treasury Board's Common Services Policy) Thus, the Service Program includes:

- The personnel dedicated to the management and control of the Department as a whole, as well as each region (e.g. the offices of the Minister, the Deputy Minister, Executive Committee members, Regional Directors General, financial, personnel, administrative and other support staff).

- The personnel assigned to program support for the respective activities in the Services Program.

- The professional, technical and operational personnel which are employed, primarily on a project or building basis to provide services to all clients including other programs of the Department. For example, an architect could be working on a variety of building design projects for the Solicitor General, the Canada Post Corporation, and the Public Works Accommodation Program in any given year, depending on the approved projects within these clients' appropriations.

Generally the Person-Years included in the other programs reflect only the resources allocated for the direct management of the Program or Activity. They, in effect represent the "client or owner" role.

Charging Practices: The revenues for the Services Program represent, primarily, the recovery from client departments and agencies of direct costs including disbursements. In addition, due to the placement of the majority of the Person-Years in the Services Program, its revenues also include of the recovery from other Public Works programs of the cost, of the staff involved in providing the professional, technical and operational services plus disbursements made by Service managers on behalf of other programs. The remaining expenditures related to other programs are charged directly to the respective program.

In the Services Program, recoveries of overhead, fees, any profit margin as well as revenues from outside parties, are shown as Non-Tax Revenue.

The revenue credited to the Accommodation Operating Vote represents recoveries from other departments and agencies who are required by legislation or government policy to pay for accommodation.

All other revenue for other Programs, primarily from outside parties, is shown as Non-Tax Revenue for the respective program.

Organization Structure

The Deputy Minister of Public Works is accountable for the management of the Department. The Departmental Executive Committee plays a key role in departmental decision making including the establishment of corporate priorities, approval of programs, the determination and allocation of financial and human resources, approval of departmental policies and the monitoring the implementation of its decisions. This Committee is composed of the Deputy Minister, ten senior headquarters managers reporting to the Deputy Minister and the six regional directors-general. In addition, as much of the departmental activity is carried out on a project basis, a formal Project Delivery System is used, with approval and monitoring of major projects the responsibility of the Corporate Projects Policy Committee, a sub-committee of the Departmental Executive Committee.

The management of Public Works Canada is subdivided into two basic categories:

Operational Management: consisting of the Assistant Deputy Minister, Operations and Regional Directors General, Regional Managers and their related staff. Their primary responsibility is to implement and deliver Executive Committee approved programs and projects.

Functional Management: consisting of the Assistant Deputy Minister, Realty, Assistant Deputy Minister, Design and Construction, Assistant Deputy Minister, Revenue Dependency, Director General, Corporate Affairs, Executive Secretary, Director, Public Relations and Information Services and their related staff. Their primary responsibilities are to develop professional/technical standards, guidelines, functional control procedures and criteria, maintain state of the art capabilities in these areas, and to maintain quality control at the planning, implementation and evaluation stages of projects and programs.

The Assistant Deputy Minister, Finance, the Director General, Personnel and the Fire Commissioner of Canada are in a special category as their roles are covered by legislation and central agency policies and regulations.

Most of the activity of the Department is carried out through the six regional offices located in Halifax, Montreal, Ottawa, Toronto, Edmonton and Vancouver. In addition, there are district offices located in St. John's, Charlottetown, Halifax, Saint John, Rimouski, Quebec, Montreal, Ottawa, Hull, London, Sault Ste. Marie, Thunder Bay, Winnipeg, Regina, Saskatoon, Calgary, Yellowknife and Whitehorse. See Figure 3 for a map of the regions.

Figure 2 shows the overall organization structure of the Department.

Land Transportation Program	65,956	84,711	(18,755)	(22.1)	6-6
Total Department	1,217,283	1,315,153	(97,870)	(7.4)	

For 1985-86 gross expenditures are expected to be $2,747 million with revenues totalling $1,529 million. See Figure 5 for further details.

Priorities

The Department will be pursuing four major priorities during 1985-86. In some cases the priorities will significantly alter the manner in which the Department carries out its responsibilities, and its relationships with other departments and agencies. The priorities are:

Restraint: which is being applied to all program areas (with substantial reductions in overhead) most specifically through the government's Expenditure and Program Review. As a result of the review, expenditures of the Department will be reduced by $34.8 million and revenues will increase by $40.7 million. In addition the Department will absorb the bulk of the effect of inflation on its programs estimated at $15 million.

Improved Management Practices: most of which are being carried out under the departmental IMPAC/Revenue Dependency Incremental Plan. In particular, the Department will extend direct cost charging to all clients of the Services Program, including other programs of the Department and will introduce several new computer based management systems including a new Financial Management System.

Improved Operational and Functional Performance: including the introduction of a new operational planning framework, program/ activity structure, accountability structure and an improved service relationship with all clients based on formally signed agreements with each one.

Support for Broader Government Objectives: including Official Languages, Affirmative Action, Economic Equality, accessibility, Energy Conservation and exploration of opportunities for cooperation with the provinces.

Each of these priorities is supported by one or more initiatives, the details of which are described in the respective Program Expenditure Plans in the following chapters.

Departmental Spending Plan by Organization

Figure 5 shows the expenditures, revenues and person-years for which each senior manager within the department is responsible.

Change in Program/Activity Structure

As noted earlier, a major change has been made in the program/activity structure for 1985-86. Following is a summary of the principal changes:

- The new Services Program includes the entire old Administration Program, a major portion of the Professional and Technical Services Program, all of the Construction Services Revolving Fund, Dredging and Fleet Services from the Marine Program, Canada Post operations from the Accommodation Program plus most of the staff from the remaining programs.

- The new Government Realty Asset Support Program combines designated properties and the Special Projects/Activity from the Accommodation Program, the Land Management and Development Program, the Municipal Grants Program, Technology, Fire Prevention and Emergency Preparedness from the Professional and Technical Services Program.

Figure 6 shows the relationship between the old and new Program/Activity structure using the amounts for 1984-85 Main Estimates.

Figure 6: 1984-85 Main Estimates Crosswalk

Old Structure	$000	P-Y	New Structure	$000	P-Y

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $158,263,000 in support of the 1985-86 Services Program. The remaining expenditures, estimated at $42,400 for the Minister's salary and motor car allowance will be made under existing statutory authority.

Parliament has previously authorized a total drawdown of $150,000,000 for the Public Works Revolving Fund. For the 1985-86 Estimates year the net cash requirements of the Fund will be met by appropriation.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85* Main Estimates

Section 1
Program Overview

A. Highlights

For 1985-86, the following goals have been established for the Services Program:

- implement the new Operational Planning Framework and operate the Program as a revolving fund on a direct cost recovery basis. All client departments and agencies and other Public Works Canada Programs utilizing the services will sign service agreements and be charged with the salaries and employee benefit costs of the human resource required, plus all associated disbursements made on their behalf (see page 2-32).

- implement a new computer-based financial management system, one of the significant milestones of the incremental plan for the introduction of improved management practices and in preparation for market rate charging for services (see page 2-32).

- generate $1,352.7 million revenues and recoveries including $465.9 million in internal charges for services provided to other Public Works programs (see page 2-7).

- carry out 3,731 realty projects for clients involving acquisitions, evaluations, surveys and disposals of real property, and process 3,267 applications for Municipal Grants (see page 2-18).

- provide realty management services for 8.3 million square metres of space primarily for the Accommodation Program and Canada Post Corporation (see page 2-21).

- provide architectural and engineering services required in the delivery of $903 million in value of construction and improvement projects (see 2-26).

- provide $17.5 million worth of dredging and related services in response to client demands (see 2-30).

B. Financial Summary by Activity

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86			Forecast 1984-85			
	Revenues	Expenses	Excess (Revenues) Expenses	Revenues	Expenses	Excess (Revenues) Expenses	For Details See Page
Real Estate Services	23,033	29,374	6,341	14,740	23,421	8,681	2-16

Architectural and Engineering Services	931,699	955,957	24,258	854,637	889,016	34,379	2-24
Dredging and Fleet Services	17,454	22,961	5,507	7,275	21,642	14,367	2-28
Corporate and Administrative Services	1,039	81,604	80,565	886	81,702	80,816	2-31
Total	1,352,690	1,510,995	158,305	1,191,330	1,370,853	179,523	
Add: Change in Working Capital Required			-			-	
Net Modified Cash Requirements			158,305			179,523	
Authorized Person-Years			8,323			8,575	

NOTES:
1. Revenues and Expenses include disbursements on behalf of, and recoveries from, clients totalling $1,146.4 million in 1985-86 and $1,019.6 million in 1984-85.
2. Revenues shown do not include an estimated annual amount of $20 million fees and recoveries of overhead which are credited to non-tax revenue.
3. 1985/86 Excess Expenses are made up of $75.7 million Corporate Overhead, $19.9 million Program Support, $51.1 million unbillable time and $11.6 million Capital Expenditures.

Figure 2: Net Change ($000)

	Estimates 1985-86	Forecast 1984-85	Change
Total Program	158,305	179,523	(21,218)

Explanation of Change: The financial requirements for 1985-86 are $21.2 million or 11.8% lower than the 1984-85 forecast expenditures. The net resource requirement reduction is due primarily to:

- implementation of various restraint measures as part of the government's Expenditure and Program Review ($ 7.1 million)
- provision for salaries and wages increases due to inflation $ 4.6 million
- increased revenue for services provided free to clients in previous years ($27.6 million)
- the increase in net resource requirement as a result of an increase in work load $ 8.9 million

Explanation of 1984-85 Forecast: The 1984-85 forecast (based on information available as of 31 October 1984) is $27.2 million or 17.9% higher than the 1984-85 Main Estimates of $152.3 million (Extracts from Part II of the Estimates, page 2-4). The increase is primarily due to:

• a reduction in revenue from Canada Post Corporation	$10.0 million
• the approval of the Dredge Fleet Capital Plan in Supplementary Estimates "B"	$ 5.7 million
• the approved funding transfer from Accommodation Program for acquisition of systems hardware and development of systems software	$11.5 million

Method of Financing:

In 1985-86 the Services Program is funded by:

- a statutory appropriation for the Minister's Salary and Motor Car Allowance;

- the Public Works Revolving Fund - Services and Management Account. Established under the authority of the Adjustment of Account Act 1980 (see Figure 29), the Account is charged with all operating expenses for the Program as well as disbursements on behalf of clients and credited with recoveries from client departments and agencies and other Public Works programs based on disbursements and project costs plus salaries and benefit costs of the employees involved.

- an appropriation to cover for the shortfall of the operation of the revolving fund. This provides for the costs not recoverable from client departments or other Public Works programs, the costs of program support, unbillable time and departmental overhead. Also included in the appropriation is an amount equal to the non-tax revenues (fees and recoveries of overhead) since these are not credited to the revolving fund.

- a capital appropriation for acquisitions of capital for the Program.

3203

C. Background

1. Introduction

The Services Program is a Common Services Program, operating within the Treasury Board Common Services Policy and serves a variety of clients including:

- Departments and Departmental Corporations listed in Schedules A and B of the Financial Administration Act, and branches designated as departments for purposes of the Act;
- Crown Corporations listed in Schedule C of the Financial Administration Act which choose to use Public Works Canada services;
- All other Programs of Public Works Canada;
- Organizations outside of federal government which qualify, within governmental and departmental policy, to receive Public Works Canada services.

The Program provides a wide range of professional, technical, operational and managerial services in the general categories of Real Estate Services, Realty Management, Architectural and Engineering and Dredging and Fleet Services. Services Program also includes Corporate and Administrative Services for all other programs of Public Works Canada itself.

2. Legal Mandate

The Public Works Act (sections 8 and 9) sets out the responsibilities of the Minister to provide engineering and architectural services and to direct the construction, maintenance and repair of public works placed under his management and control. Other statutory authorities include the Expropriation Act, the Surplus Crown Assets Act, the Public Lands Grants Act and the Adjustment of Accounts Act. In addition, a number of Treasury Board policies and regulations directly relate to the activities carried out by the Services Program. These include the Common Services Policy, the Government Contracts Regulations, Public Land Leasing and Licencing Regulations, Public Works Leasing Regulations, and the Government Land Purchase Regulations.

As the Services Program provides the management and administrative services for the department, these services are provided in accordance with a variety of Acts and central agencies' directives and policies which apply to all departments.

3. Program Objective

The objective of the Services Program is "to provide the professional, technical, and real property services required by federal government departments, agencies and other programs of the department for the construction, acquisition, management, operation and disposal of real property; and to provide the management and administrative services for the department".

4. Program Organization for Delivery

Activity Structure: The program is composed of the following five activities as shown in Figure 3.

Real Estate Services: To provide departments, agencies and other programs of the department with those real estate and related advisory services required for the evaluation, survey, acquisition, development and disposal of real property.

Realty Management Services: To provide departments, agencies and other programs of the department with those realty management and related advisory services required for the management, operation and maintenance of real property.

Architectural and Engineering Services: To provide departments, agencies and other programs of the department with those professional and technical and related advisory services required for the design, construction and project management of buildings, marine and land transportation facilities, and technology development.

Dredging and Fleet Services: To provide departments and agencies with dredging and the related fleet services.

Corporate and Administrative Services: To provide executive and general management, policy direction and administrative services for all departmental programs.

Figure 4 shows the relative resource allocation among the five activities. While more than half of the Services' person-years is allocated to Realty Management Services, 63.3% of the Program expenditures is in Architectural and Engineering Services. Both Real Estate and Dredging and Fleet Services are allocated only about 3% of the human resources and 2% of the Program expenditures.

Figure 3: Activity Structure

Figure 4: Services Program Resource Allocation by Activity

RES: Real Estate Services
RMS: Realty Management Services
AES: Architectural and Engineering Services
DFS: Dredging and Fleet Services
CAS: Corporate and Administrative Services

3507

Organization Structure: The Deputy Minister is directly accountable for ensuring that the objectives of the Program are achieved. The Assistant Deputy Minister, Operations is accountable for integrated and coordinated regional operations, maintaining good client relations and ensuring probity and prudence in contract administration. The Assistant Deputy Ministers, Design and Construction and Realty are responsible for the effective and efficient administration of their functions. The Assistant Deputy Minister, Finance is responsible for ensuring departmental compliance with the Financial Administration Act, ensuring the appropriate financial management systems and practices are in place in the department, providing the related functional direction and providing appropriate departmental information systems support. The Director General, Corporate Affairs is responsible for ensuring appropriate corporate and functional planning, policy formulation, evaluation, audit, and management consulting services to all departmental activities. The Director General, Personnel is responsible for ensuring compliance with governmental personnel regulations and policies and providing functional advice. The Executive Secretary is accountable for the provision of functional direction and advisory services on administrative services and materiel management support. The Regional Directors General are accountable for the efficient and effective management of their respective regions.

The effective and efficient delivery of the various services within Public Works Canada/Treasury Board approved plans, norms, policies and standards and within the functional guidance provided by the Assistant Deputy Ministers, Realty and Design and Construction, will be the direct responsibility of the Assistant Deputy Minister, Operations through the Regional Directors General.

The Assistant Deputy Ministers, Realty and Design and Construction are responsible for functional management which includes developing policies, procedures, systems and standards. In addition, these Assistant Deputy Ministers are responsible to provide advice to the Deputy Minister as to how to improve overall service performance and to provide quality consultation on relevant issues.

Figure 5 presents the Expenses, Revenues and Person-Years, by Activity, for which each member of the Executive Committee is responsible. The amounts shown for the Assistant Deputy Minister, Operations include the amounts for all Operational Management which is located at headquarters, in the six regional offices and in the various district offices across Canada.

D. Planning Perspective

1. Environment

The Public Works Services Program is a Common Services Program, thus responsible for responding to government-wide initiatives as well as the requirements of individual departments and agencies for its services in the most efficient and effective manner.

During 1985-86 the following significant factors will influence the resources needed for the Services Program:

- **Program Financing.** Starting 1 April 1985, the Program will be financed by means of a revolving fund and on a direct cost recovery basis. All client departments and agencies, as well as other Public Works Canada programs which utilize the services provided by the Services Program, will be charged for the services based on either existing agreements or on a direct cost recovery basis.

- **Client Relationships.** The implementation of the Common Services policy and the Client Relations policy greatly affects the relationship between the department and its clients. According to these policies, client departments and agencies and other programs of the department are responsible for deciding what services are required as well as where and when the services will be provided. Services Program as the services seller, has the responsibility for determining how the required services are to be provided and for managing the process to deliver them to clients' satisfaction and within government's policies and guidelines.

- **Relationship with Canada Post Corporation.** The department is working closely with the Corporation, one of the department's principal clients, seeking to reduce the costs of servicing the Corporation's holdings.

- **Government Restraint Measures.** Numerous restraint measures initiated by the government and from within the department will greatly affect the resource allocation to and within Services Program particularly in the areas of Program Support and Corporate and Administrative Services.

2. Initiatives

The following major initiatives are underway which significantly affect the operations of the Services Program:

- **Management Improvement.** The implementation of the departmental incremental plan will lead to a number of major improvements in management practices including development of a new financial management system, introduction of corporate and operational performance measures, expanded time reporting systems, and formal service agreements with clients (See page 2-32).

- **Development of Services Standards.** Approved standards, norms and levels of service have been developed for Architectural and Engineering Services and are being developed for the other Services using inputs from the respective industries to ensure compliance with market practices for the services provided.

- **Resource Restraint.** An internal restraint program has been introduced in response to the external program as well as to respond to the long term objective of self-sufficiency for the Services Program.

3. Program Effectiveness

As a Common Services program one of the measures of the success of the Services Program is the degree to which it recovers its costs. At the present time the general policy is to recover only the direct costs which can be readily identified with a client, either another department or agency, or another Public Works program. In 1985-86 it is expected that Services Program will recover 89.5% of its expenditures as compared to 86.9% in 1984-85. A second indicator of the performance of the Program is the extent to which its staff provide services to clients. In 1985-86 68.7% of the person-years are chargeable as compared to 60.2% in 1984-85.

Section II
Analysis by Activity

A. Real Estate Services

Objective

To provide departments, agencies and other programs of the department with those real estate and related advisory services required for the evaluation, survey, acquisition, development, and disposal of real property.

Resource Summary

This Activity represents 3.3% of the Program's person-years and 1.9% of the gross expenditure requirements.

Figure 6: Activity Expenses and Revenues ($000)

	Estimates 1985-86				Forecast 1984-85			
	Revenues	Expenses	Excess Expenses	P-Y	Revenues	Expenses	Excess Expenses	P-Y
Real Estate Services	7,777	10,605	2,828	225	4,404	9,454	5,050	225
Program support	-	3,513	3,513	51	-	3,631	3,631	56
Sub Total	7,777	14,118	6,341	276	4,404	13,085	8,681	281
Disbursements on behalf of clients	15,256	15,256	-	-	10,336	10,336	-	-
	23,033	29,374	6,341	276	14,740	23,421	8,681	281

Salaries, employee benefit plan contributions and other personnel costs make up $12.5 million or 42.7% of the expenses of this Activity in 1985-86.

Description

This Activity provides for a variety of realty services to other departmental programs and other government departments and agencies relating to the appraisal, acquisition, development and disposal of

real property. The services provided under this Activity can be classified as follows:

Property Acquisition: This includes the acquisition of property by purchase, lease, expropriation, exchange, transfers of administration and control and the obtaining of licenses.

Property Appraisal: This includes carrying out the appraisal of property designated for acquisition or disposal or to allow the property interests to be leased.

Survey: This includes land or property surveys used in the acquisition, disposal or leasing of property, topographical surveys, hydrographical surveys, airport zonings, and building surveys required under condominimum or air right legislation.

Property Investment Analysis and Development: This includes such items as real estate investment analysis, cost benefit, feasibility studies, land use studies, market surveys, analysis of lease/purchase proposals, analysis of development proposals, Federal Land Management studies, Area Screening studies, Asset Management studies and other related investment and financial studies and analyses.

Property Disposal: This includes the services required in the disposal of property by sale, lease, exchange, transfer of administration and control, the granting of licenses and the demolition of structures (buildings, wharves, etc.).

Municipal Grants: This includes the services required for the determination and payment of grants in lieu of taxes to be paid by the department under the Government Realty Assets Support Program on behalf of federal departments and agencies as well as those grants paid by Crown Corporations and the Department of External Affairs. (See the Government Realty Assets Support Program for the payments to the municipalities.)

Property Control: This includes the maintenance of the Crown Real Property and Land Inventory systems which record basic data on all lands and improvements owned or leased by the Federal Government.

Program Support: This includes the management and administrative support staff necessary to direct, control and provide administrative support for this Activity as well as for Crown Corporations reporting to the Minister of Public Works.

Performance Information/Resource Justification

The output of this Activity is a large number of different units or projects of different magnitude which are related directly to each

type of services provided. Figure 7 presents the expected volumes of each and overall total.

Figure 7: Business Volumes

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Number of acquisitions	880	965	599
Number of evaluations	1,288	1,816	1,486
Number of surveys	1,014	1,042	997
Number of disposals	549	524	541
Number of Municipal Grants applications	3,267	3,000	2,889
Total Number of Projects	6,998	7,347	6,512

Revenue: The revenue for this Activity consists of recovery of salaries and employee benefit costs and project expenditures incurred in the provision of services to client departments and agencies and other programs of the department. Figure 8 sets out the expected revenue by source and the number of person-years utilized in providing those services. The significant increase in the percentage of cost recovery and the percentage of chargeable time is the result of the introduction of direct cost charging for all services provided to client departments and agencies.

Figure 8: Revenues and Recoveries By Source ($000)

	Estimates 1985-86		Forecast 1984-85	
	$	P-Y	$	P-Y
Other Departments and Agencies	8,931	79	228	5

	23,033	182	14,740	108
Percentage of Cost Recovery	78.4%		62.9%	
Percentage of Person-Years Chargeable		65.9%		38.4%

B. Realty Management Services

Objective

To provide departments, agencies and other programs of the department with those realty management and related advisory services required for the management, operation and maintenance of real property.

Resource Summary

This Activity represents 56.9% of the Program's person-years and 27.9% of gross expenditure requirements.

Figure 9: Activity Expenses and Revenues ($000)

	Estimates 1985-86				Forecast 1984-85

	379,465	421,099	41,634	4,733	313,792	355,072	41,280	4,876

Salaries, employee benefits plan contributions and other personnel costs make up $164.2 million or 39.0% of the expenses of this Activity in 1985/86.

Description

This Activity provides for the services to other departmental programs and federal departments and agencies related to the management, operation, and maintenance of real property. The following four types of services are provided by this Activity:

Property Management: This includes the services required for the management of Crown accommodation to acceptable standards of effectiveness, efficiency and economy; the development of strategies, policies and guidelines for efficient management of assets; implementation of federal government programs such as energy conservation, federal identity, accessibility for the handicapped, etc; and the management and administration of tenant occupancy agreements and agreements governing the provision of a full range of tenant services including planning, alterations during occupancy, food and security services, parking, etc.

Operational and Technical: This includes the provision of all services necessary to operate and maintain and protect accommodation (land, buildings and related plant facilities) to acceptable standards of cleanliness, utility and efficiency, ensuring the health, safety and comfort of occupants and the general public; the development of strategies, policies and guidelines together with the provision of technical advisory and other support services to ensure that new assets are planned and built to standards which will permit the building operating and maintenance function to be effectively and efficiently carried out, and existing assets can continue to perform effectively and economically the function for which they were originally provided through the full life of these investments.

Accommodation Services: This includes the provision of space leasing, letting and marketing expertise. It also includes the provision of related and supportive services such as development of recommended rental rates and fee schedules; the implementation of special programs for space optimization, the development of accommodation strategies, policies and guidelines; the implementation of services related to parking, retail food services, moving, housing and conference facilities; the management of the computerized Facilities Information System related to accommodation assets, and accommodation advisory services to central agencies and other government departments.

Program Support: This includes the management and administrative support staff necessary to direct, control and provide administration support for this Activity.

Performance Information/Resource Justification

Performance Information: This Activity has two major clients, the Accommodation Program and the Canada Post Corporation. However, in both cases the principal output is the same i.e. space operated and maintained on behalf of clients.

Figure 10 depicts the growth in the space operated and maintained for the Accommodation Program and Canada Post Corporation. Included in the square metre figures are all Public Works and Canada Post Corporation inventories except for Goose Bay, Surplus Properties and properties under Management Agreements other than Canada Post Corporation (e.g. RCMP).

Figure 10: Total Space Operated and Maintained (000 Square Metres)

Figure 11 shows the average number of square metres of total inventory managed per person-year utilization. Included in the person-year figures are those for the administration, management, operation and maintenance of the inventory. The person-years dedicated to Goose Bay, Surplus Properties, Management Agreements other than with Canada Post Corporation, minor projects and advisory services are excluded.

Figure 11: Square Metres Operated and Maintained per Person-Year

Revenue: The revenue of this Activity consists of recoveries from client departments and agencies and other programs of the department the project costs incurred plus salaries and employee benefit costs of the staff involved in providing the services. Figure 12 summarizes the total revenue by source and indicates that the introduction of direct cost charging results in improvements in both percentages of cost recovery and person-years chargeable in 1985-86.

Figure 12: Revenues and Recoveries by Source ($000)

Percentage of Person-Years Chargeable		84.6%		80.8%

C. Architectural and Engineering Services

Objective

To provide departments, agencies and other programs of the department with those professional and technical and related advisory services required for the design, construction and project management of buildings, marine and land transportation facilities, and technology development.

Resource Summary

This Activity represents 18.0% of the Program's person-years and 63.3% of the gross expenditure requirements.

Figure 13: Activity Expenses and Revenues ($000)

	931,699	955,957	24,258	1,499	854,637	889,016	34,379	1,551

Salaries, employee benefit plan contributions and other personnel costs make up $72.4 million or 7.6% of the expenditures of this Activity in 1985-86.

Description

This Activity provides for architectural and engineering services to other programs of the department, other federal departments and agencies primarily on a project or a specific facility basis. These services include:

- the management of the professional and technical services and special services including planning, organizing, staffing, directing and controlling in order to deliver products within defined parameters such as time, cost, scope, quality;

- the provision of architectural, landscape architectural, urban design, office planning, interior design, civil, structural, mechanical and electrical engineering and other specialist services in support of the planning, design and construction of products or for technological development;

- the provision of managerial resources to enable economical and efficient operation and maintenance of the fixed assets (e.g. bridges, dry docks, locks, dams);

- the provision of resources for the direct management of construction projects i.e. the Prime Contractor role; and

- the provision of supporting tradesmen, operators, and labourers as required.

This Activity is made up of the following product lines:

Buildings: This includes office, special purpose and miscellaneous buildings.

Marine: This includes marine structures, channels, equipment, dry docks, locks and dams and other marine works.

Transportation: This includes highways, bridges, retaining walls and related works.

Technology Development: This includes the development of standards and the undertaking of research and development.

Program Support Services: This includes the managerial personnel and support staff to direct, control and provide the administrative support for the activity.

Performance Information/Resource Information

The work of the staff in this Activity is primarily carried out on a project basis. Thus, the resources required and the performance of the Activity are related to the number and value of projects undertaken on behalf of clients. Figure 14 shows the percentage of the Activity staff chargeable to clients and Figure 15 depicts the growth of the Activity workload as measured by total construction values in millions of constant 1982/83 as well as current dollars and net of site and consultant costs. The workload peaked in 1984/85 due to the Special Recovery Capital Projects Program which is currently in the process of completion in 1985/86.

Figure 14: Percentage of Person-Years Chargeable

Figure 15: Level of Construction Workload
Millions of Dollars

Revenue: The revenue for this Activity consists of the recovery of directly identifiable costs (including salaries) and disbursements which can be attributed to projects undertaken on behalf of client departments and agencies. In addition, the project costs incurred and salaries and employee benefit costs utilized in the provision of services to other Public Works programs are recovered from these programs. Figure 16 sets out the revenues and the number of recoverable person-years by source. The introduction of direct cost charging in 1985-86 results in a large increase in the percentage of the Architectural and Engineering person-years recoverable. The cost recovery ratio, however, only increases slightly. This is mainly due to the offset effect of a reduction in project costs incurred on behalf of non-federal government clients and for the Land Transportation Program as a result of the completion of the Phase I Banff Highway in 1984-85.

Figure 16: Revenues and Recoveries by Source ($000)

D. Dredging and Fleet Services

Objective

To provide departments and agencies with dredging and the related fleet services.

Resource Summary

This Activity represents 3.3% of the Program's person-years and 1.5% of the gross expenditure requirements for 1985-86.

Figure 17: Activity Expenses and Revenues ($000)

	Estimates 1985-86				Forecast 1984-85			
	Revenues	Expenses	Excess Expenses	P-Y	Revenues	Expenses	Excess Expenses	P-Y
Dredging and Fleet Services	17,454	17,454	-	277	7,275	15,933	8,658	277
Fleet Replacement Plan	-	5,507	5,507	-	-	5,709	5,709	-
	17,454	22,961	5,507	277	7,275	21,642	14,367	277

Salaries, wages, employee benefit plan contributions and other personnel costs make up $11.3 million or 49.2% of the expenditures of this Activity in 1985-86.

Description

This Activity provides for dredging and related fleet services to departments and agencies including the management, acquisition, operation and maintenance of floating marine equipment consisting of dredge plant, work boats and other support craft and related shore based plant and equipment. The Activity encompasses the following product lines:

Dredging: This includes the underwater excavation and disposal of material from navigation and approach channels, harbours and berths through the provision and operation of departmental dredge plant.

Facilities Maintenance: This includes the maintenance of wharves and other marine structures, in areas where private contractor services are not available, through the provision of self contained workboats and skilled tradesmen.

Other Fleet Services: This includes the removal of obstructions to navigation such as floating logs and deadheads, obsolete structures and the provision of survey launches and crews to assist in the surveying of navigable waters and miscellaneous services such as emergency oil spill clean-ups which require the use of floating plant.

Floating Marine Equipment Acquisition: This includes the acquisitions and major capital improvements to the dredges and related equipment.

Shore Based Plant Acquisition: This includes the acquisitions and major capital improvements to the wharves and other shore based facilities.

Program Support: This includes the management and administrative support staff necessary to direct, control and provide administrative support for this Activity.

Performance Information/Resource Justification

Performance Information: For Dredging Services, an indicator which could be used to measure work load is the number of cubic metres dredged with the unit cost per cubic metre being an indicator for the Activity's efficiency. For dredging fleet and equipment, indicators such as numbers of operational hours and cubic metres dredged per operational hour could be used to measure the fleet's productivity. However, in the case of the services provided under Dredging and Fleet Services Activity, most of the work done is either on remote marine structures not easily accessible by road or of such a small scale and far apart that the work could not feasibly be done by outside contractors (Dredging contracts are currently reported under Architectural and Engineering Services rather than under Dredging and Fleet Services. This practice of reporting dredging contracts is currently under departmental review). Consequently various macro indicators mentioned above do not take into account the particular nature of the services provided by Dredging and Fleet Services Activity and hence could not be used without further modification and careful interpretation. Specific norms and standards are being developed and once finalized will better serve as a linkage between the Activity's workload and performance.

Revenue: This Activity has two major clients: Transport Canada and Fisheries and Oceans. In previous years, dredging services provided to Fisheries and Oceans were non-recoverable. Starting 1 April 1985, both clients will reimburse Public Works Canada with the total directly related salary and project costs incurred on their behalf.

Figure 18: Revenues and Recoveries by Source ($000)

E. Corporate and Administrative Services

Objective

To provide executive and general management, policy direction and administrative services for all departmental programs.

Resource Summary

This Activity represents 18.5% of the Program's person-years and 5.4% of the gross expenditure requirements.

Figure 19: Activity Expenses and Revenues ($000)

	Estimates 1985-86				Forecast 1984-85			
	Revenues	Expenses	Excess Expenses	P-Y	Revenues	Expenses	Excess Expenses	P-Y
Executive Offices	-	2,401	2,401	44	-	2,298	2,298	44
General Management	1,039	79,203	78,164	1,494	886	79,404	78,518	1,546
	1,039	81,604	80,565	1,538	886	81,702	80,816	1,590

Salaries, employee benefit plan contributions and other personnel costs make up $57.5 million or 70.5% of the cost of this Activity in 1985-86.

Description

This Activity provides for the general departmental management, policy direction, and administrative support services for all departmental programs and is divided into the following sub-activities:

Executive Offices: This includes the cost of executive direction to the department in order to ensure the accomplishment of the departmental mission and adherence to government priorities. This direction is provided by the Offices of the Minister, Deputy Minister, Assistant Deputy Ministers, Executive Secretary, Directors General of Personnel and Regional Directors General.

General Management Services: This includes the cost of general management, policy formulation and implementation, and common support services to all departmental programs. The services provided include financial, administrative, personnel, management information, corporate planning, evaluation and review, management consulting, operational planning and control services, and public relations and information services.

Performance Information/Resource Justification

The expected result of this Activity is the accomplishment of the department's mission through the efficient and effective direction of departmental programs in accordance with departmental or government priorities. In addition, efficient and effective departmental, administrative, financial and personnel practices are expected.

In 1985-86 it is expected that the following major achievements in the Management Improvement Plan will be carried out using the resources allocated to this activity:

- introduction of the new Operational Planning Framework and the financing of the Program by means of a revolving fund which will charge all clients for services rendered, based on either existing service agreements or direct cost recovery.

- introduction in regional offices of a revised accountability structure which clearly distinguishes between the "Service Provider": the Services Program and Branches and the "Client" or "Owner" roles, i.e. Program Planning and Control as described in the Common Services Policy.

- implementation of a new computer based Financial Management System.

- introduction of the corporate and operational performance reporting for most activities of the department.

- development of signed agreements with all clients for the services which they will require from this Program.

The resources required to perform these functions should ideally be based on norms and quality of service standards. However, as such do not exist it has been decided that two ratios be established with year to year comparisons being used to assess the resource requirements for

this Activity. These two ratios are, the dollars expended on this Activity to the total for the department, and the person-years to those for the department. Figures 20 and 21 show those ratios.

Figure 20: Corporate and Administrative Costs as a Percentage of Gross Departmental Expenditures

Figure 21: Corporate and Administrative Person-Years as a Percentage of Departmental Person-Years

Revenue: The revenue for this Activity represents the recoveries of salary costs of staff who are dedicated to the administrative support of specific projects funded by clients.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures and Revenues by Object

The Services Program Expenditures and Revenues by Object are presented in Figure 22. They include the cost of the salaries and employee benefits for the majority of the staff of the department, their related expenses along with the expenditures incurred on behalf of clients which are to be temporarily financed by the Revolving Fund prior to recovery from the client.

Figure 22: Expenditures and Revenues by Object ($000)

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at 31 October 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Internal Charges for Services Provided to Other Public Works Programs

The Estimates of the department reflect the placement of the majority of the person-years in the Services Program. Other Public Works programs, like government departments, are treated as clients (as defined in the Common Services Policy). Other Public Works programs generally include person-years for direct program management only.

The following Figure 24 summarizes the amount of the internal charges for services provided by each Activity and the number of person-years involved in providing such services.

Figure 24: Summary of Internal Charges by Activity ($000)

	Estimates 1985-86		Forecast 1984-85	
	$	P-Y	$	P-Y
Real Estate Services	14,102	103	14,512	103

Other Expenses					
Corporate and Administrative Services (net)					75,701
Net Expenses for the year					146,644

Note: Amounts shown do not include:

1) Services provided without charge from Department of Labour ($.9 million), Supply and Services ($.9 million) and Accommodation Program ($28.4 million)
2) An estimated amount of $20 million fees and recoveries of overhead which are credited to non-tax revenue.
3) Disbursements on behalf of clients totaling $1,146.4 million.
4) Minister's salary and allowance $42,400
5) Capital expenditure totalling $11.6 million

2. Projected Use of the Revolving Fund Authority

It is expected that on the basis of planned operation the charges to the Public Works Revolving Fund - Services and Management Account will exceed the credits by $146.6 million during 1985-86. To provide sufficient authority for the continued operation of the Account a subsidy appropriation is being sought for that amount. Figure 29 shows the use of the Account's authority during the year.

Figure 29: Projected Use of the Revolving Fund Authority ($000)

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $604,647,000 in support of the 1985-86 Accommodation Program. The remaining expenditures, estimated at $746,000 for contributions to employee benefit plans will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85* Main Estimates
	Accommodation Program		
10	Operating expenditures	**468,261**	447,408
15	Capital expenditures	**136,386**	145,650
(S)	Contributions to employee benefit plans	**746**	640
	Total Program	**605,393**	593,698

* A new Program/Vote structure is being introduced in 1985-86. (The 1984-85 amounts have been adjusted to reflect the revised structure.)

Program Planning and Control	130	20,485		20,485	-	20,485	13,636
	130	645,729	136,386	782,115	176,722	605,393	593,698

* A new Program/Activity structure is being introduced in 1985-86. (The 1984-85 amounts have been adjusted to reflect the revised structure.)

Section I
Program Overview

A. Highlights

For 1985-86, the following goals have been established for the Accommodation Program:

- to provide 5.9 million square metres of office and other space in response to the requirements of client departments and agencies (see page 3-13);

- to operate and maintain 3.3 million square metre-years of Crown- owned space at a cost of $215.4 million (see page 3-17), 2.1 million square metre-years of leased space at a cost of $319.9 million (see page 3-20) and .5 million square metre-years of lease-purchase space at a cost of $89.9 million (see page 3-23);

- to carry out space optimization projects on 126,000 square metres of space (see page 3-26);

- to undertake major improvement projects including energy retrofits and fire safety improvements (see page 3-16);

- to bring into service 30 thousand square metre-years of new Crown-owned and lease-purchase space (see page 3-16).

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86			Forecast 1984-85			
	Expen.	Revenue Credited to Vote	Net Expen.	Expen.	Revenue Credited to Vote	Net Expen.	For Details See Page
Assets Provision and Improvement	136,386	-	136,386	137,150	-	137,150	3-14
Crown Properties	215,391	98,574	116,817	211,517	98,729	112,788	3-17
Leased Properties	319,902	74,502	245,400	304,662	65,445	239,217	3-20
Lease - Purchase Properties	89,951	3,646	86,305	83,388	2,043	81,345	3-23
Program Planning and Control	20,485	-	20,485	30,493	-	30,493	3-25
	782,115	176,722	605,393	767,210	166,217	600,993	
Authorized Person-Years		130				130	

Figure 2: Change in Net Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Change
Total Program	605,393	600,993	4,400

Explanation of Change: The financial requirements for 1985-86 are 0.7% or $4.4 million higher than the 1984-85 forecast expenditures. This increase is primarily due to:

• increase due to cashflow adjustments to approved capital projects (Sydney, Chicoutimi and others)	$6.5 million
• adjustment for Departmental occupancy in Canada Post Corporation buildings	$4.5 million
• increase for expansion lease space	$2.0 million
• increase due to allowance for inflation	$2.7 million
• net increase for other volume/workoad items	$10.8 million
• decrease in exependitures as part of the Government's Expenditure and Program Review	($22.1 million)

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to managers as of October 31, 1984) is $7.3 million more than the 1984-85 Main Estimates of $593.7 million (Extracts from Part II of the Estimates, page 3-5). The difference of $7.3 million reflects the following Major offsetting items:

• increase in lease cost of major new building (Centennial Towers) coming into full service during the year	$16.9 million
• increased activity for space optimization	$ 6.9 million
• increase for fit-up and other costs associated with the relocation of various Government Departments for the purpose of consolidating the Department of Finance, Treasury Board and the Office of the Comptroller General	$10.0 million
• decrease for transfer of funding to the Services Program for the acquisition of systems hardware and development of systems software	($11.5 million)
• decrease due to transfer of payments for the Canada Lands Company for Vieux Port du Quebec to Government Realty Assets Support Program	($ 3.5 million)
• decrease in leasing as part of Government expenditure reductions	($11.5 million)

3-8 (Accommodation Program)

C. Background

1. Introduction

The Accommodation Program is a Common Services Program. Its prime purpose is to provide and maintain a comprehensive and cost effective portfolio of space to meet the accommodation needs of other government departments and agencies, other Public Works programs and other clients. The Program includes provision for improvements to existing space and acquisition of new space.

2. Legal Mandate

Under the provisions of the Public Works Act, the Department is responsible for the "management, charge, and direction of federal buildings and properties not under the jurisdiction of other departments" and "the heating, maintenance and keeping in repair of the government buildings and any alterations from time to time therein and the supplying of furniture or fittings or repairs to those buildings".

The Treasury Board, through several policy pronouncements has made PWC responsible for planning for and fulfilling government requirements for accommodation in response to the requirements of federal departments and agencies.

3. Program Objective

The objective of the Accommodation Program is "to provide accommodation required by federal government departments and agencies".

4. Program Organization for Delivery

Activity Structure: The Accommodation Program is composed of five activities. Figure 3 illustrates the Activity structure.

Figure 3: Accommodation Program-Activity Structure

Organization Structure: The manager with the responsibility for the achievement of the results, within Public Works Canada/Treasury Board approved programs and projects, standards, policies, terms and conditions is the Assistant Deputy Minister, Operations through the Regional Directors General. The Assistant Deputy Minister, Realty also provides functional management including provision of advice on investment planning, realty business development standards, policies systems, operating and maintenance standards, and plans and in the monitoring of results in relation to them. The Assistant Deputy Minister, Design and Construction, provides functional management on accommodation project development, design and delivery. The Assistant Deputy Minister, Finance, provides functional management on portfolio financial performance and financial control. The Director General Corporate Affairs, provides functional management on the Government's priorities and broader socio-economic objectives. The resources by organization are shown in Figure 4.

Figure 4: 1985-86 Resources by Organization/Activity ($000) and Person-Years

D. Planning Perspective

1. Environment

The Accommodation Program represents Public Works Canada's management of the Accommodation Portfolio assigned to it to meet the accommodation needs of most departments and agencies of the federal government within the context of the Treasury Board's Common Services Policy.

The following factors will significantly influence the Program and the resources allocated to it during 1985-86:

- the Government's ongoing efforts of restraint generally as well as a number of specific directives on administrative restraint;

- the Departmental IMPAC/Revenue Dependency Incremental Plan which will result in major improvements in management practices in the areas of accommodation, financial and corporate management and the establishment of the required infrastructure to permit charging all clients for accommodation and services;

- the recently introduced policy of the Treasury Board which establishes clearly the roles of service and control expected of the Department as a Common Service organization;

- the trend for several years to restricted funding for new capital which has resulted in a major growth in the use of leased space. Many of these leases will expire during 1985-86 and must be replaced by new leases at higher rates; and

- office space is expected to grow at least at the same rate as the overall growth in the public service, approximately 0.5% a year, while non-office space will grow at a rate required to meet client program requirements, approximately 2-3% a year over the long term.

2. Initiatives

Faced with these challenges and the priorities established for the Department, the following major initiatives affecting the Accommodation Program will be undertaken, or will continue in 1985-86:

- **The Program/Activity Structure**, as shown in this Plan, a revised accountability structure and the "owner" role, as applied to the Accommodation Portfolio, will be introduced.

- **Major Management Improvements** such as a revised computer-based Facilities Information System which will contain validated records of space occupied by all clients was

approved by Treasury Board with the introduction of an Incremental Plan. This will serve as the basis for formalized occupancy agreements and ultimately the base for charging for such space. Other improvements underway include an accommodation management information system, classification of buildings and optimizing space utilization savings;

- **Major Projects** are underway to renovate present Crown-owned properties, to extend their economic life as well as to meet the Governments objectives on energy conservation, improved safety and fire standards;

- **A Long Range Accommodation Investment Strategy** and a complimentary Long Term Capital Plan are being developed for Treasury Board and Cabinet approval. These documents will provide the framework for future capital and operating plans to ensure that the Accommodation Portfolio is adequate to meet client needs by providing for the protection, modernization and renovation of the existing Crown-owned inventory, satisfy incremental demand for office and non- office space, and over the long term increase the level of Crown-owned office space.

- **Restraint** measures arising out of the Government's Expenditure and Program Review have affected this Program. This includes delays to, reductions to or elimination of several major capital projects. In addition, this program is expected to absorb the effects of inflation as well as increases to expected revenues of $9.0 million for parking and $0.5 million for commercial leases.

3. Program Effectiveness

As a Common Services Program, the effectiveness of the program must be judged in terms of the extent to which client satisfaction has been achieved as well as the extent to which the services have been provided with regard to maximum value for money. This could be measured by the amount of space provided to meet client space requirements while minimizing vacant space.

The principal output of the program is total space provided for clients. Figure 5 depicts the trend of total space available expressed in thousands of square metre-years. Figure 6 shows the proportion of that space not occupied by clients. Space figures may be expressed both in square metres and square metre-years. Square metre-years represent "the quantity of rentable square metres and the period of time which the space is in service during the fiscal year". For example, if 500 square metres of leased space were in service for the whole year, this means that there were 500 square metre-years of space being utilized. However, if the same space was in service for only six months, 250 square metre-years would have been utilized.

Figure 5: Total Space - 000^2 metre-years

	1983-84	1984-85	1985-86
– Leased	1949	2088	2131
– Lease-Purchase	374	438	464
– Crown-owned	3230	3253	3270
– Total	5553	5779	5865

Figure 6: Vacant Space - 000^2 metre-years

Note: A new Facilities Inventory System (FIS) has been developed and final space validation is being confirmed with clients.

Section II
Analysis by Activity

A. Assets Provision and Improvement

Objective

To provide new Crown-owned facilities and/or improvement to current Crown-owned facilities and supporting infrastructure, including lease-purchase infrastructure, to meet client requirements.

Resource Summary

This Activity accounts for 17.5% of the expenditures of the Program for 1985-86.

Figure 7: Activity Expenditures ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Assets Provision and Improvement	136,386	-	137,150	-	103,569	-

Description

This Activity consists of a number of capital projects, each of which results in the provision of new or improved buildings, including lease-purchase infrastructure, which form part of the Public Works Canada Accommodation Portfolio. These buildings are primarily to provide accommodation to departments and agencies of the federal government. It includes the costs of land and development fees as well as the costs of the buildings and equipment added or improvements to present buildings. In addition, it includes the cost of the salaries and employee benefits of the professional, technical and operational staff of the Department involved directly in the various projects.

A formal project delivery system is used to control all projects, from their inception to post-implementation evaluation with each project representing a discrete Departmental or Treasury Board decision.

The various projects are grouped by the type and size of building to which they relate:

Major Office Buildings: which are equal to or larger than 2300 square metres and primarily provide office accommodation.

Small Office Buildings: which are less than 2300 square metres and primarily provide office accommodation.

Special Purpose Buildings: which provide accommodation for non-office functions such as laboratories, warehouses, conference centres or processing plants.

Miscellaneous Buildings: which are assets or buildings which cannot be classified in either the office or special purpose categories.

Performance Information/Resource Justification

This activity is made up of a number of multi-year projects whose costs are being incurred during all phases of the delivery of the project. Thus, costs incurred in any one year cannot be directly related to the amount of accommodation space made available in the same year.

In 1985-86 these expenditures are for the following types of projects:

Figure 8: Project Expenditures ($000)

Type of Project	1985-86	1984-85
New Construction - Crown-owned and site acquisition for Lease-Purchase	49,104	52,864
Major improvements, fire and safety retrofits	61,046	51,216
Energy conservation and thermography	8,100	8,965
Decentralization	5,181	7,706
Minor improvements	11,000	10,400
Equipment	1,520	3,061
Other	435	2,938
	136,386	137,150

Included above is $8.3 million for services provided by the Services Program in 1985-86.

A list of the individual Major Projects is shown in Figure 21 under the Supplementary Information starting on page 3-30.

Figure 9 depicts the actual cost of new space (i.e. 30,000 square metre-years) brought into use year over year. Figure 10 shows the calculated cost of improvements in relation to the total inventory of Crown-owned facilities. The cost of improvements is made up of major improvements, fire and safety retrofits, minor improvements and energy conservation.

Figure 9: Cost per m^2y of new space brought into use.

Figure 10: Cost of Improvements

B. Crown Properties

Objective

To operate and maintain Crown-owned facilities and supporting infrastructure to meet the accommodation requirements of clients.

Resource Summary

This activity accounts for 27.5% of the total expenditures of the Program in 1985-86.

Figure 11 presents the expenditures and revenues for the Activity. At present only a limited number of clients are charged for accommodation as required by either specific legislation or government policy. Recoveries from outside parties are treated as Non-Tax Revenue.

Figure 11: Activity Expenditures and Revenue ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Crown Properties	215,391	-	211,517	-	194,218	-
Less: Revenue Credited to the Vote	98,574	-	98,729	-	98,495	-
	116,817	-	112,788	-	95,723	-

Of the Total Expenditures in 1985-86, $78.4 million is for charges for services provided by the Services Program. The remaining $137.0 million is for other goods and services required.

Description

This Activity provides the funding required for the maintenance and operation of Crown-owned facilities forming part of the Public Works Canada Accommodation Portfolio, including the provision of on site supervision, heat, light, power and ventilation, custodial and cleaning services, the carrying out of cyclic maintenance and repair projects.

The professional, technical and operational personnel to manage and operate the various buildings are provided by the Services Program with this Activity being charged the cost of their salaries, wages and related employee benefits.

The Activity, like the Accommodation Portfolio, is subdivided by type of space as follows:

Major Office Buildings: which are equal to or larger than 2300 square metres, and primarily provide office accommodation and the other space in the building in support of the office function.

Small Office Buildings: which are smaller than 2300 square metres, primarily to provide office accommodation.

Special Purpose Buildings: which provide accommodation for non-office functions such as laboratories, warehouses, conference centres or processing plants, and the other space in the building in support of those functions.

Miscellaneous Buildings: which are assets or buildings, including housing, which cannot be classified in either the office or special purpose categories.

Performance Information/Resources Justification

In 1985-86, it is expected that this Activity will provide for approximately 3.3 million square metres of Crown-owned space plus housing. Figure 12 presents the expected space to be managed for the total portfolio.

Figure 12: Crown-owned Space (000^2 metre-years)

The $215.4 million of resources required for this activity for 1985-86 are determined on the basis of funding for office space, special purpose office and non-office space, laboratory space etc.

C. Leased Properties

Objective

To lease, operate and maintain leasehold facilities to meet the accommodation requirements of clients.

Resource Summary

This Activity accounts for 40.9% of the total expenditures of the Program in 1985-86.

Figure 13 presents the revenues and expenditures for this Activity. At present a limited number of clients are charged for accommodation as a result of specific legislative or government policy requirements. Recoveries from outside parties are treated as Non-Tax Revenue.

Figure 13: Activity Expenditures and Revenues ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Leased Properties	319,902	-	304,662	-	258,510	-
Less: Revenue Credited to the Vote	74,502	-	65,445	-	59,493	-
	245,400	-	239,217	-	199,017	-

In 1985-86, of the total, $305.7 million or 95.6% is for payments to lessors under leasing arrangements. Charges by the Services Program total $4.24 million.

Description

This Activity provides the funding to obtain and manage leasehold facilities, forming part of the Public Works Canada Accommodation Portfolio. It includes all funds required for the payment of annual contract rent and escalations, operations and maintenance for net leases, and fit-ups.

Public Works Canada personnel to manage, and operate the various leasehold properties are provided by the Services Program with this Activity being charged with the cost of the related salaries and employee benefits.

This Activity is subdivided by type of space as follows:

Office Space: which is to provide office accommodation and other space in the lease in support of the office function,

Special Purpose Space: which is to provide accommodation for non-office functions such as laboratories, computer, conference centres, warehouses or processing plants and other space in the lease in support of those functions.

Miscellaneous Space: which is to provide for a variety of functions which cannot be classified in the office or special purpose categories.

Performance Information/Resource Justification

In 1985-86, it is forecast that this Activity will provide 2,131,000 square metre-years of space. This represents an increase of 43,000 square metre-years over 1984-85 requirements. Figure 14 presents the leased space to be managed.

Figure 14: Leased Space (000^2 metre-years)

The $319.9 million of resources required for this activity for 1985-86 are determined on the basis of funding for existing leased space and new leased space (renegotiated or replacement space), fit-up costs of this space, operating costs etc.

D. Lease-Purchase Properties

Objective

To make annual payments, operate and maintain lease-purchase facilities to meet the accommodation requirements of clients.

Resource Summary

This Activity accounts for 11.5% of the total expenditures of the Program in 1985-86.

Figure 15 presents the expenditures and revenues for the Activity. At present only a limited number of clients are charged for accommodation as required by specific legislation or government policy. Recoveries from outside parties are treated as Non-Tax Revenue.

Figure 15: Activity Expenditures and Revenues ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Leased-Purchase Properties	89,951	-	83,388	-	68,441	-
Less: Revenue Credited to the Vote	3,646	-	2,043	-	-	-
	86,305	-	81,345	-	68,441	-

In 1985-86, of the total, $88.2 million or 98.2% is for payments under lease-purchase arrangements, operations and maintenance costs and taxes. Charges by the Services Program total $1.7 million.

Description

This Activity includes the funding required to obtain and manage lease-purchase facilities forming part of the Public Works' accommodation portfolio. In addition to the payments under these agreements, it

M 59

includes other costs necessary to maintain and operate certain facilities. Fit-ups to lease-purchase facilities are also funded under the Activity. Any contributions to infrastructure is provided for under the Asset Provision and Improvement Activity.

The Public Works Canada personnel to manage and operate the lease-purchase properties are provided by the Services Program with this Activity being charged with the cost of the related salaries and employee benefits as well as direct operating costs.

This Activity, like the Accommodation Portfolio, is subdivided by type of space, however at the moment it includes only:

Major Office Buildings: which are equal to or larger than 2300 square metres, primarily provide office accommodation and other space in the building in support of the office function.

Performance Information/Resource Justification

In 1985-86, it is forecast that this Activity will provide 464,000 square metre-years of space. This represents an increase of 26,000 m^2y over 1984-85 requirements. Figure 16 presents the expected space to be managed.

Figure 16: Lease-Purchase Space (000^2 metre-years)

The $89.9 million of resources required for this activity for 1985-86 are determined on the basis of funding for 10 lease-purchase facilities in several locations across Canada. These facilities are almost exclusively large office buildings in core areas and are, in most cases (e.g., Guy Favreau), the "flagship" buildings for the federal government in a given locality. See Figure 22 for a listing of the buildings.

E. Program Planning and Control

Objective

To manage the overall accommodation portfolio including the developing, monitoring, and controlling of acquisition, improvement and operating plans and the development and individual project plans and submissions to meet the accommodation requirements of clients.

Resource Summary

This Activity accounts for 2.6% of the expenditures of the Program in 1985-86.

Figure 17: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Program Planning and Control	20,485	130	30,493	130	8,544	130

Salaries and employee benefits make up 29.2% of the costs of this Activity. The remaining $14.4 million is for other costs associated with accommodation planning such as space optimization.

Description

This Activity provides for the program planning and control of the Public Works Canada administered accommodation portfolio (Crown-Owned, Lease and Lease-Purchase space). It includes conducting studies to identify accommodation requirements and developing of policies and plans to satisfy clients accommodation requirements and addressing the government's accommodation investment strategies such as the inclusion of commercial space in federal buildings, the ratio of Crown-owned to leased space, federal presence, heritage properties, economic stimulation, etc.

This Activity encompasses developing, monitoring and controlling of capital asset acquisition and portfolio operating plans which take into account the long-term financial return on the portfolio, the condition of the assets, energy management, facilities maintenance requirements, functional space utilization, existing contractual obligations, the mix and age of asset types contained in the portfolio and Public Works Canada/Treasury Board approved standards of quality, safety and quantity.

This Activity also provides the funding required for the conduct of optimization studies and the funds necessary for the implementation of space optimization projects including refits and the costs associated with forced client moves.

Individual projects are developed and submitted for Public Works Canada/Treasury Board approval and project implementation is monitored and controlled to ensure the achievement of project objectives.

Performance Information/Resource Justification

The objective of this Activity is to manage the overall Public Works Canada administered accommodation portfolio in the most efficient and effective manner possible.

The major thrust required to accomplish this objective revolves around the concept of this activity as an "ownership" role. The concept of ownership involves the negotiation of required agreements by the managers of this activity with the various service managers who actually carry out the work and charge the various other activities within the program for their services and any other direct costs. Performance factors include comparison of actual space supplied versus space planned, space to be optimized etc. The achievement of specific targets requires that the department:

- accurately forecast and respond to known client space requirement;
- accurately forecast space capable of being optimized;
- comply with Departmental/Treasury Board accommodation standards;
- accurately forecast vacancy rates and expense reduction opportunities.

Space Optimization: In 1985-86, it is expected that space optimization projects in various buildings in all regions will be undertaken and will involve the review and treatment of approximately 126,000 square metres of space presently occupied by clients. From this total, it is anticipated that some 30,000 square metres of space will be recovered.

Stenographic, Secretarial and Typing	3	4	4	12,636-31,946	20,347

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at 31 October 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Internal Charges

The majority of departmental employees are in the Services Program. The Accommodation Program, like other departments, is treated as a "client" of the Services Program (as defined in the Treasury Board Common Services Policy). This Program acquires the required services and reimburses the Services Program for the direct costs of such services. Figure 20 shows the totals of these charges by activity and an approximation of the person-years in providing these services.

Figure 20: Internal Charges ($000) and Proxy Person Years (PPY)

	Estimates 1985-86		Estimates 1984-85	
	$	PPY	$	PPY

Edmonton (1988)	7,500	13,220	105,000

1. Capital Costs refer to the initial development costs of a specific project and include such items as land costs, legal costs, costs of a podium where applicable etc. and these are financed through the capital vote.
2. Annual lease-purchase payment refers to the negotiated rental costs for a specific lease purchase project over the life of the lease (typically 35 years) at the current financing rate of the day.
3. Present value of payments refers to the discounted sum of annual lease-purchase payments at the applicable interest rate from the date of the first payment.

6. Transfer Payments

Figure 23: Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85
New Employment Expansion and Development (NEED) Program	-	82

B. Cost Analysis

Net Program Costs

The Estimates for 1985-86 for the Accommodation Program include only those expenditures charged to and revenues credited to the appropriations of the Program. The adjustments made to the estimated expenditures to arrive at total cost include: accommodation provided without charge by the department ($443,000), other services provided without charge by other departments ($115,000). The revenue includes that which has been credited to the vote plus revenues from outside parties credited to Non-Tax Revenue.

Figure 24: Net Cost of Program by Activity ($000)

	1985-86 Expend-itures	Add Other Costs	Total Cost	Deduct Revenue	Total Net Cost	1984-85 Total Net Cost
Assets Provision and Improvement	136,386		136,386		136,386	137,150
Crown Properties	215,391		215,391	123,674	91,717	97,188
Leased Properties	319,902		319,902	78,452	241,450	238,217
Lease-Purchase Properties	89,951		89,951	4,696	85,255	81,345
Program Planning and Control	20,485	558	21,043		21,043	30,493
	782,115	558	782,673	206,822	575,851	584,393

The revenue shown above includes $30.1 million from outside sources credited to Non-Tax revenue.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $88,824,000 in support of the Government Realty Assets Support Program. The remaining expenditures, estimated at $286,391,000 for grants to municipalities and other taxing authorities and for contributions to employee benefit plans, will be made under existing statutory authority.

Financial Requirements by Authority

Section I
Program Overview

A. Highlights

For 1985-86, the following goals have been established for the Government Realty Assets Support Program:

- operate and maintain currently designated properties as well as undertake a number of redevelopment projects directly or in cooperation with municipalities (see page 4-14).

- undertake a major program to dispose of surplus property as part of the governments efforts to generate additional revenue. It is expected that this will result in increased revenue of 32.0 million in 1985-86 (see page 4-16)

- continue the major Research and Development Project in cooperation with Energy Mines and Resources (see page 4-18).

- maintain required fire prevention services within existing departmental resource levels (see page 4-20).

- make payments totalling $286 million to taxing authorities as grants in lieu of taxes in respect of federal properties pursuant to applicable legislation (see page 4-25).

- complete the asbestos decontamination program, upgrade internal common use signage within federal buildings and complete the retrofit of existing space to a basic barrier free standard (see page 4-28).

- make payments in accordance with agreements and/or Vote wording for the operational and capital expenditures of the Crown corporations reporting to the Minister of Public Works (see page 4-30).

B. Financial Summary by Activity

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Federal Land Development and Management	53,939	67,579	(13,640)	4-14
Design, Construction and Realty Technology	6,257	6,569	(312)	4-17
Fire Prevention	4,025	3,534	491	4-20
Emergency Preparedness	1,104	447	657	4-23
Municipal Grants	287,971	259,898	28,073	4-25
Special Projects	4,404	7,065	(2,661)	4-28
Crown Corporations	17,515	90,604	(73,089)	4-30
	375,215	435,696	(60,481)	
Person-Years	97	78	19	

Explanation of Change: The financial requirements for 1985-86 are 14% or $60 million lower than the 1984-85 expenditures. The decrease is primarily due to:

- decreased contributions under subsidiary agreements for revitalization of areas in Sault Ste. Marie, Moncton and the Shubenacadie Canal as a result of the completions of the majority of the projects, and reduced expenditures in the development of federal properties. ($7.1 million)
- increased grants in lieu of taxes to municipalities for additional grants and allowance for inflation $28.0 million
- increase due to reallocation of departmental resources to strengthen Emergency Preparedness and Fire Prevention Activities $ .7 million
- decrease due to reduction of the Accessibility Program, and the Asbestos Decontamination program, as a result of the completion of a majority of the projects. ($2.7 million)

- reductions in payments to Crown Corporations due to the completion of a number of capital projects. ($73.1 million)

- reduction in the program as part of the government's Expenditure and Program Review ($ 6.0 million)

- increase due to inflation $ 1.1 million

- decreased capital expenditures for the marine structures disposal program in the Gaspé area ($ 1.4 million)

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $42.7 million or 11% higher than the 1984-85 Main Estimates of $393 million (extracts from Part II of the Estimates, page 4-6). The difference of $42.7 million reflects the following major items:

- an increase in capital construction expenditures and operating expenditures for Le Vieux-Port de Québec Inc. $17.8 million

- an increase in capital expenditures related to Le Vieux-Port de Montréal Inc. $15.7 million

- an increase in capital expenditures related to Harbourfront Corporation $ 4.6 million

- a Supplementary Estimate of $5.1 million for increased contributions under subsidiary agreements for revitalization of areas and the development of federal properties:

  - an increase in the contribution to Saint John Market Square $ 3.6 million

  - an increase in capital expenditures for the development of federal property in Trois Rivières. $ 1.5 million

- a reduction in the Municipal Grants activity. ($ .5 million)

C. Background

1. Introduction

Unlike the Accommodation and Services Programs, the Government Realty Assets Support (GRAS) Program is not a Common Services Program. Rather, its activities provide for the accomplishment of specific government mandates all of which relate to the government's holding of real property but each of which is a distinct entity. The Program's activities support the government's responsibilities for the control and management of real property in the areas of the federal land management policy, fire prevention services, emergency preparedness, design, construction and realty technology, grants in lieu of taxes and Crown Corporations reporting to the Minister of Public Works.

2. Legal Mandate

The mandate for federal land development and management is derived from the Public Works Act, 9(1)(h). Additional authorities are contained in Section 9(2) of that Act, the Kingsmere Park Act, the Laurier House Act, the Official Residences Act, the Expropriation Act, the Surplus Crown Assets Act, and the Public Lands Grants Act. Compensation to local taxing authorities for services provided to exempt federal property in the form of grants in lieu of real property taxes is made under the Municipal Grants Act, 1980 and 1970. The mandate for the technology activity, the Fire Commissioner of Canada's Office and the planning for emergencies are based on the Public Works Act, Government Property Fire Prevention Regulations, and the Emergency Planning Order PC 1981 respectively.

3. Program Objective

The objective of the program is "to support the Government's responsibilities for the control and management of real property in the areas of the federal land management policy, design, construction and realty technology, fire prevention, emergency preparedness, special projects, grants in lieu of taxes to local taxing authorities and transfer of payments to certain Crown Corporations".

4. Program Organization for Delivery

Activity Structure: The program is composed of seven activities. Figure 2 presents the activity structure.

Figure 2: Activity Structure

Organization Structure: There are a number of managers responsible for the achievement of the results of the various Activities of this Program. Figure 3 presents the relationship between the organization and the previously described Activity structure, together with an allocation of 1985-86 resources.

Figure 3: 1985-86 Resources by Organization/Activity ($000)

	53,939	2	6,257	2	4,025	69	1,104	20	287,971	2	4,404	2	17,515		375,215	97

Funding Structure: The GRAS Program is funded by seven annual and two statutory appropriations. The person-years and associated costs for managerial personnel required to direct, control and be accountable for achievement of objectives and results are dedicated to the Program Planning and Control sub-activity of each Activity. Except for Fire Prevention and Emergency Preparedness Activities, the professional, technical and operational personnel are provided as required by the Services Program and are charged to the appropriate Activities on the basis of the salaries and related employee benefit costs of the employees involved.

D. Planning Perspective

1. Environment

This Program is composed of several very different activities each of which contributes to overall government objectives but is related to Real Property.

The following factors will significantly influence the Program and the resources allocated to it during 1985-86:

- The Government's policy of restraint affects all program areas.
- A major component of the activity of this Program is carried out by Crown Corporations which are subject to specific directions from Cabinet rather than being an integral part of the departmental operations.
- The single largest component of this program is grants in lieu of municipal taxes. As these payments are purely statutory and are related to values of properties and taxing rates of the various authorities, the aggregate amount of actual expenditures is liable to vary from forecast amounts due to these factors which are beyond the control of the Department.

2. Initiatives

The following major initiatives are underway which affect the resources of the Program:

- **Restraint:** As part of the efforts arising out of the government's Expenditure Reduction and Program Review, a major effort is being undertaken to generate additional revenues from the disposal of surplus federal properties. It is estimated that $27.2 million will be generated from this initiative. In addition, there will be reductions in the funding of a number of projects, as well as reductions to the operating costs of designated properties.

- **Redevelopment and Revitalization of Federal Lands:** A number of federal properties are being redeveloped. In addition, contributions will be made to several municipalities for similar activities under Economic and Regional Development Agreements.

3. Program Effectiveness

This Program consists of seven components, all of which relate to the Government's holdings of real estate. However, each are distinct entities with distinct objectives, thus no overall indicators of Program Effectiveness can be presented. Thus, indicators of results are presented for each Activity only.

Section II
Analysis by Activity

A. Federal Land Development and Management

Objective

To provide an advisory and implementation capability which contributes to the management of federal lands and holdings and the making of contributions for development initiatives under Economic and Regional Development agreements.

Resource Summary

This activity accounts for 14.4% of the GRAS Program expenditures in 1985-86.

Figure 4: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Central Real Property Inventory	358	-	350	-		
Management of Surplus Properties	4,038	-	4,325	-		
Federal Land Management Studies	861	-	770	-		
Development of Federal Properties	16,195	-	28,559	-		
Management of Designated Properties	32,387	-	33,475	-		
Program Planning and Control	100	2	100	2		
	53,939	2	67,579	2	84,944	2

The operating expenditures make up $37.1 million or 69% of this activity. Capital expenditures make up $8.5 million or 16% of the expenditures of this Activity of which $6.0 million are for redevelopment projects. These projects include Welland Canal ($1 million); Trois Rivieres ($5 million). In addition $8.2 million or 15% of the expenditures are for contributions to municipalities under Economic and Regional Development agreements.

Description

Through the Federal Land Development and Management activity, the government is provided an advisory and implementation capability thereby contributing to the better management of federal lands and holdings. This Activity has the following six subactivities:

Central Real Property Inventory: This includes the management of the Central Real Property Inventory (CRPI) which is the inventory record of property owned and leased on behalf of the Crown by all federal departments and agencies.

Management of Surplus Properties: This includes the management and maintenance of all properties declared surplus either by PWC or other departments from the time they are declared surplus until they are disposed of.

Development of Federal Properties: This includes the activities associated with developing and disposing of surplus and underutilized properties, including studies and plans. This can also take the form of providing funds necessary to further the objectives of the "Federal Land Management Policy" along with the contributions to municipalities and provinces under Economic and Regional Development agreements.

Federal Land Management Studies: This includes the activities associated with the support of the Treasury Board Advisory Committee on Federal Land Management (TBAC/FLM), more specifically land use and socio-economic impact studies associated with the acquisition, disposal and reutilization of properties. These studies are presented as Area Screening Canada reports or Federal Land Management (FLM) reviews.

Management of Designated Properties: This includes acquisition, operation and maintenance of properties designated by the government to be funded separately from the Accommodation Program or other departments, e.g., Official Residences, Goose Bay, etc.

Program Planning and Control: This includes the provision of program direction and directly related management of the activity.

Performance Information/Resource Justification

The following section describes the expected results of each sub-activity in 1985-86 as well as the resources required.

Central Real Property Inventory: The expected result of this element is a comprehensive, accurate and up-to-date CRPI record. It is estimated that 97% of the land and holdings owned and leased by the Federal Government is included in the inventory which is approximately

20 million hectares. It is expected that 15,000 changes will be made in the inventory in 1985-86. In 1984-85, 15,000 changes were processed. In 1983-84, 16,040 changes were processed.

Development of Federal Properties: The following figure sets out the number of properties to be reused for federal or non-federal purposes as well as the expected proceeds from disposals of all federal properties.

Figure 5: Performance on Development of Federal Properties

	1985-86	1984-85
Number of properties being redeveloped	5	6
Proceeds from disposal ($000) of federal properties	32,000	7,100

In addition, payments will be made for projects in the cities of Sault Ste. Marie ($4.6 million), Moncton ($2.9 million), and Dartmouth ($1.1 million) in 1985-86, as the result of subsidiary agreements under Economic and Regional Development Agreements.

Management of Designated Properties: The following Figure lists the major Designated Properties to be managed and the costs for each:

Figure 6: Cost of Designated Properties ($000)

	1985-86	1984-85

B. Design, Construction and Realty Technology

Objective

To undertake research, develop standards, disseminate information and provide implementation support on technological improvements related to the design, construction, maintenance and operation of real property.

Resource Summary

This Activity accounts for 1.6% of the GRAS Program expenditures in 1985-86.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Technical Standards and Guidelines	1,128	-	1,135	-		
Technology Transfer Applied Research	3,735	-	4,078	-		
Interdepartmental and Industry Support	757	-	756	-		
Program Planning and Control	637	2	600	2		
	6,257	2	6,569	2	5,308	2

Of the total expenditures, $2.1 million represents the cost of services provided by the Services Program.

Description

Through this Activity, the department provides professional and technical advice, research and support to its various activities and to a wide range of government clients on matters relating to the design, construction, maintenance and operation of real property. This Activity consists of the following five sub-activities:

Technical Standards and Guidelines: This includes the development of standards, codes, specifications, guidelines and policies in particular technological areas.

Applied Research: This includes the development, demonstration or evaluation of a technological innovation or procedure for its application and use.

Technology Transfer: This includes the gathering, organizing and making available the results of research and assisting in its dissemination, application and use.

Interdepartmental and Industry Support: This includes providing advice, consultation or related support to the national construction process.

Program Planning and Control: This includes the management and administration of the technological resources.

Performance Information/Resource Justification

As this activity is primarily research oriented and is structured on a project basis, the expected results and their related resources are expressed in narrative terms on a project-by-project basis, as shown in figure 8.

Figure 8: Technology Projects 1985-86

Project	Resources $000	Overall Results* Expected
Energy Research and Development Projects with Energy, Mines and Resources	1,804	

*Indoor Air Quality - Determine the effects of outgassing on air quality and prevent such problems by incorporating the knowledge gained into design procedures. Develop streamlined tracer gas techniques suitable for large buildings that will gain general acceptance in the building industry. Develop documented and verified air quality test procedures for large buildings.

Design and Analysis - To provide nationally supported Building Energy Systems Analysis (BESA) tools to engineers and architects as an aid in energy conservation efforts to optimize energy use in all types of new and existing commercial, institutional and industrial buildings. To develop Canadian expertise in the use and application of computerized energy analysis tools.

Heating and Cooling - Remove technical barriers to commercialization of seasonal aquifier storage and latent energy storage in the form of ice by conducting experiments and full-scale field trials as part of actual building systems. Monitor and evaluate field trials over several years and disseminate results. Conduct an international energy storage conference in Canada in September 1985 to assess progress and define future goals. Pursue international cooperation through such means as IEA projects and country to country exchange, e.g., China and Sweden.

Operations - Assess Central Control Monitoring Systems (CCMS) and Energy Management Systems (EMS) presently installed in PWC buildings to establish their cost-effectiveness, reliability of operation, limitations, and compatibility with sensors and activators. Acquire, test and evaluate state-of-the-art distributed and stand-alone microprocessor based controllers for building energy systems to determine their range of application and performance efficiency. Develop procedures for the appropriate selection of CCMS and EMS and provide effective training aid for the building operating staff and managers.

Lighting - Identify and develop new procedures for specifying illumination systems designed on the basis of visual performance. Develop new techniques for the analysis and evaluation of installed lighting systems to validate compliance with visual performance design criteria.

C. Fire Prevention

Objective

To provide for fire prevention, inspection and investigation on the federal government's owned and controlled properties, and contribute to the knowledge base and the competence of public and private agencies in the field of fire prevention in Canada.

Resource Summary

This Activity accounts for 1.0% of the GRAS Program expenditures in 1985-86.

Figure 9: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Fire Prevention Engineering	932	16	848	16		
Inspections and Investigations	1,514	26	1,272	20		
Education and Training	700	12	636	12		
Information Transfer	175	3	53	1		
Program Planning and Control	704	12	742	14		
	4,025	69	3,534	63	3401	62

Of the total expenditures, $3.4 million is for salaries and employee benefit plan contributions with the remainder composed of operating and minor capital requirements.

Description

The Office of the Fire Commissioner of Canada is responsible for the provision of fire prevention services to Government of Canada owned and leased properties, excluding DND bases, MOT Airport Crash Fire Fighting and Government ships. The Fire Commissioners's jurisdiction extends to all Government Departments, Agencies and Crown Corporations other than designated exclusions. This Activity consists of the following five sub-activities:

Fire Prevention Engineering: This includes the review and approval of plans and specifications for new buildings and of alterations and additions to existing buildings, for fire protection engineering surveys, for inspection and takeover of buildings during construction and at completion of projects, and for the promulgation of fire protection engineering standards and technical information bulletins.

Inspections and Investigations: This includes the conducting of inspections to determine the fire safety of a property or occupancy, investigating fires occurring on federal property and reporting on all such fires.

Education and Training: This includes providing education and training to public service occupants of federally owned or leased properties, establishing Building Fire Emergency Plans and developing educational material for use in training courses and seminars.

Information Transfer: This includes compiling statistical data and reports on fire losses as well as participating on committees at the international, national and provincial levels.

Program Planning and Control: This includes the management and administrative support necessary to direct, control and support this Activity.

Performance Information/Resource Justification

The resources of this activity are primarily directed into three areas; inspections, reviewing of plans and specifications, and the provision of training.

In the area of inspections, due primarily to limited resources, a multi-year inspection program has been developed to ensure that all space is subject to inspection over time. The following Figure 10, shows the number of square metres scheduled for inspection in each year.

Figure 11 indicates the number of hours expected to be utilized in the review of plans and specifications for new buildings or alterations.

Finally, Figure 12 sets out the number of hours of training and education session that are to be carried out by the office.

Figure 10: Space Scheduled for Inspection (000 m^2)

Figure 11: Hours Utilized in Plan and Specification Review

Figure 12: Hours of Training Given (000's)

D. Emergency Preparedness

Objective

To provide plans and arrangements supporting the department's responsibility under the federal emergency planning order.

Resource Summary

This Activity accounts for .29% of the GRAS Program expenditures for 1985-86. Thirteen person-years are being transfered from the Services Program, Realty Management Services, in 1985-86 to implement a coordinated Federal Emergency Planning Program.

Figure 13: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Emergency Preparedness	1,104	20	447	7	382	7

Description

There are five functions in this Activity and they are:

- Development and maintenance of plans and preparations for establishing and operating a national emergency construction agency for the control and regulation of engineering and construction resources throughout Canada in a National emergency.
- Development of plans and arrangements for protection of the population from the wartime effects of radioactive fallout and from other weapons effects.
- Planning and coordination of arrangements for provision of emergency operations centres for the Continuity of Government Program.
- Development and maintenance of readiness plans that will enable the Department to carry out its emergency responsibilities in peace and war.
- Planning and program management.

Planning is carried out by the Directorate of Emergency Preparedness in Headquarters and by each of the six regional offices. Activities involving provinces and municipalities are currently handled by Headquarters with direct liaison with provinces. Plans and operations to meet specific peace-time emergency responsibilities are carried out by the regional offices. Advice and guidance to the public on public protection matters are currently provided directly from Ottawa.

Performance Information/Resource Justification

The fundamental direction of emergency planning is to strengthen the planning within federal departments to provide for general-purpose planning activity covering the full spectrum of emergency contingencies (peace and war) which could arise.

The work has been divided into several hundred discrete actions requiring a five-year period (84-89) to complete. Additional resources have been allocated only for the four year period 84-88.

Currently authorized resources will be used to undertake:

- Planning and development of a National Emergency Construction Agency, having a federal, provincial, municipal and private-sector components.

- Planning and coordination for the provision of emergency operations centres, including advice and guidance to provinces and municipalities on the design and construction of municipal emergency operations centres.

- General emergency planning relating to multiple hazards, damage assessment, assistance to provinces, public protection and advice and guidance to the public on public protection matters, including provision of standards and designs.

Accomplishment of the major outputs required for the National Shelter Program will require, not only the successful collaboration with the twelve provincial/territorial governments, but also the allocation of significant resources to enable provinces and municipalities to undertake the necessary planning.

Greater emphasis will be placed on development of the National Emergency Construction Agency and on developing a greater regional emergency planning capability.

It is expected that during 1985/86, thirty-nine planning units will be completed, bringing the total completed to that date of sixty. There are four hundred and seventy-nine plans/planning units to be completed in the five year plan.

E. Municipal Grants

Objective

To provide grants in lieu of taxes to taxing authorities in respect of Federal properties pursuant to applicable legislation.

Resource Summary

This activity accounts for 76.7% of the GRAS Program expenditures for 1985-86.

Figure 14: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Grants Payments	286,000	-	258,000	-	231,067	-
Administration	1,850	-	1,785	-	2,078	-
Program Planning and Control	121	2	113	2	69	2
	287,971	2	259,898	2	233,214	2

Of the total expenditures in 1985-86, $286.0 million is for grants payments to various taxing authorities and $1.8 million is for charges for services provided by the Services Program.

Description

This Activity provides for the funding and administration of grants in lieu of taxes on federal property whether that property is managed by Public Works Canada or by other departments and agencies, and is made up of the following sub-activities:

Grants Payments: This is the total of the payments made during the year to the various taxing authorities under the provisions of the Municipal Grants Act 1980 and prior legislation for amounts related to tax years prior to 1981.

Administration: This includes the costs of processing the applications for grants, including determination of the eligibility of the claim, valuation of the property involved, along with the calculation, requisitioning and making of the interim and/or final payments. This service provided by the Real Estate Services Activity in the Services program.

Program Planning and Control: This includes the management and administrative support necessary to plan, direct and control this activity.

Performance Information/Resource Justification

Payments under this activity are to be made to approximately 3000 taxing authorites covering 84,000 federal properties or buildings. The total requirement for the year is the aggregate of the amounts paid to each taxing authority.

Each payment is the result of an annual application from a local taxing authority. The amount paid is determined on the basis of a determination or confirmation for all eligible federal property within the jurisdiction of the local taxing authority, the eligibility of the leasehold or occupant interest, individual property values (and/or dimensions for frontage or area taxes, the effective tax rates and application of the provisions of the Act and related regulations. In 1985-86 the total payments are expected to increase by $28.1 million over 1984-85 as a result of inflation.

The following information is provided to describe the work load of this activity and the efficiency and effectiveness with which the grant applications are processed. In 1983-84 95% of the applications resulted in interim or final payments within 50 days. The goal is to increase this to 100% in 1984-85 and future years.

Figure 15: Percentage of Applications processed within 50 days

Figure 16: Administration and Control Cost per Application processed

F. Special Projects

Objective

To undertake, solely or jointly with other departments, those projects, as directed, which have a significant impact on the design, construction, maintenance or operation of real property.

Resource Summary

This Activity accounts for 1.2% of the GRAS Program expenditures for 1985-86.

Figure 17: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Accessibility Program	3,002	-	3,744			
Asbestos Decontamination	100	-	1,312			
Federal Identity Program	1,212	-	1,915			
Program Planning and Control	90	2	94	2		
	4,404	2	7,065	2	19,389	2

In 1985-86, $4.3 million or 97% of the expenditures is for capital, as compared to $6.5 million or 94% in 1984-85.

Description

This Activity consists of those projects of a specialized/unique nature relating to, and having a significant impact on, the design, construction maintenance or operation of real property. These projects normally are externally generated, of high visibility, and not predictable in the sense of planning and resourcing. Current projects included in this Activity are:

The Accessibility Program: which is the application of the new Barrier Free Design Standard of buildings to allow access to them for people with handicaps. This program has been ongoing since 1981 and is expected to be completed in 1985-86.

The Asbestos Decontamination Program: which involves the removal and control of asbestos in Crown-owned facilities in order to ensure safety in buildings containing spray-applied asbestos insulation.

The Federal Identity Program: which includes the installation of Canada Wordmark signs on government-occupied facilities in order to promote public access to government services. This is a 4 year program to refurbish signage. It consists of four major phases from primary identification signage in high profile facilities to client operational signage.

Program Planning and Control: which includes the management and administrative support necessary to plan, direct and control this activity.

Performance Information/Resource Justification

The results expected and the resources required are determined on a project by project basis over the lifetime of each. The success of these projects can best be measured in terms of the actual accomplishments in relation to plan outputs. Figure 18 shows the expected results of each of these projects.

Figure 18: Details of Special Projects

Sub-Activity	Resources $000 1985-86	Overall Output	Specific Detail 1985-86
Accessibility Program	3,002	to ensure barrier free access to all public buildings	Complete the alterations of Crown-owned and Leased buildings to provide barrier free access to all the public.
Asbestos Decontamination	100	the removal and control of asbestos in Crown-owned buildings	Completion of the removal of asbestos in several of the remaining buildings.
Federal Identity Program	1,212	signage renewal on multi-occupant buildings to fulfil federal visual image objectives	Complete prior phases and Phase III which is the upgrading of common use signage (directory boards, internal direction signs etc.).

G. Crown Corporations

Objective

To make payments to certain Crown Corporations pursuant to agreements approved by the Governor in Council.

Resource Summary

This Activity accounts for 4.7% of the GRAS Program expenditures in 1985-86.

Figure 19: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Canada Lands Company			
(Mirabel) Ltd.	7,652	9,543	11,228
(Le Vieux-Port de Québec) Inc.	2,294	28,622	32,534
(Le Vieux-Port de Montréal) Ltd.	1,477	31,614	12,640
Harbourfront Corporation	6,092	20,825	12,891
	17,515	90,604	69,293

The payments to the various corporations include provision for a number of capital projects forming part of the government's Special Recovery Capital Projects Program. In 1985-86 $2.9 million have been provided for that Program as compared to $42.9 million in 1984-85.

Description/Resource Justification

This Activity provides for the payments to be made to the various Corporations, three of which are subsidiaries of the Canada Lands Company.

In all cases the management of each corporation is under the direction of a Board of Directors and Executives who are ultimately responsible to the Minister. Senior officials of the Department of Public Works are on the Boards of Directors. The Deputy Minister of Public Works is on the Board of Directors of the Harbourfront Corporation. The Assistant Deputy Minister, Realty, is a member of the Board of Directors of the Vieux Port de Montreal. The Director General, Real Estate Services, is on the Board of Directors of the Vieux Port de Quebec. Senior officials of the department constitute the Board of Directors of the Canada Lands Co. (Mirabel) Ltd. The Department's responsibility is to provide advice to the Minister as requested and to make the payments in accordance with any agreements with the respective Corporation and vote wordings.

Following is a brief description of principal objectives of each of the corporations and a summary of the basis for the payments made to each. As a portion of the payments are for major capital projects, details of the individual projects are provided in Figure 31 on pages 4-38 and 4-39.

The Canada Lands Company (Mirabel) Ltd. is responsible for the administration and operation of the peripheral lands to the international airport at Mirabel, Quebec, and to dispose of certain of those lands while assuring the local residents of a normal life as well as protecting airport operations.

Following is a financial summary of the operations of the corporation for 1985-86 and 1984-85.

Figure 20: Canada Lands Company (Mirabel) Ltd.
Summary of Expenses ($000)

	Estimates 1985-86	Forecast 1984-85
Operating Costs	6,282	7,988
Capital Expenditures	1,370	1,555
Government's Payments	7,652	9,543
Planned Person-Years	98	98

Canada Lands Company (Le Vieux-Port de Quebec) Inc: was incorporated in 1981 as a subsidiary of the Canada Lands Company Limited, a Crown Corporation. The subsidiary is responsible for:

- implementing the Vieux-Port de Quebec development master plan;
- administering, managing, promoting and operating the land and its developments;
- contributing to the regional economic development of the area by the creation of administrative centres and the establishment of new businesses and boutiques as well as touristic and recreational installations;
- maintaining the heritage aspect of the area by the promotion of this historic site and the renovations of the historic buildings.

Figure 21: Canada Lands Company (Le Vieux-Port de Québec) Inc. Summary of Expenses ($000)

	Estimates 1985-86	Forecast 1984-85
Operating Costs	2,154	6,316
Capital Expenditures	140	22,306
Government's Payments	2,294	28,622
Planned Person-Years	80	80

Canada Lands Company (Le Vieux-Port de Montréal) Limited: was incorporated in 1981 as a subsidiary of the Canada Lands Company Limited, a Crown Corporation. The company's mandate is:

- to develop and promote the development of Le Vieux Port lands by putting into place the infrastructure, equipment and services needed;
- to invest in the redevelopment or construction of revenue producing buildings;
- to enter into agreements to encourage the private sector to invest in development;
- to enter into agreements with other levels of government regarding the provision of other public funds; and
- to administer, manage and maintain the property of Her Majesty.

Figure 22: Canada Lands Company (Le Vieux-Port de Montréal) Limited Summary of Expenses ($000)

	Estimates 1985-86	Forecast 1984-85
Operating Costs	1,477	2,225
Capital Expenditures	-	29,389
Government's Payments	1,477	31,614
Planned Person-Years	23	23

Harbourfront Corporation: is responsible for redeveloping a 90 acre site on the Toronto Waterfront in order to provide better public access and use of the site, as well as optimizing commercial and residential development. The corporation is expected, over time, to achieve revenue sufficient that it will no longer be dependent on the federal government. This increased level of income is expected to provide a self sufficient cultural and recreational centre, for use by the general public. The payments to the corporation are based on the following operating and capital requirements.

Figure 23: Harbourfront Corporation
Summary of Expenses and Revenue ($000)

	Estimates 1985-86	Forecast 1984-85
Operating Costs	10,018	9,130
Redevelopment and Operating Revenue	(9,313)	(8,808)
Surplus from Previous Years	(499)	(4,178)
Net Operating Costs	206	(3,856)
Capital Expenditures	5,886	24,681
Government's Payments	6,092	20,825
Planned Person-Years	130	130

Note: The person-year columns display the forecast distribution of the authorized person-years for the program by occupational group. The current salary range column shows the salary ranges by occupational group at 31 October 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Internal Charges

The majority of departmental employees are in the Services Program. The Government Realty Assets Support Program, like other departments, is treated as a "client" of the Services Program (as defined in the Treasury Board Common Services Policy). This Program acquires the required services and reimburses the Services Program for the direct costs of such services. Figure 26 shows the totals of these charges by activity and an approximation of the person-years in providing these services.

Figure 26: Internal Charges ($000) and Proxy Person-Years (PPY)

B. Cost Analysis

1. Net Program Cost

The GRAS Program 1985-86 Estimates include those expenditures to be charged to the program's appropriations. Other cost items such as services provided without charge by other departments and receipts credited to Non Tax Revenue must be included when considering the total cost of operating the program.

Figure 30: Net Cost of Program ($000)

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $12,193,000 in support of the 1985-86 Marine Transportation and Related Engineering Works Program. The remaining expenditures estimated at $221,000 for contributions to employee benefit plans and a dry dock subsidy will be made under existing statutory authority.

Financial Requirements by Authority

Section I
Program Overview

A. Highlights

For 1985-86, the following goals have been established for the Marine Transportation Program:

- to operate and maintain the present locks and dams within the 5 year average of operating costs (see page 5-11);
- to complete the improvements to the Esquimalt Graving Dock (see page 5-13);
- to maintain an overall occupancy rate of 75% for Crown-owned dry docks (see page 5-14).

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Locks and Dams	2,412	2,193	219	5-11
Dry Docks	9,656	11,712	(2,056)	5-13
Program Planning and Control	346	325	21	5-15
	12,414	14,230	(1,816)	
Person-Years	5	5	-	

Explanation of Change: The 1985-86 estimated expenditures of $12.4 million represent a net decrease of approximately $1.8 million or 12% of the 1984-85 forecast expenditures. This decrease is primarily due to:

- reduced capital expenditures at Lauzon Quebec ($1.2 million) and at the Esquimalt Graving Dock ($2.2 million) — ($3.4 million)
- increased operating expenses due to the requirement for major repairs to the quay walls at the Lauzon Dry Docks — $1.4 million
- the provision for price increases in operating costs — $ .2 million

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of 31 October 1984) is unchanged from that expected in the 1984-85 Main Estimates of $14.2 million. (Extracts from Part II of the Estimates, page 5-4)

C. Background

1. Introduction

The Marine Transportation Program provides specific locks, dams and dry docks in direct support of public and private users. This includes the maintenance and operation of these locks, dams, and dry dock facilities.

2. Legal Mandate

The Minister is charged under the Public Works Act (PWA)s.9(1)(a) with management of "the construction and repair of the dams, the hydraulic works... and works for improving the navigation of any water". S.12 further states that "the Minister shall direct the construction, maintenance and repair of all harbour ... and other public works ... constructed or maintained at the expense of Canada that are placed under his management and control". While the program responsibility for ports, harbours and wharves has been transferred to other departments, the provisions of the Act specific to locks, dams and dry docks remain a responsibility of the Department

Under the Public Works Act, the Minister is responsible for the maintenance and operation of the government dry docks at Lauzon, P.Q. Selkirk, Manitoba and Esquimalt, B.C. The Dry Docks Subsidies Act names the Minister of Public Works as the chief agent in recommending to the Governor-in-Council the subsidies and tariffs as set out in the Lauzon Dry Docks, Selkirk Marine Slip, Esquimalt Graving Dock and Canadian Vickers Dry Dock Regulations.

3. Program Objective

The objective of the Marine Transportation Program is "to facilitate marine transportation and to support specific related economic and social development goals through the construction, reconstruction operation, maintenance and subsidization of certain marine facilities."

4. Program Organization for Delivery

Activity Structure: The Marine Transportation Program is composed of three Activities as presented in Figure 2. Program Planning and Control is the management and control activity. Locks and Dams provides for the operation, maintenance of several lock and dam facilities. Dry Docks provides for the construction, operation and maintenance of several dry docks and financial support to private dry docks.

Figure 2: Activity Structure

Organization Structure: The manager responsible for the effective and efficient achievement of results in accordance with Executive Committee and Treasury Board approved plans, standards and policies is the Assistant Deputy Minister, Operations through the Regional Directors General. The Assistant Deputy Minister, Design and Construction provides functional management including the provision of advice and assistance in the development of standards, policies, plans and in monitoring and quality assurance throughout all stages of the management process. The resources by organization are set out in Figure 3. In addition to the person-years shown in this Figure, the Program is provided with services from the Services Program as shown in Figure 10.

Figure 3: Resources by Organization/Activity ($000)

	ADM Operations		ADM Design and Construction		Total	
	$	P-Y	$	P-Y	$	P-Y
Locks and Dams	2,412				2,412	
Dry Docks	9,656				9,656	
Program Planning and Control	277	4	69	1	346	5
	12,345	4	69	1	12,414	5

D. Planning Perspective

1. Environment

There is a changing requirement for maintenance of water levels, where the major beneficiaries are no longer commercial users but hydro electric companies, users of pleasure craft, and downstream land-owners.

Dry docks are maintained principally in support of the federal interest with respect to the ship repair industry.

The level of activity in this Program has diminished considerably over the past few years, as program responsibilities formerly carried out here were transferred to Program Departments.

The remaining activities (program responsibility for water level control, dry docks, locks and dams) will be considered for possible transfer to other jurisdictions, either within the federal government or where relevant, to provincial governments or the private sector.

2. Initiatives

The following initiatives are underway which may affect the resources of the program:

- Discussions are being held with the Province of Quebec regarding the possibility of transferring some of the dams to the Province;
- Dry dock tariffs will be reviewed in light of the recommendations made by the Auditor General on dry dock operations.

Section II
Analysis by Activity

A. Locks and Dams

Objective

To regulate water levels and flows required for safe navigation and other purposes on certain rivers through the establishment of the required water levels, construction, reconstruction operation and maintenance of certain locks and dams.

Resource Summary

This Activity accounts for 19% of the expenditures of the Marine Program for 1985-86.

Figure 4: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Locks and Dams	2,412	2,193	2,150

Of the total expenditures in 1985-86, 57% or $1.4 million is for the operation and maintenance of the locks and dams, $1.0 million is for capital expenditures. Of these costs, $1.0 million is for services provided by the Services Program.

Description

This Activity provides for the operation and maintenance of lock and dam facilities located on the Ottawa, French and Red Rivers. The work includes dredging, construction and other maintenance efforts in order to control the level and flow of water and thereby support navigation along these waterways by facilitating the passage of commercial vessels, pleasure craft and forest products. This Activity contributes to other government department objectives through maintenance of appropriate water levels for navigation, hydro electricity production, logging operations and other similar purposes.

Performance Information/Resource Justification

In 1985-86, the Department will be operating 9 water level control facilities on the Ottawa, French and Red rivers which control the level and flow of water. It is the Department's intention to ensure that the operating costs in 1985-86 remain within the average costs over the past 5 years.

The Department controls one lock complex, the St. Andrews lock. The operating costs of that complex are expected to remain at the same level as in 1984-85.

In 1984-85 the operating costs for the Activity are forecast to be $1.3 million and it is planned that they will be $1.4 million in 1985-86 which is less than the 5 year average for operating and maintenance costs for all the locks and dams.

B. Dry Docks

Objective

To support the ship repair industry through the construction, reconstruction, operation and maintenance of certain dry docks and the contribution of financial support under the Dry Dock Subsidies Act.

Resource Summary

This Activity accounts for 78% of the expenditures of the Marine Program in 1985-86.

Figure 5: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Crown-owned dry docks	9,476	11,532	7,479
Subsidy to private dry docks	180	180	180
	9,656	11,712	7,659
Revenues from Dry Docks	1,296	1,266	962
Operating Loss from Dry Docks	4,294	2,887	3,288

Of the total expenditures in 1985-86, $5.6 million is for operating expenditures. $3.9 million will be required for capital improvements, primarily for the completion of the major improvements to the Graving Dock in Esquimalt. The expenditures include $2.3 million for charges for services provided by the Services Program.

Description

This activity currently provides for the maintenance and operation of Crown-owned dry docks at Lauzon, Québec, Selkirk, Manitoba and Esquimalt, British Columbia.

The Georges P. Vanier Dry Dock at Canadian Vickers Ltd. (Montreal) is the only Dry Dock presently subsidized under the terms of the Dry Docks Subsidies Act. The Department's involvement is limited to payment of the annual subsidy, arranging for periodic audits and the carrying out of periodic technical inspections.

Users of the dry docks are charged with tariffs approved by the Governor in Council.

Performance Information/Resource Justification

The principal result of the Activity is effective, efficient, and accessible ship repair facilities. Achievement of this can be measured in terms of the occupancy rate of the various dry docks in relation to the availability of the docks. Four of the five dry docks are expected to be occupied to the capacity. Based on historic usage patterns, the dry dock at Selkirk will only be occupied for approximately 30% of the shipping season even though it must be available throughout that time to handle possible emergency repairs.

The resources allocated for the operation and maintenance of these dry docks as established through consideration of the required level of maintenance for each facility. Thus, the requirements may vary from year to year due to damage, age of the structure. However, with the exception of major repairs the operating costs from year to year should be similar. In 1985-86, major repairs to the quay walls at Lauzon costing $1.4 million are being incurred.

Figure 6: Occupancy Rate - as a percentage of Available days

C. Program Planning and Control

Objective

To manage the Marine Transportation and Related Engineering Works Program including the identification of requirements and priorities, the development of capital and operating plans, and the control of resources provided to the program.

Resource Summary

This Activity accounts for approximately 2.8% of the Marine Program expenditures in 1985-86.

Figure 7: Activity Expenditures ($000) and Person Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Program Planning and Control	346	5	325	5	201	5

Salaries and employee benefit contributions make up 95% of the costs of this Activity in 1985-86.

Description

This Activity provides for the determination of the program requirements for Public Works Canada controlled locks, dams and dry docks; the development of plans to satisfy program requirements; and the control of resources provided to the program to enable the implementation of approved plans.

Performance Information/Resource Information

The expected results of this activity are approved plans for the program and the achievement of those plans, in effect, the management and control of the program. The resources required for this Activity represent a portion of the cost of the Program Planning and Control staff involved as the "owner" in the respective offices where this Program is being carried out.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 8: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	290	274	161

	Authorized Person-years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	2	2	2	50,350-96,300	66,054
Scientific and Professional					
Engineering and Land Survey	3	3	3	23,306-76,130	52,148

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at 31 October 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Internal Charges

The majority of the person-years of the Department are in the Services Program. The Marine Transportation Program, like other departments, is treated as a "client" of the Services Program (as defined in the Treasury Board Common Services Policy) acquiring the required services and reimbursing the Services Program for the direct costs of such services. Figure 10 reflects the charges to the Marine Transportation Program and an approximation of the person-years involved in providing these services.

Figure 10: Internal Charges ($000) and Proxy Person-Years (PPY)

Grants			
Dry Dock Subsidy to Canadian Vickers, Montreal	180	180	180

B. Cost Analysis

Net Program Costs

The Marine Transportation Program 1985-86 Estimates include those expenditures to be charged to the program's appropriations. The adjustments made to the estimated expenditures to arrive at total cost include services provided without charge by other departments ($5,000) and accommodation provided by this department ($17,000). Revenue includes amounts to be received for the use of the dry docks and is credited to Non-Tax Revenue.

Figure 14: Net Program Cost ($000)

3631

Section I
Program Overview

A. Highlights

For 1985-86, the following goals have been established for the Land Transportation and Other Engineering Works Program:

- complete Phases I and II of a project to upgrade to four lanes the Trans-Canada Highway through Banff National Park (See page 6-12),
- maintain and reconstruct the Northwest Highway system within reduced resource levels (See page 6-10), and
- operate and maintain the present bridges within present resource levels and fully recover the operating costs through increased tariffs on the New Westminister Bridge (See page 6-13).

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Highway Systems	63,309	82,096	(18,787)	6-11
Bridges and Other Engineering Works	2,426	2,417	9	6-13
Program Planning and Control	221	198	23	6-15
	65,956	84,711	(18,755)	
Person-Years	3	3	-	

Explanation of Change: The 1985-86 estimated expenditures of $66.0 million represents decrease of approximately $18.8 million or 22.2% of the 1984-85 forecast expenditures. This decrease is primarily due to:

- a decrease in capital expenditures in 1985-86 due to the completion in 1984-85 of a major part of work on Phases I and II of the Trans-Canada Highway upgrading it to 4 lanes through Banff National Park and reduced work on reconstruction of the Northwest Highways. ($17.8 million)
- a reduction in maintenance level for the Northwest Highway System as part of the government Expenditure and Program Review. ($1.0 million)

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of 31 October 1984) is unchanged from the amounts shown in the 1984-85 Main Estimates. (Extracts from Part II of the Estimates, page 6-4)

C. Background

1. Introduction

The Program provides for the construction and maintenance of roads and bridges under the exclusive jurisdiction of the federal government, including most notably the Northwest Highway System. It also provides for the construction of the Trans-Canada Highway through national parks, as well as the federal government's share of the responsibility for the design, construction and maintenance of a number of international, interprovincial and intraprovincial bridges.

2. Legal Mandate

The Trans-Canada Highway Act s.8 gives the Minister the authority to "provide for the construction of such highways within National Parks as form part of a Trans-Canada Highway". The Public Works Act s.9(c) charges the Minister with "the management, charge and direction of the following properties belonging to Canada,...namely: (c) the roads and bridges...". The Public Works Act s.9(1)(h) also makes the Minister reponsible for administering the federal portion of shared-cost road transportation projects for which the Minister has been made reponsible. The Public Works Act s.12 states further that "the Minister shall direct the construction, maintenance and repair of all...roads or parts of road, bridges...constructed or maintained at the expense of Canada that are placed under his management and control".

3. Program Objective

The objective of the Land Transportation program is "to facilitate land transportation and to support certain related economic and social development goals through the construction, reconstruction and maintenance of designated highways and bridges and other engineering works".

4. Program Organization for Delivery

Activity Structure: The program is composed of three activities, as presented in Figure 2.

Organization Structure: The manager responsible for the effective and efficient achievement of results in accordance with Executive Committee and Treasury Board approved plans, standards and policies is the Assistant Deputy Minister, Operations through the Regional Directors General. The Assistant Deputy Minister, Design and Construction provides functional management including the provision of advice and assistance in the development of standards, policies and plans and in monitoring and quality assurance throughout all stages of the management process. The resources by organization are set out in Figure 3.

Figure 2: Activity Structure

Figure 3: Resources by Organization/Activity ($000) 1985-86

	ADM Operations		ADM Design and Construction		Total	
	$	P-Y	$	P-Y	$	P-Y
Highway Systems	63,309	-	-	-	63,309	-
Bridges and Other Works	2,426	-	-	-	2,426	-
Program Planning and Control	148	2	73	1	221	3
	65,883	2	73	1	65,956	3

D. Planning Perspective

1. Environment

The planning and conduct of this program requires an understanding of the function of the program's highways and bridges in the national and regional transportation systems, and of the federal-provincial and federal-territorial government relationships involved, as well as the complexities of the required engineering and construction.

Essentially, the activities in the highways portion of the program represent those roads which are under federal jurisdiction in the national highway system, primary responsibility for which rests with provincial governments.

Federal restraint has affected the level of activity in this Program.

2. Initiatives

The two major initiatives underway at the moment are the reconstruction of the Trans-Canada Highway in Banff National Park along with the reconstruction of portions of the Northwest Highway System. In 1985-86, due to the government's Expenditure and Program Review, as well as the completion of major projects, the reconstruction program will be reduced from $58 million to $40 million. In addition, resources allocated to maintenance of the Northwest Highway System will be reduced by $1 million.

As part of the government's expenditure reduction program announced in November 1984, the tolls for the New Westminster Railway Bridge were doubled to cost recovery levels resulting in increased revenue of $4 million over the next 3 years. As shown on page 6-13 this will result in increased revenue of $1.4 million in 1985-86.

Transfer of responsibility for components of the Northwest Highway System located in British Columbia is under discussion with the provincial government.

Section II
Analysis by Activity

A. Highway Systems

Objective

To construct, reconstruct and maintain designated highway systems and to undertake improvements of the Trans-Canada Highway through the National Parks.

Resource Summary

The Activity accounts for approximately 96% of the expenditures of the Land Transportation Program.

Figure 4: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Northwest Highway System	52,060	54,241	51,043
Trans-Canada Highway System	11,249	27,855	13,986
Other Systems	-	-	-
	63,309	82,096	65,029

Of the total expenditures in 1985-86, 36% or $22.9 million represents the maintenance costs of the Northwest Highway System. Capital expenditures total $40.4 million for 1985-86. Of these costs, $4.5 million is for charges for services provided by the Services Program.

Description

This Activity provides for the reconstruction and maintenance of the Northwest Highway System (Alaska Highway and Haines Road) and capital improvements to the Trans-Canada Highway through the National Parks and other highways as mandated. Maintenance of the Trans Canada Highway in the parks is the responsibility of Parks Canada. This Activity includes provision for the bridges which are on integral part of these highways.

The Yukon Territorial Government, under an agreement with the Department, carries out maintenance on the Yukon portion of the Alaska Highway and the Haines Road. Most maintenance work on the British Columbia portion of the Alaska Highway is contracted out and all capital projects in this activity are contracted out.

Performance Information/Resource Justification

The resources required for this Activity are directed at the reconstruction, improvement and maintenance of two highway systems. Details of the Capital expenditures by project are shown in Figure 12 on page 6-18.

Northwest Highway System: The system is 2,003 kilometres in length and is in constant need of maintenance, repairs and reconstruction. In 1985-86 the work will be concentrated in the area south of Fort Nelson and around Whitehorse. Figure 5 presents the operating requirements and results of this sub-activity.

Figure 5: Northwest Highway System

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Maintenance cost per km	$11,436	11,943	14,033
Reconstruction -			
Paving - No. of km	40	19	19
Grading - No. of km	57	58.1	70

Trans-Canada Highway System: At the present time the principal work being done on the Trans-Canada Highway is the improvement of the highway through Banff National Park from kilometre 0 to kilometre 27 extending it to four lanes to meet the needs caused by increased traffic in and through the park. Phase I will be completed in 1985-86. Phase II is currently under construction with final paving, animal fencing, landscaping etc. to be completed in 1985-86. This will result in an additional 2 kilometres being graded and 12.5 kilometres being paved in 1985-86.

B. Bridges and Other Engineering Works

Objective

To construct, reconstruct, operate and maintain certain designated bridges and other engineering works.

Resource Summary

This Activity accounts for 3% of the expenditures of the Land Transportation Program in 1985-86.

Figure 6: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Bridges and other Engineering Works	2,426	2,417	4,010
Revenue	2,675	1,269	989

The resources are primarily required for the maintenance and operation of the various bridges in this Activity. Of these costs $1.1 million is for charges for services provided by the Services Program.

Description

This Activity provides for maintenance, improvement and operation of five international, seven interprovincial and five intraprovincial bridges. Two of the bridges have moveable spans and require full-time operations staff.

The Activity includes all aspects of the operation and maintenance of these bridges which includes arranging for design, construction supervision and carrying out, or monitoring maintenance, as appropriate. Revenues arise from rail car tariffs on the New Westminster Bridge. Bridges considered to be part of highway systems are not included in this Activity.

Performance Information/Resource Justification

Financial resources required for the provision, operation and maintenance of these bridges are established through consideration of the level of upgrading or maintenance required each year to provide the required service level. The resources required fluctuate annually and are affected by age of the structure, maintenance intervals, accidents involving structural damage and general wear and tear of the structure. However, with the exception of major repairs, the costs should be similar from year to year. The costs in 1983-84 included $2.3 million for repairs of the New Westminster Railway Bridge. Figure 7 shows the trend of expenditures over the past several years.

Figure 7: Operating and Maintenance Costs by Year ($ Millions)

Due to the doubling of the tariffs for the use of the New Westminster Bridge, it is expected that the resulting revenues in 1985-86 will exceed the operating costs of all of the bridges.

C. Program Planning and Control

Objective

To manage the Land Transportation and Other Engineering Works Program, including the identification of requirements and priorities, the development of capital and operating plans, and the control of resources provided to the program.

Resource Summary

This Activity accounts for .3% of the Land Transportation Program expenditures in 1985-86.

Figure 8: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Program Planning and Control	221	3	198	3	126	3

Description

This Activity provides for the determination of program requirements related to Public Works Canada controlled highway systems, bridges and other engineering works; the development of plans to satisfy program requirements; and the control of resources provided to the program to enable the implementation of approved plans.

Performance Information/Resource Justification

The expected results of this Activity are approved plans for the Program, and the achievement of those plans, in effect, the management and control of the Program. The resources required for this activity represent a portion of the cost of the Program Planning and Control staff involved as the "owner" in the respective offices where this Program is being carried out.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 9: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Operating			
Personnel			
Salaries and Wages	186	168	103

Total expenditures	65,956	84,711	69,165

2. Personnel Expenditures

Figure 10: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	2	2	2	50,350-96,300	66,054
Scientific and Professional					
Engineering and Land Survey	1	1	1	23,306-76,130	

Note: The person-year column displays the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at 31 October 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Internal Charges

The majority of departmental employees are shown in the Services Program. The Land Transportation Program, like other departments, is treated as a "client" (as defined by the Treasury Board Common Services Policy) and acquires the required services from the Services Program, reimbursing that Program for the direct cost of those services. The following table reflects those charges to the Land Transportation Program and an approximation of the Person-Years involved in providing those services.

M 65

B. Cost Analysis

Net Program Costs

The Land Transportation Program 1985-86 Estimates include only those expenditures to be charged to the program's appropriations. The adjustments made to the estimated expenditures to arrive at total cost include, services provided without charge by other departments ($3,000) and accommodation provided by this department ($10,000). Revenue includes amounts to be received as charges for the use of the New Westminster Railway Bridge.

Figure 13: Net Program Cost ($000)

1985–86 Estimates

Part III

Expenditure Plan

3641

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Regional Industrial Expansion

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II describes each activity and identifies the costs associated with these activities. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is sought in these Estimates to spend $1,206,897,637 in support of the 1985-86 Department of Regional Industrial Expansion. This includes $5,300,000 in non-budgetary expenditures. The remaining expenditures, estimated at $74,339,009 will be made under existing statutory authorities including: Liabilities under the Small Businesses Loans Act; insurance payments under the Enterprise Development Program; guarantees under the Industrial and Regional Development Program; the Minister's salary and motor car allowance; and contributions to employee benefit plans.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates

Section I
Program Overview

A. Highlights

- The government is reviewing the direction of the Department, with an intended re-orientation away from financial assistance and toward business intelligence, consultative and policy functions. As a result of this new emphasis, the Industrial and Regional Development Program is now being adjusted to improve its efficiency and effectiveness. Over the longer term, an increased priority will be given to innovation in strategic areas, strengthening the defence/industrial base, and facilitating joint economic development initiatives with the provinces (see page 17).

- The Program's budgetary expenditures for 1985-86 are estimated at $1,275.9 million, a decrease of $73.4 million or 5% under the 1984-85 forecast (see Extracts from Part II, page 6).

- Non-budgetary expenditures in the form of loans and investments will amount to $5.3 million in 1985-86 (see page 38).

- Direct assistance to the private sector in the form of grants and contributions is estimated at $1,022.7 million, down $67.4 million from the 1984-85 forecast (see page 37).

- Three main assistance programs of DRIE account for 71% of Departmental funds to be contributed to industry in 1985-86 (see page 14). These major programs are:

	($000)
Economic and Regional Development Agreements and General Development Agreements	162,485
Defence Industry Productivity Program	175,000
Industrial and Regional Development Program	344,393

- In 1985-86, DRIE will require 43 fewer person-years than the 1984-85 forecast (see page 8).

B. Financial Summary

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For details see page
Business Climate	157,992	203,221	(45,229)	21
Innovation	272,997	234,079	38,918	23
Industrial, Commercial and Tourism Development	719,849*	790,027	(70,178)	25
Marketing	82,504	83,680	(1,176)	28
Administration	47,895	47,549	346	31
Total	1,281,237	1,358,556	(77,319)	
Person-Years	2,970	3,013	(43)	

* This includes $5,300,000 for loans and investments.

Explanation of Change: The net decrease of $77.3 million (5.7%) in the 1985-86 requirements over the 1984-85 forecast is made up of the following major items:

	$ million
• increase in salary costs	7.8
• decrease in operating expenditures	(10.8)
• increases (reductions) in cash flow requirements for the following programs:	
Industrial and Regional Development Program	66.5
Native Economic Development Program	40.0
Special Agricultural and Rural Development Act, Defence Industry Productivity Program and Canadian Industrial Renewal Board	11.1
Small Businesses Loan Act	(17.5)
Loans under the Industrial and Regional Development Program	(4.0)
Tourism	(11.0)
Special Recovery Capital Projects Program	(17.1)
Shipbuilding Industry Assistance Program	(10.0)
Small Business Investment Grants	(10.5)
Industry Labour Adjustment Program	(19.2)
General Development Agreements	(41.2)
Enterprise Development Program losses	(10.0)
Industry Energy Research and Development and Maislin	(32.4)
Convention centres	(15.0)
Other programs	(4.0)

Explanation of 1984-85 Forecast: The 1984-85 forecast (based on information as of October 31, 1984) is $53.8 million or 4% higher than the 1984-85 Main Estimates of $1,304.8 million (Extracts from Part II of the Estimates, page 4). The difference of $53.8 million reflects the following major items:

	$ million
• increase in liabilities under the Small Businesses Loans Act	29.0
• loan insurance payments in respect of Maislin Industries Ltd.	24.8

C. Background

1. Introduction

The Department of Regional Industrial Expansion (DRIE) was created in December, 1983, through the amalgamation of the former departments of Industry, Trade and Commerce and Regional Economic Expansion. DRIE was established to address the government's key priority of economic renewal, and was given the mandate of increasing the economic prosperity of Canadians in all provinces and stimulating regional industrial expansion. When the Ministry of State for Economic and Regional Development was disbanded in July, 1984, the Regional and Project Co-ordination Branch and the Federal Economic Development Co-ordinators were transferred to DRIE.

The Department plays a major role in the government's efforts to optimize regional economic benefits. This is accomplished through both program and non-program functions. The latter includes policy development, the transfer of new technologies throughout Canadian industry and the analysis and dissemination of economic and commercial information. The Department also assists industry through the identification of development opportunities and markets, and the promotion of economic benefits from major government procurements and Crown-sponsored projects.

Private industry projects are supported through a series of programs delivered by the Department. These programs are related to key industrial sectors, including consumer goods and services, resource industries, tourism, capital and industrial goods, and small business. Assistance is provided through a range of financial mechanisms, including grants, contributions, repayable contributions, loans and loan guarantees.

The government is reviewing the direction of the Department, with an intended re-orientation away from financial assistance and toward a greater business intelligence, policy and consultative role. As a result of this new emphasis, the Department will be re-aligning its funded programs and non-program functions.

DRIE's position as the federal focal point for addressing economic development involves close and frequent co-operation with a number of other departments and agencies, including External Affairs, Finance, Treasury Board, Defence, Environment, Transport, Energy, Mines and Resources and Indian and Northern Affairs.

2. Legal Mandate

The Department of Regional Industrial Expansion was established in December, 1983, under the Department of Regional Industrial Expansion Act which sets out the departmental mandate of:

- enhancing the national economy and achieving economic development in all regions in Canada;
- improving opportunities for productive economic expansion in all regions of Canada and access to those opportunities; and
- promoting economic development in those regions in Canada in which opportunities for productive employment are exceptionally inadequate.

The mandate for Economic and Regional Development Agreements is set out in the Government Organization Act proclaimed in December, 1983. The Industrial and Regional Development Program, which supports economic growth through initiatives that build on strengths in every region, was established under the Industrial and Regional Development Act. Other acts administered by the Department include the Small Businesses Loans Act, enacted to provide guarantees for loans to small business owners and the Agricultural and Rural Development Act, which provides for the rehabilitation and development of rural areas in Canada.

3. Program Objective

To increase overall industrial, commercial and tourism activity in all parts of Canada and in the process reduce economic disparity across Canada.

This objective will be achieved by:

- working with business and labour, other governments and the academic community;
- shaping the framework set by government policies;
- providing financial, marketing and other technical information to businesses; and
- where necessary, extending direct financial assistance.

The Department will also foster the development of an environment which encourages firms to be more internationally competitive by aiding these firms to:

- develop new products, processes, and services;
- establish the capacity to produce these goods and services;
- market these goods and services at home and abroad; and
- restructure the firms' activities to adjust to changing market conditions.

4. Program Organization for Delivery

Activity Structure: Since the announcement of the government re-organization in January, 1982, and the official merger of the two parent departments, DRIE has been developing and implementing a new approach to managing its policy and program operations. The basic management task is to co-ordinate regional and sectoral needs, to establish priorities, and to exploit opportunities to stimulate

industrial development. The activity framework is designed to support the various phases of the product life cycle. This is based on the notion that the Department must be prepared to provide the most effective type of assistance and support to corporate initiatives at the critical stages of product and corporate development.

The activities include Business Climate, which embraces general policy and consultative functions intended to generate a favourable climate for investment, entrepreneurship, and ongoing business activity in Canada. Funded assistance is available for infrastructure required for the realization of regional industrial development, particularly in the less advantaged regions.

The second Activity, Innovation, seeks to establish an innovative capability in the private sector, induce investment in technology and support the development of new products and processes. Assistance includes support for micro-electronics and innovation centres; stimulating research, development and the transfer of technology; and developing corporate understandings with certain key companies to determine what government actions could contribute to mutual objectives.

The third Activity, Industrial, Commercial and Tourism Development, covers the largest share of departmental expenditures. Programs under this Activity provide support for plant establishment, expansion, modernization and productivity improvement, with assistance concentrated in disadvantaged areas. Work includes identifying and supporting development opportunities in industry, small business and tourism, as well as in-depth economic and financial analyses of projects carried out in headquarters and in the regional offices.

The Marketing Activity focuses on the development and exploitation of international and domestic market opportunities. This Activity includes international trade policy development, enhancement of access to foreign markets, and identification of domestic marketing opportunities, as well as a major international marketing program for the tourism industry.

The final Activity, Administration, includes executive direction and support services to assist the Department in discharging its mandate.

These five Activities which comprise the Regional Industrial Expansion Program are shown in Figure 2. Section II of this Plan discusses each of these activities in further detail.

Figure 2: Activity Structure

Program Delivery: The Department pursues its mandate through an array of funded programs and non-program functions. Non-program functions include policy development, technology transfer, and industrial intelligence, as well as the identification of industrial opportunities for investment, business counselling and enhancement of domestic and foreign market penetration. Industry/government committees and task forces are also convened to provide advice to the Department in the development of industrial policies and sector strategies. For example, reports prepared by private sector task forces have recently been completed on the automotive, petrochemical, aerospace and forestry sectors.

DRIE also achieves its mandate through direct funded assistance to the private sector by means of grants, contributions, loans and loan guarantees. The instruments or delivery mechanisms through which financial assistance is provided are a series of programs delivered by the Department. These programs provide funding for major projects of a long term nature with multi-year cash flows. Figure 3 presents program funding by Activity for 1985-86.

Figure 3: Program (Instrument) Funding by Activity, 1985-86 ($000)

	Business Climate	Innovation	Industrial, Commercial and Tourism Development	Marketing	Total
Economic and Regional Development Agreements and General Development Agreements	83,854	630	74,083	3,918	162,485
Industrial and Regional Development Program	18,473	156,035	149,113	20,772	344,393
Defence Industry Productivity Program	-	87,500	87,500	-	175,000
Western Transportation Industrial Development Program	798	1,994	6,978	199	9,969
Special Agricultural and Rural Development Program	-	-	20,600	-	20,600
Native Economic Development Program	2,400	6,000	101,000	600	110,000
Shipbuilding Industry Assistance Program	-	-	35,000	-	35,000
Canadian Industrial Renewal Board	-	-	68,435	-	68,435
Other Programs	7,228	-	89,576	-	96,804
Total	112,753	252,159	632,285	25,489	1,022,686

The Economic and Regional Development Agreements (ERDA), the Defence Industry Productivity Program (DIPP) and the Industrial and Regional Development Program (IRDP) are the main vehicles for DRIE's direct funded assistance. These three programs are discussed separately on pages 41 to 49.

Other programs complement assistance provided through ERDA, DIPP, and IRDP. The Special Agricultural Rural Development Act and the Native Economic Development Program provide assistance to promote economic development for Canada's Native people. The Canadian Industrial Renewal Board supports the textiles, clothing and footwear sectors, while the Shipbuilding Industry Assistance Program supports the shipbuilding sector. The Small Businesses Loans Act encourages lenders in the private sector to make loans to small business. DRIE is also involved in the delivery of two programs funded by External Affairs, the Program for Export Market Development and the Promotional Projects Program. These other programs are further defined on page 49.

The creation of a partnership with industry is fundamental to DRIE's success, since DRIE achieves its mandate by providing assistance to private industry. Interaction with the private sector involves all phases of the Department's activities, from the development of policies and strategies to program delivery. This crucial link to the private sector is maintained through discussions with firms and associations, and through policy and intelligence functions.

Organization Structure: DRIE is headed by a Minister for Regional Industrial Expansion, as well as a Minister of State for Tourism and a Minister of State for Small Business. Organizationally, the Department is structured along both regional and sectoral lines. The headquarters organization is divided into components based on industrial sectors, regional development and corporate support. DRIE is highly decentralized, with 10 regional offices (one in each province) headed by Regional Executive Directors.

The regional offices focus on development opportunities in particular regions while the Assistant Deputy Ministers in headquarters consider the national perspective for their relative sectors, i.e., capital and industrial goods; tourism; consumer goods, services and resource processing; and small business. Regional Executive Directors and headquarters ADMs come together as a Management Board to ensure that regional and sectoral policies are co-ordinated, and to select proposals from the private sector to be given funded assistance.

When the Ministry of State for Economic and Regional Development was disbanded in July, 1984, the Regional and Project Co-ordination Branch and the Federal Economic Development Co-ordinators were transferred to DRIE under the Regional Development Branch. As a result of this transfer, DRIE now plays a primary role in the effort to integrate and co-ordinate regional and sectoral policies, and the Minister of DRIE acts as chairman of the Cabinet Committee on Economic and Regional Development.

Figure 4 relates the Program's organization structure to its activities by showing the 1985-86 resources required.

Figure 4: Resources by Organization/Activity, ($000)

										ACTIVITY TOTAL
Business Climate (505 P-Y)	2,878	8,424	1,981	-	547	130,555	-	3,141	10,466	157,992
Innovation (234 P-Y)	96,842	2,987	1,019	-	-	172,149	-	-	-	272,997
Industrial, Commercial & Tourism Development (1,185 P-Y)	139,206	12,046	63,249	12,792	3,774	488,707[1]	-	-	75	719,849

Administration (620 P-Y)	120	307	339	607	52	6,841	37,233	696	1,700	47,895
Program Total (2,970 P-Y)	239,422	36,050	66,588	40,474	4,373	836,721	41,531	3,837	12,241	1,281,237

[1] Includes $5,300 thousand in loans.

Note: This preliminary resource display will be subject to revision relating to changing priorities as the year progresses.

D. Planning Perspective

1. Environment

Several key factors concerning the state of the Canadian economic environment and market conditions have significant implications for the Regional Industrial Expansion Program.

- There is uncertainty about the scope and strength of economic recovery.
- The rapidly accelerating pace of technological change and its pervasiveness are a major challenge to Canadian industry. New technologies are revolutionizing industrial processes, products and services and are creating new opportunities for Canadian businesses.
- The industrial sector faces competitive adaptation to a world of new technologies and changing international supply and demand patterns.
- Successful restructuring of manufacturing firms will help to stabilize employment in that sector.
- Small business and the service sector will continue to be the main providers of jobs in Canada.
- For the medium-term, competitive pressures appear particularly acute for certain resource commodities, notably forest products and minerals, as well as for the tourism industry.
- The recent growth in protectionism in international markets is a factor of major concern for Canada's exporting firms.

2. Initiatives

The new government, after an evaluation of departmental functions, is changing the direction of regional and industrial programming. At the same time, greater priority will be given to supporting the needs of Canadian business through better commercial intelligence and closer links with potential investors and markets.

This change in emphasis is demonstrated by the transfer to DRIE of $15,728,000 and 184 person-years for the Regional Development Branch and the Federal Economic Development Co-ordinators, who co-ordinate economic development policies at the federal level and with the provinces. Other policy and business intelligence functions that will be given increased emphasis include:

- The Office of Industrial Innovation, the focal point for the planning of policies and programs in support of innovation;

- The Small Business Secretariat, which plays a policy development and advocacy role for small business;

- The Office of Industrial Adjustment, the focal point for the development and implementation of policies and programs to facilitate private sector adjustment;

- The Think Canadian campaign, which promotes public awareness of Canadian-made products; and

- The promotion of tourism through marketing campaigns to increase penetration of primary markets and develop new markets.

In line with the intention to reduce overall government expenditures, financial programs will be de-emphasized, while maintaining a reasonable level of program support for innovation in strategic areas, strengthening the defence-industrial base, and facilitating joint initiatives with the provinces. This new orientation is expected to result in a re-alignment of the Department's major programs as follows.

- The Department is streamlining the Industrial and Regional Development Program.

- Economic and Regional Development Agreements have now been signed with all provinces, and the process of completing subsidiary agreements tailored to meet specific economic development needs of each region is well advanced.

- Increased emphasis will be given to the Defence Industry Productivity Program in support of the government's intention to strengthen the defence/industrial base.

Another initiative the Department is pursuing is the development of Memoranda of Understanding as a means to discuss strategies, goals and objectives with major corporations, and, where appropriate, industries. This involves the preparation of corporate memoranda of understanding detailing a course of action to achieve both private and public objectives over a medium term time frame.

3. Program Effectiveness

The Department is now developing new management processes and systems to monitor, control and yield information on the results of projects and programs. Assessment of the effectiveness of the Regional and Industrial Expansion Program is achieved through the cyclical evaluation of the Department's program evaluation components. Major evaluation studies currently underway include the Tourism Marketing component. As they became available, the results of these evaluations will be displayed in future Expenditure Plans.

The following information addresses the effectiveness of the Regional Industrial Expansion Program in terms of the two thrusts of its objective: increasing industrial activity and reducing regional disparity.

Industrial Activity: DRIE's impact on increased industrial activity is achieved by providing assistance to industry through a mix of programs or instruments, as well as through non-program or policy and industrial intelligence functions. This assistance allows companies to undertake projects that would otherwise not go forward, thus increasing employment, sales and investment.

Figure 5 displays the number of private sector projects funded through these programs, and the total contributions authorized.

Figure 5: Number and Value ($000) of Private Sector Projects Assisted

	Actual 1984-1985 (to Oct 31, 1984)		Actual 1983-84	
	Number	$	Number	$
Defence Industry Productivity Program	30	10,686	155	74,900
Industrial and Regional Development Program*	974	235,576	1,207	239,600
Western Transportation Industrial Development Program	18	2,797	-	-
Special Agricultural and Rural Development Program	207	7,951	N/A	14,421
Native Economic Development Program	7	1,751	-	-
Shipbuilding Industry Assistance Program	40	19,293	48	42,400
Canadian Industrial Renewal Board	218	66,800	464	119,100
Small Businesses Loans Act	18,180	511,054	28,511	776,000

* Includes previous programs subsumed by IRDP.

Regional Development: Although all of the Department's programs help to strengthen regional economies, the Economic and Regional Development Agreements (ERDAs) are the primary tool for addressing regional economic development requirements. The ERDAs, developed in conjunction with the provincial governments, form the framework for subsidiary agreements that meet specific needs in each province. Figure 6 identifies DRIE's commitment for active subsidiary agreements under Economic and Regional Development and General Development Agreements, the forerunners to ERDAs.

Figure 6: Commitment ($000) for Subsidiary Agreements by Province

	DRIE Commitment
Newfoundland	169,300
Prince Edward Island	5,800
Nova Scotia	118,150
New Brunswick	144,775
Quebec	223,152
Ontario	124,303
Manitoba	131,800
Saskatchewan	49,600
Alberta	22,500
Northwest Territories	9,675

Evaluations of approximately 20 subsidiary agreements will be completed prior to the tabling of the next Expenditure Plan.

In addition to ERDAs, other programs tailored to meet regional needs include the Industrial and Regional Development Program, which promotes regional development by targetting progressively greater assistance to areas of the country having less favorable opportunities for economic growth. The Special Agricultural and Rural Development Act and the Western Transportation Industrial Development Program focus on the needs of the western provinces. A special program for disadvantaged areas in Quebec stimulates industrial and tourism development in Bas St-Laurent, Gaspé and les Îles de la Madeleine. The Native Economic Development Program is a national program which assists regional development initiatives of Native peoples.

The impact of specific projects supported through major DRIE programs is discussed in more detail in Section III of this plan.

Section II
Analysis by Activity

A. Business Climate

Objective

To foster an environment supportive of investment, innovation, entrepreneurship and economic growth.

Resource Summary

Business Climate accounts for approximately 12% of total 1985-86 Program expenditures and 17% of Program person-years.

Figure 7: Business Climate Expenditures ($000) and Person-Years

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Policy and commercial intelligence	45,239	46,364	33,821
ERDAs and GDAs	83,854	107,687	103,917
IRDP	18,473	9,824	14,355
Other programs	10,426	39,346	38,270
Total	157,992	203,221	190,363
Person-Years	505	676	608

Approximately 29% of the costs of Business Climate are related to salaries and other operating expenditures, and 71% are for grants and contributions in 1985-86.

Description

The Business Climate Activity involves DRIE's efforts to ensure a conducive climate for business investment at both the federal and provincial levels. This is achieved principally through policy development and through financial assistance for infrastructure required to support successful industrial activity.

Policy and Commercial Intelligence: The principal component of this Activity is policy development and co-ordination, which is aimed at producing sectoral and regional development strategies. The Department works with other federal government departments to influence policies affecting regional industrial development in areas such as taxation, procurement, foreign investment and competition practices. DRIE also plays a role in co-ordinating trade policies and issues with other departments and agencies.

Through this Activity, the Department consults with private institutions, provincial governments, and other federal agencies to maximize development opportunities. Federal/provincial agreements are developed to provide for the special economic development needs of each province. Negotiations with foreign government officials and firms are undertaken to foster co-operation and to encourage joint investment and marketing endeavours.

Emphasis is also given to gathering and disseminating economic and commercial information and conducting special research studies of important business issues. For example, studies of industry sectors are conducted to examine growth potential, trade implications and impact on regional development.

The highest priority is given to involving private sector participation to ensure that departmental policies and programs meet industry needs. This interaction is ensured through ongoing consultation with individual companies, and by developing responses to industry task force reports on various sectors.

Program Assistance: Direct funded assistance under Business Climate supports the development of industrial infrastructure (such as industrial parks, wharves, water and public utilities, access roads and common services) primarily through Economic and Regional Development Agreements. The provision of infrastructure assists companies by reducing the costs of common services, and assists communities by encouraging industry to locate in their region. Institutions supporting industrial development are also funded under this Activity.

Performance Information/Resource Justification

The Business Climate Activity includes program assistance as well as policy and commercial intelligence functions. The impact of the Business Climate Activity can be measured in terms of the achievement of projects supported through a combination of these two types of functions. Key projects and expected results are identified in Section III of the Expenditure Plan under the Economic and Regional Development Agreements (see page 41) and the Industrial and Regional Development Program (see page 46).

B. Innovation

Objective

To stimulate research and development and promote the innovative capability of Canadian industry in order to improve Canada's ability to compete in domestic and export markets.

Resource Summary

Innovation accounts for approximately 21% of Program expenditures and 8% of the person-years in 1985-86.

Figure 8: Innovation Expenditures ($000) and Person-Years

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Policy and commercial intelligence	20,838	24,677	19,883
ERDAs and GDAs	630	-	3,040
IRDP/DIPP	243,535	185,522	136,963
Other programs	7,994	23,880	18,753
Total	272,997	234,079	178,639
Person-Years	234	337	291

Approximately 8% of the Innovation budget is for salaries and other operating expenditures, and 92% is for grants and contributions.

Description

The Innovation Activity facilitates the introduction of new products and processes into the marketplace. In the long term, the objective is to establish a broad innovative capability throughout the manufacturing and processing sectors.

Policy and Commercial Intelligence: These functions include policy development, business counselling and the analysis and dissemination of information relating to new technologies, products and processes. The Department promotes the use of international design standards to enable domestic industries to compete on an equal basis in export markets, and encourages subsidiary companies to seek world product mandates from their foreign parents. These mandates encompass factors such as export autonomy, operating jurisdictions and incentives (such as government contracts) for foreign companies to locate in Canada.

The Innovation Activity also includes the Office of Industrial Innovation, a focal point for the planning of policies and programs in support of innovation. This office reviews the overall approach to technological development and the efficiency of technology transfer from government to industry.

Through this Activity, the Department supports technology centres which undertake research and development for industry and provide technical advice and services. Innovation centres, which evaluate inventions, assist in the commercialization of new products and aid the establishment of new technology-based companies, are also supported. These centres assist in the development of new technologies and the transfer of these technologies throughout the country.

Program Assistance: To make high risk innovation ventures more attractive to the private sector, support is provided through the Department's funded programs. Assistance is given to companies that develop new products and processes, adapt foreign technologies to the Canadian market, or invest in strategically important technologies. The types of endeavours that are eligible for financial support include applied research projects, product/process development projects, design and engineering projects, and defence-related products.

Performance Information/Resource Justification

Through a mix of direct funded programs, plus non-program functions that complement this funded assistance, the Innovation Activity supports projects carried out by private industry. The impact of this Activity can be measured in terms of the achievement of these projects. Key projects and expected results are identified in Section III of this Expenditure Plan under Economic and Regional Development Agreements (see page 41), the Defence Industry Productivity Program (see page 44), and the Industrial and Regional Development Program (see page 46).

C. Industrial, Commercial and Tourism Development.

Objective

To stimulate industrial, commercial and tourism development in Canada by supporting industrial, small business and tourism initiatives, and projects involving plant establishment, modernization and expansion.

Resource Summary

Industrial, Commercial and Tourism Development accounts for approximately 56% of Program expenditures and 40% of Program person-years in 1985-86.

Figure 9: Industrial, Commercial and Tourism Development Expenditures ($000) and Person-Years

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Policy and commercial intelligence	82,264	68,145	56,573
ERDAs and GDAs	74,083	93,961	98,217
IRDP/DIPP	236,613	244,681	189,483
Other programs	321,589	373,940	217,089
Non-budgetary loans and investments	5,300	9,300	5,931
Total	719,849	790,027	567,293
Person-Years	1,185	915	766

Approximately 11% of the Industrial, Commercial and Tourism Development budget is related to salaries and other operating costs, while 89% is devoted to grants and contributions in 1985-86. Revenue totalling $120,050,000 earned through this Activity from return on investments, refunds of previous year's expenditures and service fees is credited to the Consolidated Revenue Fund (see page 40).

Description

The Industrial, Commercial and Tourism Development Activity supports business development endeavours that are based on regional strengths and contribute to productivity and sustained economic growth.

3669

Policy and Commercial Intelligence: These functions involve policy development, analysing economic and commercial information and providing this information to the business community. The Department assists industry by identifying opportunities for investment, conducting feasibility studies of specific proposals requiring funding, and counselling companies through all stages of project development. Other policy and commercial intelligence functions under this activity are described below.

- The Office of Industrial and Regional Benefits helps Canadian businesses take advantage of opportunities arising from investment in major capital projects, thereby increasing industrial benefits in Canada. DRIE assists in the planning of major projects, and ensures that Canadian suppliers have full and fair opportunity to bid on contracts associated with major projects. The Office's responsibilities also encompass the planning and implementation of benefits from major Crown purchases.

- Corporate Memoranda of Understanding are used to interact with a small number of key firms to develop corporate accords and determine what government actions could contribute to the realization of mutual objectives. Discussions pertain to common concerns such as economic growth, employment and exports.

- The Machinery Duty Remission Program assists machinery users to acquire advanced production equipment, at the lowest possible cost, through the remission of duty on equipment not available in Canada, and provides a supportive environment to machinery manufacturers. Through this program, duty remission was provided to some 500 companies in the 1983-84 fiscal year, and 21 companies were assisted to increase the range of machinery products manufactured in Canada.

- Tourism is stimulated through the development of tourism products, such as attractions, visitor facilities, and services to attract tourists and assist regional development. The Department also identifies supply or development problems and implements solutions to improve the efficiency and effectiveness of the tourism industry.

- The Department promotes maximum use of Canadian suppliers as sources of goods and services to increase the domestic market base for Canadian firms.

Program Assistance: Funding is provided through the Industrial and Regional Development Program (IRDP) to stimulate the establishment, expansion and modernization of Canadian businesses. Firms are also

funded through the Defence Industry Productivity Program to develop viable defence, or defence-related products for export, and regional development and tourism are supported through federal/provincial agreements.

The majority of resources for the other programs identified in Section III of this Plan also fall under this Activity. The Special Agricultural and Rural Development Act and the Native Economic Development Program focus on the specific economic development needs of Native peoples. The Canadian Industrial Renewal Board supports the textiles, clothing and footwear sector, while the Shipbuilding Industry Assistance Program works toward increasing competitiveness of the Canadian shipbuilding industry. The Small Businesses Loans Act was introduced to encourage lenders in the private sector to make loans available to small business by guaranteeing these loans.

Performance Information/Resource Justification

As with the Business Climate and Innovation Activities, the Industrial, Commercial and Tourism Development Activity supports private sector projects as a result of both program and non-program functions. The impact of this Activity can be measured in terms of the achievement of these projects. Key projects and expected impacts are identified in Section III of this Expenditure Plan under Economic and Regional Development Agreements (see page 41), the Defence Industry Productivity Program (see page 44), and the Industrial and Regional Development Program (see page 46).

3671

D. Marketing

Objective

To facilitate the identification, development and exploitation of international and domestic market opportunities, including those associated with major development projects, in order to increase domestic and export sales and reduce reliance on imports.

Resource Summary

Marketing accounts for approximately 7% of Program expenditures and 14% of Program person-years in 1985-86.

Figure 10: Marketing Expenditures ($000) and Person-Years

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Policy and commercial intelligence	57,015	72,420	52,063
ERDAs and GDAs	3,918	2,003	1,093
IRDP	20,772	7,629	175
Other programs	799	1,628	1,217
Total	82,504	83,680	54,548
Person-Years	426	447	396

Approximately 69% of the Marketing budget relates to salaries and other operating costs, while 31% is for grants and contributions in 1985-86.

Description

Through the Marketing Activity, the government shares in the risks and cost of obtaining market knowledge and promoting products and services for Canadian companies.

Policy and Commercial Intelligence: These functions, encompassing tourism marketing and international and domestic market enhancement, form the major portion of the Marketing Activity.

Tourism marketing, a major component of the Marketing Activity, is designed to improve Canada's image as a tourist destination, and to improve Canada's share in the growing world tourism industry. Advertising and other communications activities are conducted in the USA, Canada and overseas markets in co-operation with the provinces,

territories and the private sector to increase penetration of primary markets (i.e., Northeastern USA) and develop new geographic (i.e., Southeast Asia) and special interest markets (i.e., skiing).

The development of domestic and international marketing involves identifying and increasing access to new market opportunities, analyzing markets and disseminating market knowledge. Domestic marketing is supported through a "Think Canadian" campaign that increases awareness of the benefits of made-at-home products and services. Market information and counselling is also provided to increase manufacturers' awareness of opportunities and reduce reliance on imports. Through the Business Opportunities Sourcing System, information on approximately 15,000 Canadian companies and their products, services and capabilities is accessible to the public.

DRIE is involved in the delivery of two programs funded by External Affairs to assist in the penetration of foreign markets. The Program for Export Market Development (PEMD) assists individual companies to expand their marketing efforts in world markets through a wide range of marketing techniques, such as participating in trade fairs and bringing foreign buyers to Canada. Whereas PEMD supports individual companies, the Promotional Projects Program (PPP) is the vehicle through which the federal government plans and implements participation in trade fairs and missions, and encourages incoming trade visits by foreign buyers and government delegations.

Program Assistance: Direct funding, provided mostly through the Industrial and Regional Development Program (IRDP), aids non-profit organizations to support Canadian industry in marketing their products through market research, special events, and conferences. The Co-operative Overseas Marketing Development Program, a component of IRDP, assists firms in the forestry industry to penetrate foreign markets. Federal/provincial agreements also support regional marketing initiatives.

Performance Information/Resource Justification

This section displays performance information for two of the programs supporting international marketing, and for tourism marketing.

Figure 11: Marketing Performance Data

International Marketing	Actual 1983-84
Program for Export Market Development	
Number of companies supported	3,909
Promotional Projects Program	
Number of trade fairs and missions organized	227
Number of trade visitors brought to Canada	115
Number of trade delegations brought to Canada	119

3673

Tourism Marketing: While tourism is a strong generator of foreign exchange, Canada has a large and increasing travel balance of payments deficit. In 1983, for example, Canada received 34,256,000 visitors from other countries, while 40,731,000 Canadians travelled outside of Canada. Total tourism receipts in 1983 were $3.8 billion, and payments made by Canadians going abroad totalled $6.0 billion for a deficit in balance of payments of $2.2 billion. The Department addresses this situation by promoting increased tourism in Canada through advertising, the provision of public information, and other promotional techniques in North American and overseas markets.

E. Administration

Objective

To enhance departmental operations through corporate direction and the provision of efficient support services.

Resource Summary

Administration accounts for approximately 4% of total 1985-86 Program expenditures and 21% of Program person-years.

Figure 12: Administration Expenditures ($000) and Person-Years

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Corporate Management	6,706	5,055	7,866
Corporate Services	41,189	42,494	34,768
Total	47,895	47,549	42,634
Person-Years	620	638	581

Description

The Administration Activity encompasses Corporate Management and Corporate Services. Corporate Management represents the central management and administration of the Department, and includes the Corporate Coordination Bureau, the Deputies' offices, ADMs and their immediate support staff. Corporate Services covers a broad range of centralized support services provided by the Comptroller's Office, Human Resources, Communications, Internal Audit and Legal Services.

Through this Activity, services necessary to assist and support the sector branches to carry out the Department's mandate are provided. Also included are information mechanisms to assist in policy formation and control systems to ensure accountability.

Performance Information/Resource Justification

Figure 13 shows the ratio of Administration person-years and expenditures to the Program totals.

Figure 13: Relationship of Administration and Program Resources ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

Administration	47,895	620	47,549	638	42,634	581
Percentage of total	4	21	4	21	4	22

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 14: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	127,159	122,628	98,066
Contributions to employee benefit plans	17,797	14,540	15,758
Other personnel costs	37	34	34
Goods and services			
Transportation and communications	23,544	26,538	16,835
Information	39,413	45,227	30,302
Professional and special services	37,033	39,210	34,344
Rentals	2,228	2,362	1,451
Purchased repair and upkeep	1,193	1,011	1,199
Utilities, materials and supplies	3,094	5,571	2,492
All other expenditures	579	613	1,085
Total operating	252,077	257,734	201,566
Capital:			
Construction and acquisition of machinery and equipment	1,174	1,421	3,408
Transfer payments	1,022,686	1,090,101	822,572
Total expenditures	1,275,937	1,349,256	1,027,546

Note: The 1984-85 forecast and the 1985-86 Estimates figures include costs incurred by the areas of the disbanded Ministry of State for Economic and Regional Development that were transferred to DRIE in the 1984-85 fiscal year. The actual expenditures for 1983-84 do not include expenditures for these areas.

Notes: The person-years column displays the forecast distribution of the authorized person-years for the program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparisons of averages may be affected by changes in the distribution of the components underlying the calculations.

The 1985-86 Authorized Person-Years column excludes 20 PYs representing the Minister's exempt staff.

3. Capital Expenditures

Figure 16 presents capital expenditures from 1983-84 to 1985-86.

Figure 16: Allocation of Capital Budget ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Construction and acquisition of machinery and equipment	1,174	1,421	3,408

The nature of the equipment purchased is primarily office furniture, telephone equipment, photocopiers, audio-visual aids, word processors and other informatics related items.

4. Transfer Payments

Figure 17: Details of Transfer Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants			
Grants under the Industrial and Regional Development Act	4,004	3,859	985
Grants under the Native Economic Development Program	1,000	1,000	-
Grants under the Small Business Investment Grant Act	500	11,000	4,019
Grants to non-profit organizations to promote economic co-operation and development	300	141	-
Total grants	**5,804**	**16,000**	**5,004**

Figure 17: Details of Transfer Payments ($000) (cont'd)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contributions			
Contributions under the Industrial and Regional Development Act and outstanding commitments under discontinued predecessor programs	340,389	277,656	195,759
Contributions under the Defence Industry Productivity Program	175,000	170,000	144,232
Contributions under Sub-Agreements made pursuant to Economic and Regional Development Agreements/General Development Agreements with Provinces	162,485	203,651	218,699
Contributions under the Agricultural and Rural Development Act	20,600	15,400	14,421
Contributions under the Shipbuilding Industry Assistance Program	35,000	45,000	77,437
Contributions under the Western Transportation Industrial Development Program	9,969	11,400	-
Contributions to non-profit organizations and commercial operations in support of Tourism	3,784	11,000	16,999
Contributions under the Native Economic Development Program	109,000	69,000	-
Contributions under the Canadian Industrial Renewal Regulations	68,435	67,500	37,051
Contributions for outstanding commitments under the Industry and Labour Adjustment Program	18,400	37,640	49,533
Contributions for outstanding commitments under the Special Recovery Capital Projects Program	17,320	34,400	5,136
(S) Liabilities under the Small Businesses Loans Act	46,500	64,000	25,449

Figure 17: Details of Transfer Payments ($000) (cont'd)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contributions (cont'd)			
(S) Insurance Payments under the Enterprise Development Program and guarantees under the Industrial and Regional Development Program	10,000	44,780	16,804
Items not required for 1985-86:			
Contributions to increase the energy efficiency of industrial processes by supporting selected research and development projects	-	7,600	4,998
Contributions toward the capital costs of trade centres in Canada	-	15,000	8,071
Contributions for the New Employment Expansion Development Program	-	74	1,024
Contributions for the Summer Canada Works Program	-	-	1,489
Contributions approved by the Governor in Council to companies engaged in ship repair on the Canadian East and West coasts for the construction or extension of dry docks, and for the purchase and construction of supporting facilities	-	-	466
Total contributions	1,016,882	1,074,401	817,568
Total transfer payments	1,022,686	1,090,101	822,572

5. **Non-Budgetary (Loans and Investments)**

Figure 18: Details of Non-Budgetary Activity

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Payment for purchase of capital stock	300,000	300,000	-
Loans under the Industrial and Regional Development Act	5,000,000	9,000,000	975,000
Items not required for 1985-86	-	-	4,956,163
	5,300,000	9,300,000	5,931,163

B. Cost Analysis

Figure 19 shows the total cost of each Activity in the DRIE Program. Other costs shown consist of the charges for accommodation provided by Public Works Canada and other miscellaneous services provided free by other government departments.

Figure 19: Net Departmental Costs ($000)

	1985-86 Program Expenditures	Add Other Costs	Total Cost	Deduct Revenue	Net Cost	Forecast 1984-85
Business Climate	157,992	4,073	162,065	-	162,065	208,478
Innovation	272,997	1,916	274,913	-	274,913	236,708
Industrial, Commercial and Tourism Development	719,849	9,583	729,432	120,050	609,382	674,385
Marketing	82,504	3,354	85,858	-	85,858	87,264
Administration	47,895	5,031	52,926	-	52,926	52,567
	1,281,237	23,957	1,305,194	120,050	1,185,144	1,259,402

Figure 20 provides a breakdown of services provided free by other departments.

Figure 20: Services Provided Without Charge by Other Departments ($000)

	1985-86 Amount
Department of Public Works - Accommodation	21,221
Department of Supply and Services - Accounting and cheque issue services	381
Treasury Board - Insurance premiums and costs	2,012
Department of Labour - Employee compensation payments	343
	23,957

3683

C. Revenue Summary

The revenues received by DRIE are deposited to the Consolidated Revenue Fund.

Figure 21: Revenue by Type ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Return on investments	72,000	81,000	90,417
Refund of previous year's expenditure	46,500	40,000	33,441
Services and service fees	1,500	2,000	265
Other non-tax revenue	50	50	2,114
Program total	120,050	123,050	126,237

D. Program (Instrument) Descriptions

The Department's three principal programs or instruments for providing funded assistance to industry are Economic and Regional Development Agreements, the Defence Industry Productivity Program, and the Industrial and Regional Development Program.

1. Economic and Regional Development Agreements

Economic and Regional Development Agreements (ERDA) are long term vehicles for federal- provincial planning and co-operation in economic development. The purpose of these agreements is to provide for the special economic development needs of each province while reducing regional disparity. The ERDA mechanism was recently established to replace the General Development Agreements established under the Department of Regional Economic Expansion.

Each ERDA outlines a broad development strategy and priorities for action. The Agreement forms a framework for the development of specific subsidiary agreements and memoranda of understanding tailored to the needs of the region, and it ensures effective consultation and co-ordination between the federal and provincial governments in carrying out programs for economic development.

Figure 22 identifies commitments for active subsidiary agreements under both the Economic and Regional Development Agreement and General Development Agreement mechanisms. Subsidiary agreements under the ERDA process are indicated with an asterisk.

Figure 22: Subsidiary Agreement Expenditures ($000) by Province

Alberta		
Nutritive Processing	22,500	8,691
Northwest Territories		
Domestic Market Development	9,675	52

Highlighted below are some of the principal subsidiary agreements in each Activity.

Business Climate

- Ocean Industries Development - an Ocean Industries development office was established in 1981 to promote and develop medium and high technology industries in Nova Scotia. A separate subsidiary agreement in Newfoundland provides for the establishment of an Ocean Industries Development Centre and supports firms that provide products and services to the offshore oil and gas industry and the fisheries industry.

- Strait of Canso, Nova Scotia - promotes industrial development in the area through the provision of infrastructure necessary to attract private sector investment in heavy industry. Through this agreement, 500 to 1,000 permanent jobs will be created.

- Pembroke Industrial Park, Ontario - project under the Community and Rural Resource Development Agreement to provide roads, water, sewers and lighting to develop an industrial park in Pembroke. The park will attract light manufacturing and service industries.

Innovation

- Sulphation Roast Leach Pilot Plant, New Brunswick - funding is provided for testing new technology to advance mineral extraction capabilities from complex base metal ores. This project will result in 90-100 skilled technical and scientific jobs being created over a two year period.

- Urban Bus Industrial Development, Manitoba - establishes Winnipeg as a centre of expertise for the technological development and manufacture of advanced urban buses and other related industrial products.

- Advanced Technology Agreement, Saskatchewan - supports research and development in the fields of biotechnology, fibre optics and communications micro-electronics. This agreement will stimulate the technological development necessary to achieve economic diversification in Saskatchewan.

Industrial, Commercial and Tourism Development

- Tourism - Agreements in Newfoundland, Prince Edward Island, Nova Scotia, Ontario and Saskatchewan support firms in the tourism industry, attract a larger volume of domestic and foreign visitors, and generate employment.

- Pulp and Paper - Federal/Provincial agreements with Ontario, Quebec, New Brunswick, Nova Scotia and Newfoundland support projects to modernize equipment, install pollution abatement equipment and reduce energy consumption. The result will be enhanced productivity and competitiveness in international markets.

- Nutritive Processing Agreement, Alberta - supports firms in Alberta's agricultural processing sector to expand value-added processing activity.

- Domestic Market Agreement, Northwest Territories - provides support for the creation of small businesses, the expansion of tourism infrastructure and the development of community plans. Through the agreement, 600 direct jobs will be created and private sector investment will be increased by $50 million.

2. Defence Industry Productivity Program

The Defence Industry Productivity Program (DIPP) operates in support of Canada's co-operative international defence sharing agreements on research, development and production with our defence partners. Agreements have been signed with the United States, the United Kingdom, France, the Netherlands, Italy, Sweden, Norway and the Federal Republic of Germany. These arrangements enable the Canadian armed forces to purchase major weapons systems abroad, while allowing preferential access to foreign markets for products of the Canadian defence industry.

The primary objective of DIPP is to enhance Canada's economic growth through the promotion of viable defence, or defence-related products for export. Supporting objectives are to strengthen the defence industrial base and to develop and maintain a defence technological capability.

Assistance is provided to companies that produce defence related products for research and development, for establishing Canadian companies as qualified suppliers, for modernizing facilities and for market feasibility studies. The maximum level of support is 50% of eligible costs, with the norm being 35% of eligible costs.

Through this program, a specialized defence production capability has been developed in Canada with primary benefit going to the aerospace and electronics industries. Without the program, a substantial deficit in military trade would arise, depriving Canada of the economic and technological benefits inherent in defence production.

Figure 23: DIPP Expenditures ($000) by Activity

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Innovation	87,500	85,000	76,239
Industrial, Commercial & Tourism Development	87,500	85,000	67,993
	175,000	170,000	144,232

Identified below are some of the key projects planned for this program in 1985-86, along with expected results and benefits.

Innovation

- Engine Development Projects, Quebec - Pratt & Whitney Canada Ltd. of Montreal have signed a long term joint agreement with DRIE for projects involving research, development and productivity improvements in the production of helicopter engines. Projected benefits include the creation of 6,000 jobs and incremental sales of $20 billion.

- CL-289 Reconnaissance Drone, Quebec - for many years, Canadair Ltd., Montreal, has been conducting a research and development project leading to the production of an airborne surveillance system. The project has been funded jointly by Canada and the Federal Republic of Germany, with anticipated benefits of increased export sales and job creation.

- Twin Engine Helicopters, Ontario - Messerschmitt-Bölkow Blohm GmbH, the Ontario government and the Department will share the costs of establishing Fleet Industries, Fort Erie, Ontario, as a development and production facility for light helicopters. The project is expected to generate sales of $1.3 billion and create 760 jobs over 20 years.

- Automated Weather Distribution System, British Columbia - MacDonald Dettwiler & Associates Ltd. of Richmond, British Columbia, has been awarded a contract by the U.S. Air Force toward research and development of a more efficient computerized weather forecasting system. Sales of $285 million are anticipated from the project as well as the creation of 900 jobs by the early 1990s.

Industrial, Commercial and Tourism Development

- Bell Helicopter Project, Quebec - the purpose of this project, shared between the Government of Quebec and DRIE, is to establish a helicopter manufacturing facility at Bell Helicopter Textron Inc., Mirabel. The project is expected to create 2,775 jobs and generate $9.9 billion in sales over the next 20 years.

3. Industrial and Regional Development Program

The Industrial and Regional Development Program (IRDP), established in June, 1983, delivers direct funded assistance to manufacturers, processors and service industries in all parts of Canada. Intended to support private sector initiatives, IRDP is aimed at projects, industries and technologies with the greatest potential for economic return, sustained growth and international competitiveness. The elements of the program can be applied to reflect local opportunities and meet the particular needs of each applicant. Assistance is provided through a range of financial mechanisms including grants, contributions, repayable contributions, loans and loan guarantees.

While the program is a national one, and support is available for all areas, not all areas of Canada enjoy the same economic prosperity. To further stimulate industrial activity in the more economically disadvantaged areas, IRDP provides progressively enriched support to areas where need is greatest.

Major changes to the IRDP in effect since November, 1984 will result in further concentration of support in disadvantaged areas and limited total expenditures. Tourism projects and Crown Corporations are no longer eligible for support, and the maximum financial contribution to companies will be reduced.

Figure 24: IRDP Expenditures ($000) by Activity

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Business Climate	18,473	9,824	14,355
Innovation	156,035	100,522	60,724
Industrial, Commercial and Tourism Development	149,113	159,681	121,490
Marketing	20,772	7,629	175
Total	344,393	277,656	196,744

Figure 25 displays the distribution of IRDP funding by sector since the inception of the program in July, 1983 to December 31, 1984.

Figure 25: IRDP Funding ($000) by Sector

Industry Sector	Actual (July, 1983 to December 31, 1984) $	%
Food Industries	21,369.2	5.6
Beverages	1,334.7	.4
Tobacco	15.2	0
Rubber Products	8,192.6	2.2
Plastic Products	9,848.2	2.6
Leather	126.5	0
Clothing and Textiles	1,223.3	.3
Wood Industries	21,982.6	5.8
Furniture & Fixtures	5,573.3	1.5
Paper-Allied Industries	14,843.2	3.9
Printing-Publishing	872.9	.2
Primary Metals	8,074.8	2.1
Metal Fabricating	16,209.8	4.3
Machinery	31,581.0	8.3
Transportation Equipment	94,873.8	24.9
Electrical-Electronic	46,641.7	12.3
Non-Metallic Minerals	6,203.1	1.6
Petroleum & Coal Products	60.6	0
Chemical	14,486.2	3.8
Other Manufacturing	16,470.4	4.3
Tourism	18,248.1	4.8
Other	42,382.8	11.1
	380,614.0	100.0

Identified below are some of the key projects planned for this program in 1985-86 along with expected results and benefits.

Business Climate

- Hydrogen Industry Council, Quebec - represents some 30 firms in the hydrogen industry concerned with the production of ammonia, hydrogen peroxide and liquid hydrogen. Its role is to undertake research and development, negotiate international co-operation agreements, advise the government on matters pertaining to the development of hydrogen, and develop demonstration plants and industrial projects.

Innovation

- Storage Technology Corporation, Quebec - setting up of a firm which specializes in the compilation of data on a hard disc,

using a laser for writing and reading. Benefits include 220 jobs in research and production and world rights for the product. 95% of production will be exported.

- Silicart, Quebec - an agreement with the Thinking Machine Corp. of the United States has been reached for the development of a graphic animation chip with projected domestic sales of $157,000 and exports of $650,000.

- Westinghouse, Ontario - this company is developing a new generation of advanced gas turbines for electrical power generation. The turbines, to be produced in Hamilton and Renfrew, will establish Westinghouse as a major international gas turbine manufacturer. Benefits from the project are 715 new jobs and increased export sales.

- Bartech Chemical, Ontario - provides assistance to develop a manufacturing process by using domestically produced raw materials rather than imports in the manufacture of malic acid, used as a flavouring agent in the food industry. Benefits include the creation of 14 new jobs and $14.4 million in sales, 96% of which will be for export.

- Prairie Fibre, Saskatchewan - construction of a pilot plant to undertake research into making fibre from flax straw. This project will create 34 jobs and $5 million in export sales by the 1986-87 fiscal year.

- Canfor Corporation, Alberta - contribution to assist in the development of a commercially viable joining and laminating process which will result in greater use of the now under-utilized poplar resource.

Industrial, Commercial and Tourism Development

- Cavendish Farms, Prince Edward Island - support is provided to this company, which operates a food processing plant, to expand its pea processing capacity and to add an additional line of potato products. Incremental new sales over the next five years are projected at $24 million, of which 75% will be export sales. It is also expected that 44 new jobs will be created.

- Parsboro Woodworkers Ltd., Nova Scotia - establishment of a furniture manufacturing plant in Debert, Nova Scotia, to replace products presently imported by the IKEA furniture network. This project will make use of the underutilized hardwood resource, and will create 112 new jobs.

- Ski Industry, Quebec - modernization of facilities of downhill skiing centres in Sutton, St. Sauveur, Ste. Agathe, Stoneham

and Owl's Head. Expected benefits are the creation of 250 jobs and increased tourism activity.

- AMC/Renault, Ontario - American Motors Corporation is undertaking a $764 million project involving a world scale car assembly plant in Brampton, Ontario, and the development of a new line of intermediate size cars to reach annual production of 158,000 units and create up to 6,000 new jobs.

- Euclid Canada, Ontario - this company is to expand the production of off-highway rear dump trucks by the establishment of a machining center at the Guelph plant. The project is expected to create 150 jobs within three years and $250 million in sales.

- Burroughs-Memorex Ltd., Manitoba - new product expansion in the Manitoba plant for the manufacture of 5¼" disc-drives to replace the outdated 14" discs now being produced. Through this project, 290 jobs will be maintained and export sales will average $38 million annually.

- Moli Energy Ltd., British Columbia - establishes plants in Maple Ridge and Kamloops to manufacture the world's first commercially available rechargeable lithium battery. This project involves world-class technology with approximately one to two years lead time over existing battery manufacturers in other countries.

4. Other Programs

In addition to the Department's major programs, assistance is provided through a series of other programs designed to meet special sectoral or regional needs.

Canadian Industrial Renewal Board (CIRB): The Board is an agency of the Government of Canada, charged with three specific responsibilities: promoting the revitalization of firms in the textile, clothing and footwear sectors; promoting the expansion of the economic base in communities now dependent upon these industries; and assisting displaced workers.

Shipbuilding Industry Assistance Program (SIAP): The objective of SIAP is to make Canadian shipbuilders competitive with foreign builders through direct subsidies for construction of certain vessels and contributions to improve performance. The subsidy assistance is available to shipbuilders for building and conversion of commercial and fishing vessels above certain minimum sizes, whether for Canadian or foreign registry.

Special Agricultural and Rural Development Act (SARDA): SARDA rural development programs arising from agreements entered into under the

Agricultural and Rural Development Act work to improve income and employment opportunities in rural and remote areas, particularly for people of Native ancestry. Assistance is provided to projects which will open up new jobs, increase income and improve living conditions for peoples who have previously had little or no access to regular earning and employment opportunities. SARDA agreements are in effect in Manitoba, Saskatchewan, British Columbia, the Northwest Territories and the Yukon Territory.

Western Transportation Industrial Development Program (WTID): The WTID program provides assistance to firms in Manitoba, Saskatchewan, Alberta and British Columbia in manufacturing, processing and related service industries in order that they may take advantage of the opportunities presented by the changes in legislation concerning freight rates. Assistance is for suppliers to railway and resource development projects, for food and agricultural processors, for industrial diversification projects and for related research and development.

Native Economic Development Program (NEDP): The Native Economic Development Program provides assistance to aboriginal economic initiatives which promote and enhance economic self-reliance of Canada's Native people in a culturally appropriate manner.

Small Business Loans Act (SBLA): This Act encourages commercial lending institutions to provide loans to small businesses at favorable interest rates. The Department guarantees the lender against losses sustained in the making of loans. The purposes for which loans may be granted are the purchase of equipment or land, and the establishment, improvement or modernization of plant equipment or premises. Eligible borrowers are businesses in the manufacturing, trade, service, communications, construction and transportation sectors.

Machinery Program: This program provides encouragement for Canadian industrial development by:

- enabling Canadian machinery manufacturers to derive maximum benefit from the tariff provisions on machinery and equipment they produce;
- assisting machinery users to acquire advanced equipment at the lowest possible cost through remission of duty on machinery and components not available from Canadian production; and,
- establishing direct contacts between machinery producers and users and thereby encouraging the purchase of Canadian-made machinery on a competitive basis.

Program for Export Market Development (PEMD): This program assists businesses to establish or expand their export marketing efforts in world markets through a wide range of marketing techniques. Support is provided to individual companies for bidding in competition with foreign firms, participating in trade fairs, undertaking market identification trips and studies, forming export consortia, bringing potential foreign

buyers to Canada, and establishing facilities on location in a foreign market. While overall responsibility and funding for PEMD is provided by External Affairs, DRIE plans a major role in program delivery.

Promotional Projects Program (PPP): This program assists Canadian business in the exploitation of foreign markets through participation in promotional events. PPP underwrites some of the cost to industry of participating in promotional events organized by the Department of External Affairs. The program encompasses a wide variety of promotional techniques such as trade fairs abroad, trade missions and trade visitors. As with PEMD, DRIE delivers this program in conjunction with External Affairs, the department with primary responsibility.

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the Program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included is an extract from Volume II of the Public Accounts provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $1,077,000 in support of the 1985-86 Restrictive Trade Practices Commission. The remaining expenditures estimated at $117,000 for pensions and other employee benefits will be made under existing statutory authority.

Financial Requirements by Authority

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The Restrictive Trade Practices Commission has established the following major goals for 1985-86:

- to continue its primary endeavour, including the consideration of applications or requests for inquiries submitted by the Director of Investigation and Research, Consumer and Corporate Affairs Canada, hearing representations and making orders under Part IV.1 of the Combines Investigation Act, and hearing any other matters with respect to applications.

- to finalize the report to the Minister on "The State of Competition in the Canadian Petroleum Industry". This inquiry was initiated after receipt from the Director of Investigation and Research of a Statement of Material.

2. Financial Summary

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85*	Change
Restrictive Trade Practices Commission	1,194	1,674	(480)
Person-years	17	23	(6)

* The 1984-85 forecast is $440,000 and six person-years higher than the 1984-85 Main Estimates to reflect the additional resources approved in Supplementary Estimates to complete the Petroleum Inquiry.

The decrease of $480,000 in expenditures and six person-years in fiscal year 1985-86 is mainly attributed to the expected completion of the Petroleum Inquiry for which resources had been approved in Supplementary Estimates 1984-85 ($441,000 and six person-years) and to a reduction in the overall operating costs in the amount of $91,000 offset by an increase in personnel costs of $52,000. (This amount covers salary increases anticipated by Treasury Board, but does not provide for any increase in person-years).

B. Recent Performance

1. Highlights

Highlights of the Program's performance during 1983-84 are:

- A general inquiry was undertaken in 1977 in connection with the Manufacture, Production, Distribution, Purchase, Supply and Sale of Communication Systems, Communication Equipment and Related Products. The final report (Part III) - the Impact of Vertical Integration on the Equipment Industry was submitted to the Minister on January 7, 1983.

- A general inquiry was undertaken in July 1981 after receipt of a Statement of Evidence from the Director of Investigation and Research on "The State of Competition in the Canadian Petroleum Inquiry". During the fiscal year 1983-84 the hearings were completed. The Commission has heard the testimony of over 200 witnesses during 186 days of hearings. The evidence now before the Commission includes approximately 40,000 pages of testimony and over 1,800 exhibits involving about 100,000 pages of material. As the Inquiry moves into its final stages the Commission is receiving evidence concerning possible remedies proposed by the Director which he believes would increase competition in the Canadian Petroleum Industry.

  The Commission expects to submit its Report to the Minister in the early part of fiscal year 1985-86. Supplementary estimates in the amount of $441,000 and six person-years were approved by Treasury Board for the year 1984-85 in order to complete the Petroleum Inquiry and to submit a report to the Minister.

- On January 26, 1982, the Commission received a Statement of Evidence on "The Affairs and Management of Javelin International Limited" and hearings were held during 1982 and 1983.

  After reviewing the evidence submitted at the 33 days of hearings by some 13 witnesses the Commission submitted its recommendations in a Report to the Minister on September 26, 1983.

- Proceedings under Part IV.1

  An application was filed by the Director of Investigation and Research on December 22, 1982 asking for an order against Astral Films Limited - Les films Astral Limitée; Columbia Pictures Industries Inc.; Paramount Productions Inc. - Productions Paramount Inc.; MCA International B.V., carrying on business under the name and style of United Artists Corporation and Twentieth Century - Fox Film Corporation to

3705

compel them to accept Cinéplex Corporation as a customer and to supply it with commercially valuable motion pictures on usual trade terms or for such other order as may be just.

A pre-hearing was held on May 4, 1983 in order to determine the scheduling and the procedures that would govern the hearings. A hearing was held on June 3, 1983 at which time the Director made a verbal request for a postponement of hearings. The Commission acceded to the request given that Applicant and Respondents had reached an agreement on the conditions governing the distribution practices of Respondents.

On March 15, 1984 the Director filed an interim report to the Commission on the operation of the undertakings given by the six major motion picture distributors.

2. Review of Financial Performance

Figure 2: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Restrictive Trade Practices Commission	1,507	1,766	259
Person-years	24	26	2

The difference between actual expenditures and the Main Estimates results mainly from the following major items: the hearings under Part IV.1 in respect to Astral Films Limited et al were not required as scheduled in view of the agreement between the parties. The total cost of legal fees was lower than anticipated due to the fact that the libel suit in the Javelin case is still pending.

C. Background

1. Introduction

The Restrictive Trade Practices Commission is one part of the Canadian government's involvement in seeking to maintain competition in the marketplace. The reports of the Commission are not to be confused with the "statement of evidence" submitted to the Commission by the Director of Investigation and Research. Only the Restrictive Trade Practices Commission issues reports to the Minister of Consumer and Corporate Affairs following Section 18 and Section 47 inquiries. The Commission reports to Parliament through the Minister, Consumer and Corporate Affairs (CCA).

2. Legal Mandate

The Restrictive Trade Practices Commission was created by an Act, to amend the Combines Investigation Act and the Criminal Code, which was given assent on July 4, 1952 and which was amended in 1976 to include Part IV.1 conferring a quasi-judicial function upon the Restrictive Trade Practices Commission, and for the purposes of that Part, made it a court of record. This Act provides for the division of the federal government's anti-combines activities between two bodies: the Director of Investigation and Research, Bureau of Competition Policy, Consumer and Corporate Affairs, and the Restrictive Trade Practices Commission. The Director appointed by the Governor in Council is directed to "... cause an inquiry to be made into all such matters as he considers necessary to inquire into with the view of determining the facts". The Commission is assigned the duty to ... "make a report in writing and without delay transmit it to the Minister", after the proceedings specified in the Act have been completed. The Commission is also assigned the duty of receiving from the Director and considering any statement of evidence on an inquiry, under specified sections of the Combines Investigation Act or of the Criminal Code. The Commission is then empowered to hold a hearing at which persons against whom the Director has made allegations must be allowed full opportunity to be heard in person or by counsel.

In addition to duties under the Combines Investigation Act, the Commission has investigative responsibilities under the Shipping Conferences Exemption Act, 1979.

3. Program Objective

The objective of the Restrictive Trade Practices Commission is to maintain free and open competitive conditions in the market economy, to eliminate certain practices in restraint of trade and afford protection against false and misleading advertising.

This includes the following:

- to contribute to the government's policy of ensuring that free and open competitive conditions are maintained in the market economy;
- to continue to act as a restraining influence on some of the powers of the Director of Investigation and Research and ensure all parties receive fair hearing; and
- to guarantee that the quasi-judicial functions of the Commission are carried out with the independence, neutrality and fairness that the public interest requires.

4. Program Description

The Restrictive Trade Practices Commission is one of two entities established by the Combines Investigation Act to carry on the federal government's anti-combines work, the other being the Bureau of Competition Policy, Consumer and Corporate Affairs Canada. The functions of the Commission are as follows:

- to authorize searches and seizures (this section has no force or effect in view of the Supreme Court of Canada decision - September 17, 1984 in the case of Southam Inc.), order written returns of information, summon witnesses for examination and preside at hearings for the taking of evidence in inquiries conducted by the Director of Investigation and Research;

- to act as an impartial tribunal in respect of allegations by the Director of Investigation and Research in a statement of evidence in an inquiry;

- to appraise and report upon statements of evidence, relating to inquiries pursuant to Section 47 of the Combines Investigation Act, transmitted to the Commission by the Director of Investigation and Research or the Minister; and

- to hold hearings under Part IV.1 of the Act with respect to applications made by the Director of Investigation and Research. The Commission may make an order in the form applied for or with such modifications or amendments or in such other form as it deems necessary or may refuse to make an order. For the purposes of this Part, the Commission is a Court of Record.

The purpose of Section 17 examinations is to enable the Director of Investigation and Research to secure such evidence and information as may assist him and, after he has considered such evidence in connection with any other evidence or information in his possession, to decide whether he should terminate an inquiry or continue it. If an inquiry is continued, the Director must decide whether to have the matter taken before a court of appropriate jurisdiction, or brought before the Restrictive Trade Practices Commission.

These hearings, normally held "in camera", are to be distinguished from the hearings held before the full Commission at a later stage in an inquiry, after the Director of Investigation and Research has presented to the Commission either a statement of evidence containing allegations of infractions of the Combines Investigation Act or a statement of material asserting that there is a situation related to monopoly or restraint of trade. Such hearings before the full Commission may be held either in public or in private as the Chairman of the Commission decides. It has been usual for the hearings to be held in public.

During most of the major inquiries, the Commission has held hearings in some of the largest cities across Canada. During the course of hearings, the Director of Investigation and Research represented by counsel and the other parties against whom allegations are made call witnesses to appear before Members of the Commission to give evidence. The Director and the other parties (through counsel) have the opportunity to question and cross-examine witnesses and to file exhibits in support of their evidence. Witnesses may also be asked questions by Members of the Commission. All of the evidence is recorded by court reporters and transcripts are prepared for the use of the Commission and the parties. Transcripts, files and exhibits are available to the public unless the hearings were held "in camera" or if the information is confidential.

5. Program Organization for Delivery

Activity Structure: The Commission has one activity which is the Restrictive Trade Practices Commission (RTPC).

Organization Structure: The Commission consists of four members appointed by Order in Council for ten-year terms during good behaviour. One member is appointed Chairman and another may be appointed Vice-Chairman by the Governor in Council. Hearings may take place before the full Commission consisting of the Chairman, the Vice-Chairman (where one appointed), and the two other members. It is not uncommon, however, for a hearing or part of one to take place before a panel of three members with either the Chairman, or the Vice-Chairman (where one appointed) presiding. Although the Commission holds many of its hearings at its headquarters in Ottawa, the extensive nature of certain inquiries necessitates that it hold hearings elsewhere in Canada.

The senior staff of the Commission consists of the Secretary/Registrar, the Executive Assistant to the Chairman and Assistant Secretary to the Commission, a Senior Economist, Economist(s), and the Chief of Finance and Administration.

D. Planning Perspective and Performance Review

1. Environment

Legislation: As part of the continuing review of its legislation, CCA will be preparing for government consideration a number of bills, primarily to update existing legislation. One of these includes a bill to amend the Combines Investigation Act and would change the mandate of this Commission. Depending on what other functions the new legislation gives the Commission, its workload may or may not be increased by these additional functions.

Economic Conditions: The growing potential for restrictive trade practices in the marketplace places an increasing importance on the Commission's role. Participants in the marketplace look to government and the Commission to protect their economic interests and ensure that the market system is operating in an effective and equitable manner.

Public Attitudes: The Canadian public is increasingly aware of the potential problems that can arise to maintain the working of a free market. With this awareness, Canadians are looking to the government to provide efficient safeguards on market operations.

2. New Initiatives

The Commission has identified the following initiatives for 1985-86:

Hearings under Section 17 - Combines Investigation Act: In view of continuing court challenges to the existing mandate with respect to Section 17 hearings, applications by the Director (Investigation and Research) had dropped significantly. Some of these uncertainties have now been removed, and it is expected that applications for hearings under Section 17 will continue at a higher level for 1985-86. Since the Inquiry hearings (Section 47 or Part IV.1) are usually taking place before a panel of three members, only one other member is available to preside at the Section 17 hearings. Therefore it is sometimes necessary to hire the services of experienced hearing officers to meet the requirements.

Part IV.1 - Applications - Combines Investigation Act: Assuming that new legislation is not passed and that RTPC will proceed with the present one, it is expected that applications by the Director under Part IV.1 will continue to be filed with this Commission. For the purposes of this Part, the Commission is a Court of Record and in his application the Director having made a request for an order against a supplier, a person or a company, the Commission, after affording everyone against whom an order is sought a reasonable opportunity to be heard, may make an order in the form applied for or with such modifications or amendments or in such other form as it deems necessary or may refuse to make any order.

Even if new legislation is passed and there are changes in the functions of the Commission, it is still envisaged that the RTPC will be called upon to undertake new major inquiries under Section 47.

3. Update on Previously Reported Initiatives

Please refer to the descriptions in the Recent Performance - Highlights section on page 7.

4. Program Effectiveness

The effectiveness of the program must be viewed in terms of its main objective, which is to contribute to the maintenance of free and open competitive conditions in the market economy and to eliminate certain practices in restraint of trade. To this end the Restrictive Trade Practices Commission has undertaken and will continue inquiries or proceedings authorized under the Combines Investigation Act. Figure 3 presents major inquiries or proceedings completed in the last five years.

Figure 3: Major Inquiries or Proceedings of the Restrictive Trade Practices Commission Over the Previous Five Years

Inquiries or Proceedings	
Section 47	
Telecommunications Inquiry 1977 to 1981	- 234 days of hearings - Part I of report to Minister 1981 - Part II of " " " 1982 - Part III of " " " 1983
Petroleum Inquiry 1981 (Hearings began on October 19, 1981)	- 186 days of hearings - Report to be completed
Part IV.1	
Director of Investigation and Research and Bombardier Ltd. (Application filed 09/02/79)	- 32 days of hearings - Decision of RTPC October 1980
Director of Investigation and Research and Imperial Oil et al (Perrette) (Application filed 02/11/79)	- 16 days of hearings - Respondents agreed to supply - Application withdrawn by Director of Investigation and Research, October 1980
Director of Investigation and Research and BBM Bureau of Measurement (Application filed 21/08/79)	- 26 days of hearings - Decision and order of RTPC December 1981 (Appealed in Federal Court, Section 28, application dismissed)

Application by Director of Investigation and Research re Astral et al (Movie industry) (Application filed 22/12/82)	- 2 days of hearings - On March 15, 1984, the Director filed an interim report to the Commission. On July 31, 1984, the Director filed a final report to the Commission. Director's application withdrawn in view of agreement between distributors and viewers.

Canada Corporations Act

Section 114

Director of Investigation and Research and Javelin International Limited	- 33 days of hearings - Report sent to Minister September 26, 1983

---

5. Resource Justification

The Commission's work depends on the new legislation (Combines Investigation Act) as well as initiatives taken by the Director of Investigation and Research or the Minister, and thus is relatively non-discretionary. However it is difficult if not impossible at this time to predict what will be the workload in this area before the Commission in the year 1985-86. Amendments to Competition legislation could broaden or narrow the Commission's mandate and its need for resources but it is premature to estimate these requirements at this stage. The Commission will seek to maintain its objective with a minimum permanent structure, and adding temporary or term resources as required.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 4: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	838	970	924
Contributions to employee benefit plans	117	104	152
	955	1,074	1,076
Goods and Services			
Travel and removal	13	17	14
Other transportation and communication	26	43	29
Information	42	60	23
Professional and special services	130	430	329
Rental	10	16	9
Purchased repair and upkeep	2	2	3
Utilities, materials and supplies	14	28	19
Other expenditures	-	2	3
	237	598	429
Total operating	1,192	1,672	1,505
Capital	2	2	2
Total expenditures	1,194	1,674	1,507

2. Personnel Costs

The Restrictive Trade Practices Commission is a labour-intensive organization. Personnel costs (including statutory contributions to employee benefit plans) constitute 80% of the total operating costs.

Figure 5: Person-Year Requirements by Activity

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Restrictive Trade Practices Commission	17	23	24

Figure 6: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	4	4	5	50,350-96,300	77,681
Scientific and Professional, Administrative and Foreign Services	4	4	9	13,912-65,080	43,072
Administrative Support, Operational	9	9	12	12,636-40,676	25,443

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Net Program Cost: The Restrictive Trade Practices Commission's 1985-86 Estimates include only authorities to be voted and statutory authorities. Other items must be considered to ascertain the net cost of the Program. These other items are services provided without charge by other government departments.

Figure 7: Net Cost of Program ($000)

	1985-86	1984-85
Operating Expenditures	1,194	1,674
Add - Other Government Department Costs		
Public Works Canada Accommodation	176	173
Supply and Services Canada Cheque Issue Services and others	2	3
Employer's share of Insurance Premiums	11	13
	189	189
Net Cost	1,383	1,863

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Revenue Canada
Customs and Excise

Preface

This Expenditure Plan is designed to be used as a reference document and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the Departmental program and a summary of its current plan and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. The financial summary in Section I provides cross-references to information found in Section II. In addition, references are made throughout the document to provide the reader with more detail on items of particular interest.

This year's Expenditure Plan is expressed in terms of a new activity structure developed in Customs and Excise during 1984-85. As a result, this Expenditure Plan constitutes a transition year wherein some information from previous plans (1983-84 and 1984-85) has been presented in terms of the new activity structure for purposes of simplicity and consistency.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

- The Special Import Measures Act (SIMA) was proclaimed on December 1st, 1984. The administration of the Act will generate new workload which will be absorbed by the Department (see page 15).

- The Department will implement the Customs and Excise Offshore Application Act during 1984-85 as a result of the extension of Customs jurisdiction to the 200 mile limit (a new initiative introduced in the 1984-85 Expenditure Plan). The administration of the expanded territory will require 21 person-years and $713,000 annually commencing in 1985-86 (see page 16).

- Customs and Excise is implementing the new Valuation Provisions as of January 1, 1985 as a result of the 1979 Multilateral Trade Negotiations (see page 15).

- During 1985-86, the Department will proceed with the pilot testing and pilot evaluation of the three major system changes resulting from the Department's Automation Strategy Review (see page 16).

- The Department will implement the pending legislation (Bill C-17) concerning the Gasoline and Diesel Fuel Sales Tax Rebate program during 1984-85 (see page 15).

- The Department's 1985-86 person-year levels will decrease by 1.6% from 1983-84 resource levels and 1.4% from 1984-85 levels with no significant reduction of the quality of service (see page 42). The reductions result from:

  - Closure of Excise Offices
  - Closure of Customs Ports
  - Limited use of Bonded Warehouses
  - Elimination of the Mobile Surveillance group.

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For detail see page
Excise	**68,461**	66,810	1,651	21
Customs	**287,924**	286,866	1,058	28
Corporate Administration	**61,241**	52,512	8,729	38
	417,626	406,188	11,438	
Authorized person-years	**10,148**	10,288	(140)	

Explanation of 1984-85 Forecast: The 1984-85 expenditure forecast exceeds the 1984-85 Main Estimates by $7 million. This amount consists of items approved for Supplementary Estimates including $5.4 million for the implementation of the Harmonized System and $1.6 million for 4 other projects.

Explanation of the Difference between the 1985-86 Main Estimates and the 1984-85 forecast: The estimated expenditures for 1985-86 Main Estimates exceed the 1984-85 forecast by $11.4 million (2.8%). This results from an increase in personnel costs of $12 million and an increase in capital expenditures of $4.7 million, offset by a net decrease of $5.3 million in other operating costs (see page 42).

Figures 2 and 3 illustrate the departmental resource distribution for 1985-86.

Figure 2: Person-years by Activity 1985-86

Figure 3: Gross Expenditures by Category (percentage) 1985-86

3727

As mentioned in the Preface, this Expenditure Plan is expressed in terms of a new activity structure; with the exception of Figure 4, 1983-84 Financial Performance by Activity which is presented in terms of the old structure. Internal planning for 1985-86 was conducted along the lines of this new structure. Existing financial reporting mechanisms require variance explanations at the activity level only. Therefore, no explanation of financial performance is provided at the sub-activity level. Additional information on the new Customs and Excise new activity structure can be found in Section III.

B. Recent Performance

1. Highlights

- Commodity Tax Reform (Proposed Wholesale Tax) will not be implemented as a result of a private sector committee's recommendations submitted to the Minister of Finance in June 1983.

- The Department's first Program Evaluation study which reviewed the Customs Passenger Processing System was completed during 1983-84. A second evaluation on the Customs Carrier Declarations System was completed in August 1984 (see page 19).

- In 1983-84, total Departmental revenues amounted to $15.8 billion, approximately $1.2 billion lower than forecast. This resulted from decreases in the Petroleum Compensation Charges and in taxes from pipeline gas and gas liquids (see page 46).

2. Review of Financial Performance

Figure 4: Review of 1983-84 Financial Performance by Activity* ($000)

	1983-84		
	Actual	Estimates	Change
Compliance Facilitation	176,507	187,660	(11,153)
Compliance Verification and Enforcement	102,909	95,336	7,573
Dispute Settlement	8,900	9,623	(723)
Administration	90,031	85,974	4,057
	378,347	378,593	(246)

* Activity structure as presented in 1983-84 Estimates.

As shown in Figure 4, 1983-84 actual expenditures varied from the Estimates by $246 thousand or .1%. These variances resulted from the following:

	Millions
• Utilization of 510 casual person-years (5% of total utilization) at a generally lower rate of pay than the average established in the salary costing schedule. Customs and Excise has historically utilized casuals to compensate for strength fluctuations caused by retirements, resignations, promotions, etc. as well as annually recurring peak workload (i.e. summer international traffic).	($5.4)
• Increase in contributions to Employee Benefits Plan	4.2
• Restraints on travel.	(1.2)
• Re-scheduling of repairs to equipment and border-point bridges and tunnels. Delay in Tenant Services projects.	(1.4)
• Legal services, programming services, management consultants	1.2
• Cancellation of Commodity Tax Reform and delay of Extended Jurisdiction (200 mile limit) activities.	(.4)
• Delayed purchases of materials, i.e. uniforms, Customs and Excise college inventories, equipment and supplies, and reduced departmental inventories.	(1.0)
• Implementation of Federal Identity Program (signage refurbishing); purchase of previously rented computer and laboratory equipment.	1.5
• Non-discretionary capital purchases i.e. X-ray machine, vehicles, office equipment, on-line EDP equipment.	2.3
	($.2)

C. Background

1. Introduction

The Department of National Revenue, Customs and Excise, consists of one Program headed by a Deputy Minister who reports to the Minister of National Revenue.

The Department's mission is to achieve compliance with all legislation for which it has administrative responsibility in an efficient and responsive manner. In fulfilling this mission, Customs and Excise collects duties and taxes, controls the movement of people, goods and conveyances entering or leaving Canada and protects Canadian industry from unfair foreign competition.

Customs and Excise also plays an important role in implementing the Government's socio-economic policies. For instance, in the area of social policy, the Department is responsible for the application of immigration laws at points of entry (e.g. refusing entry to dangerous or unwanted visitors) and for the control of prohibited importations such as firearms, narcotics and material of indecent or immoral nature.

In the area of economic policy, the Department is involved in the implementation of Canada's multilateral trade agreements under the General Agreement on Tariffs and Trade (GATT). Domestically, Customs and Excise is called upon to support the development and maintenance of a healthy business and employment climate, including the administration of laws which protect Canadian businesses against injurious competition from foreign sources.

Customs and Excise activities are highly visible to several large cross-sections of Canadian society, (i.e. to international travellers, exporters, businesses, etc). In one way or another, Customs and Excise must deal with these various clients to provide them with the information and assistance necessary to voluntarily comply with legislative requirements. As well, the Department provides the guidance required by the Canadian business community in adapting to changing international trade conditions. Customs and Excise strives to continually project a public image that is positive, fair, unbiased and responsive to the needs of its international and domestic clients.

2. Legal Mandate

The Department of National Revenue Act delegates Customs and Excise the responsibility for "the control, regulation, management and supervision of duties of Customs and Excise including taxes imposed by the Excise Tax Act". The Minister of National Revenue is responsible for administering the Customs Act. Other major statutes included in the legal mandate of Customs and Excise are the Customs Tariff, the Special Import Measure Act, Excise Act and the Excise Tax Act, all of which are the legislative responsibility of the Minister of Finance.

Customs and Excise also administers some 60 pieces of legislation on behalf of other departments, notably, Agriculture, Health and Welfare, Consumer and Corporate Affairs, Industry, Trade and Commerce, Statistics Canada and Employment and Immigration Canada. Acts administered in whole or in part by Customs and Excise are presented in Section III.

3. Program Objective

The Customs and Excise objective is: "to ensure that all duties, taxes and other relevant charges and levies are assessed, collected and where appropriate, refunded; to control, for the protection of Canadian industry and society the movement of people, goods and conveyances entering or leaving Canada as required to achieve compliance with legislation; to protect Canadian industry from real or potential injury caused by the actual or contemplated importation of dumped or subsidized goods, as well as by other forms of unfair foreign competition."

4. Program Organization for Delivery

Activity Structure: The Customs and Excise Program is comprised of three activities: Excise, Customs, and Corporate Administration. Figure 5 illustrates the activity structure and the sub-activities of each activity.

Figure 5: Activity Structure

While the Excise and Customs activities support the same program objective, each is viewed as a distinct business. Each activity is responsible for different legislation and mostly deals with a different clientele. For

instance, the Excise activity administers the Excise Act and the Excise Tax Act which affect licensed manufacturers and wholesalers, distillers, brewers, tobacco manufacturers, etc. The Customs activity administers the Customs Tariff, the Customs Act and the Special Import Measures Act and deals mainly with Canadian and international travellers, Canadian manufacturers, importers and exporters, etc. The Corporate Administration activity includes the central administrative and functional services necessary to effectively and efficiently support the Excise and Customs activities.

Organization Structure: Customs and Excise has highly decentralized operations with 12 regional Customs and 9 regional Excise offices. In all, the Department has 10,148 employees, approximately 9,000 of whom are operational and support staff located in the field. The Department is organized under four broad sectors: Excise, Customs Programs, Customs Field Operations, and Corporate Administration.

The Excise operation collects approximately $11.5 billion annually in revenue which is used to fund government programs, promote tax equity and influence consumption patterns. In addition to Headquarters in Ottawa, there are 9 regional and 29 district offices. Excise accounts for a total of 1,506 person-years. All of Excise branch resources are within the Excise Activity.

The Customs function is performed by the Customs Programs branch and Customs Field Operations branch which together account for the 7,786 person-years included in the Customs Activity. These two branches represent approximately 77% of total departmental resources.

The Customs Program Branch develops policies and systems to provide for the efficient and uniform application of the Customs Act, Customs Tariff and the Special Import Measures Act, and for the enforcement of other statutes and regulations of Government departments and agencies. The branch is also responsible for anti-dumping, countervailing and valuation investigations in Canada and other countries. Except for a small number of officers involved in investigative functions in foreign countries, its staff of 585 person-years is located in Ottawa.

The Field Operations branch is responsible for regional Customs operations and consumes 7,201 person-years. It is responsible for the application of operating systems and procedures relating to the assessment and collection of over $5 billion in annual import duties and taxes, and the control of the movement of goods, persons and vehicles entering or leaving Canada. It provides service to the public in over 650 locations across the country.

The other branches comprise Corporate Management, Personnel Administration, Audit and Evaluation, Public Relations and the Executive office. These are located primarily at Headquarters in Ottawa and account for the 856 person-years which are included in the Corporate Administration Activity.

The relationship between the Departmental organization and activity structures, together with a breakdown of 1985-86 resources, is shown in Figure 6.

Figure 6: 1985-86 Resources by Organization/Activity ($000)

	ADM EXCISE	ADM FIELD OPERATIONS	ADM CUSTOMS PROGRAMS	ADM CORPORATE MANAGEMENT	DG PERSONNEL ADMIN	EXECUTIVE DIRECTION & OTHER	ACTIVITY TOTAL ($000)
EXCISE	68,461						68,461
CUSTOMS		258,788	29,136				287,924
CORPORATE ADMIN				38,574	13,765	8,902	61,241
TOTAL EXPENDITURES	68,461	258,788	29,136	38,574	13,765	8,902	417,626

D. Planning Perspective and Performance Review

1. Environment

The Department continues to face a period of significant environmental change. The following key factors will particularly affect Customs and Excise over the next five years.

Economic Conditions: Rapidly changing economic conditions have made it difficult to accurately forecast anticipated revenues, workload fluctuations, etc. Factors such as the rate of inflation, the value of the Canadian dollar and other currencies, and the burden of taxation greatly affect the behaviour of the travelling, importing or exporting publics served by the Department. These variables pose a challenge to the Department's ability to deploy resources efficiently and effectively in response to changing economic and business conditions.

In the realm of the economic recovery and pending the announcement of the new Government priorities, the Department anticipates that the value of merchandise imports and exports will increase 37% and 22% respectively over the 1984-1989 period. As well, the composition of the international travellers population is expected to change drastically. The number of returning Canadians is expected to decrease while the number of foreign visitors increases as a result of the value of the Canadian dollar in relation to the U.S. dollar.

Government Policy Decisions: The most important government policy decisions affecting the operations of Customs and Excise in years to come include: access to information legislation, reduction of the paper burden, service to the public, changes in transportation policy (i.e. changes in landing rights for international air carriers), Duty Free Shops, extension of jurisdiction to the 200 mile limit, the adoption of the revised nomenclature system, and the Made-in-Canada system of tariff classification. The extent to which the Department is involved will vary from the ongoing support for some of these policy decisions to the actual implementation and enforcement for others. In the latter case, the specific policies and related programs are fully discussed in the "initiatives" or "update of previously reported initiatives" sections.

International Agreements: The new Valuation Provisions, the Special Import Measures Act (SIMA) and the new Harmonized System (H.S.) are important international agreements which require Departmental participation during their development and implementation phases. The Special Import Measures Act constitutes an addition to the Department's legal mandate. The Valuation Provisions and the H.S. represent significant modifications to Customs' valuation and tariff classification coding systems. These changes, once implemented, will result in a major re-structuring of existing operational systems.

Technological Changes: The Department's continuing efforts to computerize operations, systems and processes using the newest available technology are articulated in the Automation Strategy Review (ASR). 1985-86 will be particularly characterized by the implementation, pilot testing and evaluation of several operational and administrative systems enhanced with automated features. Over the next few years, these efforts will assist the Department in responding more rapidly, effectively and with increased sensitivity to public needs. As major technological changes gradually take place in both Customs and Excise activities, the Department's ability to rapidly adjust to economic and business conditions will be enhanced and overall program effectiveness should improve.

Although forthcoming technological changes will impact tremendously on the departmental workforce (particularly in terms of training), the Department faces a greater challenge in ensuring that automation efforts contribute to and are compatible and integrated with other major changes resulting from Government policy decisions and Canada's participation in the international agreements previously described.

2. Initiatives

Customs and Excise will commence the following initiatives in 1985-86:

- Excise will implement and maintain a structured appeal mechanism as a result of changing legislation. Costs are estimated at $643,000 and 13 person-years for 1985-86 and subsequent years (see page 26).

- The Gasoline and Diesel Fuel Sales Tax Rebate program which became effective December 1, 1984 will be fully operational in Excise by April 1, 1985 until January 1, 1987. This program will cost approximately $1.4 million and 189 person-years in 1985-1986 (see page 26).

- The Department will support Vancouver's EXPO '86 by providing Customs and Excise services to the Exposition's participants and by processing visitors from other countries. The Department will expend 5 person-years and $208,000 in 1985-86 for this initiative (see page 36).

3. Update of Previously Reported Initiatives

Customs and Excise is still engaged in a number of initiatives described in previous Expenditure Plans. Updates on these initiatives are provided under the following general categories:

Legislative Changes: The introduction and passage of the revised Customs Act in Parliament is subject to the priorities established by the new government (see page 35).

Changes Related to International Agreements: There were three changes in this area:

Special Import Measures Act: The proclamation of the Special Import Measures Act (SIMA) on December 1st, 1984, makes the Anti-dumping Act and countervailing duty regulations obsolete. The expenditures related to the administration of SIMA will correspond to the expenditures related to the administration of the former legislation for the remainder of 1984-85 (34 person-years and $1.6 million). The additional workload generated by SIMA (see page 35) will be absorbed within the annual base of 99 person-years and $4.7 million during 1985-86 (the first full year following the implementation of the new legislation) and for subsequent years.

New Valuation Provisions: In December 1979, Canada signed the international agreement on Customs Valuation which was negotiated during the Multilateral Trade Negotiations.

In preparing for implementation of the new Valuation Provisions by January 1, 1985, the Department has conducted numerous public information seminars across Canada, and developed training courses for regional and Headquarters Customs Officers. The Headquarters training program was completed in June 1984. The regional training program was conducted across Canada from September through December '1984. 1984-85 resource estimates have been revised to 68 person-years and $2.2 million to more accurately reflect the estimated cost of the training program (see page 36).

Harmonized System: Canada is working towards the adoption of the internationally accepted system i.e. the Harmonized System (H.S.) by January 1, 1987. H.S. will be the basis for the classification of goods for Customs tariff and trade statistics purposes.

The Department is continuing with the conversion of the Customs Tariff to the language of the Harmonized System during 1984-85. The 1984-85 costs have been revised to 43 person-years and $5,4 millions to include expenditures associated with the conversion of automated systems. Resource requirements for 1985-86 are (based on a January 1, 1987 adoption date) 86 person-years and $23.6 millions. These resources will be used to continue the conversion of the Tariff and for developing departmental automated systems, to begin the development of training programs for some 4,500 officers affected by the new system and to prepare a comprehensive public information program to prepare the importing community for the implementation of the Harmonized System (see page 37).

Policy Changes: There were two significant policy changes:

Extension of Customs and Excise Jurisdiction - 200 mile limit: The implementation of the Customs and Excise Offshore Application Act will require 34 person-years and $1.3 million in 1984-85. Resource requirements for 1985-86 will decrease to 21 person-years and $713,000 as implementation activities will be completed in 1984-85 and only normal operational functions will remain (see page 36).

Duty Free Shops: In June 1984 the Minister announced a two-phased national implementation of Duty Free Shops. During 1984-85 operators will be appointed for the six land border duty free shops locations included in Phase I. All other locations in the participating provinces will be included in the second phase, for which operators will be appointed in 1985-86. Full national implementation will involve approximately 40 duty free shops. Expenditures for 1984-85 will be approximately 4 person-years and $458,000. An estimated 4 person-years and $496,000 will be required for 1985-86.

Systems Changes: The Departmental Automation Strategy Review (ASR) resulted in the following three major initiatives: the ALERT (Automated Lookout Enquiry and Report System) and Conditional Release (formally referred to as Release Selection) systems which are Customs initiatives (see page 37) and the Clientele Profile System (CPS) which is an Excise initiative (see page 26). Components of all three initiatives will be pilot tested and evaluated during 1984-85 and 1985-86.

ALERT: To minimize disruptions caused by ALERT at the Calgary pilot site, the Department has opted for a phased implementation of the final two system components. On the advice of a major consulting firm, it was decided to run the ALERT pilot for a full year before evaluation, and to run the pilot during evaluation. This will provide enough time for systems to operate according to specifications, thereby allowing for a more accurate evaluation. As a result, ALERT will require approximately 46 person-years and $2.7 million in 1984-85 for the implementation of the final two components of the pilot (amendment processing and entry selection). An evaluation of the pilot will be conducted during 1985-86 at a cost of approximately 37 person-years and $2.3 million.

Conditional Release: Conditional Release will require approximately 21.5 person-years and $1.4 million in 1984-85. 1985-86 expenditures are estimated at 29 person-years and $1.7 million. These costs reflect the Government's decision to run the pilot during the evaluation phase and are based on the results of a cost-benefit analysis completed in 1984.

Clientele Profile System: The Clientele Profile System expenditures for 1984-85 and 1985-86 will amount to $2.5 million and 21 person-years and $1.9 million and 16 person-years, respectively.

The following three other important systems changes will be continued or completed during 1984-85 and 1985-86:

Management Improvement Plan: This plan which was initiated in October 1980 will be phased out by March 31, 1985. Any residual activities not fully completed by that date will be continued outside the Management Improvement Plan framework and will be absorbed within the Department's ongoing program development and improvement initiatives (see page 39). 1984-85 expenditures are expected to be 45 person-years and $1.1 million.

Office Automation: The Office Automation prototype system trial will be completed in December 1984. The field trial may be extended until August 1985. Resource expenditures for this initiative amount to approximately 6 person-years and $600,000 for 1984-85 and 1985-86 respectively (see page 27).

PASS: The development of the Personal Alarm Security System (PASS) is well underway. Pilot systems will be operational in Windsor, Ontario by February 28, 1985 and in the Dundee-Lacolle area in Quebec by March 31, 1985. These two pilots will be evaluated by September 30, 1985. The 1984-85 expenditures for PASS will amount to 4 person-years and $2 million while 1985-86 expenditures will be approximately 6 person-years and 5.3 million (see pages 37 and 40).

4. Program Effectiveness

In the context of the Canadian tax administration system which is based on self-assessment, the Department's strategy for achieving its program objective is to facilitate voluntary compliance by the public. This strategy involves the promotion and provision of information necessary to the public, and as a result, the quality and expediency of information provided to clients and the interfaces between the departmental employees and clients are critical success factors for meeting the Department's program objective.

In support of this strategy, the Department maintains appropriate levels of verification and enforcement activities necessary to discharge its mandate in a fair manner.

Customs and Excise has exerted considerable effort and made visible progress over the last few years in the development and implementation of performance measurement systems. Because most of these systems provide operational-type performance data, the Department has also been concerned with resolving the difficult issue of defining and measuring program "outcomes" or program results. After analyzing the results obtained by the use of various approaches such as performance measurement systems (PMS), program evaluation studies, special measurement surveys and non-quantitative methods, the Department is now in a position to provide greater insight regarding its program effectiveness.

For purposes of this section, program effectiveness is discussed in terms of the two main components of the program objective statement, which are concerned with the appropriate revenue collection and the control of the movement of people, goods and conveyances.

Ensuring correct revenue assessment and collection: The main concern of the Excise component of the Customs and Excise program is to ensure that all duties, taxes and other relevant charges and levies are assessed, collected and where appropriate, refunded.

The Excise Branch collects over $11 billion annually. Collecting the correct amount of revenue is of prime importance. The Department must not only be accurate in its assessments, it must also strive to be fair in remitting credits.

In a tax system which is based on self-assessment the onus is on taxpayers to correctly identify, assess and remit their tax liabilities. Voluntary compliance is fostered by increasing the ability and willingness of taxpayers to do so. Information, in the form of kits, memoranda, bulletins, rulings and visits to first time clients encourages the public to comply with the law. A significant proportion of the Department's resources are used to ensure that the public is well informed. There are, however, taxpayers who knowingly or inadvertently do not comply. The Department must therefore take steps to detect, correct and deter instances of non-compliance. The Excise audit program is one such method designed to ensure that taxpayers are remitting the proper amount as prescribed by law. The audit program, which is in the Excise Verification and Enforcement sub-activity, represents 56% of total activity resources. As per the Department's Program Evaluation schedule, the audit program will be the subject of a program evaluation study in 1987-88. At that time, greater insight on the overall program effectiveness of this Excise program component will be available. In the meantime, two specific areas of the Excise audit program (standard audit units and standard duty audit units) are discussed in Section II, Analysis by Activity (see page 21).

Controlling the movement of people and goods: The second component of the program objective deals with the control (for the protection of Canadian industry and society) of the movement of people, goods and conveyances entering and leaving Canada as required by legislation. This area of responsibility is mainly the concern of the Customs activity.

The Department processed in 1983-84 over 36 million visitors entering Canada and 43.9 million returning residents. It also processed more than 13.5 million cargo control documents, 6 million import entries and more than 220,000 refund and drawback claims. In addition, Customs undertook over 128,000 seizures and other enforcement actions (forced payments, prohibitions) and made in excess of 2.2 million enforcement referrals to other government departments. An indicator of the Department's effectiveness in the area of control of the movement of people is the rate of compliance by travellers with the legislation. The most important indicators of progress in this area form part of a program evaluation study conducted in 1983-84 which covered the activities of approximately 32% of the Department's workforce and 30% of departmental annual expenditures. Results of the study are described below.

Movement of people: The study on the Customs Passenger Processing system focussed on the two stages of Passenger Processing - Traveller Declarations and Secondary Examination of those passengers suspected of not voluntarily complying with Customs, immigration and related entry regulations.

The study estimated that 91% of all passengers entering Canada do so without serious violation of entry laws. The remaining 9% of passengers can be further subdivided into two important non-complier groups. The first group, the "serious" non-complier group, represents about 2% of all travellers entering Canada who seek to avoid detection and whose non-compliance is sufficiently serious to merit official enforcement action. Such enforcement actions include seizures (i.e. consumer goods, drugs, and weapon infractions), forced payments, and prohibitions.

The second group (about 6.6% of travellers entering Canada) are "threshold" non-compliers whose offence is too important to ignore but too small to merit official enforcement action. It is estimated that 600,000 of this group are detected annually and are given "unofficial" warnings.

The Department plans to conduct specific measurement surveys to verify these estimates of the compliance rate. The results of these surveys will be taken into consideration in the next program evaluation study of the passenger processing area. Departmental initiatives generated as a result of this study and which aim at improving the compliance rate will be completed by 1988.

Movement of goods: With respect to the control over the movement of goods, a program evaluation study of the Customs Carrier Declarations System was completed in August 1984. This study focussed on the document control of three major sub-systems: Carrier Declarations, Postal Declarations/Sortation and Export Declarations. These systems form the basis for the Department's verification and control activities respecting goods entering, transiting or leaving the country.

The study concluded that the Carrier Declarations System is functioning satisfactorily and expeditiously and that the system reconciles control with responsive service. The process was well perceived by the importing community. Opportunities were identified for rationalizing the system across the transportation modes and for refinements to the verification process.

The Postal Declarations/Sortation process was found to be improving in effectiveness. However, the study concluded that there were opportunities for improving service to the public and for productivity improvements within the system.

The documentary controls for exports were found to be acceptable but the physical controls were in need of improvement. The study concluded that a further resource commitment will be required to implement any effective control in the area of exports.

The Department has reviewed the study findings and initiated actions to bring about those changes considered appropriate in response to the study. These actions are scheduled for incorporation into the Department's program by 1986-87.

The Department plans to improve the quality of effectiveness information provided through the continued development of program effectiveness indicators, conduct of studies and the further development of efficiency, effectiveness and responsiveness measurement systems. The provision of information to our clients is a key element in our strategy to foster and facilitate voluntary compliance. To this end, a major evaluation study will be completed by 1985-86 which will gauge the effectiveness of the Department's internal and external communication networks.

Section II
Analysis by Activity

A. Excise

Objective

To administer the Excise Act, the Excise Tax Act and other relevant legislation and thereby ensure that duties, taxes and other relevant charges and levies are assessed, collected and where appropriate, refunded at least cost to the public and in a manner which ensures the highest degree of public confidence in the integrity, efficiency and fairness of the excise process.

Resource Summary

The Excise Activity includes 1,506 person-years which represents approximately 15% of total departmental person-years and 16% of total departmental expenditures. The detailed Activity resources are displayed in Figure 7.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Tax Information	10,104	213	9,545	197	9,257	210
Revenue Collections	6,159	173	7,074	173	5,721	171
Verification and Enforcement	38,063	844	35,618	876	34,752	867
Excise Duty	3,322	81	3,248	81	3,404	94
Appeals	667	13	657	12	140	2
Policy and Systems	4,359	45	4,313	45	2,389	45
Program Management and Support	5,787	137	6,355	138	5,790	145
	68,461	1,506	66,810	1,522	61,453	1,534

Past Financial Performance

Actual 1983-84 expenditures for the Excise Activity were $768,000 or 1% under budget. Person-year lapses due to cancellation of Commodity Tax Reform (18 p-y's) and normal attrition (i.e. resignations, retirements, etc.) resulted in a $374,000 personnel cost saving. As well, $202,000 in operating and capital dollars were not spent because of the cancellation

of the Commodity Tax Reform. Revisions to the Client Profile System development strategy resulting in lower consultant costs and deferral of computer terminal purchases caused a saving of $192,000.

Description

The Excise objective is achieved by:

- ensuring that all taxpayers as required are licensed;
- providing information to persons affected by the Acts, in order for them to properly self-assess their tax liabilities and entitlements;
- processing tax returns; receiving, depositing and accounting for revenue;
- collecting where feasible all outstanding monies owing the Crown;
- identifying non-compliance and enhancing voluntary compliance through verification and enforcement activities.

In administering the Excise Act, Excise Tax Act, and other relevant legislations, the management focus in the Excise Activity is placed on seven areas of activity which are described below.

Tax Information: Eligible taxpayers are identified and licensed. Licensees, refund claimants and other members of the public known to be affected by the law are provided with information and interpretations respecting their entitlements and obligations with respect to Excise legislation, policy and administrative procedures. Voluntary compliance is enhanced.

This sub-activity is allocated 14% of total activity resources. These resources are utilized to facilitate the correct self-assessment of liabilities and entitlements by Excise clientele, to ensure the provision of nationally consistent and timely information and to license eligible taxpayers.

Revenue Collections: Revenue from licensed taxpayers consisting of voluntary remittances, as well as overdue taxes, duties and related penalties, is collected, deposited and accounted for. Taxpayers who are in arrears and non-filers of tax returns are identified, informed and provided with an opportunity to meet their obligations before collection action is initiated.

The volume of collection cases per annum is affected by a variety of non-discretionary factors such as the size of the licensee population, prevailing economic conditions (regional, as well as national), private sector interest rates versus Government penalty interest rates, sizes and types of enterprises, and the value of audit assessments. 11% of total activity resources are assigned to Revenue Collections.

Verification and Enforcement: Instances of over or underpayment of Excise taxes payable under the Excise Tax Act are discovered and corrected

through the selective audit of licensees, assessments and credits are issued and licensees are provided with information to assist them in voluntarily complying with legislative requirements. Claims for refund of federal sales or excise taxes by refund claimants are examined to confirm the validity of taxpayers' entitlement to reimbursement. Special investigations are conducted to confirm and deal with suspected cases of fraudulent activity.

The major output of this sub-activity, standard audit units, is an aggregate of the various types of excise and refund audits conducted according to prescribed quality and reporting requirements. This is the largest area of endeavour in the Excise Activity (56% of total Activity resources).

Excise Duty: Non-compliance with the Excise Act is identified and rectified through post-functional reviews (duty audits) and legislatively required surveillance of industries licensed under the Excise Act including distilleries, breweries, tobacco manufacturers, bonded warehouses and permit-holders. This area accounts for approximately 5% of total activity resources.

Appeals: All appeals against decisions made under the Excise Tax Act with respect to classification, tax status or valuation are resolved equitably and expeditiously. This sub-activity accounts for less than 1% of total activity resources.

Policy and Systems: Appropriate legislation, regulations, policies, procedures, and systems are planned, developed, evaluated, and maintained in order to achieve program results in operational areas. Approximately 3% of total activity resources are consumed in this sub-activity.

Program Management and Support: Management, financial and central administrative services are provided to all components of the Excise program and account for 9% of total activity resources.

Performance Information/Resource Justification

Each area of activity described above is essential within a tax system based on voluntary self-compliance. The level of results sought or achieved in each area will be affected by changes in a number of inter-related factors such as workload volume and complexity, size of the Excise client base (licensees, refund claimants, etc.), changes in legislation or policy, government priorities, business and economic conditions.

Excise workload is particularly influenced by the size of the licensee base, which in turn may be affected by normal growth in the manufacturing sector, by revisions to existing legislation, enactments of new legislation, or simply by the provisions of a federal budget. Over the next five years, Excise forecasts a steady increase of 500 licensees per annum (.9% increase) from the existing licensee base of 56,770. With the exception of workload associated with legislative changes, the Excise Activity will absorb 1985-86 workload increases in all affected operational areas without additional resources.

Performance information is provided for four major output areas in the Excise Activity. Collectively, these outputs account for approximately 87% of the total Excise resources. Details are given in Figure 8.

Figure 8: Outputs per Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	Volume	Outputs per P-Y	Volume	Outputs per P-Y	Volume	Outputs per P-Y
Tax Information						
Written Rulings Issued	37,540	176	37,210	189	36,883	176
Revenue Collections						
Collection Cases completed	104,450	604	103,530	602	102,606	600
Verification and Enforcement						
Standard audit units completed	35,030	42	34,720	40	34,412	40
Excise Duty						
Standard duty audit units completed	530	7	530	7	527	6

Written Rulings Issued: The major output of tax information is the number of written rulings issued, which includes license investigations. Excise rulings are issued by Excise officers located primarily in regional offices and are based upon established precedents or new circumstances. 1983-84 Excise rulings processed were 2% over the 36,326 volume forecast. Person-year utilization was 8% below budget (19 person-years) and as a consequence, outputs per person-year were 11% above target.

Collection Cases Completed: The number of collection cases completed in 1983-84 was 102,606 or 7% lower than the forecast volume (107,000). As person-year utilization in this area was 8% lower than budgeted, outputs per person-year were within .2% of target levels.

Standard Audit Units Completed: All performance areas measured in the standard audit units were within expected levels during 1983-84.

Standard Duty Audit Units Completed: Workload volumes (standard duty audit units) were 19% or 126 units below target. This was due to the introduction of periodic on-site surveillance for selected breweries as opposed to the previously employed post-functional audit approach. Workload forecasts for 1984-85 and 1985-86 reflect this change in methodology.

Figure 9 displays the workload volumes for the period 1981-82 to 1985-86 for these four areas of activity. Figure 10 relates workload volumes to person-years.

Figure 9: Excise Workload Volumes (1981-1986)

Figure 10: Excise outputs per person-year

Departmental initiatives affecting the Excise Activity

Three initiatives will affect the achievement of the Excise objective and impact on Excise resources in 1985-86 and beyond. These initiatives are the Excise Clientele Profile System (CPS), the new Appeals System and the Office Automation Field Trial project.

The Excise Clientele Profile System: This system involves the development and national implementation by 1988 of an automated client data base which will provide Excise with detailed and readily accessible information on the clientele. The impact of this system will be felt in tax information through form simplification and distribution of information literature. The verification and enforcement and revenue collections areas will be affected mainly through more effective and efficient deployment of audit resources, and more timely processing of refund claims. Overall, CPS will permit an estimated increase in annual revenues of $10 million and will improve control over a cash in-flow of approximately $11 - $12 billion in revenues.

The pilot implementation of the CPS regional component will be operational in Southwestern Ontario by September 1, 1985. The pilot will be implemented in three phases during the period from April 1, 1985 to September 1, 1985. The pilot evaluation will be completed by June 30, 1986. Total estimated expenditures for the pilot project amount to $5.8 million and 49 person-years. The national implementation of CPS, scheduled to commence in 1986, will be completed by March 31, 1988.

The Gasoline and Diesel Fuel Sales Tax Rebate Program: This program was effective as of December 1, 1984 and is to be in place until January 1, 1987. By virtue of this program, farmers, fishermen, loggers, hunters, trappers and mine operators will be eligible for a rebate of 4.8 cents per litre on their purchases of gasoline and diesel fuel for off-highway use in commercial activities. This rebate amount is comprised of 3.0 cents federal sales tax and 1.8 cents petroleum compensation charge. The resource expenditures for the program are shown in Figure 11.

The Appeals System: The Appeals system is a new area of activity for Excise and results from a Ways and Means Motion tabled on February 15, 1984 (see page 14). Assuming that Royal Assent is received, Excise will implement and maintain a structured appeal mechanism by which all taxpayers' appeals are resolved expeditiously and equitably to the extent permitted by law. The forecast annual expenditures related to the Appeals system are shown in Figure 11.

Figure 11: Annual Expenditures for the Fuel Tax Rebate Program and for the Appeals System (000)

	Expenditures to March 31, 1985		Estimates 1985-86		Annual Expenditures beyond 1985-86	
	$	P-Y	$	P-Y	$	P-Y
Fuel Tax Rebate Program	-	-	1,400	189	800	130
Appeals System	643	13	622	13	657	13

The Office Automation Field Trial: This project is one of four office automation field trials taking place in the Federal government under the umbrella of the Office Automation Study. The study's objective is to determine the feasibility and utility of using office communication technology in a variety of office functions. Excise is conducting this field trial in three phases. Phase I, which took place in 1983-84, consisted of a needs analysis and system development of a prototype system which was put into place to serve 100 people in Headquarters and Excise Toronto Region.

Phase II, which is under way, consists of the prototype system trial which will be completed in December 1984. Evaluation of system usage and user reaction will be ongoing until the end of the trial. To better evaluate the usefulness of the system, the Department may extend the Field trial until August 1985. The decision to implement nationally in Excise branch (Phase III) will be based on final evaluation of the trial.

B. Customs

Objective

The Customs sub-objective is as follows:

To administer the Customs Act, the Customs Tariff, the Special Import Measures Act, and other relevant legislation and regulations and thereby:

- control for the protection of Canadian industry and society, the movement of people, goods and conveyances entering or leaving Canada as required to achieve compliance with legislation;

- protect Canadian industry from real or potential injury caused by the actual or contemplated importation of dumped or subsidized goods, as well as by other forms of unfair foreign competition.

Resource Summary

The Customs Activity includes 7,786 person-years and represents approximately 77% of departmental person-years and 69% of departmental expenditures. Customs Programs branch resources are within the Interpretative Policy Determinations and Appeals and Program Development and Systems Maintenance sub-activities while Customs Field branch resources are within Port Operations and Regional Appraisal and Adjustments sub-activities. Both branches' overhead and support resources are within the Program Management sub-activity.

Figure 12: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Port Operations	183,667	5,298	181,343	5,386	167,105	5,342
Regional Appraisal and Adjustment	37,139	1,063	35,934	1,063	35,419	1,057
Interpretative Policy Determinations and Appeals	16,001	337	14,625	343	13,795	335
Program Development and Systems Maintenance	10,383	204	17,522	226	11,846	277
Program Management and Support	40,734	884	37,442	892	35,229	885
	287,924	7,786	286,866	7,910	263,394	7,896

Past Financial Performance

Actual 1983-84 expenditures were $5,607,000 or 2% under budget. $4,628,000 represents departmental savings from the use of casuals paid at rates lower than the averages established in the salary costing schedule. $392,000 are operating dollars saved because of externally imposed restrictions on printing. Re-scheduling of planned repairs to border-point bridges and tunnels and purchases of office equipment as well as reduced uniform replacement and restraints on travel resulted in other savings totalling $587,000.

Description

The first Customs sub-objective is achieved:

- by ensuring that all goods are classified in conformity with prevailing statutes and regulations;

- by ensuring that all Customs duties, taxes and other relevant charges and levies are assessed, collected and where appropriate, refunded;

- by applying, on behalf of other government departments and agencies, the provisions of other statutes and regulations which relate to the flow of people, goods and conveyances across the frontier.

The second sub-objective is achieved:

- by investigating, making determinations, and where appropriate, referring cases of suspected injurious dumping or subsidization to the Anti-dumping Tribunal and Governor-in-Council;

- by investigating other cases of unfair foreign competition as may be referred to the Department e.g. cases involving undervaluation, misclassification and misdescription.

The Customs Activity includes therefore five areas of activity designed to achieve its objectives. These areas of activity are described below.

Port Operations: All people, goods and conveyances entering into Customs control are processed and assessed that only qualifying people, goods and conveyances are cleared to proceed into, or exit from Canada; all goods entering into Customs control are classified; and revenues owing the government are assessed and collected.

This sub-activity consumes 68% of total Activity resources and is mainly concerned with controlling the movement of people and goods into and leaving Canada, thereby contributing to the first Customs sub-objective.

(3) major outputs are representative of this sub-activity's performance and represent 100% of Port Operations total resources. These outputs include the number of travellers processed, commercial entries processed (excluding postal), and importer notifications issued (E14's) in the postal area, each of which is discussed in Performance Information/Resource Justification section which follows.

Regional Appraisal and Adjustments: All information requests respecting entry of goods are answered; Post-importation review of customs transactions associated with the importation of goods verifies compliance with relevant statutes and regulations; all appeals are processed; all claims for Drawbacks, Refunds and Remissions are reviewed, qualifying claims are approved and monies are refunded; and cases of suspected non-compliance with statutes and regulations are investigated and resolved.

This sub-activity accounts for approximately 13.6% of the Activity's resources. Major outputs include entries reviewed, rulings and appeals processed and refund claims reviewed (see Figure 13)

Interpretative Policy Determinations and Appeals: Rulings, administrative policy and guidelines relating to value for duty, tariff classification and relief, seizure actions and suspected injurious dumping are issued such that the public is provided with equitable and responsive interpretation of the law and related operational resources are used in a productive manner; disputes regarding interpretation of the law are resolved expeditiously and objectively. This sub-activity accounts for approximately 4% of total activity resources and its two major outputs (discussed in the next section) are seizure adjudication decisions and assessment and tariff appeals decisions.

Program Development and Systems Maintenance: Legislation, related regulations, policies, procedures and delivery systems which contribute to the equitable and responsive application of the law and the productive use of related operational resources are developed as necessary and maintained for application in the operational sub-elements of the Customs Activity. This area consumes about 3% of total activity resources.

Program Management and Support: Management direction, planning and central administrative services are provided to all of the components of the Customs Activity (11% of total activity resources).

Performance Information/Resource Justification

In administering the Customs Act, Customs Tariff, Special Import Measures Act, and other legislation and regulations, the management focus of this Activity is on four Customs results, each of which is essential in a customs system based on voluntary self-compliance. The level of results sought or achieved in each area will be affected by changes in a number of inter-related (sometimes competing) factors. These factors include workload volumes and complexity, number of ports of entry, hours of operation, government and departmental priorities, central agency

requirements, mode of transport, country of origin, interdepartmental agreements, changes in legislation, economic conditions, private sector priorities and needs, environmental/geographic conditions. Three of these operational areas, (Port Operations, Regional Appraisal and Adjustments, and Interpretative Policy Determinations and Appeals) generate eight major outputs shown in Figure 13.

Figure 13: Workload Volumes and Outputs per Person-Year

Major outputs by Sub-Activity	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	Volume	Outputs per P-Y	Volume	Outputs per P-Y	Volume	Outputs per P-Y
Port Operations						
Travellers processed	80,820,000	33,786	80,092,000	33,525	79,965,000	33,669
Commercial entries processed	6,258,000	2,503	6,118,000	2,490	6,024,000	2,482
Importer notifications issued (E14's)	1,615,000	2,991	1,603,000	2,969	1,587,000	2,939
Regional Appraisal and Adjustments						
Entries reviewed	4,117,000	13,367	4,061,000	13,185	3,961,000	12,902
Rulings and appeals processed	157,000	611	157,000	610	161,000	621
Refund claims reviewed	177,000	2,391	175,000	2,364	173,000	2,306
Interpretative Policy Determinations and Appeals						
Seizure adjudication decisions	3,800	100	3,500	93	3,900	103
Assessment and Tariff appeals completed	6,800	133	6,800	133	4,800	132

Travellers Processed: The number of travellers processed during 1983-84 was very close to established targets. As depicted in Figure 13, the number of travellers processed reached 79,965,000 (versus 78,961,000 forecast in 1983-84). This included over 36 million visitors and over 43.9 million border crossings by Canadian residents. While an excess 1 million travellers had to be processed, person-years utilized to cope with these additional travellers exceeded previous estimates by only .6% (15 p-y's) of the sub-activity resources, thereby achieving targeted efficiency levels.

The projected shift in the composition of travellers in future years (see page 13) is likely to affect Port Operations in terms of the resource levels allocated to carry out the primary and secondary Customs functions. For instance, significant increases in the number of visitors entering Canada and concurrent decreases in the number of returning Canadians will allow the sub-activity to shift more resources from secondary examinations to the primary functions as dictated by workload peaks and type of travellers. This flexibility will allow the sub-activity to adjust more easily to travellers'needs, reduce queueing time during peak periods and overall, to be more sensitive while ensuring a more efficient and effective deployment of resources.

Commercial Entries Processed: Commercial entries processed in 1983-84 were 6,024,000 or 12% below forecast. This shortfall of entries results from a slower economic recovery as well as the general state of world-wide economic conditions. Underutilization of the resources in this sub-activity was .2% (or 42 p-y's). Outputs per person-year in this area were 11% under targeted levels. This variance is due to the Department's limited ability to shift resources to compensate for workload peaks (due to established minimum shifts levels and the employee relations considerations inherent in the frequent changing of work locations for individual employees).

With respect to the forecast of increased value of merchandise imports (previously mentioned on page 13), it is expected that the number of entries forecast for 1984-85 compounded by the increased value of entries will place a heavier workload on the resources of this sub-activity starting in 1984-85 (the review of commercial entries is based on the value of importations). In spite of this, the Department plans to maintain 1983-84 efficiency levels.

Importer Notifications Processed (E14's): As postal entries are received by Customs, a card (E14) is issued to notify the importer accordingly. All targets were met in the area of Importer notifications (E14's). While the actual number of E14's exceeded 1983-84 forecast by 58,000 or 4%, efficiency levels were 3% above those targeted.

Figures 14 and 15 relate Port Operations workload volumes to person-years for the 1981-82 to 1985-86 period.

Figure 14: Port Operations Workload Volumes

Figure 15: Port Operations Outputs per person-year

Entries Reviewed: The actual number of entries reviewed in 1983-84 was 14% over forecast. This is mainly due to the increased emphasis on the review of informal entries compared to the past, when only formal entries were subject to review. The review of informal entries is less time-consuming than the review of formal entries. Outputs per person-year were 1% above target while person-year utilization was 11% below budget.

Rulings and Appeals processed: In this area, overall performance was as planned, although the volume processed was 6% below forecast. Approximately 11,000 rulings and appeals originally forecast (as a result of Multilateral Trade Negotiations) did not materialize. As shown in Figure 16, 1984-85 workload is expected to drop slightly. Rulings and

appeals will decrease as a result of the new valuation provisions to be implemented on January 1, 1985. In addition, outputs per person-year are expected to improve as a result of better trained and more experienced Dominion Customs Appraisers.

Refund Claims reviewed: 173,000 refund claims were reviewed in 1983-84 (4% fewer than forecast). Person-year utilization was also 4% less then planned.

Figures 16 and 17 relate Regional Appraisal and Adjustments workload volumes to person-years.

Figure 16: Regional Appraisal and Adjustments Workload Volumes

Figure 17: Regional Appraisal and Adjustments Outputs per person-year

Seizure Adjudication Decisions: The number of seizure adjudication decisions rendered in 1983-84 was 1% below target. The person-year utilization targets were reached and the level of outputs per person-year was 1% below target.

Assessment Appeals Decisions: There were 317 (6%) fewer assessment appeals completed than planned. Person-year utilization was as forecast. Outputs per person-year were 6% below target.

Departmental Initiatives Affecting The Customs Activity

The Customs activity will be affected by a number of initiatives (see pages 14-17) which include the revised Customs Act, the Special Import Measures Act, the new Valuation Provisions, the Extension of Jurisdiction, Duty-Free Shops, the Harmonized System, ALERT and Conditional Release and the Personal Alarm Security System (PASS). Each of these initiatives will impact on the manner in which Customs' areas of activities are managed to achieve its sub-objectives. These initiatives are developed in the Program Development and Systems Maintenance sub-activity. Three sub-activities will be particularily affected i.e. Port Operations, Regional Appraisal and Adjustments and Interpretative Policy Determinations and Appeals. Their impact on respective areas of activity are described below.

Initiatives To Be Implemented During 1984-85

Customs Act Revisions: As discussed in previous Expenditure Plans, the present Customs Act is outdated and inflexible and does not meet the needs of the importing community and the travelling public. The Customs Act is being revised to eliminate obsolete and inconsistent provisions and to express the statute in a logical sequence. The revised Act will provide greater flexibility in coping with modern business developments and will modernize the provisions related to the collection of revenue and enforcement aspects of the Act. The Customs regional activities will be the most affected by the application of the Act. The revised Act and all related documentation are kept up-to-date and maintained in a high state of readiness for eventual implementation.

Special Import Measures Act (SIMA): The Special Import Measures Act replaces the existing Anti-dumping Act and related countervailing regulations. The administration of the Act and other new legislative features (such as investigative timeframes, enhanced disclosure of information provisions and provision for the negotiation of price and quantity undertakings) will generate new workload which will be felt in the Interpretative Policy Determinations and Appeals sub-activity. During 1984-85, the Department will complete the work related to the development and implementation of the Act including the transition of cases in progress under previous legislation for total estimated expenditures of 34 person-years and $1.6 million.

In 1985-86, this sub-activity will: experience a 20% workload increase in the anti-dumping and countervailing areas during 1985-86 (the first full year following the Act's implementation); have to adjust to longer investigative periods and increased disclosure of information provisions, and, need to implement a more comprehensive approach to import monitoring and to the development of industry studies. Approximately 99 person-years and $4.7 million will be required annually, commencing in 1985-86, to administer this area of activity and absorb the additional workload.

Valuation Provisions: The new Valuation Provisions which have been implemented as of January 1, 1985, represent a basic and extensive change from our present fair market value system. The new agreement will base value for duty on the transaction price between exporter and importer and will emphasize the importer's role in providing information on transaction price and in assessing duty and tax liability. These changes should contribute to improved sensitivity and responsiveness by Customs and Excise towards its clientele and will generally improve the enforcement process. Once implemented, the new Valuation Provisions will affect all operational areas of the Customs Activity. The project will be completed (including the final project evaluation) during 1985-86 at an approximate cost of 6 person-years and $222,764 (see page 15).

Extension of Jurisdiction and Duty Free Shops : Two other initiatives resulting from Government policy changes will also impact on this Activity during 1984-85 and beyond. They are the Extension of Customs and Excise Jurisdiction to the continental shelf and Duty Free Shops. Each initiative will start implementation during 1984-85 and 1985-86. Duty Free Shops will provide an additional service to the public without generating a significant workload increase.

The Customs and Excise Offshore Application Act will require 21 person-years and $713,000 annually to maintain normal operational functions such as entry processing, examination of goods, processing of appeals, etc. Most of these resources will be deployed in Port Operations at the regional offices affected by the Act's administration.

Initiatives Affecting The Customs Activity In 1985-86 And Beyond

EXPO '86: EXPO '86 will take place in Vancouver from May 2, 1986 through October 13, 1986 and will involve over 50 participating countries (see page 15). The exhibitors, concessionnaires and performers from these countries will import (and eventually export) commercial goods which will be used for exhibition purposes. The processing of the imported goods will take place between November 1985 and May 1986 and total expenditures for 1985-86 will amount to 5 person-years and $208,000 (including a full-time official departmental representative which is required for both 1985-86 and 1986-87).

It is estimated that approximately 2 million visitors from other countries will attend EXPO '86 and will need to be processed as they enter in Canada. As well, Customs will need to supervise the exportation of the commercial goods (from October 1986 to December 1986) temporarily imported exempt of duties and taxes for the purpose of EXPO '86. The remaining Customs facilities at the EXPO '86 site will afterwards become a permanent point of entry which will accommodate up to 5 oceanliners at a time.

ALERT: The ALERT project consists of an automated selection process for entries and an on-line interactive information and retrieval system. This selection process will particularly affect the appraisal of importations, thereby ensuring that appropriate duties and taxes are assessed. The information and document retrieval system will facilitate access to information and will assist the Customs Activity in areas such as investigations and audits.

Conditional Release: The Conditional Release system is an on-line system that will select shipments for examination prior to their release from Customs. The system will improve the responsiveness in releasing goods and enhance effectiveness with respect to compliance with legislation. The system will facilitate the operations of the Port Operations and the Regional Appraisal and Adjustment areas.

Harmonized System: The Harmonized System, will result in a classification of goods system used by approximately 150 major trading countries and will describe all goods in international trade. The Harmonized System, based on principles of simplicity, precision and uniformity of application, should foster voluntary compliance, improve the enforcement process and diminish the number of disputes. As a result the whole Customs Activity is expected to benefit from the introduction in January 1987 of the new Harmonized System.

PASS: The Customs Activity will also be affected by the Personal Alarm Security System to be implemented in 1987-88. This system is designed to ensure that an alarm is activated when a Customs officer is in real or potential danger and that appropriate law enforcement agencies are immediately contacted and dispatched to the site. This initiative is under development in the Corporate Administration Activity (see page 40).

C. Corporate Administration

Objective

To provide management direction, planning coordination and central administrative services to the Department.

Resource Summary

The Corporate Administration Activity accounts for approximately 14% of 1985-86 total departmental expenditures and represents 8.4% of the total person-years. These resource expenditures are shown in Figure 18.

Figure 18: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Corporate Management	38,574	498	32,209	506	35,348	500
Personnel Administration	13,765	222	11,962	214	10,748	225
Audit and Evaluation	4,542	71	4,429	71	3,824	71
Public Relations	1,572	14	1,494	14	1,358	14
Executive	2,788	51	2,418	51	2,222	54
	61,241	856	52,512	856	53,500	864

Past Financial Performance

Expenditures in 1983-84 were $741,000 or 1% under budget. Fifty-three percent ($390,000) of the total Activity lapse was linked to an underutilization of 18 person-years (2%), mainly caused by incomplete staffing actions. Reduced Customs and Excise services and deferred equipment purchases produced a saving of $235,000. Re-scheduling of planned printing, reduced travel and use of consultants resulted in an additional saving of $116,000.

Description

The Corporate Administration Activity is comprised of the following five sub-activities:

Corporate Management: Departmental management at all levels is provided with the management and control services necessary for the effective administration of resources in support of government-wide and departmental programs and objectives. This area includes 58% of total activity resources.

Personnel Administration: Departmental management at all levels is provided with the personnel services necessary for the effective administration of human resources in support of government-wide and departmental programs and objectives including the application of legislation pertinent to personnel management in the Public Service. This area accounts for approximately 26% of total activity resources.

Audit and Evaluation: Independent and objective audits, evaluation and assessments of the departmental programs and operations to assist in the decision-making process involved in achieving program objectives. This sub-activity includes approximately 8% of total activity resources.

Public Relations: Those affected by Customs and Excise legislation are provided with information to enhance their understanding and knowledge of the laws and of departmental activities and thereby, their ability to comply with the laws administered by the Department. This area accounts for 1.6% of total activity resources.

Executive: This sub-activity includes Legal services, Internal Affairs, the Deputy Minister's Secretariat and a portion of the Minister's office and accounts for approximately 6% of total Activity person-years.

Recent Performance

Management Improvement Plan: Initiated in October 1980, and phasing out on March 31, 1985, this Plan formulates the efforts of Customs and Excise to improve management performance and processes.

In 1983-84 major accomplishments have included the development and implementation of training courses for the whole departmental middle-management cadre; the full implementation of an improved contracting system and the creation of management position profiles for all management positions; the development and promulgation of management selection/recruitment guidelines for the management cadre in Customs and Excise; the continued development and implementation of improved financial information systems; the refinement of internal management reports and the establishment of a program evaluation function which resulted in the completion of program evaluation studies on the Customs Passenger Processing System and the Customs Carrier Declarations System.

Activities scheduled for 1984-85 include the continued implementation and evaluation of an efficiency, effectiveness and responsiveness measurement system and phased national implementation of a total expenditure control system with all phases to be completed by 1985-86.

Many modules of the Departmental Revenue Accounting System (DRAS) have reached the system design alternatives phase and approval has been given for further development and linkage to ALERT.

In 1984-85, 45 person-years and $1.1 million is required for these initiatives. Any residual initiatives which have not been completed by March 31, 1985 will be continued outside the Management Improvement Plan framework and will be absorbed within the Department's ongoing program development and improvement activities.

The impact of the MIP achievements is felt throughout the Department and offers the management tools, processes and systems necessary to entrench improved management practices at all managerial levels.

Departmental Initiatives Affecting The Corporate Administration Activity

While the Corporate Administration Activity's role is to provide the Customs and Excise Activities with the efficient and effective support and services necessary to carry out their respective operations, Corporate Administration is equally involved in the development of major departmental initiatives which will have resource implications in 1985-86 and beyond and/or will impact on the manner in which the Department will meet its program objectives in future years. Among the most important of these initiatives are the Personal Alarm Security System (PASS) and the Affirmative Action Program, each of which is discussed below.

Personal Alarm Security System (PASS): The technical specifications for PASS reflecting operational requirements for personal alarms, voice communication and remote monitoring have been developed. Two pilot systems in Windsor, Ontario and in Dundee-Lacolle, Quebec, will be operational by February 28, 1985 and March 31, 1985 respectively. The evaluation of the two pilot systems should be completed by September 30, 1985.

The parties to the contract have agreed to a ceiling price of $3.1 million subject to downward revisions through the application of a negotiated profit margin and determination of exact quantities, kinds and net costs of equipment installed. During 1984-85, the site surveys and systems engineering activities for all remaining sites in the national implementation will be conducted. The anticipated cost of this endeavor is in the $500,000 range. This preparatory work will provide the necessary information to firm up the cost of the national system.

The 1984-85 forecast expenditures for PASS amount to 4 person-years and $2 million to cover costs associated with system design, manufacturing and installation in Windsor and in the Dundee-Lacolle sector, and for some non-recurring design and engineering costs. The 1985-86 expenditures are estimated at $5.3 million and 6 person-years.

While the development of this initiative is conducted in Corporate Administration, its impact will be felt in the Customs Activity, primarily in the Port Operations sub-activity (see page 37).

Affirmative Actic : In accordance with the Treasury Board policy announced in June 1983, Customs and Excise has recently completed an intensive study of its workforce and employment policies, practices, systems and procedures in preparation for the April 1, 1985 implementation of its Affirmative Action Program.

The Affirmative Action Program, which will merge in 1985-86 with the existing Equal Opportunities Program, will permit the attainment of more equitable levels of employment in each target group and will be in direct support of Cabinet policy to bring about a more balanced, representative and responsive public service. These targets will be part of a 3-year action-plan which has been completed in December 1984. Implementation of this action-plan (starting in 1985-86) will remove or correct systems barriers which have adversely affected the careers of women, handicapped and indigenous employees. Work on the removal of architectural barriers and the identification of required technical aids will continue so as to enhance handicapped people's access to the worksite.

Customs and Excise will continue its efforts to integrate the Affirmative Action Program with other departmental human resource management initiatives currently underway. Among the most important of these initiatives are a management resourcing review, a department-wide career development program and a comprehensive performance review and appraisal process, all of which were developed under the Management Improvement Plan framework.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 19 presents the distribution of expenditures classified by standard object. They include cost reduction initiatives identified for 1985-86 which amount to $8.4 million. While $4.1 million of this amount are reductions associated with person-years and related expenditures in specific areas (see page 6), further cuts totalling $4.3 million were identified in the areas of information, personnel costs and general operating expenditures.

Figure 19: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Operating			
Salaries and Wages	309,169	301,802	283,785
Contributions to employee benefit plans	43,278	39,008	41,828
Other personnel	3,166	2,716	2,651
Transportation and communications	19,956	22,405	17,131
Information	2,024	2,573	2,350
Professional and special services	12,916	15,263	10,006
Rentals	1,478	1,603	4,347
Purchased repair and upkeep	3,684	3,556	3,008
Utilities, materials and supplies	7,405	7,379	6,002
All other expenditures	170	166	227
	403,246	396,471	371,335
Capital			
Construction and acquisition of land, buildings and equipment	4,319	2,275	2,409
Construction and acquisition of machinery and equipment	10,061	7,442	4,603
	14,380	9,717	7,012
Total expenditures	417,626	406,188	378,347

Expenditures for 1985-86 show an overall net increase of $11.4 million (2.8%) over 1984-85. Contributing to this was an increase in operating expenditures of $6.7 million (caused by an increase in personnel costs of $12 million offset by a net decrease in other operating costs of

$5.3 million). Significant operating expenditures are identified as personnel costs, transportation and communications, and professional and special services. Materials and supplies are also of some significance and include expenditures for Department uniforms and other warehouse stock.

Although Customs and Excise is not a heavy user of capital (3.4% of total expenditures), there was a $4.7 million increase in the 1985-86 capital requirements to support approved major projects (such as PASS, SIMA, ALERT, etc.) and other ongoing functions.

2. Personnel Expenditures

Person-year and personnel costs trends are provided in Figures 20 and 21.

Figure 20: Person-Years for the Period from 1980-81 to 1985-86

Figure 21: Personnel Cost for the Period from 1980-81 to 1985-86

Approximately 85% of total departmental expenditures are personnel related. In 1984-85, personnel costs will amount to $356 million, an increase of approximately $12 million over the previous year. In constant dollar terms, however, personnel costs have remained relatively stable over the six year time frame.

Between 1980-81 and 1985-86 the departmental person-year level has increased by only 5%. A large proportion of this increase was non-discretionary, in that the Department has assumed increased responsibilities as a result of budgetary provisions affecting the legislation it administers and Government decisions (e.g., appeals system, duty free shops, etc.). Increases have also been necessary for the Department's work in the areas of international agreements and system changes. Over the same period, the Department has received only marginal increases in person-years directly associated with normal growth in workload volumes. The temporary decrease in the person-year level in 1980-81 is attributable to Government austerity measures at that time. As indicated in Figure 20, there has been a net reduction in person-years since 1983-84 (1.6% or 168 person-years). This decrease includes a 105 person-year reduction in 1985-86 which is related

to the November 1984 cost reduction initiatives. The number of person-years and average salary by category is provided in Figure 22.

Figure 22: Authorized Person-Years and Salary Provision

Other	173	156	169		

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

Approximately 51% of personnel are in the Program Administration category, reflecting the Department's major role in Customs and Excise tax administration. About 5.5% of personnel (562 person-years in 1985-86) are in the Auditing category and carry out the verification process to ensure the collection of revenue due to the Crown and compliance with other aspects of legislation administered by the Department.

B. Cost Analysis

Figure 23 shows the total program costs by activity. Included under the operating expenditure heading are the Department's operating and capital expenditures. Other costs include the costs of services provided without charge by other departments, but do not include depreciation or accomodation provided without charge by this Department. The non-tax revenues shown consist of revenues from seizures and penalties, from special service charges on Customs operations and from other operations. Figure 24 details the services provided to the Department without charge.

Figure 23: Total Program Cost for 1985-86

		1985-86 Operating Expend-itures	Add Other Costs	Total Cost	Deduct Non-Tax Revenues	1985-86 Total Net Cost	1984-85 Total Net Cost

3765

C. Revenue Analysis

Figure 25 presents a breakdown of revenue collected by Customs and Excise for the years 1981-82, 1982-83 and 1983-84. Several factors have a direct impact on the amount of revenue collected in any given year. These include the general level of economic activity, changes in the rate of tax, expansions, restrictions or total withdrawal of exemptions, the imposition of new taxes or refund provisions, the effects of inflation, and the effectiveness of the Department's examination, verification and enforcement operations.

Total gross collections in 1983-84 decreased by $738,398,000 or 4.3% from those made in 1982-83. All of the decreases were in energy-related revenues, the largest being the Petroleum Compensation Charges which decreased by $1,327,644,000 or 36.3%; and Marketable Pipeline Gas and Gas Liquids taxes which decreased by $761,529,000 or 49.2%. These were partially offset by increases in Sales Tax and Import Duties collection of $742,062,000 or 12.0% and $478,349,000 or 14.5%.

Figure 25: Revenue by Class ($000)

	1983-84	1982-83	1981-82
Customs			
Import duties	3,766,575	3,288,226	3,912,168
Sales tax (imports)	1,341,526	1,093,699	1,183,270
Other Excise taxes (imports)	65,248	60,710	59,183
Sundry collections	16,121	13,935	13,339
Total revenue collected by Customs	5,189,470	4,456,570	5,167,960
Excise			
Sales tax	5,573,890	5,079,655	5,260,181
Excise tax on gasoline	470,999	505,073	542,354
Other Excise taxes	663,125	626,322	506,541
Excise duties	1,356,074	1,274,259	1,174,994
Sundry collections	564	273	138
Petroleum compensation charge	2,325,183	3,652,827	4,860,934
Air transportation tax	207,619	198,399	188,629
Marketable pipeline gas and gas liquids Tax	787,693	1,549,222	1,217,249
Telecommunications Programming Services tax	28,236	—	—
Total revenue collected by Excise	11,413,383	12,886,030	13,751,020
Total Headquarters collections	2,976	1,627	2,205
Gross Customs and Excise revenue	16,605,829	17,344,227	18,921,185
Less: refunds, drawbacks, credits	(755,947)	(847,501)	(840,257)
Net revenues	15,849,882	16,496,726	18,080,928

Some of the November 1984 economic measures taken by the Government will affect the amount of revenue collected by the Department for the remainder of 1984-85 and for 1985-86. The areas affected include the Petroleum Compensation Charges, increased by 74% effective November 10, 1984, and the Federal Sales tax increase by 1%, effective October 1, 1984. These two specific measures could respectively bring about $1.8 billion and $1 billion additional revenue in 1985-86. However, a number of tax relief provisions for specific groups (such as primary producers) will offset the net amount of revenue collected for each area. The amount in refunds, drawbacks and credits is difficult to forecast at this time and no accurate revenue forecast can be made until the tax relief programs are put in place (see page 26). Other measures (i.e. the Air Transportation Tax and the Telecommunications Programming Services Tax) will also bring slight increases in revenue in 1985-86.

D. New Activity Structure

As previously mentioned in the Preface and in Section I, the Department is presenting this year's Expenditure Plan in terms of a new activity structure. As such, all tables contained in this document with the exception of Figure 4 (page 8) are expressed in terms of the new structure where applicable. Figure 26 provides a crosswalk between the old and the new activity structures for the years 1983-84 to 1985-86. This should assist the reader in understanding the changes brought by the new structure and allow for a more meaningful comparison with the former structure. The conversion and implementation of the new structure was conducted during 1984-85 in several phases, one of which consisted of an historical conversion of operational and resource data back to 1981-82. This historical conversion has permitted the Department to express 1983-84 performance information in terms of the new structure as well as providing performance targets for 1984-85 and 1985-86.

Figure 26: Comparison between the new and the old Activity Structures in Customs and Excise

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

Taxation

3775

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates and Volume II of the Public Accounts in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Where possible, the tables or figures have been revised to reflect the most current data available.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $633,550,000 in support of the Taxation Program. The remaining expenditures, estimated at $79,402,000, will be made under existing statutory authority.

Financial Requirements by Authority

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

In the current year the Department of National Revenue, Taxation has established the following performance goals:

- to provide an enhanced and expanded level of training for Taxation employees who have regular contact with taxpayers (see page 16).
- to continue to enhance services to taxpayers and to implement new Seasonal Tax Information Clinics in 24 Canadian localities (see page 16).
- to increase the advance rulings service provided to taxpayers (see page 17).
- to improve taxpayer communication facilities (see page 17).
- to increase the level of verification of tax payable by non-residents (see page 17).
- to reduce to more acceptable levels both the number of unpaid taxpayer accounts and the amount of taxes owing (see page 18).

3781

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Returns Processing	**342,262**	323,851	18,411	21
Compliance	**374,831**	348,544	26,287	27
Notices of Objection and Appeals	**25,544**	25,645	(101)	36
Administration	**52,018**	48,326	3,692	40
	794,655	746,366	48,289	
Less: Revenues credited to the Vote[1]	**81,703**	75,851	5,852	
	712,952	670,515	42,437	
Authorized person-years	**19,863**	19,338	525	

[1] Amounts recoverable from the Canada Pension Plan account and from Canada Employment and Immigration Commission for administering certain parts of the Canada Pension Plan and the Unemployment Insurance Act, 1971.

The increase of 525 person-years consists of the following: 320 person-years for the collection of billed taxes, 60 person-years for the training of taxation employees, 30 person-years for non-resident tax verification, 27 person-years for rulings, 25 person-years for audit and 63 person-years for service to taxpayers in other programs based on increases in workload.

The increase in the 1985-86 requirements of $48.3 million over the 1984-85 forecast is comprised of the following major items:

- increases in salaries, employee benefits and other personnel costs amount to $44.6 million;

- increases in postage, travel, professional and special services, data processing, printing expenditures and other operating costs of $7.9 million and a reduction in capital expenditures of $4.2 million for a resulting net increase of $3.7 million.

Figure 2: Expenditures by Activity (Percentage Distribution) 1985-86

B. Recent Performance

1. Highlights

Highlights of Program performance during 1983-84 were:

- The improvement of Taxroll Services was started in 1983-84. Automation of the Taxroll operation will reduce paperburden, and cut down on the requirement for storage space and person-years. This not only benefits the department, but also taxpayers and their representatives (see page 18).

- The computer system upgrade planned for 1983-84 was done as planned. However, the department's data processing capacity had to be further increased to meet the computing needs for the 1984-85 processing program (1984 tax returns). Therefore, the installation of a second processor, which had been planned for 1984-85 was advanced to 1983-84.

- The Cash processing system was improved through use of data entry terminals and direct access data (see page 19).

Some of the highlights of the Program's performance during 1984-85 were:

- Telephone service improvements are progressing as planned (see page 19).

- The Montréal district office was divided into three offices in 1983-84 to better serve taxpayers in the metropolitan Montréal area. There are now 29 district offices and five sub-offices (see page 19).

2. Review of Financial Performance

Figure 3: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Returns Processing	283,295	281,899	1,396
Compliance	317,600	335,654	(18,054)
Notices of Objection and Appeals	21,915	18,801	3,114
Administration	42,668*	42,127*	541
	665,478	678,481	(13,003)
Less: Revenues credited to the Vote	61,705	61,705	-
	603,773*	616,776*	(13,003)
Authorized Person-Years	18,184	18,294	(110)

* Excludes $103,000 for Statutory Federal Court Awards

Explanation of Change: Actual financial requirements were approximately $13 million less than the Main Estimates or 2.2% less than estimated. This included $9.0 million for salaries and $4.0 million for other operating costs.

C. Background

1. Introduction

The Department of National Revenue, Taxation operates one program which is under the direction of a Deputy Minister who reports to the Minister of National Revenue.

The Department administers income tax legislation for the federal government, collects personal income tax on behalf of all provinces except Quebec and corporate income tax on behalf of all provinces except Alberta, Ontario and Quebec and collects employee and employer contributions under the Canada Pension Plan and employee and employer premiums for Unemployment Insurance.

The Department of Finance has responsibility for tax policy and amendments to the Income Tax Act. National Revenue, Taxation provides advice on the administrative feasibility of proposed tax measures and provides a statistical service for the development of tax policy.

2. Legal Mandate

The Department exists by virtue of the Department of National Revenue Act which charges it with the "control, regulation, management and supervision of internal taxes including income taxes and succession duties".

The Minister of National Revenue is the responsible Minister for Part I of the Canada Pension Plan and for Part IV of the Unemployment Insurance Act, 1971.

The Department also administers the Petroleum and Gas Revenue Tax Act as well as International Tax Agreements signed with a large number of countries aimed at promoting the exchange of information between treaty partners, to avoid the double taxation of foreign-earned income by their respective citizens.

The Department collects income taxes for the provinces under agreements entered into by the Minister of Finance with the provincial governments concerned according to provisions of Part III of the Federal-Provincial Fiscal Arrangements Act.

3. Program Objective

The objective of the program is "To administer and enforce the Income Tax Act, various federal and provincial statutes related thereto, including parts of the Canada Pension Plan and the Unemployment Insurance Act, 1971 and various provincial tax credit plans".

4. Program Organization for Delivery

Activity Structure: The four activities of the program are Returns Processing, Compliance, Notices of Objection and Appeals and Administration. For the purposes of internal planning and resourcing, two of the activities are broken out into a number of sub-activities as shown in Figure 4.

Figure 4: Activity Structure

* The term Returns Processing is used to characterize an entire activity as well as one of the sub-activities. The resources included in the sub-activity are used for all the operations which lead to the issuance of an assessment notice as well as all resources associated with electronic data processing in the Department.

Organization Structure: The Department is organized into six broad sectors or branches each reporting to the Deputy Minister.

The Assistant Deputy Minister, Policy and Systems Branch is in charge of directorates which give functional direction to field offices in matters concerning tax assessment, collections and compliance. The Branch also provides central computer services in the form of various data bases and programs which are used by field personnel when recording and assessing returns, maintaining records of collections, monitoring source deductions and answering questions from taxpayers.

The Assistant Deputy Minister, Legislation Branch, supervises directorates which provide tax rulings and interpretation bulletins, register charitable organizations and pension plans and serve as the point of liaison with the provinces and countries with which tax treaties exist.

The Assistant Deputy Minister, Management Services Branch, supervises the personnel, finance, administration and training services of the Department.

Four regional Assistant Deputy Ministers are responsible within designated regions for the application of departmental programs and policies across Canada. This is done by coordinating the activities of the taxation centres, district offices and sub-offices in their respective regions. Seven taxation centres, twenty-nine district offices, and five sub-offices report to the regional Assistant Deputy Ministers.

The Director General, Appeals Branch, establishes policies and guidelines for dealing with notices of objection and appeals submitted by taxpayers who do not agree with their tax assessment. Taxation centres and district offices have an appeals division for the processing of notices of objection. These are under the direction of the Director General of Appeals.

The Executive Direction and Corporate Services Sector coordinates the activities of a number of directorates, including Management Audit which conducts internal audits and evaluations of the effectiveness of departmental programs; Management Controls Directorate which is responsible for management information and statistical services; and Information Services.

The distribution by organization and activity is shown in Figure 5.

Figure 5: 1985-86 Resources by Organization and Activity ($000)

Deputy Minister Taxation

	ADM Policy and Systems	ADM Legislation	ADMs Regions*	ADM Management Services	DG Appeals	Executive Direction and Corporate Services	Activity Totals $	Activity Totals P-Y
Returns Processing	41,315	9,390	241,192	47,568	...	2,797	342,262	8,789

* Includes resources in the four regional ADMs' offices, the seven taxation centres, 29 district offices, and five sub-offices with the exception of the Appeals resources.

D. Planning Perspective

1. Environment

The Department bases its planning on assumptions about the number of tax returns, success in the further application of computer technology and levels of compliance. Changes in tax legislation can and do have a great effect on the Department's operations, but they are rarely known sufficiently far in advance to be effectively brought into the planning framework.

Workload: The best single indicator of the volume of work is the number of tax returns. Increases in the number of returns filed reflect such factors as the growth in population, labour force participation rates, changes in per-capita income, and the introduction of new tax initiatives by the federal and provincial governments.

In addition to personal and corporate tax returns, there are many other types of documents which the Department receives and processes. These include returns of trusts, employer remittances, instalment payments by the self-employed and corporations, annual T4 statements of salaries and wages, information slips concerning other types of income and the applications and other documents associated with registered charities. The growth in the number of returns by year is illustrated in Figures 6 and 7.

Figure 6: Millions of Personal Tax Returns Filed by Calendar Year

The substantial increase in 1979 resulted from the introduction of the child tax credit.

Figure 7: Thousands of Corporation Tax Returns Filed by Tax Year

Technology: The Department has a history of success in using computers to process high volume work, to provide quick response to taxpayer enquiries, and to support almost all other facets of its work. Communications technology has been combined with computer technology to link the taxation centres and district offices to data bases at the Ottawa computing centre, which facilitates assessing, collections, source deductions and other operations throughout the country. The expanding use of computers and communications technology has, however, only partially bridged the gap between workload increases and the growth in staff. Since however these technologies continue to improve and to become less expensive, the planning perspective assumes increasing reliance upon them.

Compliance: In support of the self-assessment system, the Department verifies that taxpayers are complying fully with the law. In cases where either income or deductions are claimed that are not in accordance with the law, corrective actions are taken. Compliance activities include the audit of corporations and the self-employed; the audit of employer payrolls to ensure that deductions at source for Income Tax, C.P.P. and U.I. are made and remitted; the detection of those who do not file tax returns but who should; the investigation and prosecution of those who attempt to avoid taxes by fraudent or criminal means; collec-

tion actions taken against those who do not choose to arrange to pay their taxes as finally agreed; the matching of information slips (e.g. T4's) against income received; and post-assessing examination of selected claims for deductions or exemptions of a type that experience has shown are subject to abuse.

Planning for compliance activities concentrates on the distribution of resources to strike a balance between two desirable effects: the encouragement of compliance and the production of additional revenues. The production of additional revenues is a surrogate measure of effectiveness; if the result of compliance activities is the receipt of additional revenues due the Crown, then it may be assumed the department is applying its resources in areas that are appropriate.

2. Initiatives

Expanded Training: In recent years, budget limitations have resulted in concentration on training to meet the immediate needs of new employees, leaving longer term employees to operate primarily on the basis of initial training and on-the-job experience.

More and better training has been identified as essential to improving the quality of tax administration. Immediate action to improve accurate, knowledgeable application of the law was seen as a critical precondition to regaining public confidence in the fair administration of the self-assessment system. The department has accordingly developed a plan to increase the quantity and improve the quality of training offered to its employees.

The training initiatives will concentrate on:

- improving the specialized knowledge of auditors and assessors;
- improving the overall knowledge of employees, especially those with taxpayer contact (e.g. enquiries officers);
- improving employee communication skills.

Enhancement of Taxpayer Services: Seasonal Taxpayer Assistance Centres established as a pilot project during 1984 served over 40,000 taxpayers who might otherwise not have had the opportunity to visit a district office. These services have been so well received that the Department will repeat the program in 1985-86. In addition Seasonal Tax Information Clinics will be set-up in 24 communities for a few weeks during the peak of the filing season to make the Department's services more accessible to a greater number of taxpayers (see page 51).

Advance Rulings: For many years the Department has been providing an advance rulings service to taxpayers wanting to know the likely tax consequences of potential business transactions.

To improve the rulings service in order to encompass a growing volume of more complex requests and to deal with them in a time frame acceptable to the requestors will require, at a minimum, 20 person-years to process relevant corporate rulings, five person-years for non-corporate rulings, as well as two person-years to resume the publication and updating of rulings.

Communications: The Department annually receives over 7 million telephone calls from taxpayers at 570 public enquiry positions located in 29 district offices. It has, to date, competitively acquired and installed a total of 372 automatic call distributor and call sequencer stations replacing rented key sets. As a result, in the 1985-86 Public Enquiries Program, over 75% of the calls received will be served through automated telephone systems explicitly designed to meet the program's service and quality objectives.

The department also prepares 4.3 million letters to taxpayers at 540 keying stations located in the word processing units of seven tax centres and 29 district offices. The department has started a gradual phase-out of electro-mechanical typewriters and replacement by standard micro-electronic equipment in order to accommodate increasing correspondence workload without a corresponding increase in word processing person-years. To date 200 keying stations have been converted, with at least one word processor in each field office. This will result in more timely and high quality written communications with taxpayers.

Increasing the level of verification of tax payable by non-residents: A tax is payable when monies are paid to non-residents. The tax is fairly straight forward when compared to other types of withholding taxes, and the open nature of the Canadian economy makes it desirable to maintain a reasonable verification program.

The non-resident verification program has declined in recent years because of pressure on resources and is at present allocated about 19 person-years; in 1983-84, verification yielded $16 million in additional taxes utilizing 13 person-years.

An increase of 30 person-years for fiscal 1985-86 is based on the results of an audit of selected financial institutions, which indicated that 30 more person-years would be required to secure an acceptable level of compliance.

Reducing Unpaid Taxes: The value of accounts receivable has grown dramatically over the past five years, increasing from $1.25 billion to $3.15 billion as of April 1984. A number of factors, including general economic conditions, changing public attitudes, limited departmental resources and an interest rate on overdue taxes appreciably lower than the cost of money from other sources, have contributed to the growing problem.

The number of outstanding accounts has risen from approximately 927,000 in 1981 to close to 1,100,000 in 1984. Furthermore, the Department has introduced a new policy of directly contacting taxpayers prior to initiating any garnishment or legal proceeding. These factors increase resource requirements in 1985-86 and subsequent years.

The Department has received 320 additional person-years to reduce the $3.15 billion accounts receivable outstanding at April 1, 1984 ($3.5 billion at October 31, 1984). It is expected that, with these additional person-years, approximately $400 million additional will be collected based on 1983-84 experience.

3. Update on Previously Reported Initiatives

Improvement of Taxroll Services: The gradual conversion of taxpayer information to a computerized form for rapid storage and retrieval is now being implemented across Canada. The system now makes available on computer terminals essential income, deductions and exemptions data from personal tax returns. This has substantially reduced the requirement to draw and refile taxpayer returns, thereby making it possible to respond to taxpayer enquiries more quickly. The Department has also begun to implement a system of numeric filing of returns in selected taxation centres and district offices that will eventually eliminate the need for manual sorting when filing returns.

When the Taxroll system is fully automated in 1987-88, it is anticipated that these measures will have increased productivity by reducing person-year needs by 300, and will have produced significant savings in travel and accommodation costs while at the same time producing dramatic reductions in the turnaround time between receipt of a taxpayer enquiry and its resolution.

Appeals: Appeals divisions have been established at the Shawinigan-Sud, Sudbury, Surrey and Winnipeg Taxation Centres to process simpler objections. This initiative has enabled the Department to resolve that type of objection more quickly, thereby greatly improving the service to those taxpayers.

Upgrade of Taxation Cashiering System: In 1983-84 the Department undertook to review and improve its cash processing system in order to reduce the time required for depositing cheques. Although initial plans called for the purchase of special cashiering equipment, a feasibility study resulted in a decision to use data entry terminals and direct access data to improve the system. A pilot project in the Ottawa and Sudbury Taxation Centres is underway, with implementation in all Taxation Centres planned by the end of 1986-87.

Improved Telephone and Telecommunications Services: The telephone enquiry service, which now receives over 7 million enquiries annually, is a major departmental operation. In 1981 the toll-free long-distance service was converted from the Zenith to the "800" or direct dial service, resulting in substantial savings. Telephone queuing which allows enquiry officers to take calls in the sequence received is now being used in many district offices, as a result of tests showing that it enables offices to handle more calls. Phone installations in all offices have been reconfigured to secure an optimum balance between lines, extensions and special features, and savings are being achieved in these areas as well.

A departmental study has determined that purchasing rather than renting telephone equipment could result in further savings. Interconnect trials in several district offices have been very successful to date, and new equipment purchases offer features which enable these offices to provide improved service both internally and to the public.

Non-voice office communication systems, such as telex equipment and word processing equipment have also been modernized and upgraded in order to expand capacity and reduce costs.

New Offices: In 1983-84 the Montréal District Office was divided into three separate offices in order to provide better service to taxpayers in the metropolitan region. Saint-Hubert and Laval were chosen as sites for the two additional district offices which made the Department more accessible to taxpayers by reducing travel distance and eliminating problems of access to downtown Montréal. In addition to increased taxpayer service, these new offices have enabled the Department to achieve greater uniformity in the structure of district offices in terms of size, manageability and efficiency.

Enhanced Level of Service for Taxpayers: In 1983-84 and 1984-85 the Department undertook a number of organizational and service initiatives aimed at providing an enhanced level of service to taxpayers. The initiatives included an automated taxroll service, implementation of a more efficient telephone system, the opening of new offices in growing population centres, as well as seasonal tax assistance centres to meet taxpayer information needs more promptly during peak periods.

3793

4. Program Effectiveness

The ultimate measure of program effectiveness would be the extent of compliance with legislation administered by Taxation. Full compliance would be realized where all taxpayers reported income from all sources, claimed precisely those exemptions and deductions to which they were legally entitled, no more and no less, and paid their tax liabilities in full.

The difference between full compliance and what the Department is able to assess and collect is commonly known as the tax-gap. In spite of periodic attempts to translate the concept into useable terms, measurement has proven elusive. The measurement of program outputs (see Analysis by Activity Section) has accordingly been used as a proxy for program effectiveness measurement.

In addition, the department's program evaluation function does involve a deeper periodic examination of the effectiveness of individual components of the Taxation program. Two evaluations completed in the last year are: Revenue Program and Basic Files Program. The findings and conclusions of these evaluation studies are reported under their respective activities in Section II, Analysis by Activity (For Returns Processing see page 26 and for Compliance, page 31).

Program evaluation work is now in progress on the following components: Special Investigations, Taxpayer Requested Adjustments and Income Tax Appeals.

Section II
Analysis by Activity

A. Returns Processing

Objective

The objective of the Returns Processing activity is to foster self-assessment by the taxpayer.

Resource Summary

Approximately $342 million or 43 percent of the expenditures and 8,789 person-years, or 44 percent of the person-years required for tax administration in 1985-86 will be allocated to the Returns Processing activity.

Figure 8: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Public Enquiries	64,283	1,505	47,704	1,475	38,428	1,238
Taxpayer Requested Adjustments	26,247	866	22,635	799	17,410	648
Returns Processing	251,732	6,418	253,512	6,496	227,457	6,302
	342,262	8,789	323,851	8,770	283,295	8,188

For 1985-86, the cost of returns processing amounts to $342.3 million. Personnel costs account for 75.3%, printing and postage for 13.2% and other operating costs for 11.5%.

Figure 9: Returns Processing Expenditures by Sub-Activity (Percentage Distribution) 1985-86

Past Financial Performance

Figure 10: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		**Change**	
	$	P-Y	$	P-Y	**$**	**P-Y**
Public Enquiries	38,428	1,238	40,355	1,316	**(1,927)**	**(78)**
Taxpayer Requested Adjustments	17,410	648	17,515	646	**(105)**	**2**
Returns Processing	227,457	6,302	224,029	5,926	**3,428**	**376**
	283,295	8,188	281,899	7,888	**1,396**	**300**

Returns Processing activity financial requirements were $1.4 million higher than originally estimated which is the net result of the use of 300 person-years over plan for $7.8 million in salaries and employee benefit plans and a lapse of $6.4 million in other operating costs mainly for postage, data processing rentals and printing. The 1983-84 Main Estimates were developed using the 1982-83 Operating Budget. This forecast was insufficient to handle the 1983-84 Returns Processing program. Internal adjustments to other programs were made to fund this deficiency.

Description

This activity consists of the following sub-activities.

Public Enquiries: The Department receives a very large number of enquiries of varying complexity, ranging from taxpayers requesting information about the status of an expected refund to an explanation of the applicability of some deduction or exemption to an advance ruling as to the tax consequences of a proposed corporate reorganization.

Public enquiries may be made by telephone in the district offices where a no-charge, long-distance service is available to taxpayers; by appearing in-person at a district office; or by correspondence, generally directed to a taxation centre.

The Department has assigned a very high priority to answering enquiries in the belief that ready taxpayer access to information facilitates the self-assessment process. Nonetheless, the quality of this service, in terms of the promptness of its delivery, must remain a matter of judgment in the light of available resources.

Taxpayer Requested Adjustments: A taxpayer may submit additional documents concerning a return recently filed and awaiting assessment. Or, a taxpayer may request, on the basis of new documentation, that an already assessed return be re-opened as long as not more than three years have elapsed since the original assessment. The processing of these adjustments is accorded a very high priority in terms of resource allocation.

Returns Processing: This encompasses the receipt of returns in taxation centres; the information encoding and correction of returns for apparent errors; the transmission of data to the computing centre; the assessing of the return; the issuance of an assessment notice, usually with either a refund or a demand for payment; the recording and banking of all payments received from taxpayers; and the filing of returns in Taxroll.

Performance Information/Resource Justification

Public Enquiries: Figure 11 below includes for 1985-86 additional person-years dedicated to the enhancement of services to taxpayers. More telephone calls will be answered and the number of lost calls will be reduced, meaning that the first time response rate will be improved. Also, in 1984-85, a pilot project involving Seasonal Taxpayer Assistance Centres in selected Canadian cities increased the capacity to answer in-person enquiries. That project will be continued in 1985-86 together with a new pilot project involving Seasonal Tax Information Clinics in

24 locations. The Department intends to increase overall quality and staff productivity in the handling of enquiries. Centralized district office enquiry units, with advanced communications hardware, are being established to direct calls to the appropriate sources of expertise. Person-years shown in Figure 11 are those strictly devoted to the handling of public enquiries. Other person-years supporting the sub-activity, such as those involved in initiating information releases to the public, or providing rulings and interpretations, are not included in Figure 11.

Figure 11: Public Enquiries by Type and Associated Person-Years

	Telephone (000)	Counter (000)	Correspondence (000)	Total (000)	Person-Years Associated with Workload	Enquiries Handled per Person-Year
1981-82 Actual	6,276	1,121	151	7,548	731	10,326
1982-83 Actual	6,465	1,128	138	7,731	759	10,186
1983-84 Actual	7,140	1,139	139	8,418	759	11,091
1984-85 Forecast	5,879	1,125	144	7,148	837	8,540
1985-86 Estimates	6,006	1,153	148	7,307	855	8,546

Taxpayer Requested Adjustments: Person-years shown in Figure 12 are those devoted solely to the handling of taxpayer requested adjustments, which have been increasing in complexity over the years. Also associated with the sub-activity are person-years involved in adjusting information returns; these are not included in Figure 12.

In 1983-84 the late passage of legislation delayed issuance of assessments. This allowed the Department to process a significant number of T1 taxpayer requested adjustments as part of the original assessment. As a result, taxpayer requested adjustments for T1 returns for 1983-84 show a decline, which was unique to the situation and not evidence of any downward trend.

Additional person-years to avoid backlogs and provide more prompt responses to taxpayer requested adjustments have been provided for in 1984-85.

Figure 12: Taxpayer Requested Adjustments by Type and Associated Person-Years

	T1 Individual Returns Adjustments (000)	T2 Corporation Returns Adjustments (000)	T3 Trust Returns Adjustments (000)	Total Adjustments (000)	Person-Years Associated With Workload	Adjustments Per Person-Year
1981-82 Actual	825	88	6	919	656	1,401
1982-83 Actual	923	122	7	1,052	602	1,748
1983-84 Actual	842	148	11	1,001	605	1,655
1984-85 Forecast	953	182	10	1,145	687	1,667
1985-86 Estimates	973	197	11	1,181	707	1,670

Returns Processing: Results are measured by the number of tax returns processed per person-year. The production rate varies over time because of the change in complexity of the average return.

Figure 13 shows the number of notices of assessment issued for returns processed in each fiscal year. From January to March 1983 (fiscal year 1982-83) issuing of notices was delayed in anticipation of the passage of legislation incorporating tax changes from two previous budgets. In these months the usual processing of workload continued, utilizing the normal person-year allocation, except for sending out the notices of assessment as they could not legally be issued until the new provisions of the Income Tax Act took effect on March 30, 1983.

Figure 13: Returns Processed by Type and Aggregate Person-Years Associated with the Sub-Activity

	T1 Individual Returns Processed (000)	T2 Corporation Returns Processed (000)	T3 Trust Returns Processed (000)	Special Returns and Approvals Processed (000)	Total Returns Processed (000)	Aggregate Person-Years for the Sub-activity	Returns Processed Per Person-Year
1981-82 Actual	14,765	589	238	96	15,688	6,073	2,583
1982-83 Actual	13,048	641	315	117	14,121	6,101	2,315
1983-84 Actual	17,834	700	319	121	18,974	6,302	3,011
1984-85 Forecast	16,012	756	344	178	17,290	6,496	2,662
1985-86 Estimates	16,354	826	432	192	17,804	6,418	2,774

Program evaluation study: A program evaluation study of Revenue Programs, a key component of the Returns Processing sub-activity, was completed in 1983-84. This concerns the processing of revenue collected by the department, the maintenance of control accounts to facilitate payments to other jurisdictions, setting interest policy within the guidelines of the Income Tax Act and providing timely, accurate and useful information to taxpayers concerning their accounts.

The evaluation study focused on the procedures for handling and allocating payments to taxpayer accounts. The study found that the majority of individual taxpayers do not submit their payments with the required remittance form and the proper allocation noted on the form. Moreover, while the majority of corporations use the required remittance form, the information pertaining to the allocation of payment is often incorrect. The study concluded that the majority of misapplied payments, with the resultant enquiries and delays, were caused by a lack of, or incomplete, information provided by taxpayers and, to a much smaller degree, by internal procedures.

In response to the findings and conclusions of this study, the department will issue a pamphlet with the receipts forwarded to taxpayers emphasizing the importance of including a remittance form with each payment and explaining how to complete it. Also, internal procedures are to be reviewed.

B. Compliance

Objective

The objective of the Compliance activity is to enhance taxpayer compliance with the law.

Resource Summary

Approximately $375 million or 47 percent of the expenditures and 9,620 person-years, or 49 percent of the person-years required for tax administration in 1985-86 will be allocated to the Compliance activity.

Figure 14: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Source Deductions	32,861	1,056	29,779	953	27,482	911
Tax Evasion Investigations	24,659	523	23,940	524	22,867	533
Collection of Billed Taxes	54,946	1,694	43,287	1,374	35,509	1,162
Examination	24,246	694	19,234	587	16,801	569
	374,831	9,620	348,544	9,134	317,600	8,664

For 1985-86, the cost of Compliance amounts to $374.8 million. Personnel costs account for 89.5% of this amount and other operating costs for 10.5%.

An increase of 486 person-years over the 1984-85 Forecast consists of 320 for Collection of Billed Taxes and a net 166 person-years in other compliance sub-activities including verification of tax payable by non-residents.

Compliance activity financial requirements were $18 million lower than originally estimated because Compliance resources were reduced internally in order to meet the requirements of service programs such as returns processing (300 person-years) and appeals (101 person-years).

Description

This Compliance activity consists of the following six sub-activities.

Audit: The Audit sub-activity is concerned with the detection of non-compliance among taxpayers whose income is from sources other than salaries and wages. This includes corporations and self-employed individuals, such as unincorporated businesses, professionals, farmers, and fishermen. Auditors are supported in this work by other officers with special knowledge of particular industries (oil, steel, etc.) and by specialists such as real estate appraisers and equity evaluators. The fundamental purpose of audit and all the other compliance sub-activities is to encourage future voluntary compliance. The additional tax revenues that result from audit operations are very much in excess of the cost of the audit effort.

Delinquent Action: Every individual is required to file a return for every year for which there is tax payable, and every corporation is required to file a return every year whether or not there is tax payable. Accordingly, the objective of the staff engaged in this effort is to identify those who fail to comply and to secure the appropriate returns and tax from them. Where a person has filed in the past, computer records are available to identify delinquents. In addition a variety of projects are carried out to identify those who have not filed in the past. Failure to file a return carries a range of penalties, which help to bring on to the taxrolls many who would otherwise pay no tax.

Source Deductions: The largest source of revenue is the money deducted at source from employees by their employers and remitted each month to cover Income Tax, Unemployment Insurance premiums and Canada Pension Plan contributions. Audits of employer payrolls are conducted in cases of suspected delinquency and, where necessary, followed by penalties and, in extreme cases, by prosecution. Service audits are also conducted to reconcile differences between remittances actually made and the year-end reports of employers of total deductions shown on T4s. Audits are also conducted of payments to non-residents where source deductions were required.

Tax Evasion Investigations: The main purpose of this endeavour is to discourage evasion by investigating and prosecuting flagrant cases of tax cheating. All but the smallest of the district offices have a Special Investigations Section responsible for the investigation of attempts to escape tax by fraudulent means, e.g., the making of false statements in a return, the making of false entries in books and records, and the destruction or hiding of records. A number of these cases are brought to prosecution each year. In other cases, the Department

only imposes a gross negligence penalty. In some cases the investigation fails to provide sufficient evidence of fraud for either penalty or prosecution. Upon summary conviction, the Court may impose a fine of not less than 25 percent and not more than 200 percent of the tax that was sought to be evaded and in addition a term of imprisonment of not more than two years. Proceeding by indictment is sometimes used, and in these cases the accused is, in addition to any penalty otherwise provided, liable upon conviction to imprisonment for as much as five years and not less than two months.

Collection of Billed Taxes: Most taxpayers pay their taxes promptly, but a small but significant percentage do not. Collection action becomes necessary in cases of unpaid balances on filing and unremitted source deductions and because some taxpayers, particularly those whose income is not subject to adequate source deductions, may persistently fail to pay what they owe. Initial action on these accounts takes the form of computer generated reminders. When this action does not produce the desired result, the accounts are referred to the district offices for direct action. Attempts are made to arrange the payment of back taxes consistent with the taxpayer's financial circumstances and with the necessity to keep payments on current-year taxes up to date. Should the taxpayer persist in the delinquency and has not made satisfactory arrangements with the Department to discharge his indebtedness, the Department is enpowered as a last resort to garnishee income, bank deposits or payments due from third parties. In extreme circumstances, seldom exercised, the department may seize and sell a taxpayer's assets.

Examination: This sub-activity comprises three operations: office examination, matching and post-assessing.

Office examination: This consists of a post assessment review and possible reassessment of tax returns within district offices where the necessary contacts with the taxpayer can be made by telephone, letter or office interview. The taxpayers are typically those in receipt of income from selling, investments and rentals.

Matching: This consists of the verification of income reported by taxpayers against information slips received from payors, for example, T4 slips from employers and T5 slips from banking institutions.

Post-assessing: This consists of the scrutiny of certain claims for deductions or exemptions, accepted without question at initial assessing in order to expedite the flow of returns. Examination of these claims requires either comparison with prior year returns or obtaining from the taxpayer additional supporting documents as well as the application of a wider knowledge of the legislation than would be practical at the initial assessing stage. Post-assessing also includes the validation of a portion of claims for provincial tax credits.

Performance Information/Resource Justification

Audit:

Figure 17: Files Audited, Additional Taxes Assessed and Associated Person-Years

	Individuals			Corporations			
	Files Audited	Additional Tax Assessed ($000)	Associated Person-Years	Files Audited	Additional Tax Assessed ($000)	Associated Person-Years	Additional Total Tax Assessed ($000)
1981-82 Actual	29,036	153,925	1,067	17,428	530,156	1,255	684,081
1982-83 Actual	26,966	182,965	1,052	17,916	645,983	1,294	828,948
1983-84 Actual	23,612	166,029	857	18,460	760,896	1,423	926,925

Program evaluation study: In addition to the above statistics, a program evaluation study of the Basic File Program was completed. As a principal component of the Audit sub-activity, this program concerns the development of procedures and policies and the provision of resources for the audit of tax returns and books and records of corporations whose gross income is $12 million or greater. The study focused on the performance of this program over the three-year period ending March 31, 1982. The study recognized that the immediate tax impact of this program compares favourably to the Department's overall compliance activities. In addition, there is also a future tax impact arising from these audits. However, the study also concluded that some improvement could be made in gathering the audit results in order to increase the level of precision of the cost/benefit data. On April 1, 1984, the Department implemented its new Audit Results Information System (ARIS).

Currently, the Department has underway a six-month project to analyse the results of the Audit sub-activity using this new Audit Results Information System.

Essentially the new system allows the Department to quantify the various elements of the audit adjustments such as timing adjustments that merely shift income from one taxation year to another, offsetting adjustments that are requested by a taxpayer and reduce the tax reassessment resulting from an audit, and those adjustments that do not produce any tax recovery in the current year because of the various provisions of the Income Tax Act permitting deferrals, reserves, etc... The system also segregates tax adjustments such as Part XIII Non-resident tax from income adjustments.

Delinquent Action:

Figure 18: Returns Obtained through Delinquent Action with Associated Person-Years and Productivity

	Returns Obtained from Late-Filers	Returns Obtained from Non-Filers	Total Returns Obtained	Associated Person-Years[1]	Returns Obtained per Person-Year

1983-84 Actual	27,930	5,044	3,844	36,818	6

Resources have been assigned sufficient to undertake about 150 to 200 prosecutions a year. Great care is taken in selecting cases for prosecution to limit the possibility of unjust prosecutions while ensuring that flagrant attempts to circumvent the law are being vigourously pursued.

Collection of Billed Taxes:

Figure 22: Number of Accounts Receivable and Outstanding Balances at Fiscal Year End (March 31st) [1]

	Number of Accounts (000)	Outstanding Balance ($ millions)
1981-82 Actual	1,007	2,340
1982-83 Actual	1,011	2,675
1983-84 Actual	1,086	3,150

[1] Excludes Uncollectible Accounts

Until recently the collections sub-activity has been assigned resources in accordance with a departmental policy to, at least, stabilize the amount owing by keeping both the number and dollar amount of outstanding accounts from increasing. However, over the past few years a number of factors, not the least of which has been the state of economy, have combined to make tax collections more difficult than usual. As a result, the Treasury Board has approved additional resources to enable the Department to make a special effort over the next three years to reduce the growing inventory of unpaid taxes.

Figure 23: Annual Intake and Closing of Accounts and Associated Person-Years

	Annual Intake		Annual Closings			
	Number	Amount ($000)	Number	Amount ($000)	Associated Person-Years	Closings per Person-Year

C. Notices of Objection and Appeals

Objective

The objective of the Notices of Objection and Appeals activity is to provide the taxpayer with a means of redress.

Resource Summary

Approximately $26 million or 3 percent of the expenditures and 646 person-years, or 3 percent of the person-years required for tax administration in 1985-86 will be allocated to the Notices of Objection and Appeals activity.

Figure 27: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Income tax objections and appeals	**22,382**	**584**	22,438	586	19,323	537
Canada Pension Plan and Unemployment Insurance Appeals	**1,457**	**40**	1,513	39	1,412	39

	21,915	594	18,801	493	**3,114**	**101**

Notices of Objection and Appeals activity financial requirements were $3.1 million higher than expected because of an increase in the objections and appeals from the number originally estimated.

Description

A taxpayer who objects to an assessment has 90 days from the date of mailing of the notice of assessment to file a Notice of Objection. The notice of objection is considered by an appeals division in a taxation centre or a district office where the assessment is re-examined in the light of the taxpayer's arguments. If the taxpayer remains unsatisfied with the outcome at this stage, or if 180 days have elapsed since filing the notice of objection, the taxpayer may file an appeal with the Tax Court of Canada, (formerly the Tax Review Board), a tribunal independent of the Department. Further stages of appeal are possible to the Federal Court and, with leave, to the Supreme Court of Canada.

Performance Information/Resource Justification

The Department assigns the highest priority to review of taxpayer objections, because of the importance attached to fairness and equity in satisfying taxpayers' legitimate concerns. As a matter of policy, the Department endeavours not to allow more than one-third the number of objections filed in any year to carry-over to the next. This policy has been successfully maintained in spite of significant increases in the number of objections filed, beginning in 1981-82.

Figure 30: Intake, Disposals, Closing Inventory and Person-Years Associated with Income Tax Objections and Appeals Activity [1]

	Intake	Dis-posals[2]	Closing Inventory	Associated Person-Years: D.O.'s and T.C.'s	Associated Person-Years: Head Office	Associated Person-Years: Total	Disposals per D.O. and T.C. Person-year

1983-84 Actual	1,347	240	49	3

D. Administration

Objective

The Administration activity encompasses the direction and support necessary to administer the law uniformly and economically.

Resource Summary

Approximately $52 million or 7 percent of the expenditures and 808 person-years, or 4 percent of the person-years required for tax administration in 1985-86 will be allocated to the Administration activity.

Figure 32: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Executive Direction and Support	10,709	105	9,526	94	8,835	71

Description

This activity provides the central direction of the Department as well as a wide range of central support and control services that are not allocated to the other activities. These central services include financial management, management audit, including program evaluation, staff relations and official languages administration. This activity also includes services provided to other departments such as the maintenance of computer-based tax models used by the Department of Finance and the support given the Department of Customs and Excise in relation to Gasoline Tax Rebates.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Taxation Program expenditures by object are presented in Figure 36.

Figure 36: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and Wages	567,162	532,825	474,069
Contributions to Employee Benefit Plans	79,402	69,267	69,998
Other Personnel Costs	860	770	132
	647,424	602,862	544,199
Goods and Services			
Travel	20,344	17,142	14,081
Postage	22,319	25,026	19,558
Telephone and Telegraph	15,771	14,144	13,011
Other Transportation and Communications	3,942	4,766	2,924
Information	1,247	1,294	1,904
Printing	26,371	23,318	19,901
Professional and Special Services	17,553	16,014	15,106
Data Processing	10,850	10,803	9,018
Other Rentals	1,724	2,017	1,245
Purchased Repair and Upkeep	5,626	3,546	3,015
Other Utilities, Materials and Supplies	7,267	7,051	4,996
All Other Expenditures	10	12	29
	133,024	125,133	104,788
Total operating	780,448	727,995	648,987*
Capital			
Construction and Acquisition of Land, Buildings and Works	1,000	1,000	220
Construction and Acquisition of Machinery and Equipment	13,143	17,313	16,226
Transfer payments	64	58	45
Less: Revenues Credited to the Vote	81,703	75,851	61,705
Total expenditures	712,952	670,515	603,773

* Excludes $103,000 for statutory Federal Court awards.

3817

Personnel costs will increase by about $44 million and the purchase of goods and services by $8 million. A $4 million decrease on the acquisition of machinery and equipment and a $6 million increase in revenues credited to the vote will require net additional expenditures of approximately $42 million or roughly six percent more than last year.

2. Personnel Expenditures

Taxation Program's personnel costs of $647.6 million, an increase of about $44 million over the previous year, account for 81.5% of total departmental expenditures. Information on person-years is provided in Figures 37 and 38.

Figure 37: Person-Year Requirements by Activity

Note: The person-year column displays the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Taxation capital expenditures total $14.1 million. An amount of $3.7 million will cover general replacement costs, capital for new person-years and dedicated funds. Mini and micro-computers, micrographics equipment and word processors cost $6.0 million, other computer hardware and software total $.7 million, and office communications equipment for the improved telephone and telecommunications project amount to $2.7 million. A further $1.0 million is required for the acquisition of property for the purpose of securing billed taxes.

4. Transfer Payments

Figure 39: Contributions

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Inter-American Centre of Tax Administrators	**53,000**	48,000	36,000
Commonwealth Association of Tax Administrators	**11,200**	10,000	9,000
	64,200	58,000	45,000

5. Program Cost Analysis

Figure 40 shows the total cost of each of the activities of the Program. Other costs of $94.1 million include services provided without charge such as the cost of accommodation provided by the Department of Public Works for $78.2 million, the cost of employee insurance premiums and health insurance plans for $13.3 million, and other miscellaneous services provided free by other government departments for $2.5 million as detailed in Figure 41. Revenue of $90.9 million, described in Figure 43, includes revenues credited to the vote for $81.7 million, and receipts credited to revenue for $9.2 million.

1985–86 Estimates

Part III

Expenditure Plan

3827

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Royal Canadian Mounted Police

3831

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is comprised of three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $686,970,000 in support of the 1985-86 Law Enforcement Program of the Royal Canadian Mounted Police. The remaining expenditures, estimated at $141,320,000 for contributions to benefit plans of Members of the Force and other employees will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	Royal Canadian Mounted Police Law Enforcement Program		
30	Operating Expenditures	596,929	648,421
35	Capital Expenditures	90,041	82,987
(S)	Pensions and Other Employee Benefits - Members of the Force	127,575	128,778

* For the purpose of the Part III, the expenditures in this activity have been allocated to the other four activities. (See Figure 1, page 8).

3835

Section I
Program Overview

A. Highlights

The R.C.M.P. plans to continue during 1985-86 its emphasis on:

- improving systems and procedures for protecting diplomats and others from acts of terrorism (see pages 16, 18);
- accommodating a projected increase in illicit drug activity commensurate with acquired resources with emphasis on targetting major illicit drug financiers and traffickers at national and international levels (see pages 16, 18, 29, 31);
- focusing on detection and prosecution of organized groups who aid and abet illegal immigration (see pages 17, 18);
- concentrating Commercial Crime resources on significant economic crimes which are national and international in scope (see pages 17, 18);
- emphasizing detection and enforcement of violations of laws controlling exports of certain strategic goods and unauthorized transfers of technology (see page 18)
- sharpening the focus of criminal intelligence collection, improving analysis and coordination of enforcement effort directed at major organized crime groups (see page 17);
- developing and implementing additional program initiatives in the area of general crime prevention and service to victims of crime (see pages 18, 19);
- Developing the capability to accommodate enforcement obligations established under the Canadian Security Intelligence Service Act and refining relationships with C.S.I.S. and other police forces to enforce laws and exchange intelligence on matters of national security.
- seeking additional means and methods to counter enterprise crime offences (see page 16);
- continuing development of information systems and data analysis to maximize productivity and use of resources (see pages 17, 19);
- maintaining current levels of Canadian Police Services to the national law enforcement community (see page 33);

- continuing to respond to requirements imposed by Canada's new Access to Information and Privacy legislation (see pages 35, 39);

- investigating a projected Criminal Code caseload of approximately 630,000 cases (see page 40);

- place emphasis on policing methods which involve crime prevention initiatives and increased attention to the victims of crime, particularily in family violence and spousal assault situations (see page 40)

B. Financial Summary by Activity

Funding requirements for the Law Enforcement Program for both the Estimates year and the current fiscal year are presented by activity in Figure 1.

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86			Forecast 1984-85		
Activity	Total Expenditures	Receipts Credited to Vote	**Total Net Expenditures**	Total Net Expenditures	Change	For Details See Page
Enforcement of Federal Statutes and Exec. Orders	302,463	32,283	**270,180**	347,761	(77,581)	24
Canadian Police Services	113,409	1,121	**112,288**	88,858	23,430	33
Police Services Under Contract	623,359	370,116	**253,243**	245,630	7,613	40
Administration	192,579		**192,579**	167,675	24,904	48
	1,231,810	403,520	**828,290**	849,924	(21,634)	
Person-Years	19,377			20,998		

Explanation of Change: The financial requirements for 1985-86 are $21.6 million or 2.6% less than the 1984-85 forecast expenditures. The change is primarily due to program reductions associated with separation of C.S.I.S. from the RCMP Law Enforcement Program. In addition, vote-netted expenditures were reduced by a $17.5 million increase in revenue. These reductions were offset by an increase in salary, pension, capital and other operating requirements.

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of November, 1984) is $23.8 million or 2.8% less than the 1984-85 Main Estimates of $873.8 million (Extracts from Part II of the Estimates, page 4). The variance of $23.8 million is attributable to person-year savings and reductions of $17.5 million as well as $12.2 million associated with restraint, lower inflation and deferment of some capital expenditures. These savings were offset by a $5.9 million reduction in revenue which was associated with the lower utilization of person-years in some of the policing contracts.

Explanation of Estimates to Estimates Change: The financial requirements for 1985-86 are $45.5 million less than 1984-85 estimates. This 5.2% reduction is the combined impact of the two explanations noted above. A significant portion of the reduction was due to C.S.I.S. separation while the balance can be attributed to program savings through restraint and other factors.

3839

C. Background

1. Introduction

The RCMP is the primary federal law enforcement agency responsible for the enforcement of a broad range of federal statutes and the investigation of suspected national security offences (see Section III for a listing of major Acts). Other federal departments have statutory responsibility to administer legislation such as the Income Tax, Customs and Excise Acts and frequently call upon the RCMP to assist in matters requiring police investigations.

Under the authority of federal-provincial policing agreements, the RCMP provides provincial police services to the territories and all provinces except Ontario and Quebec. In addition, municipal police services are provided to some 190 municipalities in the Atlantic, Prairie and Pacific regions. As provincial and municipal police, the RCMP enforces the Criminal Code, Provincial Statutes, and certain municipal by-laws, as well as meeting federal enforcement requirements. This dual role provides the basis for cost sharing arrangements.

A 1966 Federal/Provincial Administrative Agreement on Organized Crime tasked the Force as a co-ordinating body for the collection, analysis and dissemination of criminal intelligence. This agreement created a new role for the Force and provided the framework for investigations and operations directed at combatting organized crime in Canada. Field Intelligence Sections are strategically located across Canada. Special emphasis is placed on entrenched organized crime (including income tax investigations related to organized crime).

In 1966, a further Federal/Provincial Administrative Agreement on Financial Disclosure and Securities Regulations was approved. This Agreement tasked the Force to establish investigative units to enforce the laws relative to securities offences. Investigative Sections were established in every province to deal with securities crimes, fraudulent bankruptcies, commercial crime and frauds against the Government of Canada. The RCMP was also tasked to establish and operate a repository for securities fraud information.

Since 1949, the RCMP has represented Canada in Interpol and operates Canada's National Central Bureau which links with 135 countries in a system for communicating criminal information likely to assist in preventing and suppressing crime. The National Central Bureau links the world police network with Canada's police forces and law enforcement agencies.

The RCMP offers a variety of specialized services to the Canadian police community. Through operation of Canadian Police Services Activity, the Force provides the police community with a computerized criminal information repository, forensic laboratory services, fingerprint and other identification services as well as specialized police training.

Security consulting and evaluation services relating to physical security of buildings, electronic data processing systems and electronic intrusion devices are provided to the Federal Government and facilities designated as vital points under the auspices of Emergency Planning Canada. The Force also provides personal and residential protection to Canadian and foreign dignitaries, embassies, consulates and trade missions. A Bomb Data Centre is maintained to serve the Canadian police community.

2. Legal Mandate

The origin of the Force dates back to 1873 and its present day role is based on authority and responsibility assigned under the Royal Canadian Mounted Police Act. This Act establishes the RCMP as a federal police force, provides the legislative basis for operation of the Force and authorizes the Solicitor General to enter into policing agreements with provincial and municipal governments. The 1966 Federal/Provincial Attorneys General Conferences on Organized Crime, and Financial Disclosure and Securities Regulations extended this mandate to cover investigation of organized and certain white collar crime. In addition, a substantial number of agreements with other federal departments have been developed to further articulate enforcement responsibilities.

3. Program Objective

The objective of the Law Enforcement Program is "to enforce laws, prevent crime, and maintain peace, order and security".

The Program has six sub-objectives:

- to prevent and detect offences against federal statutes;
- to prevent and detect crime and maintain law and order in the provinces, territories and municipalities under contract;
- to improve police/community relations;
- to investigate national security offences;
- to provide investigative and protective services to other federal departments and agencies; and
- to assist, upon request, all Canadian law enforcement agencies by providing specialized police training, forensic laboratory and identification and information services.

4. Program Organization for Delivery

Activity Structure: As shown in Figure 2, the Law Enforcement Program is divided into four activities, each comprised of several sub-activities. The primary task of enforcing laws, preventing crime and maintaining peace, order and security are delivered through two activities, Enforcement of Federal Statutes and Executive Orders, and Police Services Under Contract. Canadian Police Services provide specialized police training, forensic laboratory, identification and information services. Administration provides support systems and services which include recruiting and in-service training.

Figure 2: Activity Structure

Organization Structure: Authority and accountability for execution of requirements of the RCMP Act rests with the Commissioner, supported by Deputy Commissioners and divisional Commanding Officers. The Commissioner reports to the Solicitor General of Canada, who in turn is responsible to the Parliament of Canada. As shown in Figure 3, there are 13 operational divisions. These divisions are sub-divided into 48 sub-divisions and 716 detachments. The remaining three divisions are "HQ", "Depot" and "N" Divisions. "HQ" Division, Ottawa, provides administration and financial services in support of the corporate roles of the Commissioner, Deputy Commissioners and policy directorates. "Depot" Division at Regina, Saskatchewan, is the Academy for training RCMP recruits. "N" Division Ottawa services the Canadian Police College, Musical Ride and Band.

Figure 3: RCMP Divisions

Figure 4 provides details on the Program's organizational structure.

Figure 4: Organization Structure

Figure 5: 1985-86 Resources by Activity ($000)

Activity	Person-Years	1985-86 Estimates
Enforcement of Federal Statutes and Executive Orders	4,796	302,463
Canadian Police Services	1,555	113,409
Police Services Under Contract	9,914	623,359
Administration	3,112	192,579
	19,377	1,231,810

5. Organization/Activity Structure Relationship

Program resources are assigned and results achieved within the context of four Activities listed above. Accountability for the Program resides with the Commissioner who receives policy advice and functional support from three Deputy Commissioners and the Chief Financial Officer.

Enforcement of Federal Statutes and Executive Orders Activity is functionally directed by the Deputy Commissioner Criminal Operations. Canadian Police Services Activity is delegated to and receives direction from the Deputy Commissioner Canadian Police Services. Police Services Under Contract is delegated to Divisional Commanding Officers and functionally directed by the Deputy Commissioner Criminal Operations. The Administration Activity is functionally directed by the Deputy Commissioner Administration and the Chief Financial Officer.

Divisional Commanders, who report to the Commissioner on operational matters, are accountable for the resources utilized and the results achieved within their assigned regions. These Commanders have the additional responsibility of interfacing with the provincial/ territorial Solicitor or Attorney General on such matters as resource planning, general enforcement policy, and the achievement of planned results. The divisional Commanding Officers are supported in the achievement of these responsibilities by the provision of policy and functional direction and advice by the Deputy Commissioners and the Chief Financial Officer.

D. Planning Perspective

The Royal Canadian Mounted Police, as Canada's national police force, is charged with a wide array of responsibilities and faces numerous competing priorities for the use of resources. This Expenditure Plan reflects resource allocations required to meet primary responsibilities; however, the need for flexibility to meet emergencies and new priorities must be recognized.

Emergency situations are inevitable within the realm of police work and can arise on a local, regional or multi-regional basis. While there is a degree of predictability to some of these situations, the diversity and wide expanse of Canada does not facilitate maintenance of contingency resources. Therefore, these situations are handled through temporary redeployment of resources. The availability of personnel employed in Police Services Under Contract is particularily significant in accommodating such situations and is a factor recognized in Federal-Provincial cost-sharing arrangements. When this occurs, planned outputs may not be fully achieved. This does not indicate that planning was invalid or that performance was substandard. It simply reflects the unpredictable nature of police work.

1. Environment

National/International Terrorism: Escalation in Canada of criminal activities by extremist/terrorist groups has serious social and political implications. Events such as the attempted murder of the Turkish Commercial Attaché, the assassination of the Turkish Military Attaché and the bombing of Litton Systems in Toronto and a B.C. hydro sub-station, all demonstrate how serious these problems can impact on Canada.

Protection of foreign diplomatic missions in the National Capital Region is of particular concern. Recent terrorist activities around the world have caused an increase in the provision of guard service to foreign missions. An assessment indicating that the threat level will not diminish in the near future has prompted a review of current practices.

Drug Enforcement: Illicit drug activity is Canada's most profitable criminal activity. Drug interdiction programs in the USA and elsewhere have impacted on Canada, causing a shift of some illicit operations to our coastal regions and larger cities. Current enforcement strategies are producing good results, however, additional enforcement personnel and resources would improve the level of effectiveness.

Anti-drug profiteering investigations are producing positive results, however, are limited in overall effectiveness by gaps in law. Additional personnel in this program would result in increased seizures and confiscation of illicit funds and profits associated with the drug trade.

In the United States, where illicit drug proceeds were estimated at $80 billion in 1980, authorities have embarked upon an extensive interdiction program which has already encouraged some major American criminal organizations to conduct illicit activity in Canada. This northward push of major American drug syndicates has a potential to directly affect person-year requirements of Drug Sections in all of Canada's major cities. Continuing American efforts against the transport of illicit drugs along Eastern and Western Seaboards, Gulf of Mexico and the Caribbean Sea may cause smugglers to shift points of entry to Canada's east and west coasts. This could also affect person-year requirements for both British Columbia and the Atlantic Provinces.

Immigration and Passport: Restrictions on immigration to Canada and a decrease in the number of working permits being issued, coupled with the attractiveness of Canada as a permanent place of residence, is expected to result in an increase of illegal entries to Canada and smuggling of aliens through Canada into the United States. This will require an increase in immigration enforcement activity.

Commercial Crime: An increase in the incidence of fraudulent activity in relation to bankruptcies and securities trading is expected. Criminal elements could attempt to exploit various federal and provincial government programs. There will be increased demand from all levels of government for a greater commitment to revenue and expenditure protection. Government departments are demanding reduced turnaround time on investigational requests and reported violations.

Organized Crime and Criminal Intelligence: Canada is affected by organized crime groups operating from a number of countries, but more particularly, from the USA. Leadership challenges are occurring within certain Canadian organized crime groups resulting in outbreaks of violence and gang style murders. Public concern about organized crime has heightened as a consequence and demands for more effective enforcement action has surfaced. Outlaw motorcycle gangs have moved to consolidate power and rival groups have already confronted each other. Leadership and coordination of effort by all police forces is required to derive maximum impact.

Customs and Excise: Personal smuggling of many consumer goods has declined in recent times due to marginal cost differences resulting from a decline in the value of our dollar vis-à-vis the US dollar. Commercial smuggling remains active due to significant cost differences between domestic and foreign sources. Export and Import Permits Act offences are expected to increase. Excise enforcement is likely to remain relatively constant.

Productivity: Governments at all levels in Canada are concerned over the increased cost of policing. This has resulted in greater emphasis being placed on accountability and the control of expenditures to the maximum extent possible while maintaining a publicly acceptable standard of service. Since the overall services provided by the Force are

primarily labour intensive, future expenditure restraint and some productivity gains may be achieved through continued research on crime patterns to maximize the use of human resources, further use of computer technology, and workload prioritization at the local level, taking into account the needs of individual communities.

Crime Prevention: In cooperation with the Ministry of the Solicitor General, the Force is conducting research to improve delivery of police services under contract to better reflect the requirements of the community being policed and the cost effectiveness of various services delivered. Other initiatives include improved training of police officers involved in child abuse investigations and family violence cases and sensitivity to the impact and needs of crime victims.

2. Initiatives

National/International Terrorism: The RCMP is studying and will implement measures to improve the existing static guard, mobile patrol and emergency response system and services provided to Canadian and foreign dignitaries. Improvements in the system should improve protection with minimal incremental operating costs.

Drug Enforcement: The main strategy of drug enforcement is to suppress the flow of illicit drugs into Canada. Enforcement activity is directed against individuals and organizations who import large quantities of drugs, especially those who operate supply lines from South East and South West Asia, the Middle East, South America and Europe (see pages 29, 30, 31, 32). Increased emphasis on confiscation of funds involved in illicit drug activity should result in larger seizures of money and reduce the ability of some organizations to finance their unlawful operations.

Immigration and Passport: Emphasis on immigration and passport enforcement has shifted from primarily street level enforcement to a more balanced approach targeted at organized illegal immigration as well as the detection and arrest of illegal immigrants (see page 28).

Commercial Crime: All aspects of commercial crime such as major economic crime within the business community, fraudulent bankruptcy, illegal activities in the Securities Trading Industry and economic crime against the Government of Canada will continue to be investigated. Programs will be maintained to attack proceeds of crime through provisions of the Income Tax Act and to suppress the manufacture and distribution of counterfeit currency, coins, tokens of value and negotiable instruments. It may be necessary to allocate additional resources above levels already planned to meet recent increases in commercial crime both nationally and internationally (see page 28).

Customs and Excise: The enforcement strategy will maintain emphasis on investigation of commercial smuggling. Increased attention will be given to contraventions of the Export-Import Permits Act relative to shipment of strategic goods and high technology items (see page 28).

Information Systems: Considerable attention is being given to automation of information systems. The Police Information Retrieval System (PIRS) is replacing some manual police information storage methods with an automated system capable of storing, integrating and displaying data relative to reported occurrences. In addition the Force is proceeding on a phased basis with the concept of a centralized data processing centre with access facilities located in each division headquarters which will amalgamate electronic data processing, telecommunications, records and information services.

Informatics: The RCMP is implementing organizational changes within Canadian Police Services which will amalgamate all matters pertaining to the administration, development and operation of Electronic Data Processing (EDP), Telecommunications, Record and Information Services under a new Directorate called Informatics.

Crime Prevention: In co-operation with the Ministry of the Solicitor General, the Force is conducting research on "Community Based Policing". This project seeks to analyze existing literature and research in order to establish models for delivery of police services under contract. These models must reflect both needs of the communities being policed and cost effectiveness in delivery of services. Three initiatives are: the training and development of police officers for participation on child abuse prevention teams; development of policy to facilitate laying charges in family violence cases; and establishment of research projects in several provinces to analyze resource implications of providing certain services to victims of family violence. Referrals to social agencies, advice on security of premises, and court processes are examples of services that the police could deliver to victims.

3. Program Effectiveness

Resource requirements are determined by an analysis of a number of indicators relevant to law enforcement. Such things as number of cases handled, number of cases successfully cleared and police to population ratios are important in determining the level of police resources required (both personnel and dollar costs). The problem with most statistical information available is that it is quantitative rather than qualitative. Statistics are used extensively as a management tool, but in the final analysis a judgement decision must be made to determine the level of enforcement to be provided. This decision must take the level of public satisfaction into consideration and, in the case of Police Services Under Contract, consultation with provincial and municipal officials on the level of resourcing they will agree to fund. The policing agreements are an important determinant in resourcing decisions.

0919

A measure of effectiveness for the Law Enforcement Program is the ratio of actual offences cleared to the actual offences. This ratio, commonly referred to as the clearance rate, serves as a useful monitor of effectiveness. Significant fluctuations or major changes over time signal the need for further analysis. A myriad of factors can influence clearance rates. For example, a change in the complexity of reported crime can increase the time required to investigate certain types of offences. If resource levels remain constant, this phenomenon can reduce the number of offences successfully concluded within available time. Similarly, a major increase in reported crime raises the case burden of each investigator and may impact upon the successful clearance of cases by reducing the average time available per investigation.

Figures 6 through 10 show actual and forecasted cases cleared along with reported and actual offences investigated by the RCMP over a seven year period.

Federal offences are violations of federal statutes. These include offences against Acts such as the Narcotic Control Act, Food and Drug Act, Customs Act, Excise Act, Export/Import Permit Act, Income Tax Act, Combines Investigation Act, Bankruptcy Act, Immigration Act and Citizenship Act. For a full list of major federal Acts, see page 63. Further details on federal offences are provided on pages 26, 27 and 28.

Section II
Analysis by Activity

A. Enforcement of Federal Statutes and Executive Orders

Objective

To prevent and detect offences against federal statutes; to maintain internal security; and to provide investigative and protective services to other federal departments and agencies.

Plans for 1985-86 include:

- continuing the shift of enforcement emphasis to interdicting importations of illicit drugs to impact the supply and concentrating on detecting and prosecuting the financiers, importers and major traffickers of heroin, cocaine, illicit chemical drugs, hashish and marijuana;
- focusing on illicit profits from enterprise crimes and employing all effective statutory methods to seize unlawfully acquired assets;
- maintaining the present enforcement emphasis on commercial smuggling of goods;
- responding to an anticipated workload increase in violations of the Export and Import Permits Act involving strategic and restricted goods;
- responding to a projected workload increase in enforcement of immigration laws. Concentrating investigators' efforts on organized illegal immigration schemes;
- collecting criminal intelligence on major active families and groups, and coordinating investigations and joint force operations with other police forces nationally and internationally; and
- investigating national security offences and politically motivated crimes directed at internationally protected persons including terrorist acts as provided in the Security Offences Act.

Resource Summary

Total expenditures for the Enforcement of Federal Statutes and Executive Orders Activity will account for approximately 24.6% of total operating expenditures for 1985-86 and 24.8% of person-years.

Figure 11: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Federal Statutes and Executive Orders	302,463	4,796	379,033	6,783	336,910	6,707
Less revenue	32,283		31,272		28,106	
Net expenditures	270,180	4,796	347,761	6,783	308,804	6,707

Revenue projections of $32.3 million for the Federal Statutes and Executive Orders Activity are derived from agreements with the Departments of Transport, External Affairs, Indian Affairs and Northern Development. For further details on revenue, see pages 61 and 62.

Description

The Enforcement of Federal Statutes and Executive Orders Activity may best be described in terms of its three sub-activities.

Federal Law: This includes prevention, detection and investigation of offences against Federal Statutes and Executive Orders. It involves specialized investigations such as drug trafficking, contract killing, extortion, laundering of money, white collar crime, sophisticated frauds, misappropriations, bankruptcies and tax frauds. Also involved are investigations into Immigration and Customs and Excise offences, Import and Export Permit Act offences, the collection/dissemination of criminal intelligence information relating to organized crime syndicates and other high profile enterprise crimes, and acts of violence by terrorist groups.

Police Services Other: This includes provision of investigational and enforcement support services through programs such as 3(b) Native Policing, Airport Security and Policing. The 3(b) Program, carried out in co-operation with Department of Indian and Northern Affairs, is designed

3855

to place Native Special Constables in policing roles on reserves and areas adjacent thereto in order to enrich the quality of police services being provided. The 3(b) Program augments efforts within Police Services Under Contract Activity aimed at reducing conflicts of Native peoples with law enforcement.

Airport Security and Policing is another program delivered by the R.C.M.P. This program is funded by Transport Canada. The objective is to maintain security of airports and departing flights at ten international and eight major domestic airports.

Protective Policing: This includes protection of Federal Government facilities, assets, Canadian and foreign dignitaries as well as the research, development and evaluation of security equipment, materials and concepts on behalf of the Government of Canada.

Performance Information/Resource Justification

Figures 12(a) and (b) display crime statistics relative to the Federal Policing Function. Information is also provided on non-crime functions performed by the Force. Non-crime data refers to a significant group of occurrences which are not necessarily crime-related, but nevertheless require attention by the police department. These include calls for assistance by the public in various emergency situations, property checks, issuance of permits, service of legal documents and other related duties.

An effectiveness indicator for the Enforcement of Federal Statutes and Executive Orders Activity is the ratio of actual offences cleared divided by the total actual offences. Figure 12(a) shows the reported and actual offences along with the number cleared.

FIGURE 12A - FEDERAL OFFENCES, EXCLUDING TRAFFIC, INVESTIGATED WITH RCMP FEDERAL RESOURCES

1 = REPORTED 2 = ACTUAL 3 = CLEARED

SOURCE: RCMP OPERATIONAL STATISTICS REPORTING SYSTEM

Figure 12(b): Volume of Non-Crime Services Provided by Federal Resources

	1982	1983
Applicant (RCMP Investigations)	4,945	1,499
Service of Legal Documents	13,345	9,019
Asst. General Public (Unspecified)	157,348	69,625
Property Checks	7,431	6,583
Permit Issuance	13,168	50,777
Boats Checked	9,238	22,229
Hunters Checked	10,498	11,913

Federal Law: Figure 13 (a) and (b) provide a breakdown of major offences included in Figure 12(a). Clearance rates are not currently available at this level of disaggregation.

FIGURE 13A – DISTRIBUTION OF MAJOR FEDERAL OFFENCES INVESTIGATED BY THE RCMP IN 1982

FIGURE 13B – DISTRIBUTION OF MAJOR FEDERAL OFFENCES INVESTIGATED BY THE RCMP IN 1983

SOURCE: RCMP OPERATIONAL STATISTICS REPORTING SYSTEM

The objective of drug enforcement is to reduce the availability of narcotics. A reduction in street level purity of the narcotic suggests this objective is being achieved. Figures 14(a), (b) and (c) illustrate the relationship between enforcement action and the street level purity of heroin. This relationship prevails during normal supply conditions. However, if world supply were to significantly increase as a result of bumper crops, enforcement efforts would not likely generate the desired effect.

FIGURE 14A NUMBER OF PERSONS CHARGED IN CANADA BY THE RCMP FOR HEROIN RELATED OFFENCES

SOURCE: RCMP OPERATIONAL STATISTICS REPORTING SYSTEM

FIGURE 14B – KILOGRAMS OF HEROIN SEIZED BY RCMP

SOURCE: RCMP DRUG ENFORCEMENT RECORDS

FIGURE 14C - AVERAGE PURITY OF HEROIN

SOURCE: RCMP DRUG ENFORCEMENT RECORDS AND ANALYSIS

Figures 15(a), (b) and (c) illustrate the relationship between enforcement action and the street level purity of cocaine. As noted in Figures 14(a), (b) and (c), an increase in enforcement action will generally reduce the purity of illicit drugs. However, since 1978 world production of cocaine has tripled; the impact of this is reflected in Figures 15(a), (b) and (c). Enforcement activity increased in terms of seizures and persons charged while street level purity continued to increase.

Protective Policing: Figure 16 identifies the volume of security functions performed by the RCMP. These functions include security for VIP visits, security inspections and surveys of physical installations and consultation on security requirements

FIGURE 16 – VOLUME OF SECURITY FUNCTIONS PERFORMED

1 = PHYSICAL SECURITY INSPECTIONS & CONSULTATIONS
2 = VIP SECURITY DETAILS

SOURCE: RCMP OPERATIONAL STATISTICS REPORTING SYSTEM

B. Canadian Police Services

Objective

To assist, upon request, all Canadian law enforcement agencies by providing specialized police training, forensic laboratory, identification and information services.

Plans for 1985-86 include:

- The maintenance of existing services to meet the priority needs of the police community and the courts by:

  - providing police training in management and specialized areas;

  - continuing priority setting to enable limited Forensic Laboratory resources to meet higher priorities of Law Enforcement Agencies and the evidential requirements of the courts;

  - continuing development of new information systems, Computerized Integrated Information Dispatch System (CIIDS) and RCMP Office Support System (ROSS) to meet increasing demand for more effective dissemination and storage of information.

  - creation of a data administration function to provide centralized management of corporate data as a primary resource of the Force to meet accountability for value, cost, legal and legislative obligations required by Treasury Board and the Access to Information and Privacy Act.

  - Development of single Data Communications Network to replace the present separate CPIC and Data Centre Networks;

  - replacement of the Ampex Videofile fingerprint storage system with a digital optical disc storage system;

  - upgrading of the RCMP operational support radio systems in "A", "B", "C", "J", "K" and "O" Divisions; and

  - replacement of Force-wide voice privacy equipment.

Resource Summary

Total expenditures for Canadian Police Services Activity will account for approximately 9.2% of total operating expenditures for 1985-86 and 8.0% of the P-Y utilization.

Figure 17: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Forensic Laboratories	22,534	343	17,211	337	17,192	320
Identification Services	26,985	459	20,611	444	19,757	450
Informatics*	54,608	639	44,362	613	42,702	614
Canadian Police College	6,777	79	5,176	71	5,344	71
Information Access	2,505	35	1,913	35	1,502	61
	113,409	1,555	89,273	1,500	86,497	1,516
Less Revenue	1,121		415		64	
Net Expenditure	112,288	1,555	88,858	1,500	86,433	1,516

*An organizational change, approved by Treasury Board on 84.06.07, amalgamated the previous Telecommunications and E.D.P. Services sub-activity with some functions within Record Services sub-activity. This new sub-activity is called Informatics. The balance of Record Services person-years were transferred to the Administration Activity. Details under the 1984-85 forecast and 1983-84 actual have been adjusted to facilitate year to year comparisons.

Description

The Canadian Police Services Activity may best be described in terms of its five sub-activities.

Forensic Laboratories: Forensic laboratory services are made available to Canadian police agencies, other government agencies and the courts through eight Crime Detection Laboratories strategically located across Canada. Expert opinion based on scientific examination of exhibits is provided as an aid to investigators and the courts.

Identification Services: Identification services are provided through maintenance and operation of a central repository for fingerprints and criminal records, the Firearms Registry and the Canadian Police Services Information Centre.

Informatics: This Directorate develops and maintains a comprehensive Program of Information Management which includes Electronic Data Processing, Telecommunications, Office Systems and the technologies associated with their convergence and interconnection. In addition, as a Police Service to the Canadian Police Community, this Directorate provides Electronic Data Processing and Telecommunications Services through the facilities of the Canadian Police Information Centre.

Canadian Police College: The Law Enforcement Community is provided with manager development training supported by related studies and widely available publications. Specialized and technical training courses are made available to all Canadian Police, other government agencies, and on a limited basis, to Commonwealth and Foreign Police Agencies.

Information Access: Legislative requirements governing access to information and privacy are met by the Information Access Directorate located in Ottawa.

Performance Information/Resource Justification

Forensic Laboratories: Support to law enforcement agencies and the courts requires meeting non-discretionary demands for forensic examinations and evidence. Figure 18 illustrates the results and outputs of laboratory operations based upon experienced and projected demand. Performance in terms of demand, reports, and court attendance is presented as follows.

Casework demand refers to cases submitted by law enforcement agencies, each of which normally requires several examinations to provide all available forensic information.

Reports issued refers to reports prepared by the laboratories on analysis performed in support of law enforcement; examination conclusions reported to client agencies lead to pleas of guilty, exoneration of citizens under suspicion, redirection or changes in the scope of investigations and evidence presentations; as an intermediate operational output these results contribute to the success rates of law enforcement programs.

Court attendance refers to the provision of expert evidence based on scientific findings and conclusions as a direct support to the courts.

Figure 18: Demand for Forensic Laboratories Services

	1981-82	1982-83	1983-84	Forecast 1984-85	Forecast 1985-86
Casework Demand	17,103	16,719	18,680	19,183	20,034
Reports Issued	16,384	16,441	18,305	18,879	19,788
Court Attendance	4,103	4,262	3,993	4,153	4,353

3865

Figure 19 illustrates total demand, outputs and backlogs in terms of person-years. The difference between demand and output is unfulfilled demand, which is composed of work returned to clients without examination due to staff shortages plus the increase in backlog from year to year. Backlog is composed of work in progress, high priority work awaiting commencement and queued lower priority cases. A massive increase in backlog has been avoided and held constant through rigourous screening of casework and establishment of a case priority system. Fulfillment of demand has been assisted by enhanced automation of equipment and introduction of efficiency measures to increase productivity and restrain cost increases. The gap between demand for service and the person-years utilized represents the need for additional resources. The capacity to meet demand has been assisted through overtime utilization and some sacrifice in improvement of techniques and staff training. Response time (time between case receival and advising submitter the results) has been increasing marginally over the past few years and is now at four weeks.

FIGURE 19 - TOTAL DEMAND AND CAPACITY FOR FORENSIC LABORATORIES

0 = BACKLOG 1 = DEMAND
2 = OUTPUT 3 = P/YS UTILIZED

SOURCE: DIRECTORATE WORK STATISTICS

Identification Services: Figure 20 illustrates forecast demand for Identification Services in terms of person-years as compared to available capacity. Over the last four years demand has increased nearly 9% compared to a capacity increase of approximately 7%. This additional workload has been accommodated through increased productivity and in part by use of overtime. It is intended that the current level of productivity will be maintained in 1985-86.

FIGURE 20 TOTAL DEMAND AND CAPACITY FOR IDENTIFICATION SERVICES

1 = DEMAND 2 = CAPACITY 3 = P-Y'S UTILIZED

SOURCE DIRECTORATE WORK STATISTICS

Informatics: Figures 21, 22 and 23 provide performance information relevant to this sub-activity.

Canadian Police Information Centre: Data collected by the CPIC system is shown in Figure 21.

Figure 21: Canadian Police Information Centre

Canadian Police Information Centre	1982-83	1983-84	Forecast 1984-85	Forecast 1985-86
Total transactions	79,951,070	83,647,745	89,164,998	93,000,000
Average response time (seconds)	3.4	3.0	3.0	3.5
Availability %*	97.8	99.2	99.0	99.0

* Availability refers to the percentage of time that the information system is available for user access within a twenty-four hour period. Immediate access to the information system is particularly important to the safety of operational police officers and apprehension of wanted persons.

RCMP Data Centre: The Data Centre is a centralized EDP facility accessible through remote terminals strategically located throughout divisions. Figure 22 provides performance data collected relative to this facility.

Figure 22: RCMP Data Centre

RCMP Data Centre	1982-83	1983-84	Forecast 1984-85	Forecast 1985-86
Availability %	95.3	95.3	97.5	97.5

Figure 23: Volume of Transactions and Service

	1982-83	1983-84	1984-85	1985-86
Directives Management (pages)	282.6	261.8	265	270
Forms Management (projects completed)	18.08	18.00	24.3	24.3
Micrographics (pages filmed)	191,162	212,273	218,641	225,000
Archives (transactions)	7,601	7,323	8,055	8,860

Telecommunications: Telecommunications services are provided through an ongoing program of development, maintenance and operations. Performance may best be evaluated by examining costs per operational police officer and time to access the systems in each of 75 geographic areas or communications districts. This data has been collected manually for some areas, but is not yet available on a Force-wide basis. A project is underway to examine the feasibility of capturing activity volumes and times electronically. This should lead to performance data on a Force-wide basis in future years.

Canadian Police College: The Canadian Police College (CPC) is developing a standards analysis and training evaluation matrix to be used in the evaluation of CPC courses by candidate. Over the next year, this process will be evaluated with a view to establishing its suitability for use as a performance measurement system.

Information Access: Figure 24 indicates the number of transactions and person-years.

Figure 24: Volume of Transactions and Person-Years

	1982-83	1983-84	1984-85	1985-86

* Changed to Privacy Act July 1, 1983.

** Requests made prior to 1983 July 1 were done within the spirit of the Act as per cabinet directives.

C. Police Services Under Contract

Objective

To prevent and detect crime and maintain law and order in provinces, territories and municipalities under contract.

Plans for 1985-86 include:

- investigating a projected Criminal Code caseload of approximately 630,000 cases;
- maintaining Criminal Code success rates of:
  - 78 to 83% for persons offences (murder, sexual assault, robbery and assault);
  - 28 to 33% for property offences (theft, break-ins, frauds); and
  - 42 to 47% for all other Criminal Code, non-traffic offences (wilful damage, disturbing the peace, weapons and morals offences, etc.);
- place emphasis on policing methods which involve crime prevention initiatives and increased attention to the victims of crime,particularly in family violence and spousal assault situations.
- conduct investigations into approximately 350,000 reported cases involving Provincial, Federal Statutes and Municipal By-Laws;
- managing a traffic law enforcement program directed at reduction of impaired driving, apprehending hit and run drivers, drivers operating vehicles while under suspension, moving violations prone to causing accidents and other offences involving federal, provincial and municipal laws which result in a workload of 1,250,000 cases (approximately);
- provide assistance to the general public in non-crime related cases in the form of missing persons enquiries, lost/found items, checking of insecure premises, suspected persons, etc. in approximately 580,000 instances;
- serving approximately 250,000 legal documents for various federal, provincial and municipal agencies;
- issuing approximately 170,000 permits for firearms registration, liquor act and others;

- conducting approximately 50,000 inspections under various provincial and federal statutes for licencing and adherence to regulation purposes;

- escorting approximately 53,000 prisoners to and from provincial and federal institutions;

- providing safety and crime prevention type lectures to schools, minority groups and others in approximately 25,000 instances; and

- investigating and/or processing reports involving approximately 210,000 motor vehicle accidents.

Resource Summary

Total expenditures for Police Services Under Contract Activity will account for approximately 50.6% of the RCMP's total operating expenditures for 1985-86 and 51.1% of the P-Y utilization.

Figure 25: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Provincial/Territorial Policing	456,569	6,896	439,396	6,786	421,245	6,902
Municipal Policing	166,790	3,018	160,517	2,985	142,375	2,933
	623,359	9,914	599,913	9,771	563,620	9,835
Less revenue	370,116		354,283		312,938	
Net expenditures	253,243	9,914	245,630	9,771	250,682	9,835

Revenue projections of $370.1 million for Police Services Under Contract are derived from policing contracts with eight provinces, two territories and approximately 190 municipalities. For revenue details, see pages 61 and 62.

0871

Description

The Royal Canadian Mounted Police provides provincial and municipal police services to the territories and all provinces, except Ontario and Quebec. During 1981, new agreements were negotiated with the Provincial and Territorial governments which also included the renewal of policing agreements for approximately 190 municipalities. The new agreements are for ten years covering the period April 1, 1981 to March 31, 1991 and are based on cost-sharing which recognizes the benefits to Canada and the economies of scale of having Canada's national police force provide the above police services. The details of the agreement are such that provinces/territories and municipalities under 15,000 population cost-shared the total provincial/territorial police services costs and municipal police services costs respectively in 1981-82 at 56% and at 81% for those municipalities over 15,000 population. The percentage share of 56% for provincial/territorial police services and municipalities under 15,000 population is increased by 1% each fiscal year commencing in 1982-83 until the percentage share reaches 60% in 1985-86 and thereafter increases by 2% per year commencing with fiscal year 1986/87 until the maximum share of 70% is reached in 1990-91. The percentage of 81% for municipal policing in those municipalities over 15,000 population is increased by 1% for each fiscal year commencing in 1982-83 until the maximum share of 90% is reached in 1990-91. In 1985-86, provinces/territories and municipalities under 15,000 population will cost-share at 60% of the policing costs. Municipalities in excess of 15,000 population will cost-share at 85%. Full details concerning federal revenue resulting from policing agreements is detailed on page 61. Contracting governments receive similar services to those provided by a local police organization; general duties, traffic policing, identification services and other specialized services. Contract policing provides the means of delivery for Enforcement of Federal Statutes and Executive Orders over much of the vast geographic expanse of Canada. Specialized federal units are situated in larger population centres and made available to address more complex federal cases/responsibilities in rural Canada.

Performance Information/Resource Justification

Police services provided under contract are highly labour intensive and involve enforcement of criminal laws, federal statutes, provincial laws and municipal by-laws. Much of the work is reactive and often requires an immediate response to a call for help from the public. The public turns to the police for assistance and guidance under several circumstances. A police officer's time can be categorized into discretionary (or proactive) work, non-discretionary (or reactive) work and administrative overhead.

Discretionary work involves the enforcement of federal, provincial and municipal laws when no specific complaint exists. This type of enforcement activity tends to impact on the general peace and order in a community. An increase in the crime rate or an increase in demand for

other services results in decreased time available for discretionary enforcement, which in turn tends to result in greater opportunity to commit crimes. Time available for discretionary enforcement has been shrinking over the years (see Figure 26).

Non-discretionary work involves crimes against property and persons, response to complaints from the public or government, searches for missing or lost persons, escorting prisoners, investigating sudden deaths, issuing permits, attending accident scenes, restoring public order, etc. Many of the services provided are not offence related, but involve situations which require police response and attention. (See Figure 27 for further information regarding the volume and type of non-crime services provided by Police Services Under Contract during 1982 and 1983.) Current information systems do not facilitate identification of any time factor associated with these specific occurrences.

Administrative overhead involves the routine day to day resource management functions which maintain the organization such as supervision of personnel and investigations, buildings and equipment, records keeping and associated clerical duties.

Figure 26 provides information on the utilization of time associated with delivery of contract police services over recent years. The data shows that non-discretionary time has been increasing while discretionary time decreased.

FIGURE 26 WORK CATEGORIES - PERCENTAGE OF TIME CONSUMED

1 = NON-DISCRETIONARY 2 = DISCRETIONARY 3 = ADMINISTRATION

SOURCE: RCMP PERSON HOUR REPORTING SYSTEM C-75D

0973

It must be appreciated that current time collection methods do not facilitate extraction of pure reactive time from our data system. Consequently, in some work categories where a definite distinction cannot be made, such time has been arbitrarily included in the reactive grouping. Future time collection methods will hopefully overcome this deficiency.

As noted earlier in the section on "Performance Information/ Resource Justification", the demand upon a police officer's time has shown a consistent shift towards reactive or non-discretionary work. This trend reduces the amount of time available for proactive police activity. This change is believed to be caused by a disproportionate growth of reactive crime offences relative to the growth in human resources. The trend is forecast to continue through to 1985.

Figure 27: Non-Crime Outputs Volume of Some Non-Crime Services Provided by Police Services Under Contract

	1982	1983
Assistance to general public	570,000	556,000
Service of legal documents	210,000	232,000
Safety or preventive lectures	18,000	23,000
Permits issued	148,000	157,000
Inspections conducted	28,000	35,000
Prisoners escorted	51,000	44,000
Motor vehicle accidents investigated	218,000	201,000

A measure of effectiveness is the ratio of actual offences cleared (by the laying of a charge or otherwise successfully identifying the offender) to the total number of actual offences investigated. This ratio is commonly referred to as the clearance rate. For further information on the significance of clearance rates, see page 20.

Persons offences are identified in figure 28. These offences include murder, sexual assaults, robberies, and assaults.

Property offences are reported in figure 29. This is an area which receives a lot of focus from the Force's crime prevention initiatives.

Other Criminal Code offences are shown in figure 30. Some offences under this category are influenced by crime prevention initiative.

Figure 31 identifies the number of federal offences investigated by Police Services Under Contracts. Investigations under this category include offences against a number of federal statutes. Further details on the various Acts which are enforced and the major categories of offences are provided on pages 27, 28, and 63.

8877

D. Administration

Objective

To direct and manage organizational and administrative resources on behalf of the Law Enforcement Program.

Resource Summary

Total expenditures for the Administration Activity will account for approximately 15.6% of the total operating expenditures during 1985-86. Administration represents 16.1% of the overall Force's person-years.

Figure 32: Activity Expenditures and Person-Years ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Dept'l Administration	57,277	793	49,870	971	41,892	885
Division Administration*	121,063	1,797	105,407	1,746	103,407	1,730
Training	14,239	522	12,398	242	10,520	227
Total	192,579	3,112	167,675	2,959	155,819	2,842

* Data under 1984-85 and 1983-84 has been adjusted to include portions of Record Services sub-activity which were transferred to Administration from Canadian Police Services. See page 34.

Description

The Administration Activity may best be described in terms of its three sub-activities.

Departmental Administration: Encompasses centralized administrative functions such as audit, review and policy development. Functions include: Air Services; Official Languages; Public Relations; Organization and Personnel; Services and Supply; Finance; Planning and Evaluation; Health Services; and the Commissioner's Secretariat.

Divisional Administration: Parallels Departmental Administration by carrying out staffing and support functions within Divisions. Additional decentralized categories include Divisional Audit Services, Office of the Commanding Officer and Record Services.

Training: The training function is on three levels.

Headquarters Training: This is concerned with development, implementation and administration of training policy and the delivery of

centralized training services in areas where there is insufficient demand for such training to be economically delivered at division level, or where highly specialized training is needed.

Division In-Service Training: This is concerned with development, implementation and administration of training programs within each division with emphasis on unique operational/administrative/managerial needs of that division.

Recruit Training: This is concerned with the development and delivery of basic recruit training for newly engaged Constables and Special Constables at the recruit training academy, "Depot" Division, Regina.

Performance Information/Resource Justification

Figure 33 represents person-year growth in the Administrative Activity as a percentage of total person-year growth for the program. The increase shown for 1984-85 and 1985-86 is due to an organizational change which transferred some functions from Canadian Police Services to Administration.

FIGURE 33 - ADMINISTRATION PERSON YEARS AS A PERCENTAGE OF TOTAL PROGRAM

3879

Figure 34 represents expenditures for Administration Activity as a percentage of total program cost. Comments under figure 33 also apply here.

Contribution to Non-RCMP candidates attending Canadian Police College courses	**508,000**		
Total	**30,739,000**	28,479,000	24,540,487

3889

B. Cost Analysis

The RCMP 1985-86 Estimates include only authorities to be voted and statutory authorities. Consideration on a full cost basis must include services provided without charge. Details of such costs are outlined in Figure 39.

Figure 39: Net Program Costs for the Year 1985-86 ($000)

1985-86 Operating Expenditures	Add* Other Costs	Less** Revenue	Net Cost	Forecast 1984-85
1,231,810	108,774	408,372	**932,212**	946,701

* Other costs of $108.8 million consist of:

	($000)
• Accommodation provided without charge by DPW	13,919
• DSS services provided without charge	1,327
• Pension and insurance paid by Treasury Board	16,414
• Accommodation provided without charge by Transport Canada	284
• Labour Canada services provided without charge	159
• Accommodation provided without charge by RCMP	76,671
	108,774

** Total revenues of $408.4 million consist of:

• Receipts and revenues credited to the Vote	
- Provincial policing contracts	235,295
- Municipal policing contracts	114,046
- Northwest Territory policing	15,050
- Yukon Territory policing	5,725
- Police services to other departments	32,283
- Police Information Retrieval System	1,121
	403,520
• Receipts credited to consolidated revenue	
- Total Vote 14 credits	4,852

C. Revenue Analysis

Revenues are received from other federal departments for the provision of "Other Police Services". The Enforcement of Federal Statutes and Executive Orders Activity recovers the cost of Policing Airports and the 3-B Native Policing Program on certain larger reserves within contracting provinces and territories. Substantial revenues are also received for providing police services to provinces, territories and municipalities under policing agreements between Canada and eight provinces, two territories and some 190 municipalities expiring in 1991. Details on the Federal-Provincial cost-sharing agreement are shown below in Figure 40.

Figure 40: Cost-Sharing Percentages Between Federal Government and the Provinces, Territories and Municipalities

Fiscal Year	Provinces, Territories and Municipalities (Under 15,000 pop.) Share %	Federal Share %	Municipalities (Over 15,000 pop.) Share %	Federal Share %
1981-82	56	44	81	19
1982-83	57	43	82	18
1983-84	58	42	83	17
1984-85	59	41	84	16
1985-86	60	40	85	15
1986-87	62	38	86	14
1987-88	64	36	87	13
1988-89	66	34	88	12
1989-90	68	32	89	11
1990-91	70	30	90	10

Figure 41 shows the percentage of program costs that are recovered through revenue. Several 1981 amendments to the Federal-Provincial cost-sharing Agreement on Contract Policing increased revenues. In particular, 1981-82 revenues were increased substantially due to a change from semi-annual billing to quarterly. This resulted in collection of fifteen months revenue within the twelve month period. A second factor which influenced revenue was a change in the cost base used to calculate invoices. Contracting parties are now billed on current cost base rather than previous year costs. Finally, the cost-sharing percentages were increased as noted above in Figure 40.

FIGURE 41 – REVENUE AS PERCENTAGE OF PROGRAM COST

ACTUAL *FORECAST*

D. Listing of Major Federal Statutes

In relation to the following federal statutes, the RCMP has a wide variety of enforcement responsibilities.

Aeronautics Act
Animal Disease and Protection Act
Bank Act
Bankruptcy Act
Canada Grain Act
Canada Pension Plan
Canada Shipping Act
Canada Wheat Board Act
Canadian Citizenship Act
Canadian Elections Act
Combines Investigation Act
Criminal Code
Cultural Property Export & Import Act
Customs Act
Excise Act
Explosives Act
Export & Import Permits Act
Family Allowance Act
Fisheries Act
Food & Drug Act
Immigration Act
Income Tax Act
Migratory Birds Convention Act
Narcotic Control Act
National Energy Board Act
Official Secrets Act
Petroleum Administration Act
Weights and Measures Act

Science Council of Canada

1985–86 Estimates

Part III

Expenditure Plan

3895

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Science Council
of Canada

3899

Preface

This Expenditure Plan is designed as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the program including a description, information on its background, objectives and planning perspective as well as the performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $4,583,000 in 1985-86 for Science Council of Canada. The remaining expenditures, estimated at $374,000 for pensions and other employee benefits, will be made under existing statutory authority.

Financial Requirements by Authority

3903

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The Science Council of Canada undertakes a wide range of activities and programs in line with its mandate to carry out a program of science and technology policy research, to publish its findings, and, through communications activities, to increase awareness and discussion of science and technology policy issues in Canada.

Council's research work is administered under five key policy areas:

- Technological and innovative capacity in industry (see p. 14).
- Education and employment in a technologically changing world (see p. 15).
- Biotechnology, information technologies and other new technologies (see p. 16).
- Science and technology infrastructure (see p. 17).
- The impact of science and technology on society and the environment (see p. 19).

Its major activities for 1985-86 include:

- a national consultative program identifying emerging science and technologies that promise to be critically important to Canada over the next decade; (see page 13)
- increased discussions leading to policy advice which will assist to determine the balance of Canada's scientific effort; (see page 19)
- increased activity to promote greater awareness among a broader public of the development and effects of science and technology. (see page 18)

2. Financial Summary

Figure 1: Financial Summary ($000)

	Estimates 1985-86	Forecast* 1984-85	Change
Science Council of Canada	4,957	4,847	110
Authorized person-years	68	67	1

*The level of expenditures forecast for 1984-85 is the same as originally provided for in the 1984-85 Main Estimates (Extracts from Part II of the Estimates, page 5).

Explanation of Change: The need for the additional $110,000 and one person-year in 1985-86 was primarily due to the following:

- an increase of $35,000 and one person-year to cover workload increase in the Communication Area;
- an increase of $75,000 in salaries and employee benefits to cover inflation, promotions and salary increments.

B. Recent Performance

1. Highlights

Highlights of the Program's performance during 1983-84 are as follows:

The Science Council is committed to maintaining its research capability and presence in what it regards as the five key science and technology policy areas. The planning framework, adopted at the Council's December 1983 meeting, encompasses all of the duties set forth in the Science Council of Canada Act. Because of limited resources it was not possible to have a major research program in all these areas simultaneously. The Council's response has been to devote the greater part of its resources to two or three major areas at a time, while actively monitoring the other areas with the remainder of its resources.

Two major studies that have been the focus of much of the Council's research effort for the past three years are now complete. These deal with industrial policy and science and education. A third major study, biotechnology was begun in 1983.

Since 1981 Council has been engaged in a major research project designed to increase understanding of the problems facing Canadian industry and the issues involved in developing an appropriate industrial strategy. A final report was prepared during 1983 and was reviewed by the Council in draft form at its December meeting. A revised draft was approved in March 1984 and was released in September 1984.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Science Council of Canada	4,582	4,547	35

Explanation of Change: The additional expenditure of $35,000 was primarily due to higher contributions to employee benefit plans.

C. Background

1. Introduction

The Science Council of Canada, created by an Act of Parliament in 1966, exists to provide a source of independent advice to government and to society in general on science and technology policy. The Science Council performs a unique role in the federal government's decision-making process. Unlike departments and agencies which include a science component, and which also advise the government on specific aspects of science and technology policy, the Science Council operates at arms length from government, determining its own research program and publishing findings at its own discretion. One of its primary objectives is to generate a greater degree of public awareness of science and technology policy issues.

2. Legal Mandate

The Science Council of Canada was created in 1966 through an Act of Parliament to provide independent advice on science and technology policy for Canada. Its duties, set out in the Science Council of Canada Act, 1966-67, were enlarged through amendments made in 1978. The amendments stress the national role of Council and its mandate to generate increased public awareness of the nature of science policy issues. The Act empowers Council to conduct studies, inquiries and other undertakings on its own initiative, and to publish the results. The Science Council of Canada reports to the Minister of State for Science and Technology, and the Act also requires Council to investigate and report to the Minister on all matters referred to Council by the Minister.

3. Program Objective

The objectives of the Science Council of Canada are to assess Canada's scientific and technological requirements, to increase public awareness of these requirements and of the interdependence of various groups in society in the development and use of science and technology, and to advise the Government on the best use of science and technology.

4. Program Organization for Delivery

Activity Structure: The Science Council of Canada has one activity: policy research and development. An outline of its activities over the course of 1985-86 appears under the heading: Program Description.

Organization Structure: A departmental corporation, the Science Council consists of a chairman, vice-chairman and as many as 28 members appointed by the Governor in Council. Apart from the chairman and vice-chairman, the members serve without remuneration and represent a broad range of expertise and specialization in science or technology. The chairman is also the Chief Executive Officer of Council. The work of the Science Council is carried out by a staff of 67 who undertake policy research and analysis, provide communications about Council's activities and findings, and provide administrative services.

5. Program Description

The Science Council of Canada has identified five key science and technology policy areas under which its activities are conducted:

- o Technological and innovative capacity in industry;

- Education and employment in a technologically changing world;
- Biotechnology, information technologies and other new technologies;
- Science and technology infrastructure; and
- The impact of technology on society and the environment.

The five key policy areas encompass all of the duties as set forth in the Science Council of Canada Act. Under the umbrella of these broad areas of policy concern, Council has developed a planning framework for determining and undertaking its individual research programs. Because of limited resources, a major task of Council is to identify priority areas for specific research undertakings. It is not feasible, for example, to carry out major research programs in all five areas simultaneously. And while Council selects among two or three of the five areas for major research in a given timeframe, it devotes the remainder of its resources to monitoring developments in the other areas.

Another principal mandate of Council is to generate awareness among Canadians of science and technology policy issues. Council places a great deal of emphasis on communicating its findings and recommendations to the broadest possible public. Major policy documents, which have the sanction of Council, are published as red-covered Council policy reports. More technical material prepared as part of the research effort which supports the major policy documents is often released as green-covered background studies. In addition, Council publishes statements and speeches by the Chairman on current policy issues, occasional papers, and the annual report as required by the Act. It also publishes the newsletter, "In Touch" regularly and contributes material for science articles in magazines and newspapers, or radio and TV programming.

Council's major research efforts are augmented through the sponsorship of or attendance at various workshops, seminars, conferences or other sessions at which topics related to Council's activities are addressed. Often, the Council will publish proceedings or abstracts of these events.

As part of its communication activities, Council plans to continue to maintain a network of contacts with decision-makers in all 10 provinces. The network provides a continual source of information and feedback on important science and technology policy issues facing the country. An aim of Council is to bring together experts in various fields such as government, business, the professions, the scientific community, and labour to focus attention on policy issues. As a result of organizing meetings and other activities, Council is seen as a catalyst for otherwise disparate groups to share information, outline problems, and work toward solutions thus stimulating national discussion of science and technology policy issues.

Figure 4: Functional Structure

D. Planning Perspective

1. Environment

Most science and technology issues are far reaching and complex. In general, they are the result of two major influences at work simultaneously. First, the field is characterized by an extremely rapid pace of change and development. Second, the issues are closely inter-related with and affect virtually every facet of society. The effect of these influences underscores the work of the Science Council, both in its major decisions and in its various research programs. Many, but not all science and technology developments are the result of events taking place beyond Canada's borders, and much of Council's efforts are aimed at advising Canadians in government, industry, universities and other sectors how best to plan and shape policies in a world increasingly affected by the imperatives of science and technology. By virtue of its expertise and mandate, Council serves as a valuable, impartial institution through which to address issues and tender advice and recommendations. In 1985-86 Council intends to continue to generate awareness among Canadians of science and technology policy issues.

Technological Development: It has become increasingly evident that scientific and technological development is an essential component of economic health. In Canada, the application of technology to the development and productivity of our national resource base, and the incubation of new high-growth technologies are critical to the modern economy. Closely related to these factors are the requirements for research and development — the seeds of our technological, and economic future — and the need for appropriately trained people to meet the

challenges of a technological world. These themes permeate the thinking behind the Council's major decisions and advice, and underlie the day-to-day work within its various research programs.

Fiscal Climate: The climate of fiscal restraint within the Federal Government generates pressure on all departments and agencies to control expenditures and to make the best use of available funding.

Public Opinion: In recent years, the Canadian public has demonstrated increased awareness of science and technology issues and the effect of technological developments on every aspect of life. Greater knowledge and awareness translates into keener debate, more rational discussion and, ultimately, better decisions. The Council is committed to encouraging greater awareness. Because of its unique position as an arms-length institution, it can provide impartial advice to all sectors of society, including federal and provincial governments, industries, and universities.

2. New and Continuing Initiatives

As previously described, the research program conducted by Council is carried out in five major areas. This research program is supplemented by a communication program designed to increase public awareness of the developments and effects of science and technology generally, and of the Council's findings and recommendations on specific issues.

No major changes are expected in the nature or direction of Council's program in 1985-86. The emphasis will be on continuing to expand upon past initiatives. Council's research and communication programs are described below.

Emerging Science & Technologies: A program on Emerging Science and Technologies (EST) is one of the most ambitious S&T consultations ever attempted by Council. Over 10,000 Canadians in science, engineering and business, will be consulted in the Council's effort to identify the science and technologies that promise to be critically important to Canada over the next decade. The program constitutes the most significant undertaking of the next few years. Council believes that such consultations can combine the expertise of those at the forefront of industry with that of laboratory scientists at the leading edge of new science and technologies.

The consultation will take place in two stages. First, 250 experts from business, government, universities and research organizations, who are among the most informed persons in their fields, will be questioned at length over the telephone about future technologies of crucial importance to Canada. The initial consultation will be extended to a large sample over 10,000 Canadians from all sectors of society, who will

be asked to express their views and concerns about emerging technologies. They will be asked to identify which new technologies will influence Canada's development, the socio-economic sectors that might be affected, the probabilities for commercializing the technologies, and the areas of concern posed by these technologies.

The EST group is currently compiling the results of this major consultation. Results will be discussed in upcoming issues of Council's newsletter "In Touch". As its next step, Council, aided by a consultative committee, will choose specific areas for further study and will call face-to-face meetings, bringing together science and business people in those specific sectors.

Technological and Innovative Capacity in Industry: Industrial nations the world over are scrambling, not only to share in technological development, but as well, to apply technology to business, industry, health care, resource management and virtually every conceivable aspect of production, distribution and service. To remain competitive and to improve productivity, Canada must also harness the benefits of technology.

Canadian Industrial Development: This year, the Council completed a major study of industrial policy, culminating in the release of a report (Report 37) entitled "Canadian Industrial Development". The study focusses on ways to strengthen Canada's industrial technological performance, which the report finds is vulnerable in a number of important areas. Canada slipped from sixth to eleventh place in terms of international competitiveness between 1981 and 1982.

The report identifies weaknesses in key areas which contribute to international competitiveness -- low productivity growth, a weakness in research and development, less than optimum performance in foreign trade and investments, and the lack of a stable socio-political consensus which is more often than not characterized by conflict rather than cooperation in setting industrial priorities. Its recommendations are designed to strengthen Canada's competitiveness and overall industrial technological capability. In particular, emphasis is given to measures which would enhance entrepreneurship, improve Canada's technological capacity for future development, encourage industry to look outward to international markets, and promote cooperation among the various interest groups in the Canadian industrial infrastructure.

Since the report is a recent one, it is premature to judge the ultimate effects of its findings and recommendations in terms of encouraging directional changes. Many of Council's concerns, however, are shared by others and there are indications that Canadian business and governments have begun to move in the directions recommended by Council in this and other studies.

Associated with Report 37, Council has published a number of background studies, including "Governments and Microelectronics", and "The Challenge of Diversity: Industrial Policy in the Canadian Federation".

Aquaculture: Aquaculture represents a relatively new technology which holds significant industrial promise. Designed to introduce innovative means to cultivate and harvest fresh water and marine animals and plants, it could help meet the world demand for fish while, at the same time, alleviate some of the problems associated with Canada's traditional commercial fishing operations.

Following a conference on aquaculture, co-sponsored with the federal department of Fisheries and Oceans, Council established a task force to assess the immediate needs of the industry. A preliminary report of the task force, issued in March, 1984, found that, although the subject is being researched, commercial viability of aquaculture awaits market demand.

The conference and the task force report have helped increase awareness of the potential of aquaculture technology as it relates to commercial operations, and work is continuing in a number of sectors to help enhance commerical possibilities.

Education and Employment in a Technologically Changing World: Canada, like other industrial nations, is faced with a need for educational and employment planning in a world dominated by scientific and technological change. In education, science and technology offer new opportunities but at the same time, the educational systems must be able to respond to the need for qualified and skilled people to meet the challenges of the future. In the factory and office, technology is directly affecting employment patterns, job requirements and many other facets of the world of work.

Because of their importance, education and employment policy and planning will continue to be a major focus of attention of the Science Council. An outline of its current activities in this area follows:

Science and Education: An examination of the state of science education in elementary and secondary schools across Canada has been the subject of a major study by the Council. Initiated in 1980, the study was designed to stimulate discussion on the future of science education in schools. It includes a historical analysis and a review of the current characteristics, success and limitations of science education across Canada.

As part of the study, six discussion papers have been published by Council over the past four years. In May, 1984, Council released a three-volume background study, entitled "Science Education in Canadian Schools". It represents the most comprehensive compilation

3913

of data on science education ever produced in Canada, focussing on past and current practices. As part of Council's science and education program, a series of conferences on the subject has also been held in every province of Canada and the Yukon. These two-day conferences brought together parents, students, teachers, trustees, scientists, provincial education officials and others and served to stimulate discussion and increase awareness of the issues involved.

The final report of the science and education study, "Science for Every Student: Educating Canadians for Tomorrow's World" provides comprehensive recommendations on all major aspects of science education in Canadian schools. The Council is undertaking a follow-on program with meetings in each province, to ensure a full and wide-ranging discussion of the policy issues raised by the report.

Engineering Education: In cooperation with the Canadian Council of Professional Engineers, the Science Council organized a national conference on engineering education in April 1983. The conference was brought about as a result of Council's continuing concern about science and technology education in Canada and served to focus attention on problem areas and to lay the groundwork for identifying solutions. Following the conference, a background paper on the issue was commissioned to provide a detailed analysis of the issues and concerns raised.

Biotechnology, Information Technology and Other New Technologies: Often considered the leading edges of technological development biotechnology and information technology represent two of the fastest growing fields of technical innovation and application. Biotechnology is a newer endeavour, but some of the implications of its rapid development are beginning to emerge. Much of Council's energies and attention are currently addressing the momentous implications of these two world-wide phenomena.

Biotechnology: Although a relatively new development, the growth of biotechnology in the past few years has been startling. Many experts predict its impact will be at least as profound as that of the information revolution, perhaps even more so. Already, many Canadian industries, particularly in pharmaceutics, agriculture, forestry, mineral extraction, and waste management, are applying biotechnology.

During 1984, Council continued its work on a major study of biotechnology, initiated in 1983. The study is designed to recommend policies which would stimulate the adoption of advanced biotechnology, especially in resource industries, to promote effective communications among these working in or affected by biotechnology, and to increase awareness among governments, industry and universities as to the potential economic benefits of biotechnology.

Council is also focussing on two particular areas of biotechnology application -- the pulp and paper industry and agriculture. As background for a workshop held in February 1984, Council prepared a paper summarizing research, applications and pilot projects in the pulp and paper industries. In the field of agriculture, Council is examining the sector's ability to apply the results of biotechnology research. As part of this examination, Council published a manuscript report on biotechnology in the seed industry.

Information Technology and Personal Privacy: The Science Council, together with the Canadian Institute for Advanced Research, sponsored a conference on robotics and artificial intelligence in Ottawa, in March 1984. The conference, on "Machines that Think, Sense and Act and Their Applications", brought together people from a variety of disciplines, including electrical and mechanical engineers, psychologists, physiologists, and computer scientists, who have an interest in various aspects of information technology. A conclusion of this and previous conferences is that, while Canadian researchers have proven themselves capable of demonstrating world-class ability in research in artificial intelligence, Canada may fall behind if this endeavour is not more fully financed and supported.

Council organized a workshop on information technologies and personal privacy in Canada in the fall of 1984. The information privacy protection aspects discussed included a review of the increased use of computer-based systems to store and process personal information and resulting privacy issues. The electronic funds transfer was discussed, and in particular the new set of privacy implications and transactions by electronic means.

Science and Technology Infrastructure: A nation's science and technology infrastructure is composed of all the elements which contribute to the research, development and application of science and technology. Council has undertaken a number of studies related to science and technology infrastructure, but is now placing increased emphasis on this area, because of the recognition of the importance of research and development work to economic competitiveness. The following is a summary of Council programs in this area.

The University Sector: Academic institutions have always been a major contributor to science and technological development in industrial countries, both in terms of the research carried out within them, and their role in preparing the skilled graduates required by industries and governments in a technological world. Council is currently defining the terms of reference of a program of study which would focus on universities.

The study will focus on the role of universities in achieving national goals, and how links between governments and universities can be improved to make R&D efforts more mutually supportive. Specific terms of reference and priorities for the study, expected to take about two years, are to be decided by the Council in 1984.

Science Counsellor Network: Council recommended expanding and strengthening the present science counsellor network which is used to raise domestic awareness of international science and technology (S&T) activities and to promote technology transfer. Council suggests increasing the present science counsellor staff at all locations, especially in London, Washington, Tokyo, and Bonn, as an initial step in expanding the system to five new locations — San Francisco, New York, Northern Europe, Southern Europe, and East Asia. Council further emphasizes the need for the science counsellors to have more interaction with industry. Small and medium-sized enterprises (SME) are looking more and more to science counsellors not so much for detailed technical information, as for the counsellors' knowledge of the host country and policies that could have an impact on them.

The Science Council examination of the science counsellor system was carried out as follow-up to a November 1983 seminar sponsored jointly by Council and the Department of External Affairs.

The Impact of Technology on Society and the Environment: The dramatic pace of science and technology developments presages equally momentous changes for human society and the environment. The introduction of new technology generally has an impact not only on an immediate region, industry or group, but, through ripple effects, its impact can be very broad. Such issues as labour, health, privacy, ethics and others are often influenced by new technology. And the impact of technology on the quality of air and water, animal and plant populations, new biological forms, and other issues are among the environmental factors which must be addressed.

Increasingly, social conscience demands that major applications of new science and technology be planned in such a way as to maximize their benefits and minimize potential disruptive effects. As the influence of technology becomes more pervasive, its impact on society and the environment must be constantly monitored and addressed in terms of policy. This requires a broad and continuing program of research, analysis and study.

The Science Council has a number of current programs related to the impact of science and technology on society and the environment, and a description of these follows.

Toxicology and Epidemiology: Council is initiating a study to assess the status of toxicology and epidemiology in Canada. The initial phase of the study, currently underway, is to determine the terms of reference of the research project and identify and engage experts in the field to carry out the work. One of the aims of the project is to assess the success with which Canada incorporates risk analysis in the policy making process.

Environmental and Occupational Standards: A project of Council is to review several existing regulatory standards dealing with human health and the environment with the goal of establishing the solidity of the basic sciences supporting them and the effectiveness of the processes whereby they were established. Since Council considers it very important that there be public confidence around any standard, the overall focus of the study will be the evaluation of this regulatory process with particular emphasis on standard setting and the quality of science underlying such standards.

Communication: One of the fundamental roles of the Science Council of Canada is its requirement, under the Act, to increase public awareness of the developments and effects of science and technology generally, and of its findings and recommendations on specific issues. Indeed, in view of the fact that Council is an advisory body, the effectiveness of its work is directly dependent on its effectiveness in communication. The dissemination of information, and wide ranging discussion and analysis of science and technology issues are prerequisites to changes in policy direction. A particular concern is that of providing information to and stimulating discussion among the key science and technology sectors in society — governments, industry, and universities. But many other sectors also have an interest in or are affected by science and technology developments, and it is incumbent on the Science Council to provide as broad a distribution as possible of its information and policy studies and recommendations.

The Communication Division within the Science Council is developing and implementing a communication program to fulfill the above requirements.

One of the principal tasks of the division is to publish and disseminate major research reports, summaries and background papers generated as a result of Council's ongoing work. In the past few years, the distribution of Council publications has increased dramatically, as Council had endeavoured to reach a wider audience. Whereas Council reports were very often previously distributed to only several hundred individuals, now the distribution for any given publication is many thousand carefully selected individuals. Most importantly the material that is distributed is tailored to meet the needs and interests of each target audience. Apart from the value of disseminating information to more key people in the science and technology community, the increased circulation of material in different forms has enabled Council to carry out its catalytic role effectively.

In addition, Council plans to continue to engage in a number of other communication activities designed to increase awareness among a broader public as well. Among these are:

- a highly-successful newsletter "In Touch", a regular publication describing Council's research program and its other activities, written and presented in a way which is both informative and appealing to a non-specialist audience;

- a variety of corporate literature such as pamphlets and booklets, many of which provide an easily-accessible summary of major Council reports, studies and programs;

- exhibitions and displays which draw attention to relevant themes and which are seen by thousands of Canadians across the country;

- articles, stories and inserts in Canadian newspapers and magazines; and

- the Annual Report, required by the Act, which provides a yearly review of all major Council programs and activities.

Any successful communication program cannot consist merely of a one-way information flow. Council intends to continue to encourage and actively seek feedback from the public through its regular meetings, workshops and seminars, which it undertakes on its own or in cooperation with other organizations, and through written communication from members of the specialist and general publics.

3. Program Effectiveness

To date, Council has monitored its program effectiveness on a continual informal basis.

For example, Council actively promotes the exchange of ideas and criticism of its proposals. It has organized meetings, workshops and conferences that bring together representatives of government, industry, labour and the universities. Such meetings help to diffuse the results of Council's research and provide an avenue for reaction to Council's work and recommendations. Council is also using its bi-monthly newsletter to encourage reaction from readers by enclosing a mailback card inviting readers to express their opinions.

Assessment of reaction to Council's ideas is an integral part of evaluation. The comments of participants in follow-up meetings are reviewed as a means of refining Council's recommendations. The Chairman travels frequently to talk to people in industry and universities, to learn about their work and to hear their views on science and technology issues. In addition, the Chairman, Council members, and staff are frequently invited to make speeches and discuss policy issues. In this way Council has enhanced its usefulness as a catalytic agent and helped raise the profile of science and technology in Canada.

4. Resource Justification

During the fiscal year, Council's program may be described in terms of its operational tasks in the areas of research and communication, which account for the majority of resources requested in 1985-86.

Figure 5: Research Project Commitment, ($000)

Program	Resources		Outputs
	$	P-Y	
Policy Research and Development			
1. Council	108	0	- selection of Policy Research Studies. - evaluation and approval or modification of analysis and recommendations. - feeding in regional and sectoral concerns. - communication of Council findings at regional and sectoral levels.
2. Research	2,297	28	- development of science policy and stimulation of national discussion about it (see p. 14). - intensification of a two-way linkage between decision makers and the science and technology community (see p. 18). - identification of emerging science and technologies which are potentially strategic to future economic and social development in Canada (see p. 13).
3. Communication	1,062	16	- improved public awareness of what are considered to be major issues in science and technology (see p. 19). - follow-up on Council's policy reports with people of diverse interests and different views in a non-political forum (see p. 19). - dialogue between various sectors of Canadian society, particularly between industry, government and universities, and between the traditionally isolated cultures of natural science, and the humanities and social sciences (see p. 20). - editing, translation and production of all Council publications.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 6: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and Wages	2,674	2,602	2,418
Other personnel	374	338	349
	3,048	2,940	2,767
Goods and Services

Capital	37	30	31
Total expenditures	4,957	4,847	4,582

2. Personnel Expenditures

Figure 7: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provisions
	85-86	84-85	83-84		
Executive	6	6	6	50,350-96,300	71,228
Scientific and Professional	18	18	17	19,782-67,720	50,965
Administrative and Foreign Service	24	21	22	12,766-57,987	33,985
Technical	4	5	5	12,635-57,764	30,710
Administrative Support	16	17	17	12,636-31,946	22,360

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

1985–86 Estimates

Part III

Expenditure Plan

3923

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Secretary of State

3927

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

There are five chapters in this document. The first provides an introduction to the Department. The other four present the Program Expenditure Plans for each of the Department's Programs.

Chapters 2 to 5 begin with extracts from Part II of the Estimates for the particular Program being described. This is to provide continuity with the other Estimates documents. Also included are extracts from volume II of the Public Accounts (Official Languages Program only). These are provided as an aid in assessing the Program's financial performance over the past year.

With the exception of the Education Support Program, each of the Program Expenditure Plans is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

The Plan for the Education Support Program is divided into two sections. Section I presents an overview of the Program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides the same information provided in Section III of the other Program Plans.

This document is designed to permit easy access to specific information that the reader may require. A general table of contents lists the various chapters, and detailed tables of contents are provided for each Program. Within Section I of each Program Expenditure Plan, a financial summary provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Departmental Summary

3931

Roles and Responsibilities

The mandate of the Department of the Secretary of State is to contribute to the development, among present and future Canadians, of a sense of belonging to the nation by permitting them to grow freely in a multicultural society within a bilingual framework.

Departmental Organization and Programs

The Department, as part of the Social Development Envelope, fulfills its mandate through four Programs:

- Administration and Regional Operations;
- Official Languages;
- Education Support; and
- Citizenship and Culture.

These Programs converge on the mandate by addressing the principal elements of Canadian society. Their aim is to stimulate the dialogue between the federal administration and the various components of society while providing them with financial and technical support.

Administration and Regional Operations Program: This Program provides overall management direction, policy coordination and a full range of management support systems and services as well as the management of a network of regional and local offices across the country.

Official Languages Program: This Program contributes to increasing the appreciation and use of both official languages in Canada. Each province and territory receives assistance for the development and provision of education in the language of their official language minority communities and for providing Canadians with the opportunity of learning their second official language; official language minority communities receive assistance for their institutions and organizations; private and non-federal public institutions and organizations are assisted in providing services to the public in both official languages; and the federal government and its institutions are provided with translation and interpretation services.

Education Support Program: This program provides support and financial assistance to the post-secondary educational system in various ways so that Canadians who wish to do so can further their education. Fiscal payments to the provinces are intended to strengthen the capacity of the post-secondary institutions; loans under the Canada Student Loans Program assist students in financial need; Canadian educational interests are represented internationally in collaboration with the Department of External Affairs; and a continuing effort is made through policy coordination and development to provide the best methods of federal support that will give students access to post-secondary education wherever in Canada they wish to study.

Citizenship and Culture Program: This Program contributes to providing equal opportunities for participation across Canada and making available the benefits of Canadian citizenship to all residents of Canada. Youth, natives, women and other disadvantaged groups receive assistance to further their growth and development; federal activities to improve the status of disabled persons are co-ordinated; cultural groups receive assistance to enable them to participate more fully in society; multicultural activities which reflect Canada's cultural and racial diversity are supported; human rights organizations receive assistance to participate more fully in society; and Canadians receive assistance to increase their knowledge and awareness of Canada.

Organization

The Secretary of State Department is headed by the Secretary of State, the Minister of State for Multiculturalism and the Minister of State for Youth who are responsible to Parliament for their respective activities of the Department. Figure 1 represents the relationship between the Department's organizational and Program structures.

Figure 1: Secretary of State Organization

Departmental Spending Plan

A summary of the Departmental Spending Plan is shown below.

Figure 2: Financial Summary by Program ($000)

	Estimates 1985-86	Forecast 1984-85	Change $	Change %	For Details See Page
Administration and Regional Operations	35,139	35,151	(12)	-	2-6
Official Languages	334,255	323,273	10,982	3	3-7
Education Support	2,555,930	2,442,722	113,208	5	4-7
Citizenship and Culture	168,280	204,425	(36,145)	(18)	5-8
	3,093,604	3,005,571	88,033	3	

Statutory items account for approximately 83% of the department's expenditures.

Departmental Priorities

The objectives and priorities of the federal government focus primarily on national reconciliation, economic renewal and social justice. In order to achieve this result, the federal government continues to place particular importance on economic growth and development.

The achievement of the objectives and priorities of the Department of the Secretary of State are closely related to, and dependent upon, the continuation of the present rate of economic recovery during the current planning period.

The Department will continue to pursue its mandate of "enhancing Canadians' sense of belonging to Canada". The Department will therefore:

- with the support of both provincial governments and voluntary organizations, continue to implement, assist and support official language minority rights;
- undertake constructive, meaningful dialogues with both the provinces, and the education and business sectors, in order to effectively review post-secondary education agreements;

- extend human rights through application of the Canadian Charter of Rights and Freedoms;

- provide support and assistance to youth, women, natives, the disabled, and ethnocultural groups to enable them to participate on a fair and equal basis in Canadian Society; and

- maintain support for and consultations with the voluntary sector in order to allow it to reach its optimal potential and development.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $32,025,000 in support of the 1985-86 Administration and Regional Operations Program. The remaining expenditures, estimated at $3,114,000 for contributions to employee benefit plans and the Minister's salary and motor car allowance will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates

Section I
Program Overview

A. Highlights

The key results expected from the Program in 1985-86 will be the continuing provision of a full range of management support systems and services to Departmental programs, as well as the continuing management of the direct service activities in the regions.

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Regional Operations	9,977	9,625	352	2-11
Administration	25,162	25,526	(364)	2-13
	35,139	35,151	(12)	
Authorized person-years	643	637	6	

Explanation of change: The financial requirements for 1985-86 are essentially the same as the 1984-85 forecast expenditures.

Explanation of 1984-85 Forecast: The 1984-85 forecast is $3.1 million or 9% higher than the 1984-85 Main Estimates of $32 million (Extracts from Part II of the Estimates, page 2-4). The difference reflects the following major Supplementary Estimate items:

	$ millions
• human (20 P-Y) and financial resources provided for the new office of the Minister of State for Youth, and the Communication Directorate	1.2
• human (13 P-Y) and financial resources provided for the decentralization of the Quebec Regional office	0.7

- human (3 P-Y) and financial resources provided for the Canada Student Loans Program systems computerization project 0.9

C. Background

1. Introduction

The Department's Administration and Regional Operations Program provides overall management direction, policy coordination, advice and a full range of management support systems and services to the operating programs of the Department of the Secretary of State, both in Headquarters and in the regions. These support services provide management policies, systems and services to permit efficient and effective program delivery.

2. Legal Mandate

The mandate for the Administration and Regional Operations Program is based upon the statutory authority granted to the Secretary of State of Canada for the management and direction of the Department pursuant to subsection 2(2) of the Department of the Secretary of State Act, R.S., C77, S.1.

3. Program Objective

The objective of the Administration and Regional Operations Program is to ensure, jointly and individually, with equity, the economical, efficient, effective and accountable realization of the Department's objectives and priorities, in a spirit of service to the public; and to contribute to enhancing Canadians' sense of belonging to the country in each region.

4. Program Organization for Delivery

Activity Structure: The Administration and Regional Operations Program comprises two activities: Administration and Regional Operations.

Organizational Structure: Five senior managers of the Department are responsible for delivery of the Administration and Regional Operations Program. The organizational structure and the resources associated with each area are depicted in Figure 2. The five senior managers and their responsibilities include:

Assistant Under Secretary of State, Management Practices: is responsible for ensuring the development and maintenance of an integrated management process that responds to departmental and governmental needs; coordinating planning and management information systems; ensuring the review of management practices and procedures

and advising managers on related issues; controlling departmental assets; ensuring the provision of financial services to permit efficient and effective management of resources, and administrative and legal services in support of departmental programs. The incumbent of this position is also responsible for the Administration Activity in terms of the setting of priorities, approval of operational and work plans, allocation of budgets and the monitoring of progress against plans for all responsibility centres in the Activity, including Personnel, Corporate Policy and Public Affairs, and Evaluation and Audit which are within the Activity but which report independently to the Under Secretary.

Assistant Under Secretary of State, Corporate Policy and Public Affairs: is responsible for central coordination of research, the co-ordination of the department's involvement in international affairs, policy development, policy analysis and strategic planning. Additional responsibilities within the Activity include the Corporate Secretariat and the Communications Branch.

Assistant Under Secretary of State, Regional Operations: is responsible for the management and coordination of the Department's regional activities. Responsibilities also include ensuring regional concerns are taken into consideration when policy decisions are made.

Director General, Personnel: is responsible for all personnel related services.

Director General, Review: is responsible for program evaluation and internal audit.

Figure 2: 1985-86 Resources by Organization and Activity ($000)

	AUSS Management Practices*	Director General Personnel	Director General Review	AUSS Corporate Policy and Public Affairs	AUSS Regional Operations	Activity Total

* This includes the Offices of the Secretary of State, the Minister of State for Multiculturalism, the Minister of State for Youth, the Under Secretary of State and the Assistant Under Secretary of State Management Practices.

D. Planning Perspective

1. Environment

The Administration and Regional Operations Program is administered in an environment of restraint which requires more effective use of resources. The need to do more with less will place increased emphasis on the evaluation of programs and services as well as human resource management, both at headquarters and in the regions. Nevertheless, in such a climate, the Regional Operations Activity must ensure an adequate representation of the Department's interests in the regions.

The initiation or expansion of programs, as well as the emergence of complex economic and social issues, directly result in increased demands on the central services the Administration Activity provides to the Department. Further, the increased decentralization of departmental programs requires that the regional offices must continue to ensure effective delivery of services.

In the Administration Activity, central agency and other requirements also play an important role in determining the workload of its major components, chiefly Finance, Personnel and Administration. The Access to Information and Privacy legislation has for example placed considerable demands on the department.

More and more demands are being placed upon managers for sound and effective decision-making and in order to do this they require complete, accurate and up-to-date information. For the Administration Activity, this results in an increasing demand for good, comprehensive systems which are capable of providing data in a timely and cost effective manner. The systems and services areas of the Department are even further taxed due to the rapid changes in information technology and communications which are taking place. Computer applications and office automation will continue to have a significant impact on departmental operations.

2. Initiatives

Resource restraint allows little room for the initiation of new services or the expansion of current activities in the Administration Activity. Emphasis is being placed or improving existing services and making management systems more effective.

Regional Operations will be decentralizing the Quebec regional office in 1985-86 in order to provide better service to the region. The estimated cost of this expansion will be 25 person-years and $900,000 on an ongoing basis.

Section II
Analysis by Activity

A. Regional Operations

Objective

To ensure that ministerial objectives and priorities are achieved in a harmonious and integrated fashion across the country and the diversity of Canada's regions and the specificity of their needs and aspirations are well understood and integrated into Departmental orientation and activity.

Resource Summary

The Regional Operations Activity represents approximately 28% of the Administration and Regional Operations Program resources for 1985-86.

Figure 3: Activity Expenditures ($000) and Person-years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Regional Operations	9,977	192	9,625	186	8,904	194

Salary and other personnel expenditures make up 76% of the Regional Operations Activity resources. Transportation and communication expenditures account for a further 15%.

Description

The Regional Operations Activity is responsible for representing and implementing all regional aspects of the department's mandate and objectives within each region of the country and ensuring that delivery of departmental Activities is based on and appropriate to local needs and aspirations of each region. Regional Operations is the Department's focal point in each region of the country, ensures the assessment and representation of regional interests and works towards their integration in all aspects of the Department's policy and program services. Regional functions include the management of

the promotion and the granting of citizenship, including the operation of the courts of Canadian Citizenship, the management of grants and contributions awarded to local, regional and provincial groups for all departmental programs which are regionalized, the management of translation services in certain regions and the liaison function with local and provincial governments.

Performance Information/Resource Justification

Regional Operations was established as an activity to ensure an active departmental presence in each region of the country, to deliver departmental programs and provide input with the development of policies and programs that best meet the needs of each region. The resources assigned to Regional Operations are determined by the number and size of regional and local offices and citizenship courts, the number and diversity of departmental programs and the amount of program delivery activity being carried out on behalf of other Activities. It must be noted that the financial and person-year resources for the programs delivered in the regions are covered under the specific Activities to which they relate. Thus, the staff who deliver programs in the regions, who are located in the regions and who are managed on a day-to-day basis by regional managers are not accounted for in the Regional Operations Activity resource levels nor are the grant and contribution monies they award. Over the long term, the number of person-years within Regional Operations will only vary marginally with significant changes in the level or scope of Activities managed in the regions. A comparison of Regional Operations person-years to the total person-years managed by the Activity demonstrates a tendency towards a relative reduction of Regional Operations costs. Overall, efficiency of Regional Operations will thus increase as more Activities are managed regionally. Figure 4 depicts this point.

Figure 4: Ratio of Regional Operations Personnel to Total Personnel Managed in the Regions

	Projected 1985-86	Forecast 1984-85	Actual* 1983-84
Regional Operations Person-years	192	186	185
Person-years Managed in Regions	537	525	462
Percentage	35.8	35.4	40.0

* The actual utilization figures for 1983-84 have been adjusted to reflect transfers which were made in the 1984-85 Estimates in order to make the figures for 1983-84 comparable with those of subsequent fiscal years.

B. Administration

Objective

To ensure achievement of the Department's objectives and efficient and effective management of human, financial, technical and physical resources through the provision of overall orientation and executive direction and appropriate management processes, services and controls.

Resource Summary

The Administration Activity represents approximately 72% of the Administration and Regional Operations Program resources for 1985-86.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Executive	3,537	64	4,120	75	3,701	65
Corporate Policy	1,629	27	1,634	27	1,423	33
Management Policies, Systems and Services	18,015	339	17,894	329	14,969	312
Management Improvement	1,981	21	1,878	20	1,591	21
	25,162	451	25,526	451	21,684	431

Salary and other personnel expenditures make up 70% of the Administration Activity resources. Professional and special services expenditures for such services as audit, program evaluation and data processing account for a further 14%.

Description

This Activity includes four major areas: Executive, Corporate Policy, Management Policies, Systems and Services and Management Improvement.

Executive: This includes the offices of the Secretary of State, the Minister of State for Multiculturalism, the Minister of State for Youth, the Under Secretary of State and the Assistant Under Secretary of State for Management Practices.

Corporate Policy: This includes the functions of corporate policy development, strategic planning, co-ordination of departmental research and liaison and policy functions associated with federal-provincial relations and international affairs.

Management Policies, Systems and Services: This includes the development and implementation of management policies and systems and the provision of planning, management information, financial, administrative, records, library, security, computer, access to information, information-communications, corporate support, correspondence, personnel and legal services to the entire department.

Management Improvement: This includes internal audit, program evaluation and management review.

Performance Information/Resource Justification

At the Activity level, performance is shown by the ratio between the Administration Activity's person-years and operating dollars to those of the Department. Over a three year period the ratios have remained relatively constant.

Note: The person-year column displays the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

The net cost of the Administration and Regional Operations Program includes the operating costs and statutory expenditures along with the value of services provided free by other departments. These additional services include the value of accommodation provided by the department of Public Works ($2,695,000), the value of financial services provided by the Department of Supply and Services ($76,000), the value of insurance premiums provided by the Treasury Board ($432,000), and the value of services provided by the Department of Labour ($22,000).

Figure 10: Net Cost of the Program for the Year 1985-86 ($000)

	Estimates 1985-86	Add Other Costs	Net Cost 1985-86	Total 1984-85
Regional Operations	9,977	967	10,944	10,511
Administration	25,162	2,258	27,420	27,663
	35,139	3,225	38,364	38,174

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $325,118,000 in support of the 1985-86 Official Languages Program. The remaining expenditures, estimated at $9,137,000 for contributions to employee benefit plans, will be made under existing statutory authority.

Financial Requirements by Authority

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

Two major points regarding the program in the upcoming year are:

- 1985-86 is the third year of application of the three-year agreements on Official Languages in Education concluded with the provinces and territories. The forecast expenditures for the year are approximately $212 million (see page 3-22);

- to meet the Government of Canada's needs in the area of official languages, the Services Activity will translate approximately 290 million words in 1985-86. This volume has risen slightly over the forecast for 1984-85 (284 million words). The interpretation sector will provide approximately 13,300 interpreter-days, a slight increase from the figure for 1984-85 (see pages 3-30 and 3-31).

2. Financial Requirements

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Education	213,489	208,614	4,875	3-20
Promotion	29,843	27,901	1,942	3-25
Services	90,923	86,758	4,165	3-28
	334,255	323,273	10,982	
Authorized person-years	1,852	1,841	11	

Explanation of change: The financial requirements for 1985-86 are $11.0 million (3.4%) higher than 1984-85 forecasts. This difference is attributable to the following items:

	$ millions
• a net increase due to federal-provincial agreements for minority language education and second language instruction	5.0
• an increase due to general price increases	4.2
• an increase for the acquisition of word processing equipment	1.2
• an increase for Promotion of Official Languages	1.0
• a net increase due to transfer between Programs within the Department (17 P-Y)	0.7
• a net increase due to the return to the base of funds tranferred to other programs	0.5
• a net decrease for translation and interpretation contracts	(1.6)
• a decrease of 6 person-years approved for 1984-85 only for the Summer Career Access component of the 1984 Summer Canada Program	

Explanation of the 1984-85 forecast: The 1984-85 forecast is $5.6 million (1.8%) higher than 1984-85 Main Estimates levels, which are $317.6 million. The difference is attributable to the following items:

	$ millions
• Supplementary Estimates for an increase in contributions for the completion of the St. John, N.B. "centre scolaire communautaire"	1.9
• Supplementary Estimates for an increase in funds and human resources (5 P-Y) for the renewed mandate of the Promotion of Official Languages Activity	3.7
• Transfer of six person-years from Treasury Board for the Summer Career Access component of the 1984 Summer Canada Program	

B. Recent Performance

1. Highlights

The 1983-84 Expenditure Plan dealt with the Education, Promotion and Services Activities.

Education: following an agreement reached in 1983-84 between the Department and the CMEC (Council of Ministers of Education, Canada), three-year bilateral agreements were negotiated with the provinces and territories regarding assistance for:

- minority official language education and second official language instruction; and
- two national programs: the summer language bursary program and the second-language monitor program.

Promotion: the Promotion Activity finished combining its two components (Official Language Communities and Promotion of Official Languages) into one activity, which resulted in:

- a reorganization of objectives and areas of activity; and
- an administrative reorganization, including regionalization.

Services: The results of the Services Activity were as follows:

- the total number of words translated was 290 million, compared with a forecast of 288 million. Translation from one official language to the other accounted for 93.2% of this volume;
- the interpretation sector provided 13,455 interpreter-days of oral interpretation and 726 interpreter-days of sign language interpretation; and
- contract work accounted for 21.7% of total translation volume and 43.2% of interpretation volume.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Difference
Education	194,791	183,903	10,888
Promotion*	4,088	1,966	2,122
Services	82,384	81,869	515
	281,263	267,738	13,525

* These amounts do not include the Official Language Communities component which was in the Citizenship and Culture Program in 1983-84.

Following the tabling of the 1983-84 Expenditure Plan, Supplementary Estimates were approved for the Education Activity which included $425,000 for linguistic development, $650,000 for the Miramichi School-Community Centre in Newcastle, New Brunswick and $12,427,000 for the new federal-provincial agreements.

Supplementary Estimates of $2,396,000 were also approved for the Promotion Activity, subsequent to the renewal of its mandate which required budgetary increases.

Supplementary Estimates of $542,000 for translation and interpretation contracts and $690,000 for salary expenditures were approved for the Services Activity.

C. Background

1. Introduction

The federal government's official languages policy is designed to promote the equal status of the two official languages both within and outside the federal Public Service. The policy is implemented by means of various programs.

In the Secretary of State Department, the Official Languages Program provides the federal government with translation, interpretation, terminology and language advisory services to

facilitate its communications with Canadians in the official language of their choice. These services also increase federal employees' opportunities to work in their own official language.

For the private and non-federal public sectors in Canada, the Official Languages Program is designed to help Canadians appreciate the uniqueness of Canada's language status and to ensure that the equality of Canada's official languages is realized. Assistance in this regard is provided mainly in the form of transfer payments for the development of minority official language communities made to organizations active in areas such as post-secondary education, communication and culture; in the form of grants and contributions for the promotion of the official languages and the provision of varied linguistic services; and, in particular, in the form of contributions by the Official Languages in Education Program to the provinces and territories for minority official language education and second official language instruction.

Also in the Secretary of State Department, the Citizenship and Culture Program helps adult immigrants acquire Canadian citizenship and learn one of the two official languages. In addition, this Program finances some of the court challenges on sections of the Constitution relating to the official languages.

Finally, in the federal public sector, Treasury Board establishes policies and programs applicable to the entire Public Service. The Public Service Commission offers language training to government employees. The Office of the Commissioner of Official Languages monitors compliance with the policy as well as its effectiveness.

2. Legal Mandate

The mandate of the Program is based on the mandates of its three activities.

The mandate of the Education Activity derives from Cabinet decisions, Orders in Council and agreements with the Council of Ministers of Education, Canada (CMEC) and with each province and territory.

The mandate of the Promotion Activity derives from the recent Cabinet decision (July, 1983) which made the Activity responsible for providing financial and technical assistance to official language communities to promote their full participation, in their language, in the social, educational, cultural and economic life of Canadian society and to the private and non-federal public sectors to facilitate the use of both official languages and the provision of services in both languages.

The mandate of the Services Activity derives from the Translation Bureau Act (1934), the Translation Bureau Regulations (1968) and

indirectly from the Official Languages Act (1969) and the Canada Act (1982). In addition, a 1974 Cabinet decision made the Translation Bureau responsible for verifying and standardizing the terminology used in the federal Public Service.

3. Program Objective

The objective of the Official Languages Program is to foster a better appreciation among Canadians of the equal status of the two official languages and to provide Canadians with increased opportunities to participate fully, in either official language, in all aspects of their lives; thus contributing to enhancing Canadians' sense of belonging to the country.

4. Program Organization for Delivery

Activity Structure: The Official Languages Program comprises three activities, as shown in Figure 3.

Figure 3: Activity Structure

Organization Structure: The Official Languages Program has its headquarters in Hull. The Promotion and Services Activities are directed by the Assistant Under Secretary of State, Official Languages and Translation, and the Education Activity by the Assistant Under Secretary of State, Education Support. Responsibility for co-ordinating activities and the administration of some grants under the Promotion Activity is assigned to officers located in the regions. The Services Activity is decentralized and is spread out in some 90 translation sections working for Parliament and in client departments and agencies across the country. Seventy-five percent of staff of the Services Activity work in the Ottawa-Hull area. Montreal and Quebec City are the two other major centres where staff from this Activity are represented. Other sections are located in Halifax, Moncton, Toronto, Winnipeg and a number of military bases, including Lahr in the Federal Republic of Germany.

Figure 4: 1985-86 Resources by Organization and Activity ($000)

Person-Years	23	1,829	1,852

D. Planning Perspective

1. Environment

There are a number of key factors which may significantly influence the nature and scope of the Official Languages Program.

The success of endeavours relating to official languages in Canada depends in large part on the voluntary participation of non-federal sectors.

The Promotion Activity undertakes efforts designed to encourage rather than coerce the private and non-federal public sectors to accept and introduce institutional bilingualism and make Canadians more aware of Canada's linguistic duality and the use of both official languages. This is an enormous task which is affected by a number of socio-political factors, the most important being the willingness of provincial governments to provide the official language minority with services equivalent to those enjoyed by the majority; the commitment of the majority group to serve the official language minority group; the presence, the degree of concern and the claims of the minority official language group; and court rulings regarding the Charter of Rights and Freedoms and Bill 101.

These same factors affect the assistance provided to the provinces under the Education Activity to promote minority language education and second language instruction. This latter issue is one of national interest, in particular as a result of the recent patriation of the Constitution and the creation of the Charter of Rights and Freedoms, which establishes the language rights of the minority in matters of education. The objectives of the Education Activity must be achieved using the education systems of the provinces, which limits the federal government's contribution in this area.

The Services Activity is responsible for responding to requests for linguistic services from federal clients by making use of the Activity's own professionals or by awarding contracts to the private sector. Variations in the demand for services depend on two factors. Firstly, when Parliament or its committees are sitting, the demand for interpretation increases. Similarly, parliamentary activity also affects translation, especially when special committees of the House are set up. Secondly, demand is linked to the coming into effect of any new legislation, regulations or amendment to government policy either directly or indirectly related to the use of translation, interpretation or terminology services.

2. Initiatives

While the Official Languages Program does not present any initiatives for the 1985-86, it will continue implementation of previous initiatives.

3. Update on Previously Reported Initiatives

Promotion: The Promotion Activity reported one initiative in the 1984-85 Expenditure Plan: an expanded mandate. This mandate enables the two components, Official Language Communities and Private and Non-Federal Public Sectors, to offer new services.

The Official Language Communities: This component now provides a technical assistance service by which it assigns resource-persons to any non-profit organization for carrying out large-scale projects, or to set up permanent services for official language minorities. The component also provides technical and financial support to official language minority organizations for the creation of institutions these communities can support.

The Private and Non-Federal Public Sectors: This component implemented an information and awareness campaign promoting equal status for the two official languages in Canada. National and regional information plans promote understanding of and respect for the country's linguistic duality and highlight the benefits of bilingualism and opportunities to learn the second official language. Financial assistance is also provided to voluntary organizations contributing to this objective. Furthermore, the component increased

financial support for the development and implementation of institutional bilingualism.

Services: Three initiatives were reported in previous Expenditure Plans: rationalization, automation and implementation of the recommendations of an Administrative Review. All three pertain to the Services Activity.

Rationalization: Rationalization involves more rigorous screening of documents to be translated. Clients are thus encouraged to increase their ability to draft texts in the appropriate language through the use of language advisory services, and are familiarized with the cost of translation through disclosure of pertinent information. It also involves establishing priorities and setting up channels for the routing of texts by clients, as provided in the Treasury Board policies on the use of translation services. This is done in co-operation with the designated official in charge of official languages policy in each department.

A decrease in the rate of growth of total demand was one result anticipated from the rationalization measures. In the past, the rate of growth was as follows: 11.1% from 1979-80 to 1980-81, 4.8% from 1980-81 to 1981-82, and 4.6% from 1981-82 to 1982-83. Total demand for 1983-84 was 286 million words, compared with 285 million words in 1982-83, an increase of 0.35%. It is not possible to estimate what demand would have been without rationalization measures. However, the program considers the rationalisation measures as being partially responsible for the easing of demand.

Automation: Automation of operations began in 1974 and has been a major initiative of the Program since 1976-77. The Services Activity has just completed a study of the cost-effectiveness of the automated equipment in use. The study demonstrates that positive results were achieved.

Slightly over one third of the word processing stations are assigned to translators and the remainder are used by support staff. Clients benefit since they receive a finished product, which can be delivered on a magnetic-recording medium, thus reducing their costs of producing documents. In 1983-84, the activity avoided hiring an additionnal 0.4 typist person-year for each workstation used by translators.

Word processing systems used by support staff generate savings, in the form of avoided increases in staff, in the amount of 0.5 typist person-year for each workstation. Such workstations are cost-effective in less than the prescribed five-year period.

Efforts in the development of machine translation have already proven cost-effective in the translation of weather bulletins. A feasibility study, which included a field trial, concluded that it was

valid to transfer the weather bulletin translation system to a micro-computer, given the fact that Environment Canada's mainframe computer will shortly be unavailable. The micro-computer will be able to provide the service for several years until such time that volume increases may require another solution, such as transfer to a minicomputer. With regard to the Terminology Bank, the Activity has set up a development team to design and install the new TERMIUM III system which will facilitate access to terminological files and make expansion to other languages possible.

Implementation of the recommendations of an Administrative Review: This initiative was presented in the Expenditure Plan for 1984-85. All the recommendations of the review have been accepted in principle. A task force has been set up to evaluate the impact of these recommendations on the organization and operations of the activity and to develop an implementation plan. A new policy on official language freelance translation contracts was implemented and certain contracting responsibilities and person-years (22) were transferred to the Administration and Regional Operations Program in the 1984-85 Estimates.

4. Program Effectiveness

In recent years, the Program has devised performance indicators for areas where they did not already exist.

Following the recent renewal of the mandate of the Education Activity, the Program developed performance indicators pertaining to the results sought by the Activity. These results are expressed in terms of opportunities that funding provided by the Activity creates for official language minorities to be educated in their own language and for all Canadians to learn their second official language.

The indicators include the rate of participation of official language minorities in minority official language education, the rate of participation of Canadians in second official language instruction and the rate of participation of Canadians in second official language education (overall rate and percentage of school week). The Activity is currently setting up mechanisms for gathering and analysing the data needed to establish and monitor these indicators.

The Promotion Activity also developed indicators following the recent broadening of its mandate, which concerns minority official language communities and the private and non-federal public sectors. Achievement of the Activity's main result - public acceptance of the concept of linguistic duality - is measured by enrollment in second language education and instruction programs, the rate of bilingualism and official statements. Formal recognition of linguistic duality by Canadian institutions is reflected in the implementation of official languages policies. The availability of services to minority official language communities is measured by the services offered by Canadian

institutions and by the organizations particular to these communities. Future Expenditure Plans will report on these indicators.

To facilitate communications in the two official languages, the Services Activity strives for results in terms of the availability of communications tools. The effectiveness of the Activity in ensuring that such tools are available depends on the demand of its clientele, which comprises all federal government departments, and is measured by client satisfaction with the product and the turnaround time and by a methodical assessment of the quality of translated texts.

The following measures cover the Services Activity only. Translation and interpretation services account for more than 80% of the Activity's resources. Translated words are one of the main outputs contributing to the objective, which is to facilitate communication. The client's requirement is to receive a quality translation within the agreed-to delivery time. This section therefore includes measures of client satisfaction, translation quality and turnaround time.

Client Satisfaction: The Activity periodically conducts statistical surveys on client satisfaction, dealing with the accuracy with which the message was rendered, language quality, turnaround time, contact with the Bureau and layout. The vast majority of clients are satisfied, as shown by the survey findings.

Figure 5: Client Satisfaction with Translation in Official Languages (excluding the Parliamentary Sector)

Quality of Translated Texts: The Activity periodically conducts an evaluation of the quality of translations according to professional standards of accuracy in rendering the meaning and correct language usage. A representative sample of 400 translations in the official languages taken from the Bureau's overall production is assessed by a method which classifies texts in five categories ranging from A down to E. The results of evaluations conducted in recent years are presented in Figure 6. No evaluation was conducted in 1983. The 1984 results show a strong tendancy to the centre.

Figure 6: Survey on Quality of Translation in Official Languages

Source: Finished Product Operations

Translation Turnaround Time: Figure 7 shows, according to length of text, the time elapsed between the day the text is received for translation by the translation section and the day the translation is sent to the client. Data for 1984-85 will not be available before the end of the fiscal year. These figures include texts contracted out to freelance translators. Turnaround time has decreased, particularly for more lengthy texts.

Figure 7: Translation Turnaround Time

Source: Translation Data System

Section II
Analysis by Activity

A. Education

Objective

To promote, encourage and assist the development and provision of education services in the language of the minority official language community of each province or territory and education services in the second official language for all Canadians.

Resource Summary

The Education Activity represents approximately 64% of the Official Languages Program resources for 1985-86.

Figure 8: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84*	
	$	P-Y	$	P-Y	$	P-Y
Education	213,489	23	208,614	23	194,791	18

* Figure 7 provides more detail for 1983-84.

Contributions make up 99 % of the Education Activity expenditures.

Description

In March, 1983, approval in principle was obtained for a protocol between the Government of Canada and the provincial governments for minority-language education and second-language instruction. At that time, the Secretary of State announced that during the three years of the new agreements (1983-84 to 1985-86) approximately $600 million would be provided to the provinces and territories. During 1983-84, the protocol was signed and three-year bilateral agreements were concluded with each province and territory. Under the new agreements, support will be provided for four broad program expenditure categories: Infrastructure Support, Program Expansion and Development, Teacher Training and Development, and Student Support.

The new agreements also include two national programs: the Summer Language Bursary Program and the Official Languages Monitor Program.

The Government of Canada's contributions are intended to assist with the additional costs incurred in providing minority official language education and second official language instruction and may take the form of providing specific project initiatives and implementing innovative and experimental projects, establishing and supporting language training centres and teacher training institutions, as well as providing bursaries and awards to individual teachers and students. Provinces may choose between two types of financial arrangements. Under the first, provinces receive per student amounts for infrastructure support, for which they are to provide to the federal government each year information demonstrating their additional costs, and a contribution for specific projects and activities agreed to by both levels of government. Under the second type of financial arrangement, the Government of Canada and the provincial government will negotiate and agree on the manner in which all financial assistance will be provided. As in the past, separate agreements will be concluded with each of the territories. These territorial agreements will be in conformity with the provisions of the protocol.

Through Language Acquisition Development, financial assistance is provided to institutions, associations and organizations for the compilation and dissemination of information on, or the development of teaching techniques related to minority official language education and second official language instruction. This supplements the agreements on official languages in education.

The Queen Elizabeth Silver Jubilee Endowment Fund makes it possible to award scholarships each year to students at the post-secondary level so that they may continue their studies in their second official language. These scholarships (five in 1984-85) are financed from the investment income of a $300,000 fund created in 1978, and are administered by the Association of Universities and Colleges of Canada.

The staff of the Education Activity handles negotiations and follow-up with the governments of the provinces and territories and with organizations involved in official languages in education. It administers the allocation of contributions and analyses the situation in each region of the country. Finally, it collates and analyses data and prepares reports.

Performance Information/Resource Justification

Under the terms of the new bilateral agreements, the provinces and territories will provide the federal government with data to justify the allocation of resources to this Activity for expenditures made by the provinces and territories to provide education in the minority language and teach the second official language. The level of resources allocated to the Education Activity is determined by Cabinet and therefore does not directly reflect the demand in the provinces and territories.

Most of the funds go toward infrastructure support in the form of per capita payments determined by student enrollment in the minority official language and in the second language. In 1983-84, approximately $160 million was spent in this form. In addition, under special bilateral agreements, the Activity provides program expansion and development, teacher training and development and student support funding for special projects such as implementation of new programs and for assistance to teachers and students.

Figure 9 provides the breakdown for developmental programs by category for the years 1984-85 and 1985-86.

Figure 9: Contributions related to Official Languages in Education ($000) - 1985-86 and 1984-85

	Estimates 1985-86	Forecast 1984-85
Provinces and Territories	173,973	173,501
Summer Language Bursaries	9,508	8,734
Language Monitors	5,424	5,323
Language Acquisition Development	892	893
Unallocated	20,979	11,015
Saint John	-	3,769
Miramichi	1,350	4,000
Total	212,126	207,235

Each province and territory is free to determine its allocation to the various programs of the overall amount it receives, subject to the terms of the agreements. Furthermore, some programs are administered by national organizations and results are only known at the close of the fiscal year. It is therefore not possible to forecast the number of contributions or individuals receiving support for 1984-85 and 1985-86 or to include this information in Figure 9.

The amounts paid in the form of contributions by the Education Activity for recent years appear in Figure 10. The breakdown is by province and by category of support for the developmental programs.

Figure 10: Contributions Related to Official Languages in Education ($000) - recent years

Province or Territory	1983-84*	1982-83	1981-82	1980-81

1982-83	6,063	1,943	243	6,491	1,005	15,745

B. Promotion

Objective

To encourage and assist minority official language communities at the national, provincial and community levels, in establishing and maintaining their institutions, in developing effective organizations, and in participating in their language in the social, educational, cultural and economic life of Canadian society; and to promote the equal status of the two official languages and assist Canadians and their institutions in its achievement.

Resource Summary

The Promotion Activity represents approximately 9% of the Official Languages Program resources for 1985-86.

Figure 12: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84*	
	$	P-Y	$	P-Y	$	P-Y
Promotion	29,843	53	27,901	42	26,633	31

* These totals include expenditures for the Official Language Communities component which were not accounted for in this Activity in 1983-84 as it was then part of the Citizenship and Culture Program.

Contributions make up 89% of the Promotion Activity's expenditures.

Description

The aim of the Promotion Activity is to promote the equal status of the two official languages among Canadians; to provide financial and technical assistance to organizations seeking equal status for the two official languages and the adoption of bilingualism policies; and to provide financial and technical assistance to institutions, companies and organizations in the private and non-federal public sectors so that they can set up institutions and offer services in the language of minority official language communities.

The Promotion Activity works to achieve this aim through the official language communities and the private and non-federal public sectors. Promotion initiatives come under four components: awareness, bilingualization, institutionalization and access to services.

Awareness: The aim of the first component is to make Canadians aware of the equal status of the two official languages. This is achieved by means of a regionalized information campaign promoting understanding of and respect for the country's linguistic duality and highlighting the social, cultural and economic benefits of bilingualism and opportunities for Canadians to learn their second official language; and by means of financial and technical assistance to groups that encourage acquisition of the second official language and associations working to promote the equal status of the two official languages and to promote Canada's official languages policy abroad.

Bilingualization: The second component seeks to win acceptance by Canadian institutions of the concept of two official languages. To that end, the Activity provides financial and technical assistance to voluntary organizations that promote and call for recognition of the language rights of minority official language communities and to non-profit private-sector organizations that wish to adopt an official languages policy and officially recognize the concept of linguistic duality.

Institutionalization: The aim of the third component is to facilitate the development of institutions that are accessible to minority official language communities. This is done through financial and technical assistance to non-federal public institutions and non-profit private-sector organizations to enable them to expedite delivery of services in the language of minority official language communities by means of new initiatives and existing programs, and to minority official language communities to enable them to set up institutions that they can maintain themselves.

Access to Services: The fourth component seeks to facilitate access by minority official language communities to services in their language where such services are unavailable. Financial and technical assistance is provided to voluntary organizations in minority official language communities so that they can offer services in their language that are not available from a Canadian institution.

Performance Information/Resource Justification

Financial assistance available under this Activity takes the form of grants/contributions to non-profit organizations and contributions to non-federal public administrations.

Technical assistance takes the form of loans of resource-persons (from the Department or other government agencies) to non-profit organizations and non-federal public administrations wishing to provide permanent services in both of Canada's official languages and/or carry out major projects requiring specialized skills to meet the objectives of the Promotion Activity. Technical assistance is also provided in the form of a consultation service for any Canadian citizen or organization wishing to obtain information or professional and technical resources pertaining to official languages.

Figure 13: Grants and Contributions Made by the Promotion of Official Languages Activity ($000)

Nature	1985-86		1984-85		1983-84	
	Number of organizations	Estimates	Number of organizations	Forecast Expenditures	Number of organizations	Actual * Expenditures
Awareness	..	728	..	500	..	249
Bilingualization	..	10,281	..	9,918	..	9,722
Institutionalization	..	6,851	..	3,924	..	912
Access to Services	..	8,597	..	10,861	..	14,393
Total	714**	26,457	688**	25,203	676**	25,276

* Includes expenditures of $21,561,150 by the Citizenship Development Activity in 1983-84 which are not accounted for in the 1983-84 Public Accounts for the Official Languages Program.

** The breakdown by category is not shown because some organizations receive assistance in more than one category.

The resources allocated to financial and technical assistance under the Promotion Activity are determined by Cabinet. The following factors will affect the success of the Activity: the difficulty of developing a concerted federal approach to official languages outside the Public Service; the amount of detail in the plans and approaches devised in response to the needs and opportunities in each province or region; and the number of priority areas and projects in which the Promotion Activity is involved.

3383

C. Services

Objective

To facilitate communication in both official languages within the federal public service and between the public service and the general public; to contribute to linguistic development at the national and international levels and to help Canadians benefit from this development.

Resource Summary

The Services Activity represents approximately 27% of Official Languages Program resources for 1985-86.

Figure 14: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84*	
	$	P-Y	$	P-Y	$	P-Y
Services	90,923	1,776	86,758	1,776	82,384	1,806

* Figure 2 provides more detail for 1983-84.

Salaries and other personnel expenditures make up 78 % of the Services Activity resources.

Description

This Activity comprises four components: Translation; Interpretation; Linguistic Services; and Program Services.

Translation: This component undertakes the translation of texts which cover all fields of government endeavour. The workload, which fluctuates constantly throughout the year, is distributed among the Bureau's own teams of translators and among freelancers or translation firms when there is a sudden influx of requests, large or specialized texts, or as required to ensure cost-effectiveness.

The component is divided into three services: parliamentary services; services to departments; and multilingual services.

Parliamentary services maintains specialized teams of more than 100 translators to meet the special needs of this client. The

turnaround time for House of Commons and Senate debates is not more than three hours and parliamentary committees can count on a turnaround time of 12 to 72 hours, depending on the level of priority of the text.

Services to departments serves more than 150 federal departments and agencies, most of which are located in the National Capital Region. In addition to teams of translators working in some 50 client departments, there are also central services for general translation to handle the overflow, as well as specialized teams.

Multilingual services provides translation in some 60 foreign languages. About half of the words produced annually are translated by in-house translators working mainly from German, Russian or Spanish toward French or English. Texts are contracted out to freelancers mainly when the volume of work, the language or the specialized nature of the text makes this necessary.

About 22.8% of the workload will be contracted out in 1985-86. Assignments are distributed equitably among the various regions of the country, based on the competence, specialization and availability of freelancers.

Interpretation: This component has provided oral interpretation since 1959 to the Canadian Parliament (the Senate, the House of Commons and their committees) to permit debates in both official languages. Interpretation is also available to the Judiciary and for government conferences, including those at which official and foreign languages are spoken.

In the fall of 1979, a new sign language interpretation service was set up to help federal public servants communicate more effectively with the 200,000 Canadians who suffer from impaired hearing.

The interpretation component is divided into three major services: parliamentary interpretation; bilingual conferences; and multilingual interpretation. Interpretation is provided by about 60 interpreters and 20 translator-interpreters, most of whom are trained internally. Approximately 44% of the total interpreter-days will be provided by freelancers.

Linguistic Services: Linguistic Services are divided into terminology, documentation, and training and language quality. The following results are expected in 1985-86: the addition of 50,000 records to the Terminology Bank and the release of 10 new terminology publications; publication of the Style Manual; the loan of 26,000 documents and books and the addition of 9,000 publications and volumes to the collection; and the provision of 1,700 person-days of training and development to translators.

Program Services: This component comprises planning, policy development, research, monitoring of the Official Languages Program, the development of management information systems, the collection and dissemination of professional and management information designed for Program staff and a specialized public, and certain internal administrative services, including responsibility for the automation budget and the headquarters telecommunications budget and equipment maintenance.

Performance Information/Resource Justification

The allocation of resources to the Services Activity is done annually on the basis of forecasts from client departments and agencies concerning the demand for services. Such forecasts are generally indicated in their official languages plans. These forecasts are reviewed by translation unit chiefs and by the Services Activity's senior managers who then determine the workload to be contracted out or assigned to in-house translators. This workload is used to establish person-year requirements in view of productivity objectives. A performance data system makes it possible to measure productivity, calculate the unit cost of outputs, monitor the implementation of plans and check the accuracy of forecasts.

Translation: Production volume and costs appear in Figure 15.

Figure 15: Volume (millions of words) and costs ($000 and cents) Translation

	Words translated	$ current	Unit cost ¢ current	Unit cost ¢ constant
1985-86[1]	290.0	70,611	24.4	16.9
1984-85[2]	284.0	69,201	24.4	17.6
1983-84	289.8	67,012[3]	23.6[3]	17.7[3]
1982-83	290.0	64,458	22.2	17.7
1981-82	276.2	57,781	20.9	18.4
1980-81	250.4	51,082	20.4	20.4

1 Estimated
2 Forecast
3 Preliminary Data

Source: 1985-86 Multiyear Operational Plan (revised)

The implicit price index for government expenditures, as published by the Bank of Canada, was used to calculate constant dollar costs. The value of the index for 1984-85 and 1985-86 was estimated by assuming an inflation rate of 4% for each of these years.

Figure 16 provides information on productivity by person-year and shows the impact of Parliament's activities on the component. Thus, the reduced productivity in 1979-80 corresponds to the period in which two federal elections were held within a relatively short time. Similarly, the recent federal election has had an effect on the data.

Figure 16: Translation Productivity by Person-Year (000 words/P-Y)

Source: Multi-Year Operational Plan, March 1984

Interpretation: Figure 17 shows the number of interpreter-days provided by in-house services as well as freelance interpreters. The Activity's in-house interpreters also provide translation services.

Figure 17: Production (in Interpreter-Days) of In-house and Contract Interpretation Services

Source: Multi-Year Operational Plan, March 1984

The reduction in services in 1979-80 is attributable to the fact that there were two elections that year, resulting in a slowdown in Parliament's activities.

Linguistic Services: Terminology research will continue and the number of records in the Terminology Bank will be increased to 850,000. The fundamental unit of the Terminology Bank is the record, which can include several terms. Previous Expenditure Plans reported on the number of terms, but referred to them as records. This plan follows correct usage and therefore presents a lower number.

Growth is also expected in the use of the Bank, resulting in an increase in the number of records retrieved from the network as a whole. More non-official language records will be loaded into the data base as required by the multilingual services. The terminological information services will continue to answer telephone enquiries from

the private sector and Canadian and international agencies. With access to some 400 bibliographical data bases, Information and Reference Services provides on-line reference facilities and a documentary information service by telephone. The documentation service's collections are available through counter loans, inter-network loans and for consultation in the library.

Figure 18: Requests for Linguistic Services

	1985-86	1984-85	1983-84
Number of records queried	1,000,000	750,000	962,082
Number of telephone calls	45,000	45,000	39,150
Number of reference questions	40,000	40,000	37,153
Number of loans			
-counter and inter-network	24,000	24,000	23,852
-inter-library	2,000	2,000	2,341

The estimate of number of records queried is lower than in previous forecasts because of a delay in the start-up of Termium III.

Total	238,583	232,438	218,979

* These figures include the Official Language Communities component which was in the Citizenship and Culture Program in 1983-84.

B. Cost Analysis

The net cost of the Official Languages Program includes the operating costs and statutory expenditures along with the value of services provided free by other departments. These additional services include the value of accomodation provided by the Department of Public Works ($7,816,000), the value of financial services provided by the Department of Supply and Services ($221,000), and the value of insurance premiums provided by the Treasury Board ($1,244,000).

Appropriation Authority

Authority is sought in these Estimates to spend $8,569,000 in support of the 1985-86 Education Support Program. The remaining expenditures, estimated at $2,547,361,000 for post-secondary education payments to the provinces, payments in respect of Canada Student Loans and contributions to employee benefits plans will be made under existing statutory authority.

Section I
Program Overview

A. Highlights

In 1985-86 the Education Support Program will administer payments for post-secondary education to provincial and territorial governments under the Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act, 1977. Amendments made to this legislation in 1984 renamed the Act (formerly the Federal-Provincial Fiscal Arrangements and Established Programs Financing Act, 1977) and established a new escalator for federal per capita contributions to post-secondary education for 1983-84 and 1984-85, based on federal "six and five" fiscal restraint policy. The new legislation also requires the Secretary of State to report to Parliament, commencing in 1986, on federal involvement in post-secondary education.

The changes in legislation only affect the escalator for 1983-84 and 1984-85. The current legislation provides that on April 1, 1985 the escalator for post-secondary education contributions will again be based on the Gross National Product. An estimated $2.3 billion in cash payments will be contributed in 1985-86 under the Education Support Program, in addition to the $2.2 billion worth of tax transfers administered by the Department of Finance, for a total federal post-secondary education contribution of $4.5 billion.

In 1985-86, the Education Support Program will continue to administer and implement the new provisions of the Canada Student Loans Act adopted in June 1983, to extend provisions to part-time students and to provide special repayment features for unemployed former students; the cost of all programs is expected to total $270 million (see page 4-18), increasing from $229 million in 1984-85 and $179 million in 1983-84.

Two other components of the Education Support Program, the Centres of Specialization and the Statistical Development programs, were established in 1983-84 and will end in 1984-85. Proposals for future activities of this kind will be reviewed by the government during 1984-85.

B. Financial Summary

Figure 1: Financial Summary ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Post Secondary Education	2,277,000	2,179,000	98,000	4-17
Canada Student Loans Program	269,946	229,000	40,946	4-18
Centres of Specialization	-	24,545	(24,545)	4-12
Program Management and Delivery	8,984	10,177	(1,193)	
	2,555,930	2,442,722	113,208	
Authorized person-years	91	106	(15)	

Explanation of Change: The increase of $113,208,000 or 5% in the 1985-86 requirements over the 1984-85 forecast is made up of the following major items:

	$ millions
• net increase in statutory payments to the provinces under the Federal PSE and Health Contributions Act	98.0
• increase in interest payments to the lending institutions, liabilities under guaranteed loans and alternative payments to the province of Quebec pursuant to the Canada Student Loans Act	40.9
• the termination of the Centres of Specialization Program (4 P-Y)	(24.5)
• net decrease in operating budgets due to the termination of a mandate to provide for a statistical and policy analysis capacity and a reduction of 11 person-years for delivery of the interest relief component of the Canada Student Loan Program	(1.2)

Explanation of 1984-85 Forecast: The 1984-85 forecast is $263,907,000 or 12% higher than the 1984-85 Main Estimates of $2,178,815,000. (Extracts from Part II of the Estimates, page 4-4). The difference reflects the following major items:

	$ millions
• an increase in statutory contributions for post-secondary payments to the provinces	262.0
• an increase in administrative fees paid to the provinces for processing Canada Student Loan Program applications	0.9
• an increase in contributions for the Centres of Specialization Program	0.8

C. Background

1. Introduction

On behalf of the federal government, the Education Support Program makes payments to provincial and territorial governments under the Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act, 1977. Federal contributions under the Post-Secondary Education Financing Program take the form of cash payments made by Secretary of State, and a tax transfer - a reduction of federal taxes and the fiscal equalization payments associated with that reduction, as determined by the Department of Finance. The cash payments are calculated to ensure that the total transfer to each province is equal per capita. For 1983-84 and 1984-85, federal PSE transfers were limited to increases of 6% and 5% per capita, respectively.

Working in conjunction with the provinces and territories, as well as banks and other lending institutions, the Education Support Program is responsible for the administration and provision of funds for interest payments and liabilities arising from loans made under the Canada Student Loans Act. It is also responsible for alternative payments to Quebec under this Act.

The Education Support Program is responsible for the coordination and development of federal government policies and programs in the field of education. It also provides a federal focal point for communications with provincial governments, post-secondary institutions and non-governmental organizations, individually or collectively, on matters of education.

The Education Support Program also advises the Department of External Affairs on Canadian participation in international education matters and in cooperation with the provinces, through the Council of Ministers of Education (Canada), plays an active role at the international level to promote Canada's interests in this area.

The Education Support Program, as the focus of the Department's role in the education field, also provides executive direction for the Official Languages in Education Activity and the Canadian Studies component of the Canadian Culture Activity. The Official Languages in Education Activity provides financial assistance to provincial and territorial governments to encourage opportunities for education in the minority official language in each province or territory and for Canadians to acquire a knowledge of their second official language. The Canadian Studies component offers support to activities aimed at promoting opportunities for Canadians to learn more about their country.

2. Legal Mandate

The acts and other authorities which are the basis for the Education Support Program are:

- Part VI of the Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act 1977 (as amended on April 7, 1982 and on June 7, 1984); and
- Canada Student Loans Act (as amended September 1, 1983).

3. Program Objective

The objective of the Education Support Program is to support Canada's cultural, social and economic development through federal education policies and programs which contribute to strengthening Canada's post-secondary education system capacity, and which respond to individual aspirations of Canadians and to the needs and opportunities of Canadian society, thus contributing to enhancing Canadians' sense of belonging to the country.

4. Program Description

The two major components of the Program are:

- Post-Secondary Education Financing Program; and
- Canada Student Loans Program (CSLP).

Post-Secondary Education Financing Program: The Post-Secondary Education Financing Program is one of the three established programs financed under Part VI of the Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act, 1977. Under this Act, the federal government makes contributions to provincial and territorial governments for the financing of Medicare, Hospital Insurance and Post-Secondary Education. These contributions take the form of cash payments and tax transfers.

The cash payments are administered by the Secretary of State in conjunction with the Minister of Finance. The value of the cash and tax transfers is calculated by the Department of Finance.

Canada Student Loans Program: The Canada Student Loans Act came into force on July 28, 1964. Its purpose is to make financial help available to students who require assistance to carry on both full-time and part-time studies at the post-secondary level of education. The Act also permits a province to operate its own program of loans and to receive an alternative payment related to Canada Student Loans Program costs (Quebec has chosen this option since the inception of the Canada Student Loans Program).

Under the program, the federal government guarantees loans made to students by chartered banks and other designated lenders on the basis of Certificates of Eligibility (loan authorization documents) issued by provinces participating in the program. The government pays the interest on these loans while the students continue full-time studies and for six months afterwards.

The Canada Student Loans Act establishes the total amount which may be loaned in the base year and provides an escalating formula. This total amount is allocated among the provinces in the same relationship which the 18-24 age group in a province bears to the same age group in Canada as a whole.

Provincial governments are responsible for much of the important administrative work involved, including the determination of the eligibility of individual students, the assessment of students' needs, determination of provincial residency status of students and the designation of eligible educational institutions. The federal government pays a fee to the provincial governments for this service.

The Student Assistance Directorate of the Education Support Program monitors the activities of lenders in the provision of loans and processes accounts for transfer to collection agencies or the Department of Justice when necessary for the collection of delinquent accounts. It answers lenders' queries on documents and interest statements and calculates and processes for payment interest owing to lenders. It keeps records of student loans, coordinates publication activities of the program and maintains the system for designation of lenders and of educational institutions.

Although the province of Quebec operates its own student assistance program and does not issue Canada Student Loans, representatives of all provinces, including Quebec, participate in the consultative procedures, thereby assuring maximum co-ordination in the development and application of student loan facilities throughout Canada.

Changes to the Canada Student Loans Act took effect on August 1 and September 1, 1983. These amendments provide an interest relief plan for borrowers encountering difficulty in repaying their Canada Student Loans for reasons of unemployment, and where family income is below a prescribed limit, as well as for those who are temporarily or permanently disabled. On August 1, 1983, the weekly loan limit for full-time students was raised from $56.25 to $100. The weekly loan limit for full-time students was further increased from $100 to $105, effective August 1, 1984. The lifetime loan limit for full-time students was eliminated, and guaranteed Canada Student Loans were extended to part-time students. Interest on part-time loans is assumed by the borrower and not by the Government of Canada as in the case of loans to full-time students.

Other components: The funding authority for two other components, the **Centres of Specialization** and the **Statistical Development programs** ends in 1984-85.

The Centres of Specialization program was established in 1983-84 to assist universities to create a new capacity or improve existing strengths in research and human resource development. The total budget for this program for 1983-84 and 1984-85 was $25 million. The Statistical Development program was also created in 1983-84, to improve the data base for policy analysis related to post-secondary education. A sum of $3.5 million was allocated to the Education Support Program for this activity over the two year period.

5. Program Organization for Delivery

The Education Support Program consists of one activity, Education Support which is managed by the Assistant Under Secretary of State - Education Support.

Figure 2: Education Support

D. Planning Perspective

1. Environment

Public policy in support of post-secondary education is strongly affected by demand. The past two decades have been marked by large increases in post-secondary enrolments. These increases can be seen in Figure 3, below.

Figure 3: Full-time Enrolment Rates Since 1960

	Full-time Enrolment in Post-Secondary Education	Full-time Enrolment as a Percentage of the 18-24 year old population
1960-61	163,143	9.7
1965-66	273,612	13.4
1970-71	475,548	18.1
1971-72	496,800*	18.5
1972-73	513,358	18.8
1973-74	533,575	19.1
1974-75	558,191	19.3
1975-76	592,000*	20.0
1976-77	602,700*	19.9
1977-78	615,900*	19.7
1978-79	617,800*	19.4
1979-80	623,500*	19.3
1980-81	643,400*	19.8
1981-82	675,400*	20.5
1982-83	722,000*	21.7
1983-84	763,200	22.9

Source: Statistics Canada
* These figures were revised by Statistics Canada

During the period of increased growth in enrolments transfers to the provinces related to support for the post-secondary capacity and expenditures on student aid increased as well.

In the future, demand for post-secondary education will be shaped by changing economic and demographic factors. Demographic factors indicate declines during the 1980s in the size of the 18 to 24 year old population, the traditional source of post-secondary students. Taken in isolation, this suggests the possibility of falling enrolments in the remainder of the 1980s. However, there are powerful offsetting factors:

- full-time post-secondary enrolment as a percentage of the 18-24 year old population has grown sharply in the last two years. Some of the growth in this participation rate is doubtless due to high youth unemployment rates; and

- there is a longer term trend towards an increasing participation of persons outside the traditional 18 to 24 year old population group.

- As well, with respect to student assistance, high youth unemployment rates also reduce chances of students finding summer employment, thereby increasing demand for student loans. High unemployment will also create difficulty in repaying student loans and greater use of interest relief provisions.

It is difficult to assess the combined impact of these factors. Most recent projections of post-secondary enrolment have proved to be too low. The safest assumption is that demand for post-secondary education will remain high for some years and that student financial needs will also remain high.

The Education Support Program is also affected by policies and spending in post-secondary education, although the post-secondary education transfers to provinces under the present financing arrangements are not linked to provincial spending or policy. Major provincial trends or shifts must be taken into account in the review and development of federal education support policy. In the case of student aid, provincial decisions may have an important impact on the Canada Student Loans Program. Currently a number of provinces are exercising restraint in post-secondary spending. As well, some provinces are reviewing the role and structure of their post-secondary education systems.

2. Initiatives

The Program will focus its resources and efforts in 1985-86 on managing its ongoing program. Proposals to meet the new legislative requirement to report to Parliament (see page 4-16) and for a continuing Statistical Development program will be examined for possible inclusion in Supplementary Estimates 1985-86.

3. Program Effectiveness

The extent to which the Program supports Canada's cultural, economic and social development through federal education policies or is contributing to the maintenance and development of a strong and accessible post-secondary capacity throughout Canada can only be assessed indirectly and in general terms. More specifically the effect of federal transfers for post-secondary education cannot be dissociated from that of provincial programs of support to colleges

and universities.

The post-secondary capacity in Canada underwent a dramatic expansion in the 1960s and 1970s. While there are some current difficulties, more pronounced in some provinces than in others, the overall post-secondary capacity throughout the country remains strong and accessible. Recent experience in Canada compares favourably to the experience in most other countries. For example, in 1970-71, the participation rate of full-time post-secondary students relative to the 18-24 year old population in Canada (see Figure 3) was approximately three quarters of what it was in the United States. However, by 1983-84, the participation rate in Canada had increased to the point where the rates in both countries were virtually the same.

Figure 3 on full-time post-secondary enrolment and participation rates gives a good measure of overall success in building the post-secondary capacity. In 1960-61 some 163,000 students or 9.7% of the 18 to 24 year old population were enrolled in post-secondary education. In 1970-71, the enrolment had jumped to 476,000, a 190% increase. In 1983-84 it stood at 763,000, 370% higher than 1960-61 full-time enrolments and representing 22.9% of the 18 to 24 year old population.

During the later 1960s and the first half of the 1970s, federal shared-cost transfers to the provinces ensured that about half of the cost of the rapidly expanding post-secondary system was covered by federal transfer programs. In 1977 the federal post-secondary education contribution became an unconditional transfer under the Established Programs Financing arrangements. EPF and its predecessor provided a major portion of the financing of a system that underwent a large and successful expansion.

Similar conclusions hold with respect to the Canada Student Loans Program which is administered in conjunction with provincial and territorial programs of loans and grants to needy students in all provinces and territories except Quebec. (In Quebec, the provincial government administers its own student aid program and receives an alternative payment.) The combined student aid programs have been found to be generally effective in meeting basic objectives. The main indications of this, based on program experience and feedback from borrowers, are that the programs are widely used, the bulk of funds reaches students with financial needs as intended and there are relatively few cases on record of individuals being unable to pursue a post-secondary education on financial grounds alone. A number of surveys taken between 1960-61 and 1983-84 found that those who did not undertake post-secondary education, did not do so for reasons of lack of funds or any arbitrary impediment to participation. Figure 4 provides a record of the expansion of the CSLP in meeting the needs of increasing numbers of post-secondary students in Canada.

Steps have been taken towards a better identification of the

impact of the Education Support Program. In 1982, the Government of Canada announced the objectives that guide its support of education. The Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act, 1977, as amended in 1984, provides some increase in accountability by clearly separating out the health and post-secondary portions of federal fiscal transfers. It also requires the Secretary of State to report to Parliament, beginning in 1986, on federal programs in support of post-secondary education and on the contribution of these programs to Canada's educational and economic goals. These changes, together with a recent strengthening of the statistical data base related to post-secondary education, will better enable the government to monitor the achievement of its education support objectives.

Figure 4: CSLP Loans Negotiated Since 1964

Loan Year*	CSLP Loans Negotiated	Average Loan for Students
1964-65	39,248	$ 655
1965-66	48,029	721
1966-67	59,309	682
1967-68	84,419	678
1968-69	100,110	638
1969-70	113,574	688
1970-71	127,024	678
1971-72	120,147	728
1972-73	113,760	899
1973-74	117,452	926
1974-75	130,996	924
1975-76	142,735	1,040
1976-77	140,748	1,143
1977-78	114,675	1,174
1978-79	122,305	1,209
1979-80	141,827	1,205
1980-81	152,082	1,263
1981-82	161,563	1,443
1982-83	200,737	1,625
1983-84	249,715	2,319

* For the period 1964-65 to 1979-80 the loan year ran from July 1 to June 30. Since 1980-81, the loan year has run from August to July 31.

This tables illustrates the expansion of the CSL Program during a period of significant growth in post-secondary education. It is of interest to note that survey work undertaken by the Federal-Provincial Task Force on Student Assistance (Addendum to the Labour Force Survey in June, 1980) found very wide support among students, parents, and

all sectors of the public for the basic means-tested approach to student aid and the incorporation of a loan element in the overall package of student aid.

Further details on the delivery of the Canada Student Program are available in a report on the Program which is published annually.

4. Performance Information/Resource Justification

The two major components of this Program are:

- Federal PSE payments; and
- Canada Student Loans Program (CSLP).

Federal PSE Payments: The Federal PSE and Health Contributions Act specifies the method of financing federal contributions to Hospital Insurance, Medicare and Post-Secondary Education. In essence, the pre-1977 cost-sharing formula for these three programs was replaced by a formula under which federal contributions are determined independently of program costs in the provinces.

Since 1977, the formula has provided to each province or territory an entitlement equal to the national average per capita contribution in the base year (1975-76), escalated for each subsequent year and then multiplied by the population of that province or territory. Until 1983-84, the escalator was based on the rate of growth of the Canadian economy; the legislation, as amended in 1984, imposed an escalator of 6% for 1983-84 and 5% for 1984-85. The amended legislation provides that the escalator used for PSE entitlements after 1984-85 will revert to the GNP-based escalator that was in use prior to the 6 and 5 period.

The entitlement is made up of two components. The tax transfer component consists of 13.5 personal and one corporate income tax points. It is equalized to a representative average standard, under the general equalization formula, and grows with the yield of basic federal tax and corporate taxable income. In addition, Quebec receives a special abatement of 8.5 unequalized personal income tax points under the contracting-out arrangements.

The cash payment to any province or territory is the difference between the total entitlement and the value of the tax transfer. It ensures that all provinces and territories receive an equal amount per person to finance these programs.

Figure 5 below provides a breakdown of payments by province for 1983-84 and 1984-85. Payments and tax transfers in 1985-86 are expected to increase further to an estimated $4.5 billion. The final determination of the total and the distribution by provinces will depend on the factors outlined above.

Figure 5: Federal Post-Secondary Education Contributions ($000)

	1985-86[1]			1984-85[2]			1983-84[3]		
	Cash	Tax	Total	Cash	Tax	Total	Cash	Tax	Total

Yukon	1,937	2,045	3,982	1,735	1,925	3,660	1,635	1,924	3,559
North West Territories	4,769	4,265	9,034	4,280	4,015	8,295	3,959	3,767	7,726
Total	2,276,575	2,252,440	4,529,015	2,078,585	2,140,623	4,219,208	1,952,391	2,020,493	3,972,884

1 - Main Estimates calculation (09/01/85).
2 - Second Adjustment to Advance (08/01/85). As of January 9, 1985 cash forecasts totalled $2,179,000,000. The difference is due to prior years' adjustments.
3 - Second adjustment to advance (06/01/84). As of March 31, 1984 actual cash payments totalled $2,065,213,000. The difference is due to prior years' adjustments.

CSLP: The payments in any year made under the Canada Student Loans Act are dependent on a number of factors, including:

- the number of students participating;
- the number of certificates issued;
- interest rates; and
- general economic conditions.

Figure 6: Payments Under the Canada Student Loans Act ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Number of students assisted *	253,431	230,392	209,447
Interest payments	142,146	120,052	92,953
Claim payments	74,600	61,683	48,994
Alternative payment to Quebec	53,200	47,265	36,596
Total	269,946	229,000	178,543

* Represents the number of students who were issued certificates during a loan year commencing August 1, and terminating July 31.

Expenditures increased in 1983-84 over those of 1982-83 in large part because of amendments to the Act which took effect in September 1983, which resulted in an increase in the weekly loan limits for full-time loans and special repayment features for the unemployed and low level income participants. Estimated expenditures in 1984-85 ($229 million) are expected to grow by 30% over those of 1983-84 ($179 million) because the 1983 amendments will have been in effect for the full fiscal year. In 1985-86, however, expenditures are expected to grow by a more modest rate.

The Program has introduced a revised procedure for recoveries of defaulted accounts which should result in savings of approximatively $400,000 in 1985-86. Additionally, a revised procedure for processing claims made against the guarantee should result in further savings in 1985-86.

There are four major indicators of the workload and requirement for operating resources for the program organization. These are the volume of loan certificates processed, the volume of loan related documents processed through CSLP systems, the volume of claims for loss from lenders against the guarantee and the volume of recoveries on loans. Figure 7 below shows that the workload is increasing and that the number of loss claims and certificates has increased well beyond the growth rate in person-years.

Figure 7: Workload Indicators (CSLP)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83	Actual 1981-82	Estimated Growth 1981-82 to 1985-86
Loan certificates * (Full Time)	330,000	300,000	272,105	220,280	177,112	86%
Loan Certificates * (Part Time)	1,000	500	246	-	-	-
Interest Relief * Applications	30,000	20,000	7,464	-	-	-

Social Science Support	4	4	2	12,635-57,764	31,398

Note: The person-year column displays the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the current salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. **Transfer Payments**

Figure 10: Details of Grants and Contributions ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contributions			
Contributions to post-secondary institutions and voluntary organizations to create a new or expanded capacity for research and development	-	24,545	30
(S) - Post-secondary Education Payments to the Provinces pursuant to Part VI of the Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions as amended	2,277,000	2,179,000	2,065,213
(S) - The provision of funds for interest payments, liabilities and alternative payments to provinces under the Canada Student Loans Act	269,946	229,000	178,543
Total	2,546,946	2,432,545	2,243,786

B. Cost Analysis

The net cost of the Education Support Program includes the operating costs and statutory contributions along with the value of services provided free by other departments. These additional services include the value of accommodation provided by the Department of Public Works ($404,000), the value of financial services provided by the Department of Supply and Services ($12,000), and the value of insurance premiums provided by the Treasury Board ($61,000). Revenues credited to the Consolidated Revenue Fund that relate to recovery of outstanding student loans have been deducted.

Figure 11: Net Cost of the Program for the Year 1985-86 ($000)

Operating and Capital Expenditures 1985-86	Statutory and Other Contributions	Add Other Costs	Total Cost	Deduct Revenue	Net Cost 1985-86	Total 1984-85

Appropriation Authority

Authority is sought in these Estimates to spend $164,917,000 in support of the 1985-86 Citizenship and Culture Program. The remaining expenditures, estimated at $3,363,000 for salaries and pensions of Lieutenant-Governors of the provinces and contributions to employee benefit plans will be made under existing statutory authority.

Section I
Program Overview

A. Highlights

Major points regarding the Program for 1985-86 are:

- Grants and contributions to groups and organizations to further Citizenship Development are planned at $99 million in 1985-86, a decrease of $30 million from 1984-85. The coordination of federal activities and assistance to youth projects associated with the International Youth Year will be continued. The issue of the disabled will be highlighted in 1985-86 through the Department's lead role in following up on the World Plan of Action which includes the holding of a Federal-Provincial-Territorial conference early in 1985 (see pages 5-27 and 5-28).

- The mandate of the Native Communications component ends March 31, 1985. In 1984-85 this component had a budget of $3.6 million. Proposals on the future of this program component will be presented to Cabinet in 1985-86 (see page 5-24).

- The Katimavik budget is reduced by $30 million, from $49.7 million in 1984-85 to $19.7 million in 1985-86. In 1983-84 and 1984-85 supplementary budgets for special youth projects had been allocated to Katimavik for those years only. The number of participants in this program will decrease from 4,800 in 1984-85 to 1,650 in 1985-86 (see page 5-28).

- In 1985-86, the Open House Canada Program budget will be reduced by $3.6 million, from $13.7 million to $10.1 million. Consequently it is estimated that the number of participants will decrease by 7,300, from 26,000 in 1984-85 to 18,700 in 1985-86 (see page 5-27).

- Citizenship will be granted to an estimated 125,000 individuals, permanent residents who meet the requirements of the Citizenship Act; proofs of citizenship status will be provided to 45,000 Canadians. A relatively large number of immigrants from the late 1970's and early 1980's as well as recent refugee movements, particularly from Southeast Asia, have resulted in an increase in citizenship applications in 1984-85. This momentum is expected to be maintained in 1985-86 (see page 5-18).

- In 1985-86 the fees for applications in respect to grants and proofs of Canadian citizenship will be raised from the current levels. It is estimated that this increase will raise additional revenues of $1.1 million (see page 5-51).

- In 1985-86, Multiculturalism Canada will continue to address the key issues of race relations, multiculturalism in education, immigrant women and cultural retention, while increasing the focus on institutional adaptation to Canada's multicultural and multiracial reality as recommended by the Special Parliamentary Committee on the Participation of Visible Minorities in Canadian Society (see page 5-15).

- In the area of Cultural and Academic Resources, an additional $1 million was approved through Supplementary Estimates in 1984-85 for the establishment of additional academic Chairs of Study which will focus on particular themes relating to cultural pluralism such as race relations, and for academic research. In 1985-86, two Chairs of Study, one of which will be thematic, will be established at Canadian universities (see page 5-35).

- Human Rights will continue to be a departmental priority in the post Charter period with emphasis in 1985-86 on the promotion of greater awareness of rights among children, youth, the private and labour sectors and disadvantaged groups whose rights are most threatened. Moreover, a Conference of Federal-Provincial-Territorial Human Rights Ministers is scheduled to be held in April 1985 (see page 5-44).

- The mandate of the Court Challenges component ends March 31, 1985. This program, to which $200,000 was allocated in 1984-85, is currently under review (see page 5-43).

- The enhanced Canadian Studies program which began in 1984-85 will provide $2.9 million in grants and contributions to support Canadian Studies projects under 12 separate categories of support (see pages 5-37 and 5-38).

B. **Financial Summary by Activity**

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Citizenship Registration and Promotion	17,854	17,758	96	5-17
Citizenship Development	112,223	143,527	(31,304)	5-21
Multiculturalism	24,349	26,604	(2,255)	5-30
Canadian Culture	11,589	14,088	(2,499)	5-36
Human Rights	2,265	2,448	(183)	5-40
	168,280	204,425	(36,145)	
Authorized person-years	626	659	(33)	

Explanation of change: The financial requirements for 1985-86 are 18% or $36.1 million less than the 1984-85 forecast expenditures. This decrease is primarily a result of the following:

	$ millions
• decreased funding in the Katimavik program	(30.0)
• a decrease due to the expenditure and program review announced in November, 1984	(9.7)
• decreased funding for activities related to International Youth Year	(2.5)
• a decrease due to the transfer of the Official Languages Communities Program to the Promotion of Official Languages Activity (15 P-Y)	(0.7)
• a decrease due to the completion of the celebration of the 450th anniversary of the arrival of Jacques Cartier, the Ontario and New Brunswick bicentennials and other State Ceremonial events (2 P-Y)	(4.5)
• a decrease of 16 person-years due to the end of the 1984-85 Summer Students program	(0.2)

- an increase due to the return to the 1985-86 reference level of the reductions that were introduced in 1982-83 to fund other government priorities 4.3

- an increase for the renewal and enrichment of the Women's Program 3.4

- an increase in transfer payments for increased assistance to Native Citizens 3.1

- an increase for the purchase and distribution costs of the Canadian Encyclopedia 1.4

- an increase for price increases in transfer payments 0.9

Explanation of 1984-85 Forecast: The 1984-85 forecast is $24.0 million or 13% higher than the 1984-85 Main Estimates of $180.4 million (Extracts from Part II of the Estimates, page 5-5). The difference reflects the following major Supplementary Estimates items:

	$ millions
• an increase for International Youth Year projects and for co-ordination functions for the Minister of State for Youth (30 P-Y)	8.2
• an increase for the renewal and enrichment of the Women's Program (18 P-Y)	6.9
• increased assistance to Native Citizens	1.9
• an increase for the extension and enrichment of the Canadian Studies mandate (9 P-Y)	3.7
• a transfer of 16 person-years from Treasury Board for the 1984-85 Summer Students program	0.2

C. Background

1. Introduction

The Citizenship and Culture Program was created in 1983-84 by consolidating activities already carried out within the Department. The Program contains five activities designed to assist individual Canadians, organizations and groups to participate in and enjoy the benefits of Canadian citizenship. These five activities are: Citizenship Registration and Promotion, Citizenship Development,

Multiculturalism, Canadian Culture and Human Rights. The intervention of the Program relies heavily on voluntary action and citizen involvement through activities undertaken by specific groups of Canadians. A large part of its resources is devoted to assisting these groups to help themselves in order to improve their own development and their participation and involvement in the development of the country.

The Program shares with the Official Languages Program and the Education Support Program the common goal of promoting a sense of belonging to Canada. It relates to the Official Languages Program in that it assists the beneficiaries of its five activities to acquire one official language (individuals and small voluntary groups), to offer services in both official languages (national voluntary organizations) and to promote and defend linguistic rights (Human Rights and Court Challenges). It relates to the Education Support Program by assisting in the development of learning materials which are used in educational institutions (Canadian Studies), by assisting disadvantaged citizens in identifying and expressing their needs and interests with respect to education (Citizenship Development, and Multiculturalism) and by promoting the rights of disadvantaged Canadians to have access to education (Human Rights and Citizenship Development).

The Program relates in different ways to a large number of federal departments and agencies. For example, a single component like the Women's program, which provides basic and direct assistance to women's groups and organizations in Canada, relates to the actions of Status of Women Canada (which is in charge of international and national relations and federal coordination), the Public Service Commission (which is responsible for the employment of women within the public service), the Treasury Board Secretariat (which is responsible for establishing policies and procedures with respect to affirmative action), Employment and Immigration (which is responsible for encouraging affirmative action outside the federal government) and various other federal departments and agencies which deal with women's groups and voluntary organizations receiving assistance from the Women's program. Similar relationships with various federal departments and agencies exist for other activities or components of the Program; for example, the Native Citizens component relates to the activities of Indian and Northern Affairs, National Health and Welfare, the Public Service Commission and Treasury Board; others, such as Human Rights, Youth and Disabled Persons have interdepartmental coordination mandates which specify their action as well as enlarge their relationships with other departments.

Constant attention is paid to avoid any undue overlapping of mandates and actions. The main mechanisms to ensure this are: continuous interdepartmental consultation; the scrutiny of central agencies particularly with regard to new initiatives, budgets or program renewals; program evaluations; and various audits by the

Department itself, and by the Auditor General.

2. Legal Mandate

In addition to the Department of the Secretary of State Act, the legal mandate of the Program is based upon mandates of its individual activities.

- The mandate for Citizenship Registration and Promotion derives from the Citizenship Act 1974-75-76 and Citizenship Regulations (PC. 1977-218). The Citizenship Development mandate is based upon several Cabinet Decisions and Orders in Council covering Native Citizens and Citizens Participation, including youth participation.

- The youth mandate was expanded in 1983 when Cabinet assigned the Secretary of State responsibility to coordinate the International Youth Year. In 1984, by Order in Council, a Minister of State for Youth was appointed under the Ministers and Ministries of State Act.

- In 1977 the Secretary of State was assigned responsibility to coordinate a federal-national voluntary organization consultation. Since that time the Secretary of State has been the minister responsible for voluntary action in Cabinet; this role derives in part also from the mandate on Citizenship Participation.

- In 1981, the Secretary of State was given responsibility for coordinating the interdepartmental responses arising from the International Year of Disabled Persons. In 1983, the Secretary of State was designated as the Minister responsible for the Status of Disabled Persons.

- The mandate for the Multiculturalism Activity derives from the Secretary of State Act, and more specifically, the government's announcement in October, 1971 of a Policy on Multiculturalism. In 1972, by Order in Council, a Minister of State for Multiculturalism was appointed under the Ministers and Ministries of State Act. Subsequent Cabinet and Treasury Board decisions have reaffirmed the mandate and determined the scope of the Multiculturalism activity.

- The mandate for Canadian Culture activity derives from the Department of the Secretary of State Act and the Citizenship Act.

- The mandate for Human Rights is based upon Cabinet decisions directing the Department, among other things, to serve as the central point of reference for the federal government's domestic interests in human rights and to develop further

federal-provincial-territorial consultation and coordination related to the implementation of certain international human rights instruments; and to operate a Court Challenges program to assist persons to seek court rulings clarifying language rights under the Constitution Act of 1867 and the Canadian Charter of Rights and Freedoms.

3. Program Objective

The objective of the Citizenship and Culture Program is to assist Canadians in achieving more equitable and equal opportunities for social growth, quality of life and fuller involvement in Canadian society; to achieve an improved knowledge, appreciation and enjoyment of Canada and its cultural diversity; to achieve greater awareness, knowledge and appreciation of human rights, fundamental freedoms and related responsibilities; to increase the enjoyment of human rights; and to increase compliance with Canada's domestic and international commitments, thus contributing to enhancing Canadians' sense of belonging to the country.

4. Program Organization for Delivery

Activity Structure: The Citizenship and Culture Program comprises five activities as shown in Figure 2.

Figure 2: Activity Structure

Organizational Structure: Three senior managers of the department are responsible for delivery of the Citizenship and Culture Program. The organizational structure and the resources associated with each area are depicted in Figure 3.

Figure 3: 1985-86 Resources by Organization and Activity ($000)

Citizenship Registration and Promotion	12,935		4,919	17,854
Citizenship Development	112,223			112,223
Multiculturalism	24,349			24,349
Canadian Culture		6,641	4,948	11,589
Human Rights	2,265			2,265
	151,772	6,641	9,867	168,280
Person-Years	602	13	11	626

The administration of funds is largely decentralized to the regional offices which undertake initiatives on behalf of all Activities. Policy research, program development, federal policy advocacy and public promotion, as well as functional guidance to the regions are carried out centrally where the responsibility rests for the achievement of the objectives of the Program and its Activities. Headquarters program delivery is directed at national organizations' projects and the development of new initiatives. Major new initiatives are guided by the identified needs in Canadian society as

reflected in ministerial priorities and related Cabinet policy decisions.

D. Planning Perspective

1. Environment

In carrying out its objectives, the Citizenship and Culture Program is strongly influenced by the general socio-economic conditions of Canada, as these affect equitable opportunities, a sense of common purpose and a sense of acceptance as well as the need to learn about Canada and appreciate its diverse languages, cultures, regions and economics.

In the current environment of unemployment and rapid technological change, some regions, workers in certain industries, minority cultures, natives, women, youth, the disabled and the elderly are more vulnerable than others to shifts or restrictions in available resources. At the same time, immigration, language use and regional economics and geography are combining to put into greater relief the unique characteristics and needs of Canada's provinces and territories. There are increased opportunities for association, cooperation and self-help initiatives.

A crucial element in this regard is voluntary action because it creates a vital link among people, their communities and their governments for improving the social, economic, cultural and national environment and by enhancing the quality of life and well-being of all Canadians.

In particular, native, women, ethnic, and human rights groups will continue their efforts to organize themselves to meet the challenges and take advantage of the opportunities which arise. The elderly, youth and the disabled have formed organizations and will seek to consolidate these organizations or to form others. There has been particular growth of organizations interested in issues affecting disabled persons from the perspective of professional services, technologies and disabled persons speaking for themselves. International Youth Year 1985 will put into greater relief the challenges and opportunities for Youth. Particular attention has been given to youth by different levels of governments due to the extent of the problems affecting them.

Natives will seek even greater autonomy in political, economic, cultural and social fields through their representative organizations. They will continue to emphasize the need for existing institutions to deal with the effects of the many economic and social disadvantages Natives face. Issues such as peace and disarmament will continue to attract Canadians' interest and attention and ad hoc groups and associations will continue to form around these focal points. To ensure the ongoing participation of these groups in the

growth and development of communities, concerted efforts will be required, including increased financial and technical assistance.

In recent years, increased immigration from non-traditional sources and the influx of refugees have broadened the multicultural and multiracial character of Canada. As a result, concentrated efforts will be required to assist minority group participation and cultural integration, and the development of a tolerant and receptive society. One of the consequences is heightened provincial interest in multiculturalism and citizenship, including the federal/provincial Citizenship and Language Instruction and Textbook Agreements.

Surveys have shown that there is a need to increase the general level of tolerance and respect in Canadian Society. In addition to support of individual cases, there is a need for a strategy which stresses the importance of respecting individual rights and diversity within Canadian society.

For many years, the Department has assisted individuals and groups to extend their role in Canadian society and to understand, promote and protect human rights. The Charter of Rights and Freedoms and improvements in the Canadian Human Rights Act have increased available legal protections. The outlook for the mid-1980's is for an increasing use of the existing protective mechanisms, both domestic and international, and for a continuing increase in the basic level of understanding of human rights.

There is concern about Canadians' lack of knowledge of and interest in our history, culture, society and politics. This concern has prompted the federal Government to attach importance to stimulating and maintaining a sense of Canadian citizenship and to increasing, through formal learning, the knowledge and understanding that Canadians have of themselves and their environment, with particular concern for the cultural diversity of Canada.

Measures have been taken to increase Canadian content in the mass media and in the formal education system to support official languages development, and to enhance appreciation of our multicultural heritage. The Canadian Studies program, with its mandate to encourage Canadians to learn about Canada, represents an important initiative in dealing with this national education concern.

2. Initiatives

For 1985-86 the Program will undertake the following initiatives:

Response to the Special Parliamentary Committee Report, Equality Now!:

- the development of a consultative framework for interdepartmental and/or intergovernmental discussions of Equality Now!;

- the preparation of cross-cultural training programs for use in the public and private sectors;

- the elimination of cultural and racial bias in testing, home-school liaison pilot projects, and the development of multicultural/multiracial education resources focusing on changing the "hidden curriculum".

Multicultural Institute of Business Management: the completion of a feasibility study on the establishment of a Multicultural Institute of Business Management.

Federal-Provincial Conference on Multiculturalism: the convening of a federal-provincial conference to achieve a national understanding and agreement for the implementation of the federal multicultural policy.

New enhanced Canadian Studies Program: to replace the National Program of Support for Canadian Studies, approval was given, in 1984, for an ongoing program with funding capacity on the basis of both grants and contributions. The new program, with a budget of $3.7 million, will support the development of learning materials, advanced instructional methods, and other means of improving educational activities in Canadian Studies.

3. Program Effectiveness

The Program objective of the Citizenship and Culture Program is a combination of the objectives of the five activities of which it is comprised. So far, indicators of effectiveness have been developed, and measurements have been taken, only at the component levels within each Activity. Details on the effectiveness of each Activity are provided in Section II.

Section II
Analysis by Activity

A. Citizenship Registration and Promotion

Objective

To promote Canadian Citizenship, facilitate its acquisition, provide proof of citizenship status, and foster an awareness of the rights and responsibilities of being a Canadian.

Resource Summary

The resources applicable to the Citizenship Registration and Promotion Activity represent almost 11% of the total Citizenship and Culture Program resources for 1985-86.

Figure 4: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Citizenship Registration and Promotion	17,854	330	17,758	330	24,816	429

Salary and other personnel expenditures make up 63% of the above; contributions towards Language Instruction and Textbook Agreements make up another 27% of the expenditures.

Description

Citizenship Registration and Promotion is responsible for the administration and interpretation of the Citizenship Act and Regulations and for the provision of a national service for the granting of Canadian citizenship and for issuing certificates of proof of citizenship. It is also responsible for promoting public awareness and understanding of Canadian citizenship and its privileges and responsibilities through the development of instructional and promotional programs and materials. This Activity also responds to many requests for information within the confines of the Privacy Act. These responsibilities are discharged through:

- 29 citizenship courts throughout Canada; and

- Canadian embassies and consulates which provide citizenship services outside the country.

All are supported by a headquarters unit responsible for ensuring proper application and interpretation of the Act.

Citizenship Registration and Promotion is also responsible for the Citizenship and Language Instruction Agreement and the Language Textbook Agreement administered by the Department of the Secretary of State. Under these agreements, the Government of Canada reimburses the provincial and territorial governments for one-half of the amount expended for teaching costs for citizenship and official language instruction classes for adult immigrants, and up to the full amount expended for the language textbooks used in citizenship and language instruction.

Performance Information/Resource Justification

Resources for the Citizenship Registration and Promotion Activity are allocated in terms of three major areas of activity:

- provision of Citizenship Services;

- funding of Citizenship and Language Instruction; and

- promotion of Citizenship.

Provision of Citizenship Services: This area includes the provision of citizenship registration services and facilities. The main services and facilities provided are the operation of regional Citizenship Courts and the processing of applications for the granting and proof of Canadian citizenship. A number of other services are also provided which are legislatively mandated under the Citizenship Act such as the registration of births abroad and renunciation of citizenship. Figure 5 below indicates that the demand for Citizenship services increased in 1984-85. The forecast number of grant applications in 1984-85 is 38% higher than the number of grant applications processed in 1983-84. Demand is expected to stabilize at the level of 125,000 for 1985-86. It is also anticipated that this increased demand will be processed within existing levels of person-year resources.

Figure 5: Demand for Citizenship Services

Types of Applications Processed	Forecast 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83	Actual 1981-82
Grants	125,000	125,000	90,328	110,492	89,815
Proofs	45,000	45,000	35,836	43,819	42,810
Record Searches	5,000	5,000	4,253	23,638	16,140
Person-Years	320	322	367*	n/a	n/a

* Includes 58 person-years for the relocation of registration operations to Sydney, Nova Scotia.

n/a Data not available

Citizenship and Language Instruction Classes: Citizenship and Language Instruction classes are provided to adult immigrants by the provinces, funded federally through Federal-Provincial agreements on Citizenship and Language Instruction and Language Textbooks. These classes are seen as a means for preparing people to become Canadian citizens.

Figure 6: Students Receiving Instruction

	Students		Resources
	Applicants	Number of Students Based on Funding Level	$000
1985-86 Projection	90,000	45,000	4,868
1984-85 Forecast	90,000	45,000	4,868
1983-84 Actual	87,780	87,780	9,315

This program is being reviewed and resource levels are set at $4.9 million until such time as the review is complete. The number of students is related to the resource level. Both demand for and cost of these services have been increasing since the time of the negotiation of these agreements.

Promotion of Citizenship: Promotional activities such as greeting letters from the Minister to all new citizens and the distribution of lists to members of Parliament of new citizens in their ridings, are intended to enhance the new citizens' sense of belonging. Other promotional activities including presentations and panel discussions in community organizations and schools are designed to enhance the understanding of the rights and responsibilities of being a Canadian. Citizenship judges and officers undertake such outreach activities on an on-going basis across Canada. Nationally, Citizenship registration participates in Rotary and 4-H programs which focus on the promotion and value of citizenship. The production of printed and audio-visual promotional materials is designed to encourage eligible individuals to apply for proof of citizenship status.

For fiscal year 1984-85, approximately 10 person-years for Citizenship Registration and Promotion will be allotted to promotional activities. It is anticipated that the same number of person-years will be apportioned for implementing promotional activities in 1985-86. It should be noted that although there has been and continues to be a significant increase in the numbers of immigrants receiving citizenship, the same number of person-years for promotion is being maintained by Citizenship Registration and Promotion.

B. Citizenship Development

Objective

To assist those Canadians most in need in achieving more equitable and equal opportunities for social growth, quality of life and fuller involvement in Canadian society.

Resource Summary

The Citizenship Development Activity represents approximately 67% of the Citizenship and Culture Program resources for 1985-86.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Citizenship Development	112,223	177	143,527	187	103,380	120

* These figures do not include expenditures for the Official Languages Communities Program which are shown in the Official Languages Program.

Grants and contributions make up 88% of the Citizenship Development Activity resources.

Description

The Citizenship Development Activity provides financial assistance and technical and advisory services to individuals, voluntary organizations and public and private institutions.

Assistance is provided to Canadian citizens to enable them to realize their full potential for individual and group action, and to encourage them to assert and strengthen their cultural identity, to identify the problems facing them, to meet the challenges and take advantage of the opportunities which arise, and finally to participate in concert with institutions and governments in finding solutions and developing a social, cultural, economic, and political environment which responds to their needs and aspirations.

The groups which currently receive particular attention are women, natives, disabled persons, and youth as they are the most susceptible to the difficulties being experienced by Canadian society as a result of powerful economic, social, demographic and environmental factors.

The Activity is also responsible for the promotion and coordination at the federal government level, as well as with institutions and the private sector, of specific social issues to stimulate changes in social attitudes and reduce discriminatory barriers which impede the full participation of citizens.

The Citizenship Development activity provides a flexible vehicle for the Secretary of State to provide consistent support and encouragement to Canadians as the basic problems being addressed vary according to the prevailing socio-economic-cultural circumstances of the day.

Performance Information/Resource Justification

Direct financial assistance is provided to voluntary organizations and groups based on the number of categories of beneficiaries and the issues addressed. Levels of resources are determined by Cabinet decisions which take into account such factors as the degree of need, the social, cultural, political and economic situation of target groups and the number and the complexity of areas requiring intervention.

In 1985-86, women, natives, disabled persons and youth will continue to receive particular attention. Figure 8 below indicates the level of resources allocated to those groups and issues.

Figure 8: Funding Levels by Components ($000)

	99,210	129,078	90,911	71,448	56,252

The following is the description of the components which contribute to the achievement of the approved objective of the Activity.

Women's Program: Assistance is provided to increase participation by women in all aspects of Canadian society and to help women and women's groups promote social and institutional changes to improve their status. In February 1984 Cabinet approved a program of chairs in women's studies at the rate of one chair per year for the next five years. In 1985-86, a total of $13.2 million will be granted to groups and $500,000 will be used to set up a chair in women's studies.

Native Citizens: The Native Citizens component co-ordinates and administers seven programs designed to assist organizations representing status and non-status Indians, Métis and Inuit and to facilitate projects undertaken and managed by native people. The aim of the programs is to help native people determine their needs, make known their concerns and find ways of meeting their needs and dealing with their concerns. An estimated total of $51.5 million will be spent on native citizens programs in 1985-86. The seven programs in question are described below.

The **Native Friendship Centre Program** provides assistance to friendship centres in urban areas to improve the quality of life of native citizens living in an urban environment and to support activities that encourage native people to participate in all facets of community life while preserving their cultural identity and values. In accordance with the program priorities, there was a significant increase in 1984-85 in the number of special projects to promote greater autonomy for disabled native people and a better aprreciation of their circumstances. This trend should remain steady in 1985-86.

Figure 9: Activities Funded by the Friendship Centres Component

	Transfer payments ($000)	Number of centres	Number of satellite centres	Number of capital projects	Number of special projects
1985-86 Forecast	16,064	96	4	10	15

1983-84 Actual	14,577	90	3	15	8
1982-83 Actual	10,069	79	5	20	0
1981-82 Actual	9,423	84	5	16	0

The **Native Communications Program** supports native communications societies to enable them to develop modern communications networks. Reallocation of resources among the various projects has made it possible to increase the number of community radio stations so that native people can be provided with a minimum level of service in their respective regions. There should be no change in 1985-86.

Figure 10: Activites Funded by the Native Communications Component

	Transfer payments ($000)	Number of communications societies	Number of special projects	Number of training projects and workshops on the media	Number of community radio stations
1985-86 Forecast	3,659	16	20	16	100

1982-83 Actual	2,960	13	17	1	45
1981-82 Actual	2,643	13	15	13	41

This program expires in 1984-85. The government will decide on the future of the program during the 1984-85 fiscal year.

The **Northern Native Broadcast Access Program** helps broadcasters set up facilities in the north so that native populations have access to locally produced radio and television programs that meet their needs. The program also provides funding for research and program production.

Figure 11: Number of Groups Funded by the Northern Native Broadcast Access Program

	Transfer payments ($000)	Number of groups
1985-86 Forecast	9,028	13
1984-85 Forecast	7,152	13
1983-84 Actual	4,289	11

The **Native Representative Organizations Program** provides core funding to native representative associations that work to develop strong, organized native leadership and enable native people to take part in the political, social and economic life of Canada.

The **Aboriginal Constitutional Funding Program** supports research and helps national and regional organizations hold consultations on constitutional matters that affect native people. The number of representative associations rose slightly in 1984-85 but should remain steady for the next several years.

Figure 12: Activities Funded by the Aboriginal Constitutional Funding Program

1981-82 Actual	12,890	46	17	7

4043

4044

The **Native Women's Program** encourages native women to become involved in their communities and voice their opinions and concerns. The $1 million increase approved in 1984-85 will result in greater support for the operations and projects of native women's groups.

Figure 13: Activities Funded by the Native Women's Program

	Transfer payments ($000)	Number of groups	Number of projects
1985-86 Forecast	2,349	150	175
1984-85 Forecast	2,233	120	150
1983-84 Actual	1,219	110	120
1982-83 Actual	1,123	93	110
1981-82 Actual	1,034	89	106

The **Native Social and Cultural Development Program** provides support for national initiatives to promote social and cultural development and preservation of native languages. The number of projects has increased in recent years with the level of resources approved by Cabinet. In 1985-86 spending is expected to reach $2.1 million.

Figure 14: Activities Funded by the Native Social and Cultural Development Program

	Transfer payments ($000)	Number of groups	Number of projects
1985-86 Forecast	2,050	205	75
1984-85 Forecast	1,925	196	69
1983-84 Actual	2,180	183	66
1982-83 Actual	1,129	111	-
1981-82 Actual	981	98	-

Assistance to Young People: Young people are granted assistance under three programs: the International Youth Year program, Open House Canada and Katimavik.

International Youth Year: In addition to co-ordinating activities held in observance of International Youth Year, the IYY Secretariat helps youth groups implement projects designed to heighten public awareness of their interests, concerns, aspirations and achievements. The program was set up in 1984-85 to mark International Youth Year.

Figure 15: Projects Funded by the International Youth Year Program ($000)

	Grants	Assistance for national projects	Assistance for regional projects
1985-86 Forecast	2,735	865	1,870
1984-85 Forecast	5,220	2,199	3,021

Open House Canada: Open House Canada helps young people get to know one another better, improve their knowledge of their country and promote greater mutual understanding among the various communities in Canada. In 1985-86, as a result of federal government budget restrictions, funding will be reduced by $3.7 million. This will affect the number of participants in the program.

Figure 16: Number of Participants in the Open House Canada Program

	Transfer payments ($000)	Number of participants
1985-86 Forecast	10,077	18,700
1984-85 Forecast	13,740	26,000
1983-84 Actual	13,004	26,058

Katimavik: The purpose of Katimavik is to prepare young Canadians to contribute fully to the quality of life in Canadian society by giving them the opportunity to develop their knowledge while serving others through community projects.

Figure 17: Number of Participants in Katimavik

	Contributions ($000)	Number of participants
1985-86 Forecast	19,700	1,650
1984-85 Forecast	49,700	4,800
1983-84 Actual	28,762	2,800

In 1983-84 and 1984-85, Katimavik was granted additional resources under special programs for young people. Expiry of these programs has resulted in a decrease in funding for Katimavik for 1985-86.

Assistance to the Disabled: In addition to the Status of Disabled Persons Secretariat, which develops policies and co-ordinates activities for disabled persons and promotes the interests and rights of Canadians with visual, hearing, physical, mental or psychological impairments or learning disabilities, two other components provide support for associations of disabled persons.

The **Information Referral Service project** was designed to set up a central agency to distribute information and make it available to the disabled, government employees, volunteer workers and the general public.

The **Disabled Persons Participation Program** supports non-profit organizations run by the disabled and the handicapped which organize large groups of disabled consumers to facilitate access to autonomy and implement strategies to that end. The level of resources allocated to cover the operating costs of these groups is scheduled to decrease in the coming years. The decision to reduce funding was made in the hope that the groups would become increasingly independent financially.

Figure 18: Assistance to Disabled Persons ($000)

	Disabled Persons Participation		Information Referral Service	Total transfer payments
	Support for operating costs	Project assistance		
1985-86 Forecast	417	300	206	923
1984-85 Forecast	457	300	200	957
1983-84 Actual	500	300	130	930

Other programs (see Figure 19)

The **Voluntary Action program** promotes participation by Canadians in community affairs through national and local voluntary organizations.

The **Consultation on Canada's Future program** supports voluntary action in social and cultural areas that affect the future of the country.

Figure 19: Distribution of Budget for Voluntary Action Programs ($000)

	Total transfer payments	Voluntary Action		Consultation on Canada's Future
		Support for operating costs	Project assistance	
1985-86 Forecast	1,080	480	300	300
1984-85 Forecast	1,461	833	300	328
1983-84 Actual	1,274	700	300	274

For several years, the program has funded activities jointly with the other national programs in order to meet the demand from voluntary organizations. The budget figures for 1983-84 and 1984-85 reflect this co-operation.

4047

4043

C. Multiculturalism

Objective

To assist in the removal of barriers which inhibit the full and equal participation of minority cultural groups in the social, cultural and political life of Canada and to encourage and support the sharing of culture by and among the various groups which make up Canadian society.

Resource Summary

The Multiculturalism Activity represents approximately 14% of the Citizenship and Culture Program resources for 1985-86.

Figure 20: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Multiculturalism	24,349	78	25,359	80	20,465	43

Grants and contributions make up 70% of the Multiculturalism Activity resources. Salaries and employee benefits account for a further 13% of the expenditures.

Description

The Multiculturalism Activity provides the operational focus within the federal government for the 1971 Multiculturalism Policy; initiation and co-ordination of related programs and initiatives in co-operation with other federal departments and agencies, and with other levels of government and the private sector, promotional activities designed to increase public awareness of and appreciation for Canada's racial and cultural diversity, and of the Multiculturalism Policy objectives. Financial and technical assistance is provided to representative ethnic and visible minority community groups, cross-cultural groups and organizations, institutions and individuals for activities undertaken in pursuit of Policy objectives.

Resources are expended in three major areas: federal policy co-ordination, advocacy and monitoring; public education; and delivery of a program of grants and contributions. For operational purposes these areas are divided in the following components: Federal Policy

Co-ordination; Public Education, Socio-cultural Integration, Cultural and Academic Resources. The two former components are supported by operating and human resources, while the two latter components are supported by grants and contributions funds and human resources.

Performance Information/Resource Justification

Levels of resources are determined by policy decisions which take into account such factors as the degree of need, the priority of objectives relative to other current social concerns and national/international socio-economic and political considerations.

Cabinet decisions indicate the direction to be taken and emphasis to be placed on the Directorate activities. These directions are operationalized through the distribution of approved funds to the appropriate components to achieve the desired results. Figure 21 below indicates the allocation of resources to various components.

Figure 21: Transfer Payments by Components ($000)

	1985-86	1984-85	1983-84
Socio-Cultural Integration			
Group Development	2,829	2,707	2,354

Intercultural Communications	2,898	3,285	2,567
Cultural and Academic Resources			
Cultural Enrichment	4,209	4,370	3,245
Performing and Visual Arts	1,755	2,004	1,485
Writing and Publications	922	1,012	956
Canadian Ethnic Studies	1,808	2,393	1,160

Other major expenditure areas in 1985-86 will be Public Education with expenditures of $1.7 million and Federal Policy Co-ordination with expenditures of $0.5 million.

The following is the description of the components and activities undertaken to contribute to the achievement of the approved objectives of the program.

Federal Policy Co-ordination Component: Resources are expended providing support and advice, including research and analysis, to the Minister of State for Multiculturalism, central agencies and federal departments on the implication/application of Multiculturalism as a federal policy.

Recent activities have included the development of the submission to the Macdonald Commission, "The Place of Multiculturalism in Canada's Long-Term Economic Development", development of terms of reference for the Multicultural Institute of Business Management feasibility study, co-ordination and preparation of the Federal Response to Equality Now!, and development of a legislative framework for the federal Multiculturalism Policy.

In 1985-86, the component's activities will involve the follow-up to Equality Now!, collaboration with Treasury Board on equitable employment in the Public Service, development of outreach strategies, supporting research re: multiculturalism and business, and convening consultations on a federal-provincial conference on Multiculturalism.

Public Education Component: Resources are expended through advertising and public relations activities designed to increase public awareness of and appreciation for Canada's racial and ethnic diversity and to promote this diversity as part of Canadian identity.

The major activities are advertising (majority and ethnic press), publications such as Cultures Canada, a newsletter for ethnocultural groups, educational materials for schools and interest groups and films such as the filmstrip "Not So Different" which won the Silver Screen Award at the 1984 American Industrial Film Festival and received an award of excellence from the Association for Media and Technology in Education in Canada.

Socio-Cultural Integration Component: The primary focus of the Socio-Cultural Integration component is on group and community development, immigrant integration, intergroup relations and institutional adaptation. Financial assistance is provided, on the basis of established criteria, for operations, programs and projects. The following describes the major thrust of the funding strategies in this area and provides examples and direction of spending for the 1985-86 fiscal year (see page 5-31, Figure 21).

Group Development provides assistance to ethnocultural communities on a year to year basis enabling them to establish and maintain an effective organizational base. Priority is given to newly emerging and racial minority communities. In addition to funding assistance, extensive liaison is maintained and consultative services are provided for these client groups.

In recent years support towards meeting the developmental goals of unicultural organizations and communities in such areas as advocacy, leadership/skill development, information sharing, and networking has been strengthened. This direction will continue in 1985-86.

Cultural Integration of immigrants is supported through assistance to projects which are aimed at helping immigrants: through basic orientation services to adjust to the complexities of settling in a new country; in the acquisition of basic living skills; and in the sensitization of mainstream society and institutional access. It is also under this program that funding is provided for innovative training programs for those who for one reason or another have not benefited from existing official language learning opportunities.

Since 1981, Cultural Integration has been a vehicle through which the Federal Government has been able to address the special integration needs of immigrant women. Problems faced by immigrant women include language difficulties, socio-cultural isolation and economic hardships due to low labour force participation. These issues will continue to be a priority for support in 1985-86.

Intercultural Communications supports multi-ethnic organizations which act collectively to address issues related to cultural diversity in Canada. Financial assistance is provided for the operational and programming costs of multicultural or cross-cultural organizations that undertake activities designed to increase intercultural understanding. Intercultural Communications support fifty-three centres. These centres tend to be outside the major urban areas, e.g. Windsor, Sudbury, Thunder Bay, Brandon, Kamloops, etc. Centres play very important roles in cultural sharing, citizenship development, immigrant integration and race relations. A centre or an association can represent as few as five or as many as forty unicultural groups. This focus will continue in 1985-86.

A major focus for the foreseeable future will be on assisting institutional adaptation to the Canadian multicultural/multiracial reality. The need for concerted effort in this area was acknowledged in the federal response to the many related recommendations in Equality Now!.

In 1985-86, programming emphasis under **Institutional Adaptation** will be on the development of cross-cultural training packages for use by majority institutions. Experience gained in pilot projects with media and law enforcement, undertaken in 1984-85, will provide the basis for evaluating and developing similar initiatives in 1985-86.

Research, development and implementation will be undertaken on a co-operative basis with institutions, the private sector, ethnocultural communities and recognized professionals in the field of cross-cultural training.

Cultural and Academic Resources Component: Cultural and Academic Resources focuses on language and cultural retention, cross-cultural understanding, education and research. The following describes the major thrusts of the funding strategies and provides examples and

direction of spending for the 1985-86 fiscal year (see page 5-31, Figure 21).

Under **Cultural Enrichment** assistance is provided to target populations to support the retention of heritage languages within Canadian society, as well as to demonstrate the potential and value of heritage languages in the pursuit of Canadian socio-economic goals at both the national and international level.

Supplementary School Assistance presently sponsors close to 100,000 students from 42 linguistic backgrounds in approximately 650 schools. It has assisted, in the last four years, in the production of approximately 40 language teaching aids, and sponsored conferences and teacher training workshops.

Resources are also directed towards promoting teacher aid and development, research coordination in support of heritage languages and establishing heritage language service centres.

Performing and Visual Arts supports organizations and projects which are devoted to the preservation and development of heritage skills and/or the use of heritage performing and visual arts as a medium for cross-cultural understanding. The objective is to promote the sharing and appreciation of all cultures through the folk arts as well as to promote cultural retention.

Initially, the majority of projects funded was in the area of folkloric art. However, more recently the focus has been in film and audio-visual projects. The electronic medium lends itself well to addressing complex issues such as race relations and multiculturalism in education.

In the more traditional performing and visual arts forms, the program particularly encourages skill and resource development since this will ensure that the artistic heritage is passed on to the next generation. The demand by the communities for performing events is also considered. In many rural communities this type of actitivy is the only impetus for ethnocultural activities.

Writing and Publications results in the development, publication and dissemination of literary, instructional and educational material that reflects Canada's multicultural and racial diversity, thereby fostering the expression of and appreciation for Canada's many cultures.

In 1983-84, approximately 160 research, writing, translating and publishing projects were funded and at least 80 publications were produced. In addition to support for writing and publishing projects, the program has also participated in or assisted in special projects, conferences, special issues, journals and promotion of the activity. Promotion activities include the preparation, annual updating and

distribution of publications, book displays at appropriate conferences such as the Learned Societies meetings and National Book Week, and to promote supported publications and to encourage publishing projects by and about ethnic groups.

Under **Canadian Ethnic Studies**, support is provided to scholarly research and courses of study relating to cultural pluralism, with particular emphasis on Canadian society. Three major areas of support are the multicultural studies fellowship program, ethnic research, and endowment assistance.

Between 1978 and 1984, the program funded 85 research projects, among them, studies dealing with the adaptation problems of South-East Asian refugees, inter-ethnic relations, socio-linguistic studies and other research in the disciplines of sociology, political science, psychology, geography, demography and other subjects relating to cultural groups in Canada.

Endowment Assistance makes contributions of up to $500,000 for the establishment of two Chairs a year in Ethnic Studies at Canadian universities. Seven ethnic chairs have been created at Canadian universities: Hungarian, Ukrainian, Acadian, Gaelic, Mennonite, Italian and Native. The implementation of these chairs should lead to a better understanding of Canada's pluralistic nature, as will the program's more recent development of Endowment Assistance for Thematic Chairs of Study which will address general aspects of ethnicity and multiculturalism, such as race relations.

D. Canadian Culture

Objective

To increase knowledge, awareness and appreciation of Canada, its institutions, traditions, symbols, heritage and culture, by supporting learning activities and opportunities, by supporting festivities and anniversaries of a national character, by promoting national symbols, and by conducting state ceremonies, special events and Royal visits.

Resource Summary

The Canadian Culture Activity represents approximately 7% of the Citizenship and Culture Program resources for 1985-86.

Figure 22: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
State Ceremonial	6,641	13	10,315	14	9,388	14
Canadian Studies	4,948	10	3,721	10	1,779	3
	11,589	23	14,036	24	11,167	17

Grants and contributions make up 50% of the Canadian Culture Activity resources. Professional services expenditures, largely for Canada Day activities, account for 22% of the total and salaries and wages a further 12%.

Description

This Activity consists of two principal components: Canadian Studies and State Ceremonial.

Canadian Studies has as its main activity the provision of assistance to projects that encourage Canadian studies and Canadian content in the formal education system and that will provide Canadians with more opportunities to learn about their country.

It is also responsible for coordinating federal activities in the area of Canadian studies. This involves extensive liaison with federal departments and agencies such as the Social Sciences and Humanities Research Council and the Department of Communications.

The State Ceremonial component has four responsibilities:

- it coordinates federal participation in and assistance to the celebration of anniversaries of national significance including Canada Day. The Canada Day festivities are administered with the assistance of volunteer committees at the national and provincial/territorial levels set up to advise on the general orientation of the celebrations and to plan and carry out several of the activities associated with Canada Day across the country;

- it administers the obligations of the federal government for state ceremonies and protocol and assists the Queen in her duties as Queen of Canada by organizing visits to Canada by members of the Royal family and advising on the exercise of the royal prerogative;

- it administers the obligations of the federal government to the offices of the lieutenant-governors. These obligations include payment of lieutenant-governors' salaries and travel and hospitality expenses; and

- it promotes the national symbols of Canada as a means of increasing Canadians' awareness of their national heritage.

Carrying out these responsibilities involves the participation of several other federal departments and the provincial governments.

Performance Information/Resource Justification

Canadian Studies: The Canadian Studies component of the Canadian Culture Activity began in 1978 as a pilot project of $1.6 million over 3 years. Following from the pilot project, a National Program of Support for Canadian Studies was approved in 1981 with resources totaling $3.8 million over the three year period 1981-82 to 1983-84.

In 1984-85 a new ongoing program of support for Canadian Studies was approved. Funding for this program was set at $3.7 million in 1984-85 and in 1985-86. As well, an additional amount of $1.3 million was approved for 1985-86 for the purchase and distribution costs of 27,500 sets of the Canadian Encyclopedia. A number of specific priorities have been set for the program to enable it to support the development of Canadian Studies in a concerted fashion.

The first priority area addresses the need for the development of Canadian Studies Learning Materials in a number of specified, hitherto underdeveloped, Canadian content areas. Those areas are addressed by a Writing Awards Program, Support for Print Learning Materials Development, Support for Audio-visual and Film Learning Materials Development, Support for the Development of Computer-based or Computer-assisted Learning Materials, and a coherent distribution and use program. The second priority is designed to encourage the development of Canadian Studies through continued support for national voluntary organizations, support for projects of a distance learning or public education character, and through the awarding of prizes for excellence in the field of Canadian Studies. The third priority is designed to encourage greater private sector participation in the field of Canadian Studies through a matching dollar program. And, finally, the fourth priority is designed to provide some coherence to the overall federal government Canadian Studies effort through the development of a coordination mechanism and by providing information on federal department and agency activities and funding programs for the general public.

State Ceremonial: In 1985-86, a major activity of the State Ceremonial component will be the coordination of and support for Canada Day, including support to the Canada Day committees made up of volunteers from across the country. The volunteers advise the Minister on the celebration and make recommendations on local community projects grants as well as develop and implement special national projects. Local community projects range from small fireworks displays which are a feature of the celebrations in many communities to small local projects right across Canada.

Figure 23 indicates the number of projects supported and the level of funding allocated to this activity:

Figure 23: Canada Day Activities ($000)

Fiscal Year	Number of projects	Expenditures
1985-86 (Estimates)	1,900	2,200
1984-85 (actual)	1,637	1,871
1983-84 (actual)	1,839	1,942
1982-83 (actual)	1,788	2,190

During 1984-85, the State Ceremonial component also provided financial assistance to three anniversaries of national significance: the 450th anniversary of the arrival of Jacques Cartier and the bicentennials of New Brunswick's and Ontario's anniversaries of settlement. As well it developed and coordinated the activities of other federal departments to sponsor and promote these anniversaries nationally.

The planning and organizing of Royal visits and state ceremonies is an important aspect of State Ceremonial activities. In 1984-85, the program organized a major visit by the Queen to Ontario, New Brunswick and Manitoba. It also organized the ceremonies surrounding the departure of Governor General Edward Schreyer and the Investiture of Governor General Jeanne Sauvé. In 1985-86, State Ceremonial will be involved in planning the ceremonial aspects of Expo '86 and in projecting the ceremonial aspects of the 1988 Winter Olympics in Calgary.

E. Human Rights

Objective

To achieve greater awareness, knowledge and appreciation by Canadians of human rights, fundamental freedoms and related responsibilities; to increase enjoyment of human rights; and to increase compliance with Canada's domestic and international human rights commitments.

Resource Summary

The Human Rights Activity represents approximately 1% of the Citizenship and Culture Program resources for 1985-86.

Figure 24: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Human Rights	2,265	18	2,434	17	1,890	14

Grants and contributions make up 43% of the Human Rights Activity resources. Salaries and employee benefits account for a further 33% of the expenditures.

Description

The Human Rights Activity covers the following types of undertakings:

Technical Assistance: The main types of technical assistance provided by the Human Rights Activity are described below:

- organization of and participation in seminars, workshops and conferences on human rights;
- preparation and dissemination of resource materials;
- provision of advice on the human rights aspects of policies, programs and other measures being developed by a variety of organizations;
- preparation of human rights studies, research, trends analysis, issue and policy papers; and

- participation and provision of technical assistance in meetings related to Canada's international human rights obligations.

Financial Assistance: The main types of financial assistance provided by the Human Rights Activity are described below:

- provision of financial assistance in support of the human rights initiatives of voluntary and non-governmental organizations;

- provision of financial assistance to individuals qualifying for fellowships in Human Rights; and

- provision of financial assistance to individuals and groups pursuing test cases involving language rights included in the Canadian Constitution.

Coordination and Analysis: The main types of coordination and analysis provided by the Human Rights Activity are described below:

- provision of coordination and analysis services to a federal-provincial and an interdepartmental committee and to ministerial meetings concerned with human rights;

- the coordination and preparation of Canada's human rights reports to the United Nations; and analysis of U.N. documents relevant to Canada's international human rights obligations;

- participation in international meetings.

Performance Information/Resource Justification

The performance of the Human Rights Activity can be stated under the following three items:

Technical assistance: Technical assistance is provided through general information on human rights disseminated through resource materials; advice on policies, programs and measures developed by governments, agencies and organizations in the field of human rights; information and direction provided through studies, analyses and surveys of trends. Technical assistance is provided largely in response to requests but the Department also provides technical assistance with the purpose of promoting knowledge and awareness of human rights. The allocation of resources for this purpose is determined in accordance with the demand for printed materials and technical information and advice. This demand is increasing as the result of an expansion of awareness of human rights, brought about through efforts in the area of education and promotion.

Financial Assistance: Transfer payments in the form of grants and contributions provided in support of Human Rights activities initiated by voluntary and non-governmental organizations embrace a wide range of national and local activities such as conferences, workshops, promotional and educational projects and research involving such diverse publics as students, disadvantaged groups and academics. The particular types of activities and publics involved in any particular fiscal year depend on the requests for funding received by the Department. For the period 1984-85 to 1986-87, priority is being placed on promotion of greater awareness of rights among children, youth, the private and labour sectors, and disadvantaged groups whose rights are most threatened. Examples of activities to be funded in 1985-86 are:

- the development of interdisciplinary curricula-material on human rights by the Association of Community Colleges of Canada;
- the holding of seminars with labour associations to be undertaken by the Niagara Institute; and
- summer college for community workers and human rights professionals involved with disadvantaged groups.

Funding has increased since 1982-83 as indicated in Figure 25. The budget level represents an allocation so that a minimum level of service can be provided. Periodically the size of the allocation is adjusted in light of the number and nature of human rights issues that need to be addressed.

Figure 25: Human Rights Transfer Payments to Organizations ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
No. provided	80	79	72	72
Expenditures	980	964	695	526

Additional grants and contribution funds ($375,000) have been allocated in 1984-85 and 1985-86 for the promotion of public education activities. These activities include the development, largely through voluntary organizations, of human rights educational resource materials and related activities for use in primary, secondary and post-secondary educational institutions; supporting conferences and training for those involved in the teaching of human rights; the establishment of graduate human rights fellowships; support for human

rights study and research projects; support to non-governmental organizations which have, or could have, a positive influence on the protection and promotion of human rights.

Figure 26 provides a breakdown on the nature of activities funded during 1983-84.

Figure 26: Activities Funded in 1983-84

Type of Activity	Number	Expenditures ($000)	% of Total
Seminars and conferences	38	273	39
Sustaining funds or operational assistance	16	250	35
Surveys or research projects	10	110	16
Promotion of Human Rights through visual arts	4	27	4
Support to publications	4	35	6
	72	695	100

With the increase in the budget for 1984-85 and 1985-86 the total number of activities will increase but it is expected that the distribution will remain similar to that reflected in Figure 26.

The Court Challenges component of the Human Rights Activity assists persons and groups seeking court rulings clarifying language rights under Sections 93 and 133 of the Constitution Act 1867 and, more recently (December 1982), of sections 16 to 23 of the Canadian Charter of Rights and Freedoms.

The number of such cases before the courts, at any level, and funded under this component of the Activity are set out in Figure 27.

Figure 27: Grants for Court Challenges ($000)

	Forecast 1984-85	Actual 1983-84	Actual 1982-83
Number of cases	12	8	2
Expenditures	200	150	58

The funding authority for this program ends in 1984-85. Decisions on the disposition of the program will be taken by the government during 1984-85.

Coordination and analysis: Coordination and analysis services will be provided to the federal- provincial-territorial and interdepartmental committees of human rights and their numerous working groups. Canada's human rights reports are prepared to meet Canada's international reporting responsibilities. These include, for example, international legal commitments under the International Covenant on Civil and Political Rights and the International Covenant on Economic, Social and Cultural Rights and other such instruments. Also, the analysis and consultation that are part of preparing the reports assist the governments in the implementation of domestic measures needed to bring about compliance with Canada's human rights obligations. Over the years, the provinces and territories have become increasingly involved in preparing the reports. The reports vary in complexity and length, up to 500 pages, and often require more than one year to complete. These factors affect the workload in any given fiscal year.

The Department expects that in 1985-86 it will complete the following reports:

- second Report on the Implementation of Articles 10 to 12 of the International Covenant on Economic, Social and Cultural Rights;
- eighth report on the International Convention on the Elimination of All Forms of Racial Discrimination; and
- report on the celebration of Human Rights Day - 10 December, 1984.

The level of resources is established on the basis of the requirement set by the United Nations in order to meet Canada's international responsibilities or legal obligations to produce such reports.

In 1985-86 the Department will provide secretariat services for a Ministerial Conference to be held following the coming into force of the equality provisions of the Canadian Charter of Rights and Freedoms. In addition, it will provide secretariat services to the continuing Federal-Provincial-Territorial Committee of Officials Responsible for Human Rights which will meet twice during 1985-86.

Other	1	2	16	- -	-

* These figures do not include expenditures for the Official Languages Communities Program which are shown in the Official Languages Program.

Note: The person-year column displays the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

* These figures do not include expenditures for the Official Languages Communities Program which are shown in the Official Languages Program.

B. Cost Analysis

The net cost of the Citizenship and Culture Program includes the operating costs and statutory expenditures along with the value of services provided free by other departments. These additional services include the value of accommodation provided by the Department of Public Works ($2,560,000), the value of financial services provided by the Department of Supply and Services ($72,000), and the value of insurance premiums provided by the Treasury Board ($421,000). Revenues credited to the Consolidated Revenue Fund that are collected for the processing of Citizenship Registration and Open House Canada applications have been deducted ($2,250,000).

1985–86 Estimates

Part III

Expenditure Plan

4075

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Social Sciences and Humanities
Research Council of Canada

4075

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is requested in these Estimates to spend $60,386,000 in support of the Social Sciences and Humanities Research Council Program. The remaining expenditures, estimated at $495,000, will be made under existing statutory authority.

Section I
Program Overview

A. Plan for 1985-86

1. Highlights

Communication: New technologies are transforming the structure of communications in our society. In order to assess the effect which they will have on communication among scholars, a Task Force made up of representatives of industry, government, and the Canadian research community, will advise the Council on the best course of action to follow in helping the Canadian research community to take advantage of the opportunities offered by the new technology that will change the structure of research communication in Canada.

Research Support: In the interest of delivering a high level of service to its client community within the limits of the financial and human resources available, the Council has appointed a special committee to review the Research Grants program. This committee, composed of Council members, will examine the granting philosophy and adjudication procedures of this program, and will report to the Council on the consequences of various proposals for change.

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Grants and Scholarships	54,624	56,759	(2,135)	20
Administration	6,257	6,039	218	26
	60,881	62,798	(1,917)	-
Person-Years	107	104	3	-

Explanation of Change: The decrease in the 1985-86 funding level of $1,917,000 (3%) from the 1984-85 forecast is made up of the following major items:

• termination of the supplementary funding approved by Parliament in December 1984 for research ($3,680,000) and operating expenditures ($220,000)	($3,900,000)
• price increase to maintain a level of program services related to anticipated results and existing grant commitments for the coming year.	$1,983,000

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $5,900,000 or 10% higher than the 1984-85 Main Estimates of $56,898,000 (Extracts from Part II of the Estimates, page 4). The difference of $5.9 million reflects the following major items:

• Supplementary Estimates for Canadian studies	$1,980,000
• Supplementary Estimates for research in priority areas	$3,310,000
• Supplementary Estimates for related operating costs and research into disseminating technologies	$610,000

B. Recent Performance

1. Highlights

1984-1985

Major changes to the 1984-85 plans include the following:

Canadian Studies and Priority Areas: The Council received an additional $5.9 million to sustain the funding of Canadian studies ($1,980K), research in priority areas ($3,310K), experiments with new technologies for speedier dissemination of research findings ($240K), and the related operating costs ($370K).

Human Resources Development: In order to provide increased research opportunities for excellent young scholars, the Council completed its planning for the implementaton of a program of Research Fellowships.

Communication: A sub-committee of the Council reported in 1981 on the impact of new technologies on scholarly communication. Its report recommended sweeping changes in Council policies to encourage greater use of computer-based technology in scholarly publication and in the dissemination of research findings. Faced with an adverse reaction within the scholarly communication community, the Council decided to study the question further. It authorized a limited number of demonstration projects and experiments to explore the implication of such a change. Building on this experience, the Council established a task force to provide advice on the design and implementation of new programs in support of dissemination of research results by means of the new technologies.

1983-1984

Highlights for the 1983-84 year include the following major items:

Canadian Studies and Priority Areas: The additional funding of $5.9 million approved by Cabinet in 1981 allowed the Council to:

- expand its programs in support of research in such areas as Family and Socialization of Children, and Human Context of Science and Technology;
- support research centres in Population Aging, and increase funding for universities research libraries;
- introduce Canadian Studies Research Tools and Small Universities programs; and
- fund new themes for priority research on Women and Work, and Managing the Organization in Canada.

Human Resources Development: Resulting from an evaluation of its doctoral fellowships program, the Council commissioned an annual survey on the employment prospect of recent doctoral graduates. The survey is used as a planning tool by the Council as well as by the universities.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Grants and Scholarships	54,429	54,429	-
Administration	5,655	5,619	36
	60,084	60,048	36

Explanation of Change: The increase of $36,000 is due to statutory contributions to employee benefit plans.

C. Background

1. Introduction

The Social Sciences and Humanities Research Council (SSHRC) is one component of the federal government's system for grants to conduct research in all fields of science. This system is composed of three closely related agencies: the Natural Sciences and Engineering Research Council, the Medical Research Council, and this Council. Jurisdiction over the endeavours funded by these councils is shared by both major levels of government in Canada.

The Council reports to Parliament through the Secretary of State. The role of the SSHRC is to award grants and scholarships to researchers and students in the humanities and social sciences and to fund the dissemination of research findings and the work of learned societies. Before 1978 the Council operated as a division within the Canada Council.

2. Legal Mandate

The SSHRC was created by Part 1 of the Government Organization (Scientific Activities) Act, 1976. This Act gives the Council the authority to:

- promote and assist research and scholarship in the social sciences and humanities; and
- advise the Minister in respect of such matters relating to such research as the Minister may refer to the Council for its consideration.

Within this mandate, the Council operates in all the provinces and territories of Canada and supports endeavours abroad in the social sciences and humanities by Canadians and permanent Canadian residents. The Council has established a number of major programs which operate at the national level with a view to promoting its general objectives.

3. Program Objective

The SSHRC supports specific activities within the Canadian research community, in order to promote and assist research and scholarship in the social sciences and humanities and to encourage excellence therein.

This objective has been broken down into four sub-objectives for the purpose of clarifying the relationship between broad categories of grants and scholarships and the mandate of the Council. These four sub-objectives are:

- to enhance the advancement of knowledge by assisting disciplinary-based research;

- to assist in and advise on maintaining and developing the national capacity for human resources development and the training of researchers;
- to promote targeted research in areas and themes of particular relevance and importance which would contribute to the fulfillment of national objectives; and
- to facilitate the dissemination of research results, and to increase Canada's international presence and recognition in the social sciences and humanities.

4. Program Organization for Delivery

Activity Structure: The SSHRC has identified two activities which best describe its operation: Grants and Scholarships, and Administration. These are illustrated in Figure 3 and described in detail in Section II of this Plan.

Figure 3: Activity Structure

Organization Structure: The SSHRC offices are located in Ottawa. The President is also the chief executive officer and is responsible for all matters relating to the Council. The SSHRC reports to Parliament through the Secretary of State, and, except for the ultimate control of Parliament through legislation, the Council exercises independent judgment in its granting and policy-making decisions.

The Council's organizational/functional structure is supported by an interlocking multi-level committee structure, with an extensive external membership. This structure is made up of policy advisory committees, operational grant selection committees, and committees that combine a policy and an operational role. The external membership has at its head the Council's board made up of 22 members appointed by the Governor in Council, and two committees composed of selected Council members: the Executive and Audit Committees. The Council is assisted by two groups of External Committees: i) the Advisory Academic Panel, a 12 member-committee of researchers representing various disciplines and regions of the country, which advises the Council on selected matters of research and program policy; and ii) the peer adjudication committees for each program or clusters of programs, also composed of representatives of the Canadian research community.

This division and delegation of responsibilities liberate Council from the ongoing operational aspects of its programs and allow it to deliberate broad policy issues, the setting of priorities and the allocation of resources. It also ensures due process through peer review, as well as greater assurance of Council's arms' length relationship with the government.

The senior committees (Executive, Audit and Panel) which report directly to Council, advise and assist Council on policy, budgetary and, where applicable, operational matters. The Executive Committee has the same powers and functions as the Council between meetings of the latter, whereas the Audit Committee monitors the execution of Council's audit plans. The Panel responds to Council requests for advice on policy and priorities and also ensures that due process is respected through Council's grants adjudication procedures.

The adjudication of grants and detailed recommendations on all applications are made upon the basis of peer assessment on the quality-scholarly-merit of the project, the applicant or both. Grants are available to any Canadian or permanent Canadian resident who can meet the standards established by peers in the research community. The adjudication process involves a large number of grant and scholarship selection committees, composed of experts drawn from the research community. Recommendations on grants applications are submitted for approval to Council or directly to the President of Council who has been delegated the required authority from Council.

The network of committees provides Council with the support needed in order to fulfill its mandate. The preliminary allocations of resources projected in the Operational Plan reflect the Council's priorities and intentions, but the budgets are modified and refined throughout the year on the basis of increasingly accurate information on the actual requirements, taking account of the number

and quality of applications as assessed by the selection committees through the peer review process. Between 300 and 400 experts drawn from universities and the private sector are actively involved each year in the adjudicaton/selection committees of Council's grants programs. Also, between 8,000 to 9,000 external referees provide advice to the grant selection committees on grant applications. Figure 4 illustrates the 1985-86 committee and activity structures.

Council has total responsibility for setting priorities, allocating budgets, structuring advisory and selection committees, establishing the value of grants and awards and disbursing funds. Council staff provides advice, assistance and support to Council and its committees in the management and the administration of the Council's programs.

The President represents the Council in dealing with the government and has direct control over the work of the Secretariat to the Council, and the Information Division. The Director General Program Branch, is responsible to the President mainly for program planning and delivery; overall functional support is directed by the Treasurer, Administration Branch, who also reports to the President. These three officers, in addition to the Secretary to Council, constitute the Senior Management Committee of Council. Figure 4 links the organization to the activity structure and shows the breakdown of the 1985-86 resources.

Figure 4: 1985-86 Resources by Organization/Activity ($000)

						TOTALS

Administration	6,257	–	–	–	–	6,257
	6,257	27,217	5,361	15,357	6,689	60,881
P-Ys	107	–	–	–	–	107

D. Planning Perspective

1. Environment

The social sciences and humanities cover a broad range of activities from the study of literature or ancient civilizations to research on pressing social and economic issues. The SSHRC has an essential role to perform in such areas as science policy, national identity, Canadian studies, cultural policy, highly qualified human resource development and support for post-secondary education.

Research in the humanities and social sciences is undertaken in government, the private sector and non-profit organizations. It is in the universities, however, where most of this research is performed. Within the universities the humanities and social sciences community numbers over 19,000 full-time faculty, accounting for 56% of total full-time university teachers and researchers. A recent study, conducted for the Council, indicates that this is a highly qualified, well-trained and productive research force. At the graduate level, there are approximately 25,000 students in the humanities and social sciences enrolled in Masters and Ph.D. programs. Students in these disciplines account for approximately 65% of total Masters and Ph.D. enrolments in all Canadian universities.

Economic Climate: Since the reorganization of the federal granting Councils in 1978, the SSHRC has carried out new initiatives in supporting research on Canadian Studies and Priority Areas. These developments have taken place in the face of an increase in demand for both grants and scholarships in the Council's traditional programs and a period of fiscal restraint in the federal government.

Changes in Population: Now that the baby boom generation has passed through the 18-24 age range, when people are most likely to attend a post-secondary institution, demographers predict that university enrolments will decline over the next decade. Although many projections had anticipated that the decline in enrolment during the late 1970's would continue through the 1980's, enrolment at many universities has risen in the early 1980's, due in large part to greater participation by women.

It is widely expected that the trend will change and that overall enrolment will decline in the latter part of the 1980's when the passage of the baby boom generation will have its fullest impact. As is noted in the final report of the Commission on Canadian Studies of the Association of Universities and Colleges of Canada, while enrolment projections differ on many points, they agree that, despite some potential growth in the short term, it is clear that universities will face longer term prospects of a decline in full-time enrolment into the 1990's. What is not clear at present is the magnitude of the

4089

decline, or exactly when it will commence. It should be noted that there has recently been a sizeable increase in post graduate (Masters and Ph.D) enrolment, which will continue at least until 1990.

The Canadian University System: The university system in Canada is the cornerstone of the research community in the humanities and social sciences. The jurisdictional split between the federal and provincial governments has meant that federal research support depends upon the availability of researchers within provincially operated universities. The Council is the central figure in the federal government's support system for fundamental research in the humanities and social sciences. Through its programs of research, training, communication and strategic grants support the Council promotes investigation in these disciplines to ensure both the opportunity for the training of researchers of the future and the availability of research findings. Through its support of research and its fellowships programs, the Council creates in excess of 4,000 full- and part-time jobs in all the regions of Canada.

There are serious problems in Canadian universities associated with the large number of professors hired in the 1960s who are in tenured positions and who will not retire until the mid or late 1990s. Because of fiscal restraint few new positions are opening within the universities. It is even becoming increasingly difficult to retain these highly trained researchers at a time when their contributions are required for the health and excellence of existing and future scholarship. In order to protect the country's investment in these researchers, the Council sees the need for a program of Research Fellowships to allow holders to gain useful experience in carrying out disciplinary-based research while remaining available to employers as related positions become available.

Social Climate: Over the past several years, both the funds for research in the humanities and social sciences and the provincial operating grants to universities have increased at less than the level of inflation. The 1982 increase in funds for the Council improved the situation for research funding. However, current negotiations on established program financing arrangements in the area of post secondary education are raising jurisdictional and financial matters which may affect the role of the Council. There is a growing recognition that, if Canada is to have the social and economic management required to achieve its place in the forefront of the technological revolution, consistent funding will be required for both the post-secondary and the research systems.

2. Continuing Initiatives

With the three-year supplementary funding approved by Cabinet in December 1981, the Council substantially expanded its support of research on Canadian Studies and Priority Areas. This funding was continued during 1984-85. However, with the expiration of most of this funding the Council will curtail support of activities in these areas. The impact on the operations of the Grants and Scholarships Activity is discussed on pages 22 to 25. It should be noted that all other areas will continue at their 1984-85 level.

Figure 5: Estimated Cost of Ongoing Initiatives($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Canadian Studies and Priority Areas Research Grants	**7,473**	8,580	8,357
Priority Areas	**5,361**	7,405	7,212
	12,834	15,985	15,569

In view of decreased funding, the Social Sciences and Humanities Research Council will curtail some of its activities, while eliminating and postponing others.

3. Program Effectiveness

The Council is committed to the systematic and regular evaluation of all types of its grants and scholarships and it has instituted a series of evaluations which are reported below.

To maximize effectiveness in the operation of its grants and scholarships programs, the Council has adopted an operational and organizational structure that relies heavily on external feedback and advice on policies and programs and on expert review committees and peer assessment of grants and awards made in national competitions.

Disciplinary Based Research: A recent study conducted for the Council indicates that research activity and productivity by university-based social scientists are relatively high. The study indicates that social

scientists who responded to the survey reported an average of 1.8 publications per year and an average of four completed manuscripts per social scientist per year over a three year period. These data compare favourably with a recent study on the level of research activity by social scientists in the United States.

The study of Canadian social scientists also indicated that those researchers receiving funds from SSHRC are generally more productive than those researchers not receiving Council support. An equally important finding was that SSHRC-funded researchers produced as many or more scholarly manuscripts from their non-funded research activities as those who were not funded by SSHRC. Evidence suggests, therefore, that the Council's limited funding is being disbursed to the most productive researchers in the country.

Priority Areas: Work in this field aims at promoting research in special areas in the national interest, at encouraging researchers to re-orient their efforts towards these priority areas and at the support of infrastructure such as research centres or library and archives collections. In all cases efforts are targeted to increase significantly the degree of activity within a given area.

An evaluation was completed in March 1984 of the Population Aging Program, the first priority research program introduced by the Council in 1979-80. At the time of its introduction there was evidence that the changing age structure of the Canadian population would likely have a significant impact on economic development, social policies, political behaviour, and cultural development. Yet hardly any research had addressed these issues. After the first five years of the program, a study indicated that the program had made a major contribution towards achieving a critical mass of research on population aging. The evaluation also reported that population aging research centres funded under the program are providing a wide range of useful services to university researchers as well as to the community outside the universities.

A new program to assist specialized library collections was introduced at the same time as the program in support of research on population aging. The recent evaluation of this program indicates that Council funding has allowed for the acquisition of collections and an expansion of resource that would not otherwise have been possible within existing library budgets.

Human Resources Development: The Council is systematically reviewing its spectrum of support for human resources development. In 1982-83 an evaluation was undertaken of the Council's principal activity to support human resources development, namely the Doctoral Fellowship program. A survey of Doctoral Fellowship holders indicated that approximately three quarters of those responding to the survey had completed all requirements for their degree and that most of the rest still had the intention of completing them. The survey also confirmed that the vast majority of those holding doctorates supported by the Council find satisfying work in their field of graduation. The Council, along with the Medical Research Council and the Natural Sciences and Engineering Research Council, in cooperation with Statistics Canada, has engaged in an annual joint survey of post graduation employment of doctoral students at all Canadian universities. Information from this survey is used by the Council to monitor employment patterns of highly qualified graduates.

An evaluation of the program to support students at the Masters level is currently being undertaken. Of particular concern is the impact which this program will have in encouraging students to go on to doctoral studies and complete an advanced research degree.

Communication: Last year we reported that the Council had embarked on an evaluation of its funding to support communication among researchers, both in Canada and abroad. Two studies have now been carried out; the first, on the Aid to Scholarly Associations program, and the second, on selected International Relations programs.

One of the principal findings of the evaluation of the Aid to Scholarly Associations program is that a large percentage of scholars at Canadian universities belong to at least one learned society and generally regard membership as important to scholarly activity. However, less than 30% of scholars who responded to the survey know whether or not their main learned society was a member of a Federation, either the Social Sciences Federation of Canada or the Canadian Federation for the Humanities, and 40% of those who did were able to report one or more benefits of membership. The Council established an ad hoc committee to review and advise it as to the future funding of the Federations.

As part of its International Relations programs, the Council provides support for travel to international conferences, travel to attend executive meetings of international scholarly associations and bilateral exchange programs with academies and granting bodies in France, Japan, Hungary, China, and the USSR. The evaluation of these programs indicates that funding has successfully assisted the exchange of ideas between scholars collaborating in the study of common issues. It has also provided the opportunity for the identification of new methodologies and new approaches to research. The Council is, therefore, satisfied that its international programs continue to meet the needs of researchers in the humanities and social sciences.

4093

Section II
Analysis by Activity

A. Grants and Scholarships

Objective

The Council supports specific activities within the Canadian research community to promote and assist research and scholarship in the social sciences and humanities and to encourage excellence therein.

Resource Summary

The Grants and Scholarships Activity accounts for approximately 90% of the 1985-86 total Council expenditures. There are no person-years reported within this activity.

Figure 6: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Disciplinary Based Research	27,217	27,744	26,217
Priority Areas	5,361	7,405	7,212
Human Resources Development	15,357	14,910	14,606
Communication	6,689	6,700	6,394
	54,624	56,759	54,429

Past Financial Performance

Figure 7 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 7: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Disciplinary Based Research	26,217	29,075	(2,858)
Priority Areas	7,212	7,280	(68)
Human Resources Development	14,606	11,574	3,032
Communication	6,394	6,500	(106)
	54,429	54,429	-

Explanation of Change: There is no difference in total between the actual expenditures and the Main Estimates for 1983-84.

Description

This activity represents the granting function of the Council and its operation as a decision-making body. The Council has delegated to committees of researchers the actual adjudication of competitions in its various programs.

The Council's policies are based on recognition of the current state of research in the humanities and social sciences in Canada. This community of researchers, which includes about 55% of all university faculty members, is basically young in terms of its scientific development. Nonetheless, there are enormous demands placed upon it, and in some cases these are clearly out of all proportion to its current capacity. A decade of lower employment opportunities caused by a decrease in university funding rather than a reduced need for research, is sapping the vitality of the community.

There are four sub-activities funded by the Council.

Disciplinary-Based Research: A major portion of the Council's budget is directed towards the funding of independent, scholarly research in the social sciences and humanities. Through a series of programs which support scholars through either block grants to universities or direct grants to individuals, the Council aims to maintain the level of activity within these research communities necessary to develop a basic understanding of society in general, and Canadian society in particular. In all cases, the research on the cultural, political, social or economic aspects of human society is proposed by the researcher.

Priority Areas: The sum total of research activities in Canada has not, through the free play of market forces, led to sufficient research being undertaken in certain areas of national importance. Consequently, the Council has selected a limited number of priority themes (Population Aging, Family and Socialization of Children, Human Context of Science and Technology, Women and Work, and Managing the Organization) and special areas (Canadian Studies: Research Tools, Aid to Small Universities, Development of Management Research, and Support for Specialized Collections) within which increased activity is required if we are to have the basic information needed to help policy-makers of the future identify and solve persisting national problems. These programs include both the funding of research, as proposed by scholars in the field, and the support of infrastructure for research such as purchases of research collections for libraries, the cataloguing of research materials in libraries and archives, and the support of activities to enhance research at small universities.

4095

Human Resources Development: To ensure that a sufficient supply of trained researchers is available for employment in Canada over the next decade, the Council supports postdoctoral fellows and students undertaking doctoral or masters degree programs with the aim of helping them complete their training and thereby preparing for research work in universities, government or industry.

Communication: Finally, the Council believes that research which remains widely unknown to others is of limited usefulness. It therefore funds a number of programs at the national and international levels which strive to increase the exchanges of information on research and to encourage collaborative work between researchers in Canada and those abroad.

Performance Information/Resource Justification

The Council establishes the level of funding for each type of grant or scholarship on the basis of three factors. First, the level of demand for an individual program as measured by the number of applications and the amount requested for each competition; second, the judgment of well-known researchers serving on the selection committees which adjudicate the merit of the applications received in each competition; and third, the priority assigned by Council to each type of grant or scholarship. It is difficult, however, to predict the precise needs for each program, given variations in demand and the quality of proposals received. The Council, therefore, reallocates funds between programs when justified.

Disciplinary-Based Research: Over the past few years, there has been a steady increase in the number of applications for research support, as shown in Figure 8. Because this area enjoys the highest priority within the Council, funds have been injected to meet, in part, this increase in demand. Nevertheless, the award rate in Research Grants has dropped, in dollar terms, from just over 60% in 1979-80 to about 36% in the 1984-85 competitions. This decline was not caused by any decrease in the quality of the requests received; it rather is a reflection of the decrease in the Council's real budget capacity and the resulting inability to assign sufficient resources to these programs in an effort to meet the rising demand from a clientele that has increased by 19% over the past decade. According to all indications, the award rate will continue to decline over the coming few years, even though peer review confirms the same high quality of proposals.

* The last approved new projects under Negotiated Grants, in 1982-83. Ongoing projects will continue for a number of years.

Priority Areas: Grants in Priority Areas were introduced by the Council in 1979-80, and the resources available to them grew from $2 million in that year to $7.4 million in 1984-85. In the first year the SSHRC funded projects for the study of the aging population, awarded grants for the acquisition of special collections in university libraries and provided accelerated funding to the Dictionary of Canadian Biography. Some 150 applications were received in the first year. By 1981-82, 272 applications were received from a greatly expanded group of researchers. In 1984-85, SSHRC was voted an additional $3.3 million in funds to support its strategy for Priority Areas.

In 1983-84 the Council introduced research funding for two further priority areas, Managing the Organization in Canada, and Women and Work. Figures 10 and 11 show the steady growth of interest in work in Priority Areas.

Figure 10: Number of Applications and Awards - Priority Areas

Women and Work	2,364	727	-	-	-	-
	16,245	7,464	9,480	5,219	6,915	3,481

Human Resources Development: The recent increase in enrolment in graduate work is reflected in the increase in numbers of applications for human resources development grants during 1983-84. Graduate enrolment is expected to increase over the decade and, given this increase, the SSHRC will endeavour to maintain its awards budget for these grants. The Council intends to maintain the award rate for new applicants in line with the expected requirement for trained researchers. At present, the Council gives grants to about one fifth of all full-time doctoral students in Canada, but to only one in 190 masters students. During the first three years of the postdoctoral program there has been a steady increase in the number of applications. In view of the current level of under-utilization of young researchers, this increase is expected to continue.

Communication: Through these programs the SSHRC funds upwards of 5,000 researchers presenting findings here or abroad. In addition, about 65 learned societies and the publication of some 100 learned journals and 120 scholarly manuscripts are subsidized. The budget for Communication has been held steady in real terms over the past few years.

Note: For further details on 1983-84 grants and scholarships please refer to the Council's Annual Report.

B. Administration

Objective

The Council's Administration Activity provides services to the Grants and Scholarships Activity by ensuring the most effective use of resources towards the achievement of program objectives.

Resource Summary

The Administration Activity accounts for approximately 10% of 1985-86 total Council expenditures and 100% of the person-years.

Figure 13: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Program Management	1,689	20	1,653	20	1,788	19
Program Delivery	2,503	48	2,391	47	2,499	60
Program Support	2,065	39	1,995	37	1,368	27
	6,257	107	6,039	104	5,655	106

Personnel costs represent 64% of the total activity costs; the meeting costs for Council, Panel and for peer adjudication represent 9% of the total activity costs; and other operating expenditures (such as postage, telephone, supplies, printing and rental of equipment and facilities) represent 27% of the activity costs.

Past Financial Performance

Figure 14 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 14: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Program Management	1,788	19	1,808	23	(20)	(4)
Program Delivery	2,499	60	2,748	56	(249)	4
Program Support	1,368	27	1,063	25	305	2
	5,655	106	5,619	104	36	2

Explanation of Change: The increase in actual expenditures of $36,000 or .6% over 1983-84 Main Estimates is due to statutory contributions to employee benefit plans.

Description

This activity consists of the following sub-activities:

Program Management: This sub-activity consists of the offices of the President, the Director General Program Branch, the Treasurer Administration Branch, the Secretary to the Council, and the Information Division. The purpose of this sub-activity is to provide direction to coordinate the mandate of the Council, to formulate short- and long-term objectives and priorities, and to communicate Council activities. It also includes program evaluation.

Program Delivery: This sub-activity carries out the mandate of the Council through delivery of a variety of some 50 program elements in the humanities and social sciences. Staff have the responsibility to administer and manage the adjudication of applications for grant funds within the general themes of Disciplinary-Based Research, Research in Priority Areas, Human Resources Development, and Communication.

Program Support: Within this functional sub-activity the staff participates in the Council's financial planning, budgeting and reporting; the application of policies, systems and procedures; the formulation and execution of appropriate personnel policies, practices and procedures; the provision of computer and word processing services; and material and property management, security services and records management. This sub-activity consists of the Financial and Administrative Services, Personnel and Management Systems Divisions.

Performance Information/Resource Justification

The results of the Administration Planning Element contribute directly to the effective decision-making and the efficient functioning and operation of Council and its committee system. Its level of resources relates directly to the workloads in the various program components and the level of services required by the Council to effectively plan, administer and evaluate its priorities, policies, programs and disbursements.

Percentage of total	**10.3**	9.6	9.4

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 16 presents the distribution of expenditures classified by standard object. Estimates for 1985-86 represent a decrease of $1,917,000 over 1984-85 forecast expenditures.

Figure 16: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Operating			
Salaries and wages	3,534	3,397	3,203
Contribution to employee benefit plans	495	442	460
Transportation and communications	715	717	689
Information	442	303	281
Professional and special services	630	629	549
Rentals	100	100	112
Purchase, repair and upkeep	152	152	57

Transfer payments	54,624	56,759	54,429
Total expenditures	60,881	62,798	60,084

4103

2. Personnel Expenditures

The personnel costs represent approximately 64% of the total operating expenditure budget. In 1985-86, personnel costs amount to $4,029,000, an increase of $190,000 over the previous year.

The number of person-years and average salary by category are provided in Figure 17. The proportion of personnel costs within each sub-activity are: 26% in Program Management, 43% in Program Delivery and 31% in Program Support.

Figure 17: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Executive					
Senior Management	11	11	11	50,350 - 96,300	61,647

Personnel Administration	2	2	2	13,330 - 63,870	40,991
Administrative Support					
Data Processing	6	3	3	13,352 - 37,130	20,444
Clerical	22	21	23	12,932 - 31,743	21,266
Secretarial	21	23	21	12,636 - 31,946	23,922

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

1985–86 Estimates

Part III

Expenditure Plan

4107

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Solicitor General
Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance overthe past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is requested in these Estimates to spend $185,711,600 in support of the 1985-86 Solicitor General Administration Program. The remaining expenditures estimated at $42,400 for the Solicitor General's salary and motor car allowance and $1,803,000 for pensions and other employee benefits, will be made under existing statutory authority.

Financial Requirements by Authority

Vote (thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The Solicitor General Secretariat has established the following major goals for 1985-86:

- to maintain the federal-provincial agreements that have been established and to establish federal-provincial mechanisms for continuing consultation in respect of those financial arrangements and program and policy issues arising from the implementation of the Young Offenders Act and to carry out a program of research and development to support such implementation and acceptance of the Act and to assess the impact of the new Act on the juvenile justice system in Canada (see pages 20 and 28);

- to develop and carry out a program of research, experimental and demonstration projects related to women in conflict with the law (see pages 19 and 29);

- to continue the development of new Ministerial directions to govern significant operational policy procedures in the area of security and law enforcement including Law Enforcement Agreements, Confidential Sources and Foreign Operations Abroad (see page 20);

- to continue the general review of the resources allocated within the Federal Government to law enforcement and to develop policy options designed to provide for the optimum utilization and coordination of those resources and activities and those of the RCMP (see pages 19 and 29);

- to co-ordinate the development of policies to effectively manage prison population through release mechanisms that reduce population while ensuring public safety (see pages 24 and 30);

- to complete preparations culminating in Canadian attendance at the 7th United Nations Congress on the Prevention of Crime and the Treatment of Offenders, to be held in Milan during the summer of 1985 (see pages 24 and 30);

- to undertake, in cooperation with the Departments of Justice and Health and Welfare, provincial governments and community groups, an initiative leading to improved victim service delivery, identification of the needs of victims of crime including special groups of victims, (women, elderly, etc.), victimization research, sensitization of the public to victims issues, training for professionals and volunteers in victims needs and services, greatly improved access to victims information through the National Victim Resource Centre and finally, a comprehensive federal policy on victims of crime (see pages 23 and 28);

- to promote and increase effective crime prevention activities across the country through implementation of a focussed program of research and development and by promotion of greater awareness and responsibility among public, private sector and community associations of the benefits of community based crime prevention strategies (see pages 21 and 28); and

- to improve criminal justice programs and services for Natives, particularly in the two Territories and the Prairie Provinces, through promotion of community-based alternatives to incarceration, crime prevention programs, and victims services and promotion of increased community participation in the resolution of criminal justice issues. Linked to program improvement will be the development of Ministry policy on such emerging Native issues as Indian self-government, Native policing arrangements, corrections issues, and the over-representation of Native people in the criminal justice system (see pages 23 and 28);

2. 1985-86 Financial Summary

Figure 1: Financial Requirements for 1985-86 ($000)

	Estimates 1985-86	Forecast 1984-85	Change
Solicitor General Secretariat	187,557	158,221	29,336
Authorized person-years	319	315	4

The above resource requirements include $523,376 and 10 person-years in 1985-86 and $477,000 and 10 persons-years in 1984-85 for the Correctional Investigator (see page 31).

Explanation of Change: The increase of $29.336 million in the resources requested for 1985-86 is primarily the result of the following factor:

- An incremental resource increase for negotiation and administration costs related to agreements under the new Young Offenders' Act.

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of October 31, 1984) is $137.9 million higher than the 1984-85 Main Estimates of $20.3 million. The difference of $137.9 million reflects the following items:

- funds related to the implementation of the New Young Offenders' Act. $131.4 million

- funds related to Victims of Crime, Crime Prevention, Women in Conflict with the Law, Services to Native People and other policy initiatives described at pages 19 to 27 of this document, which were requested in Supplementary Estimates $ 6.5 million

B. Recent Performance

1. Highlights

Major developments during 1984-85 include:

- Legislation creating the Canadian Security Intelligence Service (CSIS) was passed in June 1984. The Secretariat is assisting in the implementation of the legislation (see page 20);

- The Young Offenders Act was proclaimed on April 2, 1984. Agreements in principle detailing federal financial contributions for juvenile justice services delivered by the provinces were concluded. Implementation support programs were begun to facilitate the transition from the Juvenile Delinquents Act to the new legislation and the subsequent evaluation of the effects of that legislation (see page 20);

- The Ministry continued to provide technical and financial support to the provinces and local groups to promote the development of model victim assistance services. A United Nations Meeting on Victims was organized, in preparation for the 7th UN Congress on the Prevention of Crime and a two-year action plan developed to improve victims' service delivery and training programs, increase public awareness of victims' issues and to lead to the development of a comprehensive federal policy on victims of crime (see page 23);

- Legislation to modify the law governing mandatory supervision was introduced, but died on the Order Paper (see page 24);

- The Ministry developed and commenced implementation of an action plan to improve criminal justice services to Natives. This included a number of research and development projects, the dissemination of research and other information on related issues and expansion of Consultation Centre services to provide an increased focus on Native peoples and communities (see page 23);

- Support was continued for research and development projects to identify and implement effective crime prevention strategies, to promote nationally coordinated crime prevention policies and programs, and to increase public participation in such programs. National Crime Prevention Week and the Solicitor General's Crime Prevention Awards were inaugurated. In addition to distributing some 90,000 publications of all kinds in support of the Week, the Ministry supported a number of community-based activities related to crime prevention (see page 21);

- All sustaining core funding arrangements in the Ministry respecting voluntary organizations were consolidated into a single program managed by the Secretariat, setting the stage for the development of a comprehensive policy for support to voluntary organizations involved in the criminal justice system (see page 26); and

- Arrangements with the provinces governing federal-provincial financial agreements for the firearms control program were renewed for two years (to March 31, 1986) (see page 26).

Major developments during 1983-84 include:

- Review of the recommendations of the McDonald Commission relating to non-security activities of the RCMP was completed. The majority of the recommendations have either been implemented or steps towards their implementation are being taken (see page 22);

- A Comprehensive Review of Federal Law Enforcement was commenced (see page 21);

- A fundamental review of the security screening and security classification system of the federal government was completed and proposals for improvements placed before the Interdepartmental Committee on Security and Intelligence (see page 25);

- In the Criminal Law Review project, work on police powers and procedures was completed and a number of legislative proposals were developed in concert with the Department of Justice (see page 22);

- Research was developed to assist the Department of Justice in the implementation and evaluation of proposed sentencing legislation, to provide advice to the Canadian Sentencing Commission and to estimate the impact of proposed sentencing reforms on the federal penitentiary populations (see page 22); and

- Amendments to the RCMP Act were reintroduced on January 30, 1984, but died on the Order Paper (see page 26).

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Solicitor General Secretariat	28,149	19,325	8,824

Changes were primarily due to additional resources approved in Supplementary Estimates for the following items:

- continued operation of the Security Intelligence Transition (SIT) Group — $1.6 million
- Young Offenders' Act implementation — $1.5 million
- Grants to Authorized After-Care Agencies — $1.3 million
- Student Summer and Youth Employment Program — $1.7 million
- New Employment Expansion and Development (NEED) Program — $3.1 million

C. Background

1. Introduction

The Secretariat is an integral part both of the Ministry of the Solicitor General and of the wider Canadian criminal justice and national security systems.

The four agencies which, together with the Secretariat, comprise the Ministry, are the Royal Canadian Mounted Police, the Correctional Service of Canada, the National Parole Board and the Canadian Security Intelligence Service. Although the agencies report independently to the Solicitor General, the Secretariat performs duties related to them, as detailed in the Program Description below.

Other components of the criminal justice system include the judiciary and the courts, other police and law enforcement agencies, other correctional authorities and the private sector. The division of responsibility for the "administration of justice" is complex and sometimes ill-defined, and involves other federal departments and agencies, notably the Department of Justice, and provincial and municipal governments.

While the Office of the Correctional Investigator is part of the Secretariat Program for administrative purposes, it is functionally responsible directly to the Minister. This Office is, therefore, treated separately and is described on page 31 of this document.

2. Legal Mandate

The Department of the Solicitor General was established in 1966 under the provisions of the Department of the Solicitor General Act (as amended in 1984 by a section of the Canadian Security Intelligence Service Act), which gives the Solicitor General jurisdiction in all matters over which the Parliament of Canada has jurisdiction, and which have not by law been assigned to any other department, branch or agency of the Government of Canada, relating to:

- reformatories, prisons and penitentiaries;
- parole and remissions;
- the Royal Canadian Mounted Police; and
- the Canadian Security Intelligence Service.

The Solicitor General is responsible for the administration of the Department of the Solicitor General Act, the Royal Canadian Mounted Police Act, the Penitentiary Act, the Parole Act, the Prisons and Reformatories Act, the Canadian Security Intelligence Service Act, the Young Offenders Act, the Criminal Records Act and the Transfer of Offenders Act. As well, the Solictor General and/or the agencies of the Ministry discharge operational responsibilities under such acts as the Criminal Code, the Identification of Criminals Act, the Official Secrets Act, the Diplomatic and Consular Privileges and Immunities Act and the Immigration Act, to name a few.

3. Program Objective

The objective of the Solicitor General Secretariat is "to provide overall policy direction to the programs of the Department", as well as to provide advice and support to the Minister to enable him to discharge his statutory responsibilities.

4. Program Description

To fulfill its role, the Secretariat carries out a wide range of endeavours related to the Canadian criminal justice system and the national security program of the federal government. In brief, they are:

- to initiate and develop Government and Ministry policy in the functional areas of law enforcement and corrections, as well as in the general areas of criminal justice, juvenile justice and national security;

- to analyze policy initiatives, operational policy issues and operational submissions prepared by agencies of the Ministry and to provide appropriate advice to the Minister;

- to undertake policy development in cooperation with the agencies of the Ministry, central federal agencies, the Department of Justice, other federal departments, the provinces and the private sector;

- to improve policies and programs in the criminal justice and juvenile justice systems through research, the conduct of experimental and demonstration programs, and the dissemination of information;

- to manage the Solicitor General's direct responsibility for the national security program;

- to coordinate contingency planning and to manage a crisis centre for all hostage-taking and related incidents;

- to support the discharge of statutorily assigned ministerial responsibilities for national security;

- to manage the Solicitor General's statutory responsibilities for the federal gun control program;

- to supervise policy affecting the physical and administrative security arrangements of the federal government, through the Security Advisory Committee;

- to administer federal-provincial financial agreements pursuant to the Young Offenders Act and to manage the Solicitor General's statutory responsibilities under the Act.

5. Program Organization for Delivery

The Secretariat, with the exception of six regional consultants and their staff, is located in Ottawa. The organization is divided into four main branches, each reporting directly to the Deputy Solicitor General.

The Police and Security Branch initiates, develops and administers policies, operational directives, and management systems on behalf of the Solicitor General and provides advice to the Solicitor General on

national security policy and operations, the corporate and program activity of the RCMP and CSIS and federal and national law enforcement. In carrying out these responsibilities, the Branch is responsible for ensuring that accountability mechanisms are in place so that the Solicitor General and the Deputy Solicitor General can exercise effectively their statutory responsibilities.

The Policy Branch undertakes policy advice and development in the areas of young offenders, corrections, firearms and other criminal justice issues that cut across jurisdictions and functional components of the criminal justice system. Correctional policy advice is also connected to the work of the Correctional Service of Canada and the National Parole Board. The Young Offenders Unit is charged with implementing the Young Offenders Act and providing continuing support of all responsibilities of the Minister under the Act.

The Programs Branch is the Ministry research and development arm. Its principal aim is to produce and communicate knowledge and information-based advice to improve decision-making related to criminal justice legislation, policy, programs and operations. The primary clients of the Programs Branch are the Solicitor General and the Deputy Solicitor General who is the chief policy advisor of the Minister. Other users of this knowledge and information include the other branches of the Secretariat, the Agencies of the Ministry, provincial departments, the voluntary sector and the general public.

The Branch's research and development mandate encompasses two totally inter-related areas of activity:

(a) knowledge building which is based on research, statistics, experimental programs, and dissemination of information from these activities; and

(b) the provision of technical expertise and services, such as communications and media-relations, E.D.P. activities and major public involvement campaigns such as Crime Prevention Week.

The Administration Branch is responsible for the preparation, implementation and overall administration of personnel, financial and administrative policies, programs, systems, procedures and services to assist the Ministry Secretariat in meeting its organizational objectives. It is organized into three divisions, responsible, respectively, for Finance, Human Resources and Administration.

In addition to the four branches, two smaller offices also serve the Secretariat:

Corporate Systems is responsible for corporate level planning and management systems, management information systems and evaluation systems, including audit, program evaluation and various forms of management review.

Legal Services is a unit staffed by Department of Justice lawyers serving as legal advisors to the Deputy Solicitor General, and through him, to the Solicitor General. Additionally, it provides legal advice to all branches of the Secretariat and is involved, as required, in matters of law relating to the programs and policy development carried on in the Secretariat.

* Includes the offices of the Solicitor General, Deputy Solicitor General, Corporate Systems, Legal Services and the Inspector General, Canadian Security Intelligence Service.

D. Planning Perspective

1. Environment

The changing nature and incidence of crime and criminality in general, and the rapid growth, in recent years, of offender populations in particular, continue to constitute major challenges to all components of the Canadian criminal justice system. The need for fiscal restraint, coupled with the need to respond both to increasingly sophisticated types of crime and to the needs of victims, require programs in all criminal justice components to become more cost/effective and support the urgent requirement for the development of new and more effective ways of dealing with criminal justice problems. In the area of national security, acts of international terrorism increasingly pose potential threats which must be addressed by the new Canadian Security Intelligence Service. While trends in both criminal justice and national security are many and varied, the most significant of these are outlined below.

The Changing Nature of Canadian Criminality: Rates of crime continue to increase, though at decelerating rates - a probable consequence, in part, of the declining proportion of Canada's crime-prone segment (ages 16 to 24) of the population pyramid. The recent number of killings of Canadian police officers, while shocking in itself, does not appear to be part of any sudden and dramatic increase in violent crime, more generally. Computer - related and other "white collar" crimes are increasing and the enormous dollar value of illegal profits from large scale enterprise crime in Canada are now so significant that the Government must consider legislation and policing initiatives to counter this serious problem. Much of this profit results from drug trafficking, though it is noted that the incidence of reported drug crime is decreasing. This trend to fewer drug-related offences may only, however, reflect a shift in emphasis in policing priorities from "soft" to "hard" drugs and large-scale drug enterprise crimes. Property-related offences, in contrast, continue to increase.

Increases to the Inmate Population: While the causal relationship between economic factors and crime remains a subject for debate, it is a fact that greater use seems to be made of incarceration in times of economic hardship. The recent increases in inmate populations, most particularly in those for which the federal government is responsible, pose major problems for correctional management, especially given the increasing numbers of long-term and dangerous offenders and increasing public pressures on government to reduce or restrict the use of the various conditional release mechanisms.

Changing Public Attitudes toward Crime and Punishment: There has been a recent and striking crystallization of public concerns regarding crime and punishment, fueled, in no small measure, by killings of police officers. Public attitudes appear to be related to the perceived relative seriousness of the offence committed. For the most serious and heinous of crimes, many members of the public appear willing to support the use of extreme measures, including the possible reintroduction of capital punishment. For violent crimes in general, the public exhibits increasing concern and a willingness to support the use of harsher measures, particularly of longer terms of imprisonment. At the same time, it is noted that Canadians tend to seriously overestimate both the incidence and growth of violent crime, while underestimating both the severity of sentences awarded and overestimating the use made of parole. For property - related offences, the public is increasingly willing to support the use of non-custodial alternatives, for "repeat" as well as for first offenders.

Economic Considerations: Both in the federal government, and in the governments of a number of provinces, the current economic climate is one of restraint. This period of restraint coincides with sudden and dramatic increases in the numbers of offenders in custody and increasing public demands to strengthen traditional approaches to law enforcement, incarceration and other aspects of the administration of justice. At the same time, increasing pressure is felt to introduce new services in some areas, particularly to expand services to victims of crime.

These conflicting forces may require a realignment of fundamental approaches to solving criminal justice problems. Interest may grow for the development of innovative and cost/effective approaches to criminal justice problems. The increasing public support for the use of non-custodial punishments for crimes seen as less serious has the potential to assist in controlling criminal justice costs, while being, at the same time, no less effective in dealing with offenders and offering more benefits to both victims and society. Programs such as crime prevention, which contribute significantly to the reduction of the numbers of crimes committed, while encouraging members of the community to become more responsible for preventing crime, will become more attractive, especially as the cost/benefit considerations of such programs become better known. However, history suggests that innovation will probably have to be achieved in the face of increased pressure to reinforce traditional (if possibly less cost/effective) methods.

National Security: Problems respecting superpower relationships, the international economy, chronic and increasing social problems, especially in the Third World, and dangerous regional conflicts continue to constitute matters of concern for Canadians. Recurring acts of international terrorism create an increasing need for policy and programs to maintain national security.

2. New Initiatives

The following new initiatives will be undertaken in 1985/86:

- Consistent with its responsibilities under Emergency Planning Order (P.C. 1981-1305), the Secretariat, in accordance with the direction of the Interdepartmental Committee on Security and Intelligence will coordinate the development of a counter-terrorism program for consideration by Cabinet;

- An inventory of federal resources employed in national policing has been initiated to develop an information base of the essential criminal, statutory, financial and operational data pertinent to all policing jurisdictions so that informed assessments can be made of alternative policy positions which might be adopted by the Federal Government respecting RCMP roles in connection with contract policing services and Canadian Police Services. The initial stages of this project will focus on identifying existing data sources and the feasibility of developing a standard format for describing policing activities and allocating costs between the different levels of jurisdiction (see page 21);

- The Secretariat will coordinate and expand Ministry initiatives to respond to community concerns and to increase community participation in and responsibility for criminal justice. Component initiatives will include crime prevention, victims services, volunteers and voluntary organizations, community policing, community-based alternatives to incarceration, community corrections, community participation in parole decision-making, indigenous Native justice systems and mediation and dispute resolution programs (see page 26);

- The Secretariat will undertake a range of policy-related initiatives to respond to the increasing sophistication of crime and its national and international dimensions, caused by technological advances in telecommunications, increased use of offshore banking, the introduction of new financial instruments, and the further development of national and international markets for contraband, particularly illicit drugs (see page 25);

- The Secretariat will carry out a plan of action, in cooperation with the voluntary and private sectors, which will examine the causes of crime committed by women, establish community-based programs for women with problems such as drug or alcohol dependence, family conflict and family abuse, and produce effective criminal justice programs for female offenders.

3. Update on Continuing Initiatives

Young Offenders: The Young Offenders Act was proclaimed in force on April 2, 1984. To facilitate the effective implementation of the new legislation, federal-provincial negotiations were initiated, culminating with the signing of agreements-in-principle for federal financial agreements for juvenile justice services delivered by the provinces and territories. Concurrently, structures to administer the new cost-sharing agreements were developed and implementation support programs (systems development, program development, communications, research and evaluation) were established. Procedures were developed to evaluate programs undertaken in implementation of the new legislation. Analysis commenced on data from the National Study of the Functioning of the Juvenile Court. Analyses to describe court functioning, the relationship between age and court functioning, and the views of criminal justice officials in respect of the new legislation, were conducted. A system model was developed for costing various components of the juvenile justice system.

The Secretariat will establish the structures and procedures to administer the financial agreements negotiated with the provinces and territories, as well as formal mechanisms for ongoing intergovernmental consultation and collaboration in the juvenile justice area. In addition, a framework for comprehensive evaluation of the effectiveness of the new legislation will be developed and further research in support of implementation will be undertaken.

Canadian Security Intelligence Service: Legislation creating the Canadian Security Intelligence Service (CSIS) was passed in June 1984. Given the significance of this new legislation, organizational and legal studies were undertaken to establish new bases for emerging relationships between CSIS, the RCMP, other federal and provincial agencies, provincial law enforcement bodies and foreign agencies.

In providing assistance in the implementation of the new legislation, the Secretariat is assigning priority to the review of policy and direction governing the Service; the development of policy guidelines in support of new RCMP enforcement responsibilities for security offences under Part IV of the CSIS Act; and the development, in consultation with CSIS and the Department of Justice, of policy guidelines covering all aspects of the warrant process, including warrants required under s. 16 of the CSIS Act for the collection of foreign intelligence in Canada.

As well, the Secretariat will review, in consultation with CSIS, Service reporting requirements to ensure the most complete disclosure of CSIS information, consistent with the interests of national security. The Secretariat will also assist in the development and administration of the accountability framework provided for in CSIS legislation.

RCMP Roles and Responsibilities in the Post-McDonald Period: With the proclamation of the Canadian Security Intelligence Service Act, this initiative has been concluded. Consequential work by the Secretariat in respect of changes in the character of traditional RCMP roles and responsibilities occasioned by its new mandate for the enforcement of security offences under Part IV of the Act has been subsumed in the Direction and Accountability of the RCMP initiative. In connection with fundamental changes in the economic environment reported previously as an emerging issue, their impact on RCMP roles and responsibilities is to be studied through a new initiative (Federal Resources Employed in National Policing) (see page 19). Finally, the Comprehensive Review of Federal Law Enforcement initiative will also provide essential information for policy development on future RCMP roles and responsibilities.

Crime Prevention: The Ministry continued its support for research and demonstration projects aimed at identifying and implementing effective crime prevention strategies. This work included activities such as crime prevention needs assessment and evaluation studies in Manitoba and Saskatchewan, and robbery prevention programs and juvenile crime prevention activities carried out in conjunction with the Province of British Columbia. The Ministry accelerated its efforts to promote nationally coordinated crime prevention policies and programs and to increase public participation in crime prevention activities. National Crime Prevention Week and the Solicitor General's Crime Prevention Awards were inaugurated. A major information program in support of the Week resulted in the distribution of some 90,000 publications, booklets and articles, such as "The Good Neighbour's Crime Prevention Handbook", "Working Together to Prevent Crime - A Practitioner's Handbook" and the "Good Neighbours" crime prevention brochure. The Ministry also provided support for community activities, such as poster and essay contests, public forums, seminars, films and plays and small displays dealing with crime prevention.

Initiatives such as these, which have already resulted in a variety of successful policies and programs to prevent crime through cooperation between police forces and citizens, will be continued, in close cooperation with provincial governments. Increased federal/provincial collaboration will make a major contribution to effectiveness and efficiency in crime prevention and provide encouragement for many more professional, voluntary and community organizations to initiate action to reduce crime.

Comprehensive Review of Federal Law Enforcement: The review of all current federal law enforcement programs commenced on July 1, 1984. This complex, interdepartmental project is scheduled to be completed in 1986 and will lead to the development of policy options for ensuring optimal utilization and coordination of federal law enforcement resources and activities. The survey research component of this project

will involve gathering and analysing information from federal law enforcement units in the national capital region and across the country, including R.C.M.P. units.

Direction and Accountability of the RCMP: The Secretariat has completed the review of the recommendations of the Commission of Inquiry into the RCMP (McDonald Inquiry) which concerned RCMP investigative procedures and control and accountability of its law enforcement operations. The majority of the recommendations have been implemented through policy direction or have been proposed for legislative amendment. The remaining few recommendations are being examined by a federal-provincial committee for disposition. The major continuing thrust of this initiative is the further development of formal Solicitor General Directives for the RCMP which clarify, to the extent possible, its role in circumstances which are characteristically sensitive, complex and often ill-defined.

Criminal Law Review: During 1984-85, the Ministry concentrated on three important Review projects: Police Powers, Corrections Law and Mental Disorder. Considerable progress has been made in all areas. In respect of the Police Powers Project, consultation papers have been prepared, and national consultations held with provincial governments, the bar, the police, the bench and civil liberties groups. Policy development was initiated with respect to search and seizure, disposition of things seized, arrest, use of force, eyewitness identification, electronic surveillance, questioning of suspects, and investigative tests. Related legislative proposals are being developed.

Legislative proposals were developed in concert with the Department of Justice and were subsequently incorporated in Bill C-19. Of particular interest to law enforcement were amendments dealing with: blood-tests for impaired drivers; the creation of an offence for theft of computer time or data; forfeiture of the proceeds of crime as an aspect of sentencing; the abolition of writs of assistance; and the creation of a procedure whereby search warrants can be obtained by telephone or other means of telecommunications.

Consultations were undertaken and research proposals developed for research to assist the Department of Justice in the implementation and evaluation of proposed sentencing legislation, to provide advice to the Canadian Sentencing Commission and to estimate the impact of proposed sentencing reforms on the federal penitentiary populations.

A comprehensive review of the laws governing the management of both federal and provincial correctional responsibilities is underway. It will undertake an extensive number of consultations with both private and public agents involved with the field of corrections, such as the John Howard Society and provincial Heads of Corrections. It will define the purpose of the federal corrections system and examine the present

laws to determine how they need to be changed to reflect changing times and objectives.

The Mental Disorder Project, already in its final Phase II stage, will be completed and policy options will be developed. These options will include the issue of the mentally disordered young offender.

Support for Victims of Crime: The Ministry continued to provide technical and financial support to the provinces and local groups to promote the development of model victim assistance services in urban and rural areas of Canada. Information from these projects and from the analyses of the National Victimization Survey was widely distributed to Victims user groups, in part through the National Victims Resource Centre which was created by the Ministry and also via conferences, workshops, training sessions, publications and public discussions dealing with victims issues. Policy initiatives were undertaken regarding the need for police charging policies in wife assault, and on a number of other issues through involvement of the Federal/Provincial Working Group on Victims. A United Nations Meeting on Victims in preparation for the 7th U.N. Congress on the Prevention of Crime, was organized. The Ministry developed a two year plan of action designed to improve victim service delivery, increase public awareness of victims issues, develop training information for criminal justice professionals and volunteers in the victims area and to lead ultimately to the development of a comprehensive federal policy for victims of crime.

The Secretariat will continue to encourage and support the development of police-based victims' services at the community level and among criminal justice, social service and health care agencies.

A public awareness program will be carried out via the National Victims Resource Centre, workshops, seminars, training sessions and publications. The Ministry will also continue its travelling exhibit program which brings information about victims and victims' services to shopping malls and community events across Canada. Research and demonstration will focus on development and evaluation of effective victims service delivery models, victimization research, and research on the needs of special groups of victims. The training of law enforcement, correctional and private sector professionals will be encouraged to make the criminal justice system more responsive to victims. The Ministry will also continue to work towards the development of a comprehensive federal policy on Victims of Crime. This will be coordinated through the Federal/Provincial Working Group on Victims of Crime.

Services to Native People: In 1983-84, the Ministry developed and implemented the initial phases of an action plan to improve criminal justice services for Natives. A Special Advisor, Natives was hired to implement the action plan. Research and developmental projects were

undertaken on issues relating to the Young Offenders Act, admissions of Natives and Non-Natives to correctional institutions, Native women, victims, crime prevention and Indian self-government. In addition, the Ministry disseminated reports which included a literature review, an inventory of research and programs, an opinion study and reviews of two juvenile intervention projects.

The Ministry also made plans to open the Northwest Consultation Centre in Edmonton, which will provide increased services to communities in Alberta and the Northwest Territories with a major focus on the needs of aboriginal people and communities. As well, the Pacific Region Consultation Centre was provided with increased capacity to provide services to the Yukon and northern British Columbia.

The action plan will be continued in 1985/86.

Seventh U.N. Congress: In the summer of 1984, the Ministry hosted a U.N. Inter-regional Meeting of Experts on Topic 3 of the 7th U.N. Congress Agenda (Victims of Crime). The meeting was attended by 18 experts on victims issues from various parts of the world. A draft Declaration on Justice and Assistance for Victims was produced and will be considered at the 7th Congress. The Ministry initiated the preparation of Canadian position papers for the Congress. Other preparations included consultations with provincial and territorial governments and non-government organizations in the development of Canadian positions.

Correctional Management: The Ministry is responsible for policy advice to the Minister in the area of corrections as part of his legal mandate. In this regard, a broad range of operational and strategic policies issued are under active review and investigation by the Corrections Policy Division. Because of the multi-agency and intergovernmental dimensions of these issues, they are coordinated by the Corrections Policy Division. The urgency of responding to the rapid growth in penitentiary populations is one such issue. The need to develop a range of effective release mechanisms consistent with correctional goals is another. The emergence of concern for prison violence and the capacity of the system to manage difficult situations remains an issue. In this regard, also of concern is the role of the Correctional Investigator.

Conditional Release and Mandatory Supervision: The follow-up to the Solicitor General's study of conditional release and mandatory supervision resulted in the initiation of a major program of research on parole decision-making. This program of research includes three studies which focus on: the parole decision-making process; the assessment of risk associated with parole release; and the suspension/revocation process. An additional research project which was undertaken in response to the Solicitor General's study of conditional release is the

evaluation of a life skills program in order to determine whether a specific institutional pre-release program can be effective in improving the post-release adjustment of inmates and reducing the likelihood that they will recidivate.

Legislation to modify the law governing mandatory supervision was introduced and subjected to committee review in the 34th Parliament. While it did not become law, it represented a major development in the process of improving this conditional release mechanism.

Dangerous Offenders: As part of its overall consultation process on the management of dangerous offenders, the government has created the Dangerous Offender Consultation Committee, made up of representatives of private agencies and government officials. It has undertaken an evaluation of Special Handling Units within the Correctional Service of Canada and is in the process of reviewing alternatives for the effective management of violent inmates. Activities in 1985-86 will include provision of a comprehensive analysis of strategies for dealing with penitentiary populations while maintaining public safety; undertaking a review of alternatives for the release of potentially dangerous offenders; undertaking a major review of release options and programs; and monitoring developments within the federal correctional responsibility to identify further policy needs.

Long-Term Imprisonment: Since the creation of the minimum 25 year sentence in 1976, there has been a steady growth in the number of long-term offenders within the federal penitentiaries. It is expected that, by 2001, there will be as many as 2700 long-term offenders within the system. Because this population presents unique challenges to correctional authorities, a Ministry committee has been charged with long-term review of these problems. It has already prepared one working paper and a second, dealing with the substantive management problems, is being drafted. This committee is designed to provide continuing policy advice on this very sensitive area.

Security Screening and Classification: A fundamental review of the security screening and security classification system of the federal government has been completed. In February 1984, the Secretariat provided the Interdepartmental Committee on Security and Intelligence with a comprehensive proposal covering government security procedures, based on a two-level classification system. This package is presently the subject of interdepartmental discussion in preparation of a final draft to be placed before Cabinet. The Secretariat will serve as the focal point for the preparation of Treasury Board directives and guidelines for government-wide application.

National Initiatives on Drug Trafficking and Drug Abuse: The Secretariat has worked with officials of the RCMP, the Department of Justice and the Department of National Health and Welfare to develop

4135

mechanisms to improve federal, provincial and international coordination of responses to the drug problem. To that end, it is intended that senior officials of various concerned departments meet to discuss a government-wide strategy that would make the countering of drug trafficking and the prevention of drug abuse a national priority.

Telewarrants: The Secretariat completed its policy review of its proposals to permit police to obtain search warrants via telephone in substitution for writs of assistance. The proposed new customs act and Bill C-19, which were introduced into the last session of Parliament, provided for the abolition of writs of assistance in customs and drug investigations and proposed a system of telewarrants. The reintroduction of such legislation in the next Parliament is under consideration.

Amendments to the RCMP Act: Bill C-13, which sought to amend the RCMP Act by providing more equitable and legitimate procedures for RCMP internal discipline, grievance, and public complaint procedures, died on the Order Paper with the dissolution of the 32nd Parliament. Reintroduction of the Bill in the new Parliament is under consideration.

Volunteers and Voluntary Organizations: Sustaining core funding arrangements in the Ministry respecting voluntary organizations involved in the criminal justice system were consolidated into a single program and transferred to the Ministry Secretariat for ongoing management. As a result, the program now funds eleven national voluntary organizations, from a budget exceeding $2 million. The organizations funded provide both direct and indirect services to offenders at the local and national levels and consultation and advice to the Ministry on a wide range of criminal justice issues.

A basic framework for policy development was established, involving a new category of grants with a five-year evaluation cycle and substantially increased funding levels. In 1985/86, work on the funding policy will be continued, in consultation with the voluntary sector and the program itself will continue on an ongoing basis.

Gun Control: The negotiation of federal-provincial financial agreements in respect of the gun control program is a cyclical activity. Agreements extending to March 31, 1986 have been completed, on the same terms as previous agreements. In 1985/86, negotiations will be commenced relative to the next set of agreements.

4. Program Effectiveness

The Secretariat carries out a range of evaluative activities at three distinct levels.

The Programs Branch and the Policy Branch conduct full impact evaluations on selected projects in priority areas. As well, the Programs Branch conducts program reviews for development projects and is developing monitoring and self-evaluation kits for projects in the priority areas of Victims and Young Offenders. These evaluations are used extensively for planning, project management, policy and program development and for information sharing with interested jurisdictions and the Canadian public.

These project-level evaluations are coordinated with the Secretariat's plan for evaluation at the next level (program evaluation). Evaluative activities are being undertaken, on an experimental basis, for selected Secretariat program components.

In some instances, Cabinet requires the Secretariat to conduct an evaluation, following the implementation of a major piece of legislation. Such policy or tertiary level evaluations go beyond program evaluation in that they examine the impacts and effects of legislative and administrative programs that affect a number of federal, provincial and other authorities outside the Secretariat. These evaluations are complex and require more extensive time spans than do evaluations at lower levels.

5. Performance Information/Resource Justification

The Ministry Secretariat operates within the constraints of a relatively small and constant resources base, which allows it to address its most basic ongoing functions of providing policy advice and the research, statistical and experimental programs which support the policy function, and to deal, on a preliminary basis, with major policy initiatives as they arise. When Cabinet directs the Secretariat to undertake programs of major and sustained activity related to particular initiatives, such as Young Offenders, Victims or Crime Prevention, the Secretariat's resource base is adjusted on a temporary or long-term basis to reflect the resource demands of such priority initiatives.

A major increase to the Secretariat's resource base takes place in 1985/86, as the Secretariat assumes responsibility for the administration of the $145 million federal-provincial cost sharing agreements for services to young offenders. A further $14.3 million will be expended for systems development and other implementation/administration activities related to the new Young Offenders Act.

Figure 4 depicts the uses which will be made of the Secretariat's non-salary dollars (other operating, capital, grants and contributions) in 1985-86.

Reporting of operational performance relative to the 1983-84 expenditure plan is presented on pages 10 to 12 of this document.

Figure 4: Planned Non-Salary Expenditures and Results by Operational Objective for 1985/86

Operational Objective	Non-Salary Expenditures ($000)	Planned Results
Young Offenders	160,962	Implementation of the Young Offenders Act
Volunteers & Voluntary Organizations	2,060	Provision of core funding and development of a ministry policy in support of national organizations involved in the criminal justice system
Victims of Crime	1,735	Completion of research, experimental and demonstration projects, implementation of a public information program, operation of a Victims' Resource Centre and the development of related policies to encourage improvements in services to victims of crime
Crime Prevention	1,080	Completion of research, experimental and demonstration projects and the conduct of a public information program to encourage local initiatives to prevent crime
Natives	700	Completion of research, experimental and demonstration projects and a general enhancement of Secretariat services in

Operational Objective	Non-Salary Expenditures ($000)	Planned Results
		the prairie provinces, British Columbia and the territories, related to native people and the criminal justice system
Criminal Justice Policy	505	Completion of research, experimental and demonstration projects and of related policy development on issues affecting the criminal justice system not specifically related to corrections or to policing and law enforcement
Women in Conflict with the Law	420	Completion of research, experimental and demonstration projects resulting in the improvement of programs related to women in conflict with the law
Policing and Law Enforcement Policy	365	Completion of research and policy development related to major initiatives described on pages 19-26 of this document and the provision of policy advice on other aspects of policing and law enforcement
Criminal Law Review	305	Completion of research and policy/legislative development related to police powers, sentencing, correctional law and mental disorder

Operational Objective	Non-Salary Expenditures ($000)	Planned Results
7th UN Congress on Crime	205	Completion of preparations for, and participation in, the Congress in the fall of 1985
Gun Control	200	Consultation, policy development and the conduct of safety programs related to firearms
Corrections Policy	200	Completion of research and policy development related to corrections and correctional management, including initiatives described at pages 24-25 of this document
National Security	195	Development of policies and coordination of the Federal Government's national security program
Conditional Release	155	Completion of research related to parole decision-making, risk assessment and suspension/revocation
Professional Services	1,420	Provision of library and reference, communications, legal, electronic data processing, statistics and other professional and technical services to the Secretariat and its clients, the dissemination of research and related information and the provision of financial support to university centres of criminology

Operational Objective	Non-Salary Expenditures ($000)	Planned Results
Executive and Administration	2,972	Management and executive direction by the minister, deputy minister and heads of branches, the purchase of goods and the provision of administrative services

E. Office of the Correctional Investigator

The Office of the Correctional Investigator was established in 1973 pursuant to the Inquiries Act. The Correctional Investigator's mandate, as established in 1977 by an Order in Council, is "to investigate, on his own initiative, on request from the Solicitor General of Canada, or on complaint from or on behalf of inmates as defined in the Penitentiary Act, and report upon problems of inmates that come within the responsibility of the Solicitor General of Canada". The Investigator is, therefore, an ombudsman for incarcerated persons.

The Correctional Investigator's staff is comprised of 10 persons and is requesting $523,376 in the 1985-86 Estimates. The staff handles several hundred complaints per year, conducts as many interviews, and visits all penal institutions regularly. By liaising with the Commissioner of Corrections and other related agencies the Correctional Investigator endeavours to resolve complaints by administrative action. The major types of complaints investigated relate to inmate transfers, medical problems, inmate property claims, and discipline.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Secretariat expenditures by object are presented in Figure 5.

Figure 5: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	12,920	12,337	10,390
Other Personnel	1,805	1,249	1,626
	14,725	13,586	12,016
Goods and services			
Transportation and communications	1,563	1,547	1,293
Information	514	965	598
Professional and special services	5,172	8,613	4,090
Rentals	518	520	323
Purchased repair and upkeep	46	91	124
Utilities, materials and supplies	1,008	925	692
Grants and contributions	163,911	131,608	8,676
All other expenditures	-	-	1
	172,732	144,269	15,797
Total operating	187,457	157,855	27,813
Capital	100	366	336
Total expenditures	187,557	158,221	28,149

2. Personnel Expenditures

Figure 6: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management Category	31	26	17	50,350-96,300	66,066
Scientific and Professional	32	39	33	13,609-85,140	48,018
Administrative and Foreign Service					
Administrative Services	43	42	35	13,912-57,987	39,837
Financial Administration	8	8	8	13,853-57,980	37,609
Information Services	6	6	6	13,579-57,980	43,479
Organization and Methods	4	4	4	13,520-57,980	45,697

Secretariat, Stenographic and Typing	52	50	54	12,636-31,946	23,577
Office Equipment	7	8	-	12,665-25,271	20,834
Operational	-	1	3		
Other	7	7	7		

Note: The person-year column displays the forecast distribution by occupational group of the authorized person-years for the Program. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 7: Details of Grants and Contributions

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants			
Canadian Association of Chiefs of Police	50,000	50,000	50,000
Canadian Association for the Prevention of Crime	125,000	125,000	125,000
John Howard Society	50,000	50,000	50,000
Authorized After-care Agencies	1,857,000	1,642,846	1,338,600

B. Cost Analysis

Net Program Cost

The Secretariat's 1985-86 Estimates include only authorities to be voted and statutory authorities. Other items must be considered when describing the Secretariat on a full cost basis. To be taken into consideration are services provided without charge by other departments such as accommodation charges for Public Works and services provided by Supply and Services, Treasury Board and the Department of Labour.

Figure 8: Net Cost of Program for the Year 1985-86 ($000)

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Statistics Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the program and a summary of its currrent plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is sought in these Estimates to spend $187,450,000 in 1985-1986 for Statistics Canada. The remaining expenditures, estimated at $20,220,000 for contributions to employee benefit plans will be made under existing statutory authority.

Financial Requirements by Authority

Section I
Program Overview

A. Highlights

The main goals of Statistics Canada in 1985-86 are included in its ongoing program as outlined in the body of this document. The following items describe further goals for 1985-86:

- to analyze the dependence of the aged upon formal and informal support networks; this report will be the first output from a new General Social Survey designed to monitor and analyse social trends including issues related to unemployment, education, health and selected population groups (see page 28);
- to expand Justice information outputs to respond to a number of high priority issues identified by federal and provincial ministries (see page 33);
- to establish a publishing process leading to greater production efficiency and effectiveness in meeting users needs (see page 40);
- to redesign business surveys, ultimately to reduce both survey costs and respondent burden (see page 42);
- to improve efficiency by integrating statistical operations conducted at headquarters and, by further regionalizing operations where cost effectiveness or quality can be improved, (see page 44);
- to make increased use of computing technology to enhance productivity and the value of outputs (see page 46);
- to manage personnel processes to upgrade the skills profile of the agency's human resources in light of technological change (see page 48).

B. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

Activity	Estimates 1985-86 Total Expenditures	Estimates 1985-86 Receipts Credited to Vote	Estimates 1985-86 Total Net Expenditures	Forecast 1984-85 Total Net Expenditures	Change	For Details See Page
International and Domestic Economic Statistics	64,682		64,682	62,707	1,975	17
Socio-Economic Statistics	37,469		37,469	39,698	(2,229)	23
Census and Social Statistics	16,180		16,180	17,297	(1,117)	27
Institution Statistics	16,874		16,874	16,766	108	32
Technical Infrastructure	55,989	8,424	47,565	43,968	3,597	37
Corporate Management Services	24,900		24,900	24,795	105	47
	216,094	8,424	207,670	205,231	2,439	
Person Years			4,472	4,600	(128)	

The $2.4 million increase in 1985-86 requirements over the 1984-85 forecast includes the following major items:

- redesign of business surveys $ 1.8 million
- salary and inflation increases $ 9.2 million
- miscellaneous program reductions including efficiency gains and cyclical activities ($ 8.6 million)

C. Background

1. Introduction

Since the national statistical agency's establishment by Parliament in 1918, its program has evolved in response to a growing demand for statistical information. Governments at every level, business, labour, academic and social institutions, professional associations, the international statistical community and the general public are served by Statistics Canada's information when dealing with social and economic change in Canada.

Statistics Canada presents a comprehensive picture of the national economy through statistics on manufacturing, agriculture, exports and imports, retail sales, services, prices, productivity changes, trade, transportation, employment and unemployment, and aggregate measures such as gross national product. Social conditions are reported upon by statistics that cover demography, health, education, justice, culture and household incomes and expenditures. This economic and social information is produced at the national and provincial levels, for major population centres and other sub-provincial and 'small areas'.

Statistics Canada makes its information available through media releases, publications, electronic dissemination and also in response to direct inquiries. In addition, specialized products and services are provided on a cost-recovery basis, including advice on the design and implementation of information gathering projects for federal departments and agencies.

Statistics Canada carries on research and development into statistical techniques and concepts and methods of data collection, processing and dissemination to assure efficient operations and a high quality technical capability. Selected analytical studies which give focus to the implications of statistical data are carried out in the public interest.

The agency works with its federal and provincial partners to minimize duplication and maintain statistical standards and classifications. It also fulfills a number of commitments as a member of the international statistical community (see page 60, Section III).

2. Legal Mandate

Statistics Canada's formal mandate derives primarily from the Statistics Act. The Act requires the agency, under the direction of the Minister, to collect, compile, analyse and publish statistical information on the economic, social and general conditions of the country and its citizens. Other federal legislation also requires Statistics Canada to produce data for a wide variety of purposes, for example, the Corporations and Labour Unions Returns Act, The Official Languages Act, the Electoral Boundaries Readjustment Act, Federal-Provincial Fiscal Arrangements Act, the Unemployment Insurance Act and the Western Grain Stabilization Act. (See page 59 for a listing of all Acts which require the Chief Statistician or Statistics Canada to collect or provide specific information).

3. Program Objectives

The objectives of Statistics Canada are:

- To provide statistical information and analysis on the social and economic life of Canada, its provinces, its regions, its businesses, its institutions and its people, in order to contribute to an understanding of the various aspects of Canada and provide a basis for the development, analysis and evaluation of social and economic policies and programs, for public, business and individual decision-making, and for the general benefit and information of Canadians.

- To promote a national statistical program through the co-ordination of statistical activities of federal departments and with the provinces and territories.

4. Program Organization for Delivery

Activity Structure: As shown in Figure 2, Statistics Canada has identified six activities which reflect what the agency is doing and how it is working to meet its stated objectives.

The first four activities involve the planning and implementation of various surveys and other activities that produce the Program's statistical output.

The Technical Infrastructure Activity provides centralized services essential to all statistical activities including; survey methodology, questionnaire redesign, classification systems, data collection and data processing. It also includes the provision of special statistical products and services on a cost-recovery basis, research and analysis, and marketing and information services. The Corporate Management Services Activity provides departmental management, planning, finance and personnel services.

Figure 2: Activity Structure

Organization Structure: The Minister of Supply and Services is the Minister responsible to Parliament for Statistics Canada. The agency is headed by the Chief Statistician of Canada, supported by the Deputy Chief Statistician, who assists in all aspects of managing and planning.

Figure 3 displays the relationships between the six activities of Statistics Canada's Program and the agency's organization structure.

When it is cost-effective, collection, production and information operations are conducted in nine regional offices which report to the Assistant Chief Statistician Communications and Operations. Details on the regional offices are contained in Section III, Supplementary Information, page 61.

Figure 3: Resources by Organization/Activity ($000)

ACTIVITY	$ 000 (P.Y.'s)						
INTERNATIONAL AND DOMESTIC ECONOMIC STATISTICS	304 (5)	52,450 (1,200)	11,929 (241)				[illegible] (1,446)

D. Planning Perspective

1. Environment

Factors affecting the scope, emphasis and processes of the Program include: the potential requirement for additional information, the impact of technological change, and legislated requirements.

Requirements for Additional Information: A number of emerging social and economic issues may require additions to statistical data currently being produced. These needs have been identified through consultative processes which include external advisory committees and liaison with data users. As well, information needs have been identified by parliamentary committees, through program evaluation and from the agency's research studies among other sources.

Job creation is generally acknowledged to be of particular concern to Canada for the next several years. While employment and unemployment statistics are well developed, much remains unknown about the dynamics of labour force participation, future skill and occupational requirements, and the causes and consequences of unemployment. This information is needed by policy planners to address the job creation issue.

An issue closely related to job creation is education and training. Of particular concern is the retraining of workers who face the loss of their jobs through changes in technology or economic structures. Policy and program development in the area of post-secondary education requires more information about adult education and vocational training.

Trade and industrial development issues such as industry specialization, regional development, foreign ownership, international competitiveness, free trade and the role of small business, call for data and analysis in areas where existing statistical information is not fully developed. Analysis of the increasingly important service sector in the Canadian economy requires improved data about types and volume of activity, and growth in the value of services. To address the related issue of productivity, information about factors such as capital stock, capacity utilization, technological innovation and the diffusion of advanced technology in the manufacturing sector must be further developed.

Public officials, professional analysts and the general public are demanding more statistics about the size and operation of the Canadian public sector and its efficiency and effectiveness. Information needs include improved measurement of: the public sector's revenues and expenditures; its employment levels; and its financial status in terms of investment and debt. To meet these requirements, data must be standardized so that more accurate comparisons between governments and levels of government can be made.

The issue of income security has become more important as an aging population, inflation and high levels of unemployment cause concern about the incomes of certain groups, especially elderly persons living alone and single parent families. The development and monitoring of pension and income supplement programs require improved statistical data about such matters as the distribution of income and wealth, poverty, pension rights and family support systems.

Constitutional provisions and land claims negotiations have heightened interest in a variety of issues related to aboriginal people in Canadian society. Examination of these issues requires improvements in the identification and profiling of these population groups.

New data are also needed about the numbers and characteristics of disabled persons in Canada in order to respond to the recommendations of the Parliamentary Committee on the Disabled. Information is required about the nature and impact of their disabilities on health, education, employment and other aspects of their lives.

The report of the special Parliamentary Committee on Visible Minorities noted repeatedly that the development and monitoring of Affirmative Action and other programs are hindered by a lack of statistical information. More data are needed to design programs to promote the well-being of minority groups and help them overcome obstacles to full participation in Canadian life.

In recent years, concerns have increased about the costs and access to the health care system, the future impact of our aging population and related matters. Substantial information exists about health care institutions and the costs of treating illness, but comparatively little is known about the health of Canadians in relation to health care expenditures. This limits evaluation of the effectiveness of health care systems and programs designed to promote healthier lifestyles. More information could also shed light on lifestyle and other determinants of good health, as well as on groups which may be disadvantaged with respect to health care.

Technological Change: Technological developments have enabled new approaches in data collection methods, data processing and products. Data can now be collected electronically from many sources. It can be correlated and the consistency and accuracy of statistical information improved with more sophisticated equipment. Information technology in the hands of information users is also leading to new dissemination techniques. Specific changes, such as the wide use of mini and micro computers and a new communications system involving satellite transmission and cable networks, will have a considerable impact on all operational aspects of the Program.

Legislated Requirements: Statistics Canada will continue to be directed by legislation to collect and distribute specific information to determine levels of expenditures and revenues, to evaluate policies and to administer programs. (See page 59, Supplementary Information, for a listing of Acts which presently require the provision of specific information).

2. Initiatives

During 1985-86, Statistics Canada will undertake the following initiatives in response to the environmental factors just described:

- develop methods to produce from administrative records, or sample surveys of the population, information to meet needs that will arise as a result of the reduced scale and scope of the 1986 Census;
- introduce an annual General Social Survey to address issues where policy planners lack information; the first survey will focus on support networks for the aged; the second phase may examine unemployment and youth;
- produce current year public sector financial estimates for federal-provincial budget coordination, and improve information on public sector debt, investment and employment levels;
- conduct a pilot Capital Stock Survey to improve measures of industrial productivity, the scale of production and costs, and to improve understanding of the uses and effects of technology;
- produce new information about university graduates and their employment status, experience and on-going needs;
- pursue greater integration of statistical operations and computerization of production processes to enhance productivity and the value of outputs for users; and
- conduct a redesign of business surveys that will generally improve the quality of outputs related to industrial activities.

3. Program Effectiveness

The effectiveness of the Statistics Program depends on the relevance and utility of its products to its various users. These qualities are maintained in a variety of ways built into the statistical process.

Program evaluation is a major management tool for ensuring continuing relevance and effectiveness. As a matter of policy studies of major program areas, which include interviews with key users and the review of concepts and methods, are carried out by experts external to the department. Details on recently completed program evaluation studies and a related program to improve operational efficiency are included in Section III, page 55.

Statistics Canada also uses a network of formal Advisory Committees in several major subject areas to ensure its programs are relevant, (for example, national accounts, prices, culture, vital statistics, education, justice and labour).

Federal-provincial meetings are held regularly to ensure that statistical concepts are kept under review and that outputs remain relevant.

Canada's participation in international organizations such as the Organization for Economic Cooperation and Development, the United Nations, the International Labour Organization and the International Monetary Fund requires that the program's outputs meet international standards to ensure that Canadian data are relevant to these groups.

These processes complement the ongoing discussions between personnel associated with surveys and their data users. This consultative network provides the knowledge with which Statistics Canada preserves and enhances the relevance and utility of its output. The result of these processes has been the continuous introduction of modifications to the Program, which have led to the following observations by the Moser Committee and the Auditor General:

> "As regards data quality, we are impressed by much of what we have seen. As regards timeliness, accuracy, and overall adequacy, most key series we have considered stand high in the international ranking. Our contacts with several knowledgeable users indicated that in general they were satisfied with the reliability of the statistics which the agency is publishing." (Moser Committee Report, 1980).

> "Our work showed that the agency's product line was certainly relevant .... Most of the agency's budget goes to producing statistics required by law or well established government needs .... We found no instances where Statistics Canada was spending significant sums on products which did not have identifiable users .... The agency's core users are extensively consulted. We noted a strong commitment on the part of the Chief Statistician to be responsive to government needs ..... Our interviews with several key users, including those in federal and provincial governments, showed that they found the agency's products on the whole both satisfactory and useful ... ". (Auditor General's Report, 1984).

Utility of Statistics Canada Products: In addition to information provided to meet legislated requirements, the statistical information provided to government is used primarily for economic and social policy and program development, monitoring and evaluation. Figure 32 on page 57 identifies several examples of these uses and the related outputs of the Program.

Approximately 45% of the enquiries recorded by Statistics Canada come from the business community which uses information primarily to plan, monitor and evaluate its activities. Figure 33 on page 58 identifies several examples of these uses and the related outputs of the Program.

Individual Canadians use statistical information to enhance their understanding of Canada and to make personal decisions that affect their daily lives. Its usefulness will vary with the interests and needs of individuals, and as such is impossible to measure quantitatively. Information about trends in the significant events in peoples' lives, such as births, marriages, deaths, population movements and divorce are subjects of major interest. As well, there is a high public interest in factors which describe the economic health of the nation.

Examples of products of special interest to the general public are the Consumer Price Index (CPI) and employment and unemployment statistics. The CPI, which measures real changes in retail prices, is a continuing guide for individuals about the purchasing power of their incomes. Employment and unemployment patterns across the country, reported monthly, are particularly useful to people who anticipate moving, entering the work force, or planning their education. The wide public exposure given to these data by the news media underscores their significance to individuals.

In general, public attitudes and political debate on issues such as crime, health, inflation, economic growth, regional disparity, poverty and language, are founded on generally available and broadly accepted statistical information about phenomena and conditions occurring in society.

Section II
Analysis by Activity

A. International and Domestic Economic Statistics

Objectives

To provide statistical information and analysis relating to the measurement of the international and domestic components of Canadian economic performance, in order to serve as a basis for the development and analysis of public and private economic policies, programs and decision-making.

To coordinate data collection and aggregation activities with other federal departments and with provinces and territories in order to minimize response burden on the business community.

Resource Summary

The International and Domestic Economic Statistics Activity accounts for approximately 31% of the total program expenditures and 32% of total person-years for 1985-86.

Description

Measures of Economic Performance: These measures provide an integrated system of information and analysis of Canada's economic activities, both domestic and international. Statistics reflecting millions of economic transactions in all sectors are regrouped into aggregate measures, referred to as the System of National Accounts. This system measures both the current performance and the structural make-up of the Canadian economy by type of economic transaction and by sector. It also presents key economic measures such as gross national product, gross domestic product by industry, balance of international payments, financial flows, as well as input/output tables and productivity measures.

Industrial Activities: This sub-activity provides information about the activities of the primary, secondary and service sectors. The primary industries sector reports on the agriculture, logging, mining, oil and gas industries and the contribution of this sector to the national economy and international trade. The secondary industries sector provides statistical information and analysis about the activities of more than 150,000 establishments in the construction and the manufacturing industries. It measures the flows and stocks of fixed capital assets employed in the Canadian economy and their degree of capacity utilization, and estimates the annual capital expenditure plans of businesses and governments. The service industries sector provides statistical information and analysis about transportation, communication, retail and wholesale trade, accomodation, recreational, personal and professional services. This sector includes more than 600,000 business establishments which. because of their diversity, are covered by more than 100 different surveys. The main components of this information are the financial performance of the industries and their activities.

The sub-activity also measures price changes for industrial goods and for capital expenditures and construction. These industry price indexes assess inflationary pressures and processes on the major industrial sectors of the Canadian economy. They are also essential in removing the effects of price changes from economic activity measures to arrive at the real output of the Canadian economy.

Tourism: This sub-activity provides information on the travel, tourism and recreation industries and on the volume and financial implications of international travel to and from Canada. Data from Statistics Canada surveys and external sources generate the information.

Science and Technology: This sub-activity provides statistical information for the formulation and monitoring of science and technology policy in Canada. It supplies information on the financial and human resources devoted to research and development (R&D) activities, the sources of funding for those resources, the effectiveness of R&D activities in terms of selected indicators and international comparisons, the availability of scientists and engineers both for R&D activities and the implementation of new technology, and federal government science activities.

International Trade: This sub-activity provides statistical information on Canada's merchandise exports and imports by partner country and commodity, including both quantity and value. Data are extracted from Revenue Canada Customs and Excise records and cover roughly one million transactions each month.

Corporate Finance: This sub-activity provides statistics about the financial and economic performance and taxation of the corporate sector of the Canadian economy, and covers more than 550,000 industrial and financial corporations. It also includes administration of the Corporations and Labour Unions Returns Act (CALURA) which measures the extent and effects of foreign ownership and control on the Canadian economy, and of the association of Canadians with international labour organizations.

Performance Information/Resource Justification

In 1985-86 improvements that will be made to established programs include:

- rebasing the National Accounts from 1971 to 1981 prices to reflect economic change and to maintain the relevance of these measures;
- improving the timeliness of release of data on Canada's international investment position, and quarterly financial flows;
- improving the quality of data on international travel, which is a significant component of the balance of trade;
- completing development work on the 1986 Census of Agriculture;
- conducting a pilot Capital Stock Survey to improve productivity measures, aid estimation of volume of production and production costs, and develop insight into the technology renewal process and the substitution of capital for labour; and
- improving the efficiency and reliability of business surveys by upgrading the register of Canadian businesses, (see page 42).

Quality of Service: The quality of service provided by this Activity to its various users can be assessed by the following factors:

- the frequency with which statistical products are provided;
- the timeliness of their availability following collection;
- their relevance for users; and
- the reliability or accuracy of the data.

Figure 5 displays the level of service for selected components of the International and Domestic Economic Statistics Activity.

Figure 5: Major Subject Areas, Selected Outputs, and Level of Service

Major Subject Areas and Selected Outputs	Level of Service	
	Frequency	Timeliness
Measures of Economic Performance		
National income and expenditures including gross domestic product, personal income and savings, government revenues and expenditures	Quarterly	55-60 days
Gross Domestic Product in manufacturing, mining and services	Monthly	56 days
Industrial Activities		
Logging inventories	Monthly	60 days
Farm cash receipts	Monthly	35 days
Production of grains and oil seeds	Quarterly	18 days
Census of manufactures	Annual	180-360 days
Housing starts	Monthly	30 days
Volume of retail trade	Monthly	40 days
New motor vehicle sales	Monthly	35 days
Tourism		
Flow of international travelers	Monthly	42 days
Receipts and expenditures	Quarterly	52 days
Trip characteristics	Annual	7 months
National tourism indicators and travel price index	Quarterly	2 months
Travel to work	Annual	7 months
Travel by Canadians	Quarterly	5 months

	Frequency	Timeliness
Science and Technology		
Industrial R&D expenditures	Annual	12 months
Federal Government R&D expenditures	Annual	2 months
Industry selling price index	Monthly	30 days
New housing price index	Monthly	30 days
International Trade		
Canadian trade	Monthly	40 days
Corporate Finance		
Financial statistics of corporations and financial institutions	Quarterly	45 days
Corporations and Labour Unions Returns Act: Corporations	Annual	24 months
Labour unions	Annual	18 months

The relevance of many of the Activity's outputs is established by legislation which requires Statistics Canada to measure annual changes in gross national product, (G.N.P.). In order to produce this information annual statistics are required for agriculture, mining, forestry, manufacturing, transportation, communications, construction, the retail, wholesale and service sectors, and capital expenditures which provide the basic data from which G.N.P. is developed. The relevance of the surveys and associated statistical outputs are continually being reviewed through informal consultations with the various users. On a more formal basis, advisory committees on prices, national accounts and science and technology have been established to advise Statistics Canada on matters related to program issues, including the relevance of data.

The sub-elements make use of specifically designed sampling, editing and quality control measures to produce outputs which are generally considered of high quality. The economically sensitive uses of these statistics also suggests that users perceive these products to be of good quality. For the Measures of Economic Performance sub-element an indication of the quality of data can be obtained by comparing preliminary estimates with final data. Between 1961 and 1983 final data were annually within 0.4 percent of preliminary figures.

Sub-Activity Expenditure Patterns: Figure 6 displays the expenditure patterns of selected sub-activities.

Figure 6: Sub-Activity Expenditure Patterns

The following figure displays the cost of providing statistical information for the components of Canada's industrial activities. The costs are expressed per establishment in the primary, secondary and service sectors and per farm for the agriculture sector. With the exception of primary industries unit costs have been stable. For primary industries total costs have remained stable while the number of establishments has increased.

The following figure displays the cost per transaction of providing statistical information on Canadian imports and exports. The decline in unit costs reflects increased productivity in this area.

B. Socio-Economic Statistics

Objectives

To provide statistical information and analysis relating to economic phenomena commonly perceived as having a major impact on conditions of individuals and families, in order to assess the impact of changing economic circumstances on the people of Canada.

To coordinate statistical activities on socio-economic issues with other federal departments and agencies and with the provinces and territories.

Resource Summary

The Socio-Economic Statistics Activity accounts for approximately 18% of the total program expenditures and 16% of total person-years for 1985-86.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Family Income and Expenditure	4,766	96	5,472	103	4,229	95
Consumer Price Indexes	6,290	138	6,107	138	5,833	132
Employment and Unemployment	22,565	425	24,190	435	23,818	486
Sub-Provincial Data	3,848	73	3,929	76	3,378	68
	37,469	732	39,698	752	37,258	781

Description

Family Income and Expenditure: This sub-activity provides statistical information on income and expenditure levels and patterns for families, households and individuals in Canada including estimates and descriptions of the low income population. Statistics are derived from a number of sample surveys whose respondent populations vary in size from 7,000 to 37,000 households.

Consumer Price Indexes: The Consumer Price Index measures changes in retail prices. As such, it often serves as the official measure of inflation. The index covers 400 goods and services sampled in retail establishments throughout the country, with roughly 1,400,000 price quotes per year.

Employment and Unemployment: This sub-activity provides statistical information about various aspects of the labour market, including employment, unemployment, labour income, pension plans, work injuries and the unemployment insurance program. Statistics are based on results of monthly sample surveys of households (56,000) and businesses (67,000), and on the administrative records of Employment and Immigration Canada.

Sub-Provincial Data: This sub-activity provides statistical measures and products for sub-provincial areas such as counties, federal electoral districts, and municipalities. It embraces social, economic and environmental data. The main sources of sub-provincial data are censuses and administrative sources such as tax records, unemployment insurance records and similar provincial sources. The development of data from these administrative sources reduces the burden on individuals and businesses who would otherwise provide this information through surveys.

Performance Information/Resource Justification

The major change in resource requirements for the Activity is due to a 7% reduction in the sample size of the Labour Force Survey resulting in savings of $.7 million. A further small decrease in requirements is due to improvements to labour market publications making these outputs more cost effective.

Quality of Service: The quality of service provided by this Activity to its various users can be assessed by the following factors:

- the frequency with which statistical products are provided;
- the timeliness of their availability following collection;
- their relevance for users; and
- the reliability or accuracy of the data.

Figure 8 displays the level of service for selected components of the Socio-Economic Statistics Activity.

Figure 8: Major Subject Areas, Selected Outputs and Level of Service

Major Subject Areas and Selected Outputs	Level of Service	
	Frequency	Timeliness
Family Income and Expenditure		
Income of families and individuals	Annual	9 months
Expenditures of families and individuals	Biennial	15 months
Number and size of households	Annual	6 months
Consumer Price Indexes		
National CPI	Monthly	2 weeks
CPI for eighteen major centres	Monthly	2 weeks
Employment and Unemployment		
Labour force size	Monthly	14 days
Employment level	Monthly	14 days
Unemployment rate	Monthly	14 days
Number of employees	Monthly	55 days
Wages and salaries	Monthly	65-70 days
Number of unemployment insurance claims	Monthly	60 days
Pension memberships	Biennial	18 months
Sub-Provincial Data		
Migration of individuals	Annual	13 months
Statistical profiles	Occasional	-

The relevance of these data is established by their legislated uses and their general acceptance and wide use by various public and private sector clients. Members of the Advisory Committees on Labour Market Statistics and Price Measurement bring specialized expertise from outside the department to help establish the content and scope of the surveys in this area. Conferences are held each year with representatives of provincial governments, who are major data users, to discuss the usefulness and relevance of data.

Reliability of survey data is ensured by sample designs, which establish the minimum sample needed to produce acceptable estimates. The high response rates obtained by these surveys contribute to the reliability of the data. For other data, the quality of the estimates is determined by the nature and source of the information. Most data are compared with other sources to assess their reasonableness.

4175

Sub-Activity Expenditure Patterns: The information in Figure 9 displays the expenditure patterns of selected sub-activities.

Figure 9: Sub-Activity Expenditure Patterns

The following figure displays the cost to each Canadian household of providing statistical information on the labour market, prices of products and services, and incomes and expenditures of families. In the labour market area the increase in cost in 1983-84 reflects the introduction of a new Survey of Employment, Payrolls and Hours. The decrease in cost in 1984-85 reflects a reduction in the sample size of the Labour Force Survey. For family incomes and expenditures the cost swings reflect the biennial cycle of the survey activity. The cost of the Consumer Price Index has remained stable.

C. Census and Social Statistics

Objectives

To provide statistical information, analysis and services measuring changes in the Canadian population, its demographic characteristics and its conditions, including the Census of Population, in order to serve as a basis for public and private decision making in areas concerning the people of Canada.

To coordinate statistical activities on social issues with other federal departments and agencies and with the provinces and territories.

Resource Summary

The Census and Social Statistics Activity accounts for approximately 8% of the total program expenditures and 7% of the total person-years for 1985-86.

Figure 10: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Census	10,769	235	12,040	313	7,885	327
Population Estimates	3,319	69	3,204	69	2,787	67
Health Status	1,327	15	1,314	21	867	16
Education Status	169	3	161	3	--	--
Public Safety	29	—	29	--	--	--
Social Conditions	567	10	549	10	317	8
	16,180	332	17,297	416	11,856	418

Description

Census: The Census of Population, conducted every five years, is the cornerstone of the Social Statistics Activity, providing benchmark information on the demographic, social and economic conditions of the population and the basis for sample surveys of the population.

Basic information such as age, sex, marital status and family composition is collected in every census. Other information on housing, labour market status, ethnicity, education and migration may vary from census to census to reflect the changing information needs of Canadian society. The census obtains its basic data by contacting every one of the more than 9,000,000 households in Canada, an activity which at its peak employs more than 45,000 people.

M 73

Population Estimates: This sub-activity produces annual and quarterly estimates of the population, households and families and vital statistics on births, deaths, marriages and divorces. Analyses are conducted of demographic trends such as migration, the changing age structure of the population as well as periodic reports on the demographic situation in Canada. It also generates short-and long-term projections of the population, households and families, and population sub-groups. Estimates and projections are based on information from the Census, data on immigration data and vital statistics.

Health Status: This sub-activity provides information on the health of Canadians. The current focus is on the development of information profiling disabled and handicapped Canadians using information derived from sample surveys. Other work includes providing information on the incidence and evolution of specified diseases and studying the occupational health of Canadians.

Education Status: This sub-activity provides information about the education of Canadians and its relationship to other characteristics such as employment and occupation. It also measures the use of and accessibility to educational facilities and services. This information is provided by the Census of Population and periodic surveys. Activities in 1985-86 will centre on the continuation of a survey program, sponsored through cost-recovery from Secretary of State, including a Post-Secondary Student Survey, a general population survey on educational issues and the completion of the National Graduate Survey.

Public Safety: This sub-activity provides information on the public safety and security of Canadians. The current focus is on the analysis of information produced by the first Canadian Urban Victimization Survey, which was conducted on a cost-recovery basis by Statistics Canada for the Ministry of the Solicitor General, and on the planning, design and development of follow-up surveys. The Victimization Survey provides information on the incidence of crime, on the circumstances relating to the crime and on the characteristics of the victim.

Social Conditions: This sub-activity measures and analyzes a wide variety of social phenomena relating to Canada's population, households, and families. A new general social survey will provide data not available from other sources to assist in policy formulation and assessment. In the initial cycle of this survey the focus will be on formal and informal support networks for the elderly and the impact of different types of support on their well-being. Subsequent cycles of the survey, will address other issues of current concern, such as youth unemployment.

The sub-activity also develops profiles of the contributors and beneficiaries and financial dimensions of Canadian Social Security programs such as the Canada and Quebec Pension Plans, Unemployment Insurance, Family Allowances and Old Age Security.

Performance Information/Resource Justification

The major change in resource requirements, a reduction of $ 1.3 million is due to the development by the department of an alternate plan for the 1986 Census to realize resource savings. Other changes include the introduction of a general social survey; improved population estimates for small areas; and a special study of population projections for Status Indians will be completed.

Quality of Service: The quality of service provided by the Activity to its various users can be assessed by the following factors:

- the frequency with which statistical products are provided;
- the timeliness of their availability following collection;
- their relevance for users; and
- the reliability or accuracy of the data.

Figure 11 displays the level of service for selected components of the Census and Social Statistics Activity.

Figure 11: Major Subject Areas, Selected Outputs, Level of Service

Major Subject Areas and Selected Outputs	Level of Service	
	Frequency	Timeliness
Census Basic demographic data are produced within one year. More detailed priority publications on the labour market and related information are produced in the balance of the output program	5 Years	7-36 months
Population Estimates National, provincial and sub-provincial population estimates	Quarterly and Annual	3 months
National and provincial population household and family projections for a 25 year horizon	5 Years	--
Birth, deaths, marriages, divorces and causes of death	Annual	13 months

The relevance of these statistical outputs is ensured by extensive consultation with data users in planning the content of the census, surveys and other processes and by legislation which specifies many of the basic outputs. During the planning stages of censuses of population contacts are made with hundreds of data users including federal and provincial government departments, municipal governments, business, professional and labour organizations and other groups to determine current information needs. In the 1981 Census this process led to a cost sharing by five federal departments and agencies to receive specified data of particular relevance to their programs.

The Vital Statistics Council of Provincial Registrars General plays a major role in determining the content of outputs related to these measures. For information on the disabled, over 200 organizations and individuals were consulted about their data needs before and during the development of a data base.

Among the legislated uses of these population statistics are those specified by the Federal-Provincial Fiscal Arrangements Act. The $19 billion which was distributed by the federal government in 1983-84 based on data outputs of this Activity underscores their relevance.

The reliability of the outputs from this Activity can be attributed to several factors. The Census of Population meets international standards of coverage with 98% of Canadian households included. Quality control measures are applied at all stages of the Census to ensure that the data are complete and that errors are found and corrected. Consequently, sample surveys based on the Census tend to be highly reliable. The high public response to these surveys also contributes to accuracy.

In the vital statistics area, the input data are of a very high quality, nearly 100% for births, deaths, marriages and divorces. In the population estimates area, the results of the 1981 Census established that the provincial population estimates were within 1% of the actual counts.

Descriptions of the reliability of most data produced by this Activity are included in the published results.

Sub-Activity Expenditure Pattern: Figure 12 illustrates the cost per household of the Census of Population including the 1971, 1976 and 1981 Censuses.

Figure 12: Cost per Household of Censuses of Population

The reduction in costs between the 1971 and 1981 Censuses can be attributed to several factors including; fewer questions on the long-form, which is completed by a sample of households; a smaller proportion of households included in the sample; and general data collection and production efficiencies. The 1981 cost per household was only slightly higher than the mid-decade 1976 census which asked significantly fewer questions.

M 75

D. Institution Statistics

Objectives

To provide statistical information, analysis and services which facilitate an understanding of the nature and operation of the public and institutional sectors in Canada; in order to relate their operations to general societal needs and to provide a basis for policy development, program management and evaluation.

To develop and promote the use of common concepts, definitions and classification systems to ensure comparability of statistics; and to coordinate with provinces and territories and with other federal government departments the collection and aggregation of national and provincial information on institutions and their operationsto avoid duplication.

Resource Summary

The Institution Statistics Activity accounts for approximately 8% of the total program expenditures and 8% of the total person-years for 1985-86.

Figure 13: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Health Care	3,683	83	3,525	83	3,509	89
Education Institutions	2,137	50	3,183	73	2,362	56
Culture	1,921	42	1,834	42	1,786	47
Justice	5,929	104	5,182	101	4,342	91
Public Sector Finance	3,204	77	3,042	77	2,870	79
	16,874	356	16,766	376	14,869	362

Description

Health Care: This sub-activity provides information on the size, resources, revenues and expenditures of 1,250 Canadian hospitals and approximately 4,500 special care facilities. Data are also provided on the diagnosis and treatment of the roughly 4.5 million Canadians admitted to hospitals each year, on therapeutic abortions and on accident victims.

Education: This sub-activity presents a statistical portrait of education in Canada from the pre-school to doctoral level. It documents trends in enrolment and graduation, teaching faculties and finances.

Culture: This sub-activity provides an overview of cultural institutions and artists in Canada, including creation, production, dissemination, consumption and conservation. Data are derived from more than 20 surveys of artists, cultural institutions and industries.

Justice: The Canadian Centre for Justice Statistics is the focal point of the federal/provincial initiative to provide national justice statistics and information. Programs are guided by the Justice Information Council - a committee of twenty-two federal and provincial deputy ministers, responsible for the administration of justice, and the Chief Statistician. The programs cover the civil and criminal justice systems, including law enforcement, prosecutions, legal aid, courts, and correctional services. For each sector of the justice system, the Centre describes the sector and its services, measures and describes caseloads and quantifies revenues, expenditures and personnel. The Centre also provides services designed to improve the manner in which managers and policy makers develop and use information on the justice system, and assists jurisdictions with the introduction and use of modern technology.

Public Sector Finance: This sub-activity provides basic financial and employment information about governments and government business enterprises in Canada. It also maintains a classification system to allow the comparison of these data between governments and levels of government. In addition, it provides data for other programs including the Canadian System of National Accounts, the statutory requirements of federal-provincial fiscal arrangements legislation and the reporting requirements of various international organizations (Organization for Economic Cooperation and Development, International Monetary Fund and United Nations).

Performance Information/Resource Justification

The following improvements to the Activity will be made:

- new information will be made available about university graduates and their employment status, experience and on-going needs; about management indicators in correctional services; and about trends in major crime categories and selected high profile crimes;

- support will be provided to justice agencies to develop and implement management information systems in the areas of law enforcement, courts, legal aid, prosecutions and corrections;

- more timely release of data on education, justice and governments by increasing the use of electronic data dissemination (CANSIM and TELICHART) and improving the efficiency of surveys and report production with resulting lower costs; and

- special reports will be issued on federal public service employment; and on Canadian youth as part of the International Year of Youth.

Quality of Service: The quality of service provided by this Activity to its various users can be assessed by the following factors:

- the frequency with which outputs are provided;

- the timeliness of their availability;

- their relevance for users; and

- the reliability or accuracy of the data.

Figure 14 displays the level of service for selected components of the Institution Statistics Activity.

Figure 14: Major Subject Areas, Selected Outputs, and Level of Service

Major Subject Areas and Selected Outputs	Level of Service	
	Frequency	Timeliness
Health Care		
Hospital in-patients, admissions and separations	Annual	22 months
Hospital operational information	Annual	33 months
Education		
University enrolment and graduates	Annual	12 months
Education finance	Annual	24 months
Minority and second language education	Annual	7 months
Culture		
Book publishing	Annual	8 months
Performing arts	Annual	9 months
Justice		
Crime data	Annual	3 months
Homicide data	Annual	6 months
Correctional services	Annual	10 months
Juvenile courts	Annual	10 months
Public Sector Finance		
Federal government revenues, expenditures, assets and liabilities	Annual	15 months
Provincial governments revenues, expenditures, assets and liabilities	Annual	22 months
Federal, provincial and local government employment	Quarterly	4 months

Much of the information produced by this activity is derived from local management or administrative systems of health care, educational and other such institutions and thus its reliability is very high. However, because of the large number of such local systems, Statistics Canada must continually monitor and adjust to the various definitions and classification systems being used. Where possible, the information is compared to data from other sources to ensure its accuracy. Where surveys are used, extensive efforts are made to follow-up with survey recipients so that a high percentage of returns is achieved. This includes personal follow-up by regional offices.

4101

Extensive use of advisory committees on culture and health areas and an extensive network of federal-provincial committees on justice ensure the relevance of the information produced.

Sub-Activity Expenditure Patterns: Figure 15 displays the expenditure patterns of these sub-activities. For each area the per capita cost of providing statistical information is shown.

Figure 15: Sub-Activity Expenditure Patterns

The upward trend in per capita costs in justice is due to the infusion of new funds requested by the Justice Information Council for new management information for all sectors. In education, the increase is due to the implementation of programs requested and funded by the Secretary of State.

E. Technical Infrastructure

Objectives

To provide an infrastructure of centralized and specialized services in order to efficiently support and deliver the agency's statistical programs.

To develop and promote the use of common concepts, definitions and classification systems to ensure comparability of statistics.

Resource Summary

The Technical Infrastructure Activity accounts for approximately 23% of the total program expenditures and 25% of total person-years for 1985-86.

Figure 16: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Analytical Studies	**5,746**	**94**	5,515	94	4,843	94
General Information Media	**4,598**	**82**	4,530	82	3,758	81

Classification Systems	**10,850**	**260**	8,545	221	7,216	212
Statistical Methods	**2,768**	**58**	2,635	58	2,350	52
Survey Operations	**6,151**	**130**	5,916	130	5,130	142
Computing	**5,801**	**121**	5,533	121	4,884	117
	47,565	**1,121**	43,968	1,082	39,159	1,093

Description

Analytical Studies: This sub-activity provides analyses of public issues by exploiting data collected by the agency, and identifies emerging economic and social trends. By maintaining close links with external policy analysts, it ensures the continuing relevance of Statistics Canada's output.

General Information Media: This sub-activity develops, produces and distributes a number of general purpose publications and develops and markets an electronic data base of the agency's statistics. General purpose publications include: The Canada Year Book and the Canada Handbook, biennial summaries of Canadian conditions; The Canadian Statistical Review, a monthly summary of economic conditions; Infomat, a weekly summary of statistical highlights; and The Statistics Canada Daily, a daily announcement of new statistical information. The electronic data base, CANSIM, permits direct retrieval and manipulation of most statistics produced by the agency by researchers throughout Canada. TELICHART, another electronic distribution system, permits the graphic analysis of major statistical series.

Marketing and Information Services: This sub-activity plans and co-ordinates processes with the objective that data compiled by Statistics Canada are publicly available and accessible to as many users as possible on a cost-effective basis. As well, it conducts research studies into potential information markets. It provides consultation and information services including a nation-wide network of reference centres that provide information by telephone; the library service which is a basic tool used by the agency's professional staff and also serves the public; and ongoing liaison with federal, provincial and municipal governments, the media, international agencies and major industry associations.

The sub-activity also includes the co-ordination of statistical information development by other federal government departments under Treasury Board common services policy and co-ordinates cost-recovery activities and revenues.

Classification Systems: This sub-activity maintains classification systems for industries, commodities and occupations, a register of Canadian businesses, as well as a system of geographic coding. These systems are basic tools essential to statistical collection and reporting which permit the breakdown of economic activity and employment by industry, commodity, occupation and geographic area.

Statistical Methods: This sub-activity provides the statistical methods and support capability required to maintain the quality and compatibility of statistical products, and the efficiency and effectiveness of the methods used to produce them.

Survey Operations: This sub-activity co-ordinates the planning and integration of survey functions both in headquarters and the regional offices. In addition, it manages and co-ordinates the regional collection, capture, edit and transmission of data for Statistics Canada surveys and other government clients.

Computing: This sub-activity provides the planning leadership for data processing, develops general data processing tools and identifies technical and human opportunities for improving departmental cost effectiveness through the use of advanced automation. It is also responsible for the management of the system development and data processing services of Statistics Canada.

Performance Information/Resource Justification

Analytical Studies: Research and analysis helps in assessing the appropriateness of current statistical measures and identifying needs for new data in light of social and economic change. As such, it helps to ensure allocation of resources to priority needs. In the absence of any objective measure of the value of current research and analysis projects, a list of selected studies to be reported on in 1985-86 is provided.

- Employment of Female Post-Secondary Graduates
- The Job Market for Post-Secondary Graduates
- Age Pattern of Disability in Canada
- Public Cost of Justice in Canada
- Women and the Law in Canada
- The Burden of Unemployment in Canada
- The Demography of Native People
- Estimating the Number of Emigrants
- Trade and Canadian Domestic Production
- Shopping Centres in Canada
- Quality and Age of Housing
- The Canadian Job Tenure Distribution
- The Film Industry 1980-82

Much of the work in this sub-activity can be related to subjects for which additional needs for statistical information have been identified in Section I, Environment, page 12.

General Information Media: The CANSIM information services provides data electronically to Statistics Canada's largest public and private sector users. By linking the CANSIM data base to TELIDON technology, data users can obtain data in graphic form. The growth in the level of CANSIM service is shown in Figure 17.

Marketing and Information Services: A major component of this sub-activity is the inquiries service which assists users in obtaining statistical information from nine reference centres across Canada. Figure 17 illustrates the recent growth in the level of inquiries serviced and projected growth.

Figure 17: Inquiries Service and CANSIM

The public communications component of this sub-activity informs the public of the results of Statistics Canada's activities. Summaries and announcements of statistical information of public interest are provided to data users and the news media. Releases on subjects such as population trends, the consumer price index, gross national product and levels of employment and unemployment, are reported and analysed in all major news media. Monitoring of selected national media indicates that at present approximately 900 references per month are made and attributed to information produced by Statistics Canada. This exposure satisfies the needs of many data users without their having to contact the agency. In other cases, it stimulates demand for more detailed information not provided by the media.

The Publishing Centre component of this sub-activity co-ordinates the production and distribution of the agency's publications. The Centre is responsible for developing a departmental information dissemination plan, for production and marketing of products and services, and for introducing new publishing technology. The Centre was created in 1984 to promote greater efficiency in production and effectiveness in meeting users' needs. Information systems now being developed will allow measurement of the production cost of publications, volume of distribution and clientele.

The level of service provided on a cost-recovery basis to users with specialized needs is shown in Figure 18. The demand for these services has increased steadily and this trend is expected to continue.

Figure 18: Level of Cost-Recovery Service by Fiscal Year

Of the projected person-year expenditures in 1984-85 the following major projects, conducted on behalf of federal government clients, account for 50 percent of total expenditures.

Project Title	Client	Person-Years
Joint Transportation Agreement	Transport Canada	55
Isolated Post and Foreign Allowances	Treasury Board	11
Air Movement Statistics	Transport Canada	10
Automobile Fuel Consumption	Transport Canada	12
Survey of Post-Secondary School Graduates	Secretary of State	13
Canadian Travel Survey	Canadian Government Office of Tourism	9
Youth Court/Young Offenders	Solicitor General	5

The balance of the expenditures include smaller projects carried out for federal departments, as well as work for provincial governments, universities, businesses and associations.

Classification Systems: In 1985-86 Statistics Canada will spend 5% of its budget to maintain these essential components of the statistical system. This ongoing function results in periodic major revisions and enhancements. Areas to be revised in 1985-86 are shown in Figure 19.

4187

In addition, a new project will be undertaken to upgrade the register of Canadian businesses to improve the efficiency of individual business surveys and reduce respondent burden. This project will also establish mechanisms to ensure that the same concepts, standards and classifications are used in all business surveys to ensure consistency in the data produced.

Figure 19: Classification Systems Revisions and Enhancements

Revision and Enhancements	Rationale
Update and publish the standard geographical classification	As a result of boundary changes the geographical classification is updated every 5 years, for use with the population census.
Revise the occupational classification	The revision is made in response to requests from data users because occupational structures are changing.
Convert to an international system of commodity classification for customs, tariff and statistical use	The planning assumption is that Canada will become a signatory to the international Harmonized System Convention and Canadian systems will be implemented by January 1,1987.
Develop systematic profiling for large and complex business enterprises	To provide meaningful industrial and regional statistics it is necessary to delineate the operating and statistical structures and the reporting arrangements of complex business organizations and institutions.

Statistical Methods: Changes in the methods and techniques of data collection and handling can affect one or more aspects of the statistical process such as cost of production, respondent burden, data quality and products. Figure 20 summarizes the major studies of statistical methods that will be underway in 1985-86.

Figure 20: Statistical Methods Research and Analysis Studies

Study	Rationale
Telephone survey methods developments	To reduce survey costs and respondent burden by introducing data collection methods that maximize the use of telephones.
Small area estimation methods	To produce reliable data for smaller geographic areas than is currently feasible.
Edit and imputation methods	To improve data quality and consistency through the use of new data editing and imputation systems.
Questionnaire design research	To improve data quality and reduce respondent burden by improving the way survey questions are formulated and presented.
Development of new time series models	To improve the quality of seasonally adjusted data.

Survey Operations: The operations analysis and regionalization planning components of this sub-activity identify opportunities for improved statistical operations. Through selective integration of operations at the head office, such functions as data capture and editing are provided to surveys on a centralized basis with the potential benefits of improved timeliness, quality and resource savings. Extended regionalization of operations, including data collection, processing and dissemination, similarly offers potential quality, timeliness and cost improvements as well as improved service to respondents. Major work underway in this new operations integration and regionalization initiative are described in Figure 21.

Figure 21: Operations Integration and Regionalization Initiatives

Integration and Regionalization Initiatives	Rationale
Regionalization of the collection, data capture and editing of monthly export data is being assessed. A computerized data collection technique is being developed to regionally conduct and edit the monthly Survey of Manufacturing Shipments, Inventories and Orders.	The anticipated effects of greater regionalization are increased operational efficiency and improved timeliness in the release of data. In addition more local contact with respondents improves response rates and the quality of data.
Development work is underway to integrate standardized survey operations now performed in separate areas at the head office.	These integrations are expected to lead to operational efficiencies that will reduce personnel requirements. Another possible result is the integration of survey content, which will increase analytical potential.
Development work is underway in Health Statistics to standardize systems where data are collected separately from each of the provinces.	It is anticipated that this work will lead to savings for both the federal and provincial governments. These standardized systems may also be applicable to other institutional areas, such as Education Statistics.

The regional operations component of this sub-activity provides an infrastructure for regionalized data collection and data capture which maximizes efficiency in these processes. In 1984-85, the total value of regional operational services charged to statistical activities was $22.1 million to carry out 61 monthly, quarterly, semi-annual and annual surveys. Figure 22 illustrates the regional operational performance of three statistical surveys which account for 67% of the total service provided.

Figure 22: Unit Cost of Selected Regionalized Surveys

Information is now being developed which will measure cost savings and other improvements achieved through the use of regional operations.

Computing: Figure 23 illustrates trends in the proportion of Statistics Canada's budget allocated to computing and its major components; systems development, data processing and support services.

Figure 23: Proportion of Statistics Canada Expenditures on Components of the Computing Service

Although use of computing technology has increased in past years the proportion of the agency's expenditures devoted to it has declined. For the data processing component of the computing service this can partially be attributed to improved sampling techniques and the increased use of administrative records. For systems development the acquisition of advanced hardware has enabled some savings. A major factor in the overall proportionate reduction is the increased expenditure on support services including planning and control systems and training, which lead to more efficient use of the computing service.

In general, the increased use of computing technology in the agency's production processes has reduced personnel requirements and produced a broader range of outputs with greater timeliness and reliability. Management information now being developed will measure the impact of current and future investments on data processing and communications technology and the quality of service provided to the statistical activities.

F. Corporate Management Services

Objective

To provide central direction, management and administrative services in support of the agency's program.

Resource Summary

The Corporate Management Services Activity accounts for approximately 12% of the total program expenditures and 11% of total person-years for 1985-86.

Figure 24: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Executive	2,824	42	2,808	42	2,575	41
Management Practices and Planning	2,177	23	2,127	23	1,829	29
Personnel	5,160	127	4,943	127	4,608	125
Finance	5,589	126	5,478	140	5,347	139
Administrative Support Services	9,150	167	9,439	167	12,298	169
	24,900	485	24,795	499	26,657	503

Description

The Corporate Management Services Activity consists of five sub-activities:

Executive: This sub-activity provides central direction and guidance to the program on strategy, planning and priorities. It includes the Chief Statistician, Deputy Chief Statistician, Assistant Chief Statisticians and their immediate support staff.

Management Practices and Planning: This sub-activity coordinates the development and review of strategic plans, policies and initiatives; coordinates the development of management information and performance indicators; and evaluates the efficiency and effectiveness of programs and plans.

Personnel: This sub-activity provides advice on the effective use of human resources and services in the following areas: organization structure and classification; staffing, staff relations, training and development; human resource planning, organizational development, internal communications, pay and benefits, affirmative action, official languages, and individual counselling for employees related to career development, grievances and harassment.

The increased application of technology to statistical operations will bring about a major re-alignment of skills in the agency. Requirements for clerical skills will diminish as technological requirements increase. Professional staff will be redeployed from operational management to analytical roles. These changes will be brought about through staffing, retraining and other established personnel processes.

Finance: This sub-activity provides financial policy, control, accounting and reporting services. It also coordinates operational planning processes and provides administrative services through a network of administrative officers.

Administrative Support Services: This sub-activity includes services which support the day-to-day operations of the agency; records management and mail, postage, telephone communications, tenant services, material management including capital acquisition and security services.

Performance Information/Resource Justification

Figures 25 and 26 show the ratio of Corporate Management Services to total Program person-years and expenditures.

Figure 25: Ratio of Corporate Management Person-Years to Total Program Person-Years

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 29: Details of Grants and Contributions

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants			
To the Inter-American Statistical Institute	40,628	40,628	40,628
To the International Statistical Institute	1,706	1,706	1,706
To the International Association for Research in Income and Wealth	1,787	1,787	1,487
To the International Working Conference on Health Data Coding System	--	5,000	--
	44,121	49,121	43,821
Contributions			
To the Massachusetts Institute of Technology	50,000	50,000	50,000

Summer Canada-Student Employment Program	--	126,973	127,160
	50,000	197,795	367,160
Total Grants and Contributions	94,121	246,916	410,981

B. Cost Analysis

The Statistics Canada 1985-86 Estimates include only authorities to be voted and statutory authorities. Consideration on a full cost basis must include services provided without charge. Details of such costs are outlined in Figure 30.

Figure 30: Net Cost of Program ($000)

1985-86 Program Expenditures	Add[1] Other Costs	Total Cost	Deduct[2] Revenue	**Net Cost**	Forecast 1984-85
216,094	31,976	248,070	9,910	**238,160**	236,761

1. Other Costs of $32.0 million include: ($000)

• Accomodation provided without charge by Public Works	28,090
• Employee Surgical - Medical Insurance (Treasury Board)	3,005
• Other services provided without charge by other departments:	
Department of Supply and Services	736
Labour Canada	137
Transport Canada	8
Total Other Costs	31,976

2. Total Revenues of $9.9 million consist of:

• Receipts and Revenue credited to the vote:	
Federal Government department and agencies	8,424
• Receipts credited to consolidated revenue	1,486
Total Revenue	9,910

C. Revenue Analysis

Figure 31: Revenue Analysis

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
From Federal Government Departments and Agencies	8,424	8,177	6,091
Census-Cost Sharing	--	--	5,611
	8,424	8,177	11,702
From Other Governments and Private Sector	1,236	790	1,180
Sale of Publications	250	290	221
	1,486	1,080	1,401
Total Revenue	9,910	9,257	13,103

D. Program Evaluation

This section details the results of two program evaluation studies. It also identifies new work currently underway, including work in operational efficiency.

International Trade: The International Trade sub-activity (see page 19, 22) processes some 10 million import and export transactions per year. It provides information about merchandise imports and exports to federal and provincial organizations involved in fiscal, monetary and trade policies, as well as to the private sector. Together, imports and exports make up about 30% of Canada's gross national product.

The evaluation study found that the statistics produced generally satisfy principal users. However, it concluded that one publication be eliminated and that joint plans be made with Revenue Canada, Customs and Excise to improve the quality of the administrative records that are the input to this sub-activity. This improvement will produce more reliable information and thus better decision-making.

Justice: The Justice sub-activity (see page 33, 36) is managed by the Canadian Centre for Justice Statistics and is the focal point for the provision of national justice information. The evaluation study found that it "must be considered a particularly successful approach to joint federal-provincial undertakings", specifically "to joint planning and decision-making among equals".

This study which focussed on the Centre's processes, generally supported the Centre's organization and statistical products. It concluded that the Centre's mandate be extended for five years and that program effectiveness be evaluated before the end of that period. The study also concluded that the joint sponsorships and independence of the Centre continue.

Current Studies: At present, evaluations of Financial Flows and of Population Related Health Status Statistics are in the final stages. Studies on Education Statistics, National Income and Expenditure Accounts, Service Producing Industry Statistics and Public Institutions have begun in the last few months.

Operational Efficiency: A strategy to improve operational efficiency, related to the evaluation program, has been instituted in selected areas of Statistics Canada. The goals are to review and if necessary improve operating procedures, and to ensure high productivity by balancing resources with work.

In selected areas this process will introduce

- improved operating systems and methods
- work standards and efficiency measurements
- work load and staffing plans, and
- a system to aid managers in resource planning, work scheduling and performance evaluation.

Statistics Canada has launched this program in two areas, External Trade and Agriculture Statistics, and in one critical support area, Production and Support Services. Several areas where the program will be applied in 1985 are Advisory Services, Regional Operations, Manufacturing and Primary Industries, and Merchandising and Services.

E. Sample Products and Uses

Figures 32 and 33 include information about the use by governments and businesses of representative statistical outputs.

Figure 32: Representative Statistical Information Outputs of Utility to Government

Outputs	Sample Uses
Gross National Product (GNP) Gross National Expenditure (GNE) Real Domestic Product (RDP)	Development of monetary and fiscal policy, preparation of budgets and forecasts, planning of regional development and industrial incentives programs
Federal, Provincial and Local Government Financial Statistics	Co-ordination of federal and provincial budgetary policies; calculation of provincial equalization entitlements
Balance of International Payments	Economic and monetary policies, interest and exchange rate policies, and export financing
Import/Export Data	Tariff negotiations, fiscal and monetary policy
Consumer Price Index	Indexation of income support programs in a variety of government legislation
Agricultural Statistics	Food production policies and marketing
Labour Force Statistics	Unemployment insurance and job creation programs; regional entitlements for unemployment insurance benefits
Population Census Statistics	Electoral boundaries, equalization payments and grants, monitoring the status of minority groups, housing policies, selecting locations for hospitals and schools and planning road networks
Individual and family income data	Taxation studies, income support programs
Health Statistics programs	Health care service and financing

4203

Figure 33: Representative Statistical Information Products of Utility to Business

Outputs	Sample Uses
Gross National Product	Assessing the impact of current and future levels of economic activity
Corporate Financial Statistics	Monitoring financial strength, tax burden and profitability of industries
Industrial Statistics	Forecasting, market research
Consumer Price Index	Widely used as a benchmark or for COLA clauses in wage and salary negotiations
Employment and Benefit Statistics	Forecasting, benefit programs
Agricultural Statistics	Determining demand for farm inputs and developing processing and marketing strategies
Census Population and Household Statistics	Market and site location analysis in retail trade and manufacturing
Import and Export Statistics	Marketing studies including import replacement

F. Legislated Requirements

The following is a list of Federal Acts which give the Chief Statistician or Statistics Canada responsibility for the collection or provision of specific information.

Family Allowance Act
Canada Pension Plan Act
Municipal Grants Act
Excise Tax Act
War Veterans Allowance Act
Unemployment Insurance Act
Old Age Security Act
Income Tax Act
Corporations and Labour Unions Returns Act
Banks and Banking Law Revision Act
Western Grains Stabilization Act
Supplementary Retirement Benefits Act
Canada Student Loans Act
Railway Relocation and Crossing Act
Railway Act
Pension Act
Official Languages Act
Judges Act
Federal-Provincial Fiscal Arrangements and Federal Post-Secondary Education and Health Contributions Act
Electoral Boundaries Readjustment Act
Combines Investigation Act
Children of War Dead Act
Bankruptcy Act
Canada Council Act
Health Resources Fund Act
Winding-Up Act

G. International Commitments

The following is a list of International Organizations to which the Government of Canada has made commitments for statistical information.

United Nations Statistical Office
United Nations Economic Commission for Europe (ECE)
International Labour Organization (ILO)
Food and Agriculture Organization of the United Nations (FAO)
United Nations Educational, Scientific and Cultural Organization (UNESCO)
International Civil Aviation Organization (ICAO)
World Health Organization (WHO)
International Monetary Fund (IMF)
Organization for Economic Co-operation and Development (OECD)
Commonwealth Secretariat
World Tourism Organization (WTO)
Inter-American Statistical Institute (IASI)

1985–86 Estimates

Part III

Expenditure Plan

4209

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Status of Women
Canada

4213

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the Program including a description, information on its background, objectives and planning perspective as well as performance information that form the basis for the resources requested. Section II provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $2,599,000 in 1985-86 in support of the Status of Women - Office of the Coordinator. The remaining expenditures, estimated at $205,000 for pensions and other employee benefits will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	Status of Women - Office of the Co-ordinator

Office of the Co-ordinator	43	2,767	37	2,804	2,779

Section I
Program Overview

A. Highlights

Specific goals for Status of Women Canada in 1985-86, in addition to maintaining its regular operations, include the following:

- preparing and obtaining approval of a National Plan of Action on the status of women from 1985 to the year 1990 (see page 9);
- ensuring wide participation by governments, national women's organizations and the media in government and non-government preparatory activities of the 1985 United Nations World Conference on Women, and carrying out follow-up activities to this conference with the federal government, with provincial governments and with national women's non-government organizations (see page 9);
- preparing a report on total federal government funding to women's non-government organizations (see page 11); and
- preparing a report on the implementation of the Treasury Board policy on the Elimination of Sex Stereotyping in federal communications including recommendations for change if required (see page 11).

B. Financial Summary

Figure 1: Financial Summary ($000)

	Estimates 1985-86	Forecast 1984-85	Change
Status of Women, Office of the Co-ordinator	2,804	3,404	(600)
Authorized person-years	43	45	(2)

The 1984-85 forecast represents an increase of $625,000 and two person-years over the 1984-85 Main Estimates level of $2,779,000. This increase was authorized in Supplementary Estimates of that year for the Task Force on Child Care (see page 9).

The 1985-86 decrease over the 1984-85 forecast represents the net effect of an allowance for salary costs increases and the elimination of the one-year-only resources related to the Task Force.

C. Background

1. Introduction

Status of Women Canada is a federal agency as defined by the Financial Administration Act reporting to the Minister Responsible for the Status of Women. The agency was preceded by the establishment, in 1971, of the position of Co-ordinator, Status of Women in the Privy Council Office. The establishment of this position was in direct response to the Report of the Royal Commission on the Status of Women (1970). Also in 1971, a Cabinet Minister was assigned responsibility for the status of women. In 1976 it was decided that a separate agency outside PCO would be created. This agency, established by Order in Council was to be known as Status of Women, Office of the Co-ordinator, also called Status of Women Canada under the federal identity program.

Status of Women Canada provides advice and recommendations to the Minister Responsible for the Status of Women on all matters concerning the effective discharge of the Program's mandate, and provides information and liaison services in respect of government programs and policies concerning the status of women.

The agency should not be confused with other federal organizations relevant to women, including the Canadian Advisory Council on the Status of Women, the Women's Bureau of the Department of Labour and the Women's Program of the Department of Secretary of State. A brief description of each organization follows:

- the Canadian Advisory Council, as an independent organization funded by the federal government, acts as a conduit for information from women across Canada to the federal government on all issues of concern to women, conducts and publishes research studies and promotes an awareness of key issues facing women through public and media relations;

- the Women's Bureau carries out research and develops policies relative to the impact of the Canada Labour Code on women in the labour force; and

- the Women's Program is responsible for administering grants available to non-government women's organizations at the national, regional and local levels.

2. Legal Mandate

The legal mandate for the agency is provided by the Order in Council 1976-779.

3. Program Objective

The objective of the Program is to promote equal opportunities for women in all spheres of Canadian life.

4. Program Description

The role of the Program is to ensure that the federal government carries out its commitment to equality between women and men. This is achieved through:

- systematic analysis for the Minister of the impact on women of proposals, especially proposals for policy, legislative and program change;

- co-ordination of policy analysis on an inter-departmental, federal-provincial and international level so that policy recommendations to improve the status of women can be proposed to Cabinet by the Minister Responsible for the Status of Women; and

- communication with women's groups, non-government organizations and the general public on government priorities and issues of concern to women.

The Program is delivered by performing three functions which are reflected in its organization. They are: Policy Analysis and Development, External Relations and Public Information/Communications.

Policy Analysis and Development: This function involves the systematic analysis of the impact of existing government programs on women and the review of proposals for new or revised programs, policies and legislation with regard to

their impact on women. Policy analysis and development is carried out at the federal level as well as in cooperation with provincial governments and international bodies.

External Relations: This function consists of ongoing consultations with women's groups, academics and other groups and individuals at all levels interested in women's affairs in Canada and abroad, and is aimed at informing the Minister of the current environment and assisting these groups and individuals in their contacts with the federal government. Status of Women Canada also represents Canada on the United Nations Status of Women Commission, the Working Party on the Role of Women in the Economy of the Organization for Economic Co-operation and Development and the Organization of American States Status of Women Commission.

Public Information/Communications: This function informs women's groups and the general public of federal priorities and programs relating to the status of women by assisting the Minister in the preparation of speeches, correspondence, and media briefings. It also consists of media analysis, answering queries from the public and issuing publications dealing with women's issues and related areas of interest.

5. Program Organization for Delivery

Figure 2 displays the Program's resources distributed by organizational component.

Figure 2: 1985-86 Resources by Organization

The distribution of resources among the three main functions (excluding management and administration) on the basis of person-years is as follows: 33% for Policy Analysis and Development, 12% for External Relations and 23% for Public Information/Communications.

D. Planning Perspective

1. Environment

A number of factors whose scope and timing are often largely unpredictable influence the planning process of the agency. Included among these are political commitments, proposals of federal departments relating to women's needs and concerns, lobbying by non-government women's organizations and public response to government initiatives concerning women.

2. Initiatives

The efforts of Status of Women Canada in 1985-86 will be directed towards a continuation and expansion of initiatives undertaken in 1984-85 as discussed below. Specific goals planned for 1985-86 are identified under "Highlights" on page 5 of this document.

United Nations World Conference: Priority will be given to continuing preparations for Canadian participation in the 1985 UN World Conference on Women to be held in Nairobi through extensive interdepartmental, intergovernmental and non-government consultations.

Plan of Action: The development of a new plan of action on the status of women which will provide a timetable of relevant policy work for the next 5 years. This plan is the sequel to the 1979-1985 National Plan of Action on which a report was published in 1984 assessing the degree of its implementation and the progress made.

Task Force on Child Care: In June 1984, the Minister Responsible announced the setting up of a four member Task Force on Child Care. An amount of $625,000 and two person-years were approved for 1984-85 only to carry out the operations of this Task Force. The Task Force will report to the Minister Responsible before the end of fiscal 1984-85 and its report will be made public one month after it is received.

Communications Program: The communications capability within the Agency was implemented in 1984-85 and is now fully operational. Its purpose is to inform the general public and women's groups of federal activities in areas of interest to women.

3. Program Effectiveness

Status of Women Canada seeks to promote equal opportunities for women in all spheres of Canadian life. It plays a key role in ensuring that the federal government carries out its commitment to equality between women and men. This is accomplished by the systematic analysis of the impact of government actions on women with particular attention given to proposed changes to legislation, policies and programs and by the coordination of policy analysis at the interdepartmental, federal-provincial and international levels resulting in advice to the Minister and

subsequent recommendations to Cabinet for improving the status of women. The agency also communicates with women's groups, and the general public on government priorities and issues of concern to women and acts as a correspondence secretariat to the Minister in this regard.

The advice and recommendations resulting from research and consultation influence government policy, programs and legislation concerning women to varying degrees. Because government action in this area is influenced by a number of factors in addition to advice provided by Status of Women Canada it is difficult to establish clearly the relationship between the agency's work and specific changes to policies and legislation occuring in areas of concern to women and to assess the degree of its impact on such changes. Nonetheless, the agency has had considerable involvement in and influence on the following actions aimed at bringing about equality between women and men:

- additional unemployment insurance benefits for part-time employees and fishermen's wives;
- streamlining of unemployment insurance maternity benefits and extension to adoptive parents;
- child care expense deduction increased to $2000;
- improvement of benefits for surviving spouses of partially disabled veterans;
- amendments to the Canadian Human Rights Act concerning women;
- amendments to the Criminal Code concerning sexual offences;
- inclusion of Sections 15 and 28 in the Charter of Rights and Freedoms of the Constitutional Act;
- affirmative action in the federal public service;
- adoption of a federal government policy on the elimination of sex stereotyping in government communications;
- ratification of the United Nations Convention on the Elimination of all Forms of Discrimination Against Women;
- approval of the National Plan of Action on the Status of Women (1979-1985) comprising a timetable for policy development on status of women in the federal government and the subsquent preparation of a report on its implementation;
- creation of a Commission of Inquiry on Equality of Access to Employment;

- production of a supplement to the Green paper on Pensions entitled "Better Pensions for Canadians - Focus on Women";
- assistance to members of the Standing Committee on Health, Welfare and Social Affairs in its study on wife battering;
- Federal/Provincial/Territorial Report on Wife Battering released in May, 1984;
- Task Force on Child Care announced in May, 1984; and
- setting up the Special Committee to examine the problems of pornography and prostitution.

4. Performance Information/Resource Justification

Given the nature of the agency's work, only a few aspects of its endeavours can be quantified. Figure 3 provides some indication of workload trends over a three-year time span.

Figure 3: Workload Indicators

	1985-86 Projected	1984-85 Forecast	1983-84 Actual
Ministerial letters received and replied to	10,042	9,129	7,608
Letters initiated by the agency	325	295	246
Memoranda to the Minister	554	504	420
Ministerial speeches	47	42	35
Ministerial appearances (major presentations) before Special and Standing Committees	2	2	2
Briefing notes for Cabinet Committees	600	540	450

A significant level of the agency activities is carried out and managed on a project basis. In 1985-86 the agency is committed by Cabinet mandate to carry out research and analysis and consequently prepare reports on federal government activity in the matters of:

- federal funding to non-government women's organizations; and
- implementation of the Treasury Board policy on the elimination of sex stereotyping in federal communications.

In addition, the agency will represent the Government of Canada on two federal provincial territorial working groups, each of which will present a report to the June, 1985 meeting of Federal/Provincial/Territorial Ministers Responsible for Women. These working groups will specifically focus on the issues of wife battering and child care.

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Supply and Services
Canada

4231

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

There are three chapters in this document. The first provides an introduction to the Department. The other two present the Program Expenditure Plans for each of the Department's programs.

Chapters 2 and 3 begin with extracts from Part II of the Estimates for the particular program being described. This is to provide continuity with the other Estimates documents. Also included are extracts from the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

Each of the Program Expenditure Plans is divided into three sections. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

This document is designed to permit easy access to specific information that the reader may require. A general table of contents lists the various chapters, and detailed tables of contents are provided for each program. Within Section I of each Program Expenditure Plan, a financial summary provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Departmental Summary

4235

Role and Responsibilities of Supply and Services Canada

Supply and Services Programs constitute 6% of the Services to Government Envelope Expenditures. Virtually all these resources are directed to the support of other departments and agencies of government.

The Department is made up of two administrations, Supply and Services. Figure 1 presents the organization of the Department.

Services Administration: Services provides a broad range of management and administrative services to the government as a whole and to individual departments and agencies under the Financial Administration Act and the Department of Supply and Services Act.

On behalf of the Minister, as Receiver General, the administration operates the Consolidated Revenue Fund, issues cheques for government payments, and maintains the government's central accounting system.

In accordance with the Department of Supply and Services Act, Services provides public service payroll and superannuation services, financial management reporting services, accounting and administrative support and central personnel record services. Advisory services in management consulting, auditing and computing are provided to departments and agencies on a fee-for-service basis. Further information pertaining to Services and its activities may be found in Chapter 2.

Services has adopted a new Operational Plan Framework for 1985-86 which more clearly relates the activities being carried out with the responsibilities assigned to Services by the Government and with the internal management of the Program and its accountability. This approach highlights the Receiver General functions.

Supply Administration: Supply provides goods and services in support of the programs of federal government departments and agencies while taking into account the contribution of Supply to national objectives. Supply operates as a revenue-dependent common service agency and under this arrangement, customer departments are charged for services according to rates approved annually by Treasury Board.

Supply Operations activities include Commercial Acquisitions; Science & Engineering Acquisitions; Regional Supply; Printing & Communications; Major Crown Projects; Export Supply and Program Administration. Further information about Supply Operations, Defence Production Operations and Procurement Support Initiatives can be found in Chapter 3.

Figure 1: Organization Structure - Supply and Services Canada*

* The Prime Minister announced January 8, 1985, there would be one Deputy Minister for the Department of Supply and Services. As a result of this announcement, there will be organizational changes to reflect the administrative integration of the two administrations, Supply and Services.

Figure 2: Net Resource Requirement by Program ($000)

Services Program is responsible for the joint administrative services for the whole Department.

4237

Departmental Priorities

Services:

- To achieve the planned level of service established for the full range of functions assigned to the Services Program and to improve service by gaining a better understanding of client needs and responding promptly to those needs.

- To increase the productivity of the Receiver General and other systems and improve its approach to data administration through the provision of on-line systems.

- To develop the current work force to meet the needs of the future, by providing a working environment which recognizes individual and group achievement and provides training programs and opportunities for job enrichment.

Supply:

- Supply's paramount priority is to promote greater efficiency, economy and effectiveness in its operations and the delivery of its outputs so as to create an environment that is supportive of productive management - in essence to become an Exemplary Model of Productive Public Service Management.

- To utilize the potential of the government's procurement buy to offer direct support to the government's economic and regional development priorities, primarily through promoting Canadian source development, productivity growth and competitiveness, and technological innovation.

- To nurture a value culture which exhibits a strong bias for action, a fundamental commitment to its clientele, and a respect of the individual.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The Services Program has established these 1985-86 goals:

- To complete the conversion of systems affecting some 2,800 computer programs, containing 3,400,000 lines of coding which impacts on some 12,000 data files to a single technology in order to improve the technological foundation for the development of common government systems and improve the approach to data administration. The cost of the project in 1985-86 will be approximately $3,705,000.

- In 1985-86 Services expects to issue about 137.4 million cheques on behalf of the government. These include an estimated:

  - 12.6 million pay cheques to government employees;

  - 2.8 million pension cheques to members of the various government superannuation plans;

  - 96.1 million social assistance payments on behalf of Health and Welfare Canada (HWC);

  - 2.6 million payments on behalf of Veterans Affairs Canada (VAC);

  - 1.8 million economic assistance payments (e.g., National Institutional Training Plan (NITP) payments);

  - 13.2 million rebates and refunds on behalf of Revenue Canada; and

  - 8.3 million other miscellaneous payments (e.g., suppliers accounts, etc.).

- Support to Health and Welfare Canada (HWC) is continuing to complete the decentralization of the Canada Pension Plan payment process from Ottawa to all participating provinces on a phased basis. Canada Pension Plan cheque issue will be decentralized on a phased basis by 1986-87. Resources allocated are $1,133,000 and 10 person-years for 1985-86.

- Support to Health and Welfare Canada (HWC) is continuing to provide services to their relocated offices for Family Allowance, Old Age Security and Canada Pension Plan Programs in Nova Scotia and Ontario amounting to $1,108,000 and 8 person-years for 1985-86.

2. Financial Summary by Activity

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86			Forecast 1984-85	Change	For Details See Page
	Gross	Revenues	Net	Net	Net	
Receiver General Functions	145,527	19,732	125,795	120,927	4,868	2-22
Compensation Administration	53,413	4,452	48,961	47,334	1,627	2-26
Management and Administrative Services	73,580	61,891	11,689	14,272	(2,583)	2-31
Departmental Administration	20,400	8,308	12,092	13,468	(1,376)	2-35
Program Administration	9,552		9,552	9,480	72	2-38
	302,472	94,383	208,089	205,481	2,608	
Person-years			5,606	5,657	(51)	

Explanation of Change: The net increase of $2.6 million in 1985-86 requirements over 1984-85 forecast is primarily due to:

	($ millions)
• salary increases-net amount	7.0
• provision for conversion to single technology, single technology mainframes and key edit replacement	5.6
• reduction in net requirements for Centre for Service to the Public and Telidon Exploitation Program	(6.3)
• overhead and general restraint reductions	(6.6)
• other items	2.9

B. Recent Performance

1. Highlights

Highlights of the Program's performance during 1983-84 were:

- **Pay Systems Development:** an on-line input system has been developed and pilot operations have commenced to assess the effectiveness of this technological change. The actual financial requirement was $1.1 million or 24% lower than originally provided for in the 1983-84 Main Estimates.

- **Direct Funds Transfer:** the basic system for transferring payment data in machine readable form has been developed and pilot operations have been implemented. The total financial requirement was $527,000 of which 28% was higher than originally provided for in the 1983-84 Main Estimates. This variance was as a result of rescheduling planned activities from 1984-85 to 1983-84, which resulted in the utilization of two (2) person-years ($84,000) and an increase in Operation and Maintenance expenditures of some $30,000.

- In summary, Services has met as planned all performance targets in fulfillment of the Receiver General Functions and other responsibilities. System initiatives have been undertaken as planned and pilot projects have been implemented and evaluated. Conversion of data processing facilities from three technologies to one has achieved improved processing time.

2. Review of Financial Performance

Figure 2: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates*	Change
Receiver General Functions	136,410	136,530	(120)
Compensation Administration	48,989	48,727	262
Management and Administrative Services	64,403	61,722	2,681
Departmental Administration	19,080	18,524	556
Program Administration	9,136	8,551	585
	278,018	274,054	3,964
Less: Receipts and Revenues Credited to the Vote	82,524	83,335	(811)
	195,494	190,719	4,775
Person-years	5,627	5,698	(71)

* The amounts have been restated to conform with the revised break-out by activity adopted for 1985-86. For details of actual expenditures based on the activity structure in place for 1983-84 see Figure 37, page 2-46.

The net increase of $4.8 million in actual expenditures over the Main Estimates was offset by Supplementary Estimates and was primarily the result of:

	($ millions)
• cost of establishing the Centre for Service to the Public and Telidon Exploitation Program	6.5
• purchase of replacement computer equipment	4.9
• salaries paid at lower rates than provided for in the Main Estimates	(6.8)
• other items	0.2

C. Background

1. Introduction

Services exists to provide central and common administrative services to the government in order to improve the government's administrative efficiency by providing services at lower cost. The delivery of most government programs is in some way dependent on the operations of Services.

The primary role of Services is related to the public purse. It involves administering the Consolidated Revenue Fund and performing the functions of the Receiver General for Canada. While ultimate control of public money rests with Parliament, and the general management of the Consolidated Revenue Fund is the responsibility of the Minister of Finance, the Minister of Supply and Services, as Receiver General for Canada, is responsible for three main functions:

- administering payments into, and expenditures from, the Consolidated Revenue Fund;
- maintaining the government's central accounting system; and
- controlling the government's payment process.

Services is also responsible for the administration of the public service payroll, superannuation and other employee benefit plans. The pay administration includes disbursement of pay for Parliament, the public service, the RCMP, other agencies and certain Crown corporations. The public service pension plan is administered for those public servants covered by the Public Service Superannuation Act and other retirement acts.

Services offers to other government departments and agencies a variety of management and reporting services. These services include administrative and advisory services, technical services in the area of personnel data systems, and the preparation of financial reports, management statements and supporting statistics.

2. Legal Mandate

Created on April 1, 1969, by the Government Organization Act, Services operates within a statutory framework established by the Financial Administration Act, the Department of Supply and Services Act of 1970 and a number of Orders-in-Council.

3. Program Objective

Services supports and contributes to federal government operations in an economic and efficient manner through the provision of Receiver General programs in the areas of payment and banking services, maintenance of the central government fiscal accounts and associated reporting; and other services in the areas of compensation, personnel, financial, administrative, management and advisory services.

4. Program Organization for Delivery

Activity Structure: The activity structure of the Services Program has been changed from seven activities to five as outlined in Figure 3. The change takes effect starting with the 1985-86 fiscal year structure which clearly and concisely identifies the activities mandated by the Government to the Services Program for the Receiver General functions. (Figures 35 and 36, page 2-45, show the relationship between the current and previous activity structures for the Program.)

Figure 3: Activity Structure

Organization Structure: Services is a decentralized program with regional offices across Canada as presented in Figure 4.

Figure 4: Services Administration Regional Operations

Services Administration is divided into three Sectors: Operational Services, Management Services, and Planning, Finance and Administration. Each Sector is headed by an assistant deputy minister to whom the directors general or directors of the branches or bureaux within that Sector report.

The roles of the major organizations reporting to the Deputy Minister of Services are summarized below:

Operational Services Sector: The Operational Services Sector operates a network of Regional and District Offices in major cities across Canada including St.John's, Charlottetown, Halifax, Fredericton, Quebec City, Montreal, Ottawa-Hull, North Bay, Toronto, London, Winnipeg, Regina, Saskatoon, Edmonton, Vancouver and Victoria, with computer centres linked to its main computers in Hull. Also in Europe, it operates a District Office at Lahr, West Germany. This Sector issues about 137 million cheques a year totalling about $125 billion. It issues cheques to suppliers of goods and services and to recipients of government socio-economic and grant programs such as Family Allowance, Old Age Security and Guaranteed Income Supplement, Canada Pension Plan, War Veterans Allowances, National Institutional Training Program and Agricultural subsidies. It also handles election warrant payments for the Chief Electoral Officer, census payments for Statistics Canada, customs and excise rebates, income tax refunds and provides the computer processes to support income security programs.

As paymaster for the public service, this sector not only issues cheques for salaries and wages, but also administers the pay account of each employee, ensuring that proper income tax, pension and other deductions are made and that credit is given for various benefits. Administration of public service pensions and insurance plans is carried out by this Sector mainly in Shediac, New Brunswick. The Operational Services Sector provides financial management and statistical reports and certain accounting functions to departments and agencies on request.

Management Services Sector: The Management Services Sector carries out a number of Receiver General functions and provides other services on a cost recovery basis in response to requests from client departments and agencies.

In carrying out the Receiver General functions, the Government of Canada Banking and Accounting Branch performs all the statutory responsibilities other than the payment issue processes. As well it carries out the cheque redemption function for all Receiver General cheques and Unemployment Insurance Benefit Warrants, at the Cheque Redemption and Control Division in Matane, Quebec.

In the field of consulting, the Bureau of Management Consulting provides a broad range of consulting services to government departments and agencies.

In the field of auditing the Audit Services Bureau is a major auditing organization in Canada and has offices in Vancouver, Edmonton, Winnipeg, Ottawa-Hull, Montreal, Toronto, Quebec City, and Halifax. The Bureau conducts financial audits of industries and organizations that contract with the federal government. It also performs internal financial audits on behalf of departments and agencies.

In addition the Advisory Bureau for Computing, designs and operates information systems in support of the personnel management function for central agencies and for other departments and agencies upon request.

Planning, Finance and Administration Sector: The Planning, Finance and Administration Sector provides a focal point for the provision of internal planning and financial services and for the co-ordination of management and control activities within Services. The Sector is responsible for advising on the effect of human rights programs in Services as well as privacy and access legislation, ensuring that appropriate response and co-ordination mechanisms are in place.

The Sector is also responsible for all aspects of the security, fire and emergency programs through its Services Security Branch, and for providing service to the public through a toll-free telephone referral service and production and distribution of an index to federal government programs. Through the Departmental Administrative and Advisory Services Branch, the Sector provides services to both the Supply and Services Administrations on internal management and functional guidance on administrative matters.

In addition, the Internal Audit Branch and the Evaluation Branch report to the Deputy Minister. Personnel, Information and Legal services are shared with the Supply Administration and these branches report directly to both Deputy Ministers. The relationship between the departmental organization and the activity structure, together with a breakdown of 1985-86 resources, is shown in Figure 5.

Figure 5: 1985-86 Resources by Organization/Activity* ($000 and Person-years)

* The Prime Minister announced January 8, 1985, there would be one Deputy Minister for the Department of Supply and Services. As a result of this announcement, there will be organizational changes to reflect the administrative integration of the two administrations, Supply and Services.

D. Planning Perspective

1. Environment

Services Administration provides a range of essential services to all other departments and many government agencies. Changes in their programs impact on activities of the Services Program. The following factors will be of most significance to Services during the period 1984-85 through 1986-87: changes in forecast demand for program goods or services, changing economic technological or social conditions and new government policies affecting the program.

Legislation: Changes to the Public Service Superannuation Act, which call for extension of superannuation for those determinate appointments under the Public Service Employment Act not now covered as well as legislation and standards arising from recent national pension reform proposals, may impact significantly on client data and payment administration.

Technological Change: The present decade continues to promise development of new and increasingly sophisticated configurations of electronic data processing, communications, and word processing equipment. Dramatic changes both in management practices and in procedures at the operational level have been and are being realized. Departments are experiencing increased acquisition of personal computers which are used primarily for management support and information purposes within their programs. With the development of software there is an increasing demand by departments to use their personal computers (PC's) to access Services data bases.

Services continues to see these changes both as an opportunity and challenge which has resulted in its ongoing investigation of the potential of the new technology with a view of improving its effectiveness. Pilot projects and exploratory studies are continuing to assess the feasibility of introducing and maintaining automated on-line and other systems for Services activities. As well, the skills needed within Services in the future are being assessed and a human resource plan prepared to develop the skills within the organization.

Economic Climate: The economic growth, fiscal climate and government restraint are being felt within Services activities. Emphasis is being placed on productivity, value for money and economical ways of maintaining existing Program activities. Changing technology configurations in the high tech field will, however, result in increased resource investments in order to keep pace with demands and should also result in meaningful productivity gains.

2. New Initiatives

There will be no new initiatives during the fiscal year 1985-86, however previously approved projects, see page 2-17, will continue.

3. Update on Previously Reported Initiatives

Conversion to Single Technology: Services is in the second year of its four-year project to convert its computer operations to IBM-compatible single technology. The equipment required for the first phase of the conversion has been installed and parallel testing on the central accounting system is in progress. The cost of the phase scheduled for 1985-86 is $3,705,000 with a projected savings of some 30 person-years and $1,444,000 in 1986-87.

Pay Systems Development: In accordance with a 5 year plan to achieve pay systems consolidation, on-line pay input and other systems improvements, pilot projects to assess the effectiveness of On-Line Pay are underway with the Department of Consumer and Corporate Affairs, Energy Mines and Resources and with the Operational Services Sector of Supply and Services. Implementation of On-Line Pay will be determined by the results of the evaluation of the pilot projects which will be available in 1984-85. Provision for this initiative is 17 person-years and $1,505,000 in 1985-86, 4 person-years and $938,000 in 1986-87, and a savings of 23 person-years and $690,000 in 1987-88.

Pension Systems Development: To automate the operation of the various superannuation systems, a phased development of the superannuation systems is underway. Redesign of the Public Service and Canadian Forces Superannuation systems is proceeding as planned, with implementation anticipated in 1985-86. The Canadian Forces Superannuation enhancement cost is 21 person-years and $630,000 in 1984-85, and 18 person-years and $548,000 in 1985-86. Full implementation of the system will result in an overall saving of 25 person-years and $695,000 in 1986-87.

Direct Funds Transfer (DFT): This refers to the transmission of payment data in machine readable form to financial institutions for the deposit of payments into individual accounts. DFT is an alternative method of payment for the Receiver General to improve service levels. This payment method has been extended to a pilot population of recipients of Public Service Superannuation as of April 30, 1984. (The projected cost for 1984-85 is 7 person-years and $224,000, and 4 person-years and $135,000 in 1985-86 to continue the pilot applications.) Another pilot is also underway in the Public Service Pay system with one third of the External Affairs population.

Conversion of earlier pilots, External Affairs Foreign Services Allowances, Interest on Student Loans and Department of National Defense (DND) Pay Allotments, to the new standard system is planned for 1984-85.

Employee Benefit Statements: As part of a pilot project, Employee Benefit Statements were issued to all members of the management category across the public service, and subsequently to all employees of Services at a cost of 2 person-years and $48,000 in 1984-85. The pilot is now being evaluated by the Treasury Board Secretariat to determine the feasibility of extension to the rest of the public service.

4. Program Effectiveness

The effectiveness of the Services Program is measured in two main areas: the Receiver General Functions and Cost Recovery Services.

Receiver General Functions: The major aim of this function is to ensure that the financial transactions of the Government of Canada are carried out under stringent accounting controls, ensuring visibility, accountability and accuracy in the Public Accounts of Canada. Other financial statements and custom designed reports are prepared to meet client department and agency needs, from the Receiver General central data banks.

The function consists of processes for payment of government personnel, employee benefit plans, certain social programs and government accounts; operation of the Consolidated Revenue Fund i.e., receipt and deposit of public money, management of government bank accounts, and reconciliation of Receiver General cheques and warrants with the cash and bank balances of Canada; maintaining the central accounts of Canada; preparing and producing Public Accounts and reports to departments and government on financial and related operations, and the safekeeping and administrative services related to securities. (Key measures are reflected in Figure 6.)

There are several factors to consider in measuring the effectiveness of this function. For instance, how effectively are the Consolidated Revenue Fund (CRF) and funds on deposit with chartered banks being operated. Other measurements are the availability of reports within prescribed schedules for government departments and agencies, the public and Parliament. Payment services covers the payment of government personnel employee benefit plans, certain social programs and government accounts (see Section II, A, for details on operations), for which the key measure of effectiveness is the percentage of payments issued on time as indicated in Figure 6.

Figure 6: Service Delivery

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Volume of payments	137,371,000	135,736,000	129,048,000
Achievement of target - percentage of payments issued on time (%)*	100	100	99.9
Operations of the CRF			
Average time for transfer of receipts via bank facilities (1 working day excluding clearing day. Actual day(s) shown)	0.8	0.8	0.8

* See figure 12 for detailed breakdown.

Figure 6: Service Delivery (Cont.)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Financial Reporting			
Month-end departmental statements for which final delivery was on or before the 8th working day of the following month (%)	97.0	97.0	97.0
Issue monthly the Statements of Financial Operations of Government (average number of days after General Ledger of Canada completed)	16	16	15
Issue Public Accounts by November 30	Nov. 30	Nov. 30	Oct. 21

Cost Recovery Services: Services recovers the cost of providing certain administrative services in support of departmental activities as directed by legislation such as the Canada Pension Plan and Unemployment Insurance Acts and those services provided on request to departments and agencies. Departmental requests cover a wide range and include financial, data processing and auditing. The services for which costs are recovered are reflected in practically all activities of the program.

The measure of effectiveness is the delivery of a planned level of service requested, within a forecasted cost (see Figure 7). Quality and efficiency are however measured through a combination of ongoing and increases in service demands and client satisfaction.

Figure 7: Service Delivery ($000)

	Forecast 1984-85	Actual 1983-84	Actual 1982-83
Planned cost of recoverable services	96,925	83,335	76,011

A. Receiver General Functions

Objective

To provide a timely payment and banking service, maintain central government fiscal accounts and provide associated financial, statistical and other reports to government, central agencies and departments in a manner and form they can use.

Resource Summary

This activity accounts for approximately 48% of total 1985-86 Services Program expenditures and 50% of total person-years.

Figure 9: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual* 1983-84

* Activity dollars and person-years for 1983-84 Actual and Estimates have been pro-rated to sub-activity levels, based on a detailed analysis carried-out for the 1984-85 Main Estimates.

The $4.9 million net increase between the 1984-85 forecast and 1985-86 Estimates is as a result of:

	($ millions)
• economic price increases	2.4
• support of Health and Welfare Canada's decentralization, and establishment of a Services Office in North Bay	1.5
• conversion to single technology, single technology mainframes and key edit replacement	3.5

- decrease in revenues for items applicable to 1984-85 only 1.6
- overhead and general restraint reductions (6.4)
- other increases in expenditures 2.3

* Activity dollars and person-years for 1983-84 Actual and Estimates have been pro-rated to sub-activity levels, based on a detailed analysis carried-out for the 1984-85 Main Estimates.

Description

This activity involves three sub-activities, including reporting services based on the use of a centralized data base. The data is captured through Receiver General activities and the Public Service Pay and Benefit Systems. These sub-activities are payments, Consolidated Revenue Fund (CRF) operations and central accounting and reporting.

The payment function involves processes for payment of government personnel, employee benefit plans, certain social programs and government accounts and the provision of associated accounting, financial and statistical data in support of the government programs.

The Consolidated Revenue Fund operations deal with all the cash flows and balances related to the banking responsibilities of the Receiver General. This includes the authorization, control, establishment and operation of the Receiver General bank facilities and transfer accounts; receipt, transfer, holding and disbursement of public money in Canada and abroad; the distribution of Receiver General balances between banks by daily drawdowns and re-deposits and all disbursements of public money made to redeem Receiver General cheques and warrants. In addition, a reconciliation is made of the Receiver General cheques and warrants issued with the bank balances.

The central accounting and reporting function involves the maintenance of the central accounts of Canada, covering revenues, appropriations, expenditures, assets and liabilities. The centralized Receiver General's data base provides the information to prepare the Accounts of Canada, produce the annual Public Accounts, publish the monthly statement of the government's financial operations, provide special reports to central agencies and provide budgetary and financial statements to departments and agencies. In addition, as a derivative of the public service payroll payment process, a broad range of services are provided to central agencies and departments related to the application of computers to personnel management. The function also provides for the safekeeping and administrative services related to securities.

Performance Information/Resource Justification

The payment process, pertaining to employee, recipient and supplier payments, amounts to $101,868,000 and 1,885 person-years of this activity's resources in 1985-86 (see above for the sub-activity description, and Figure 12, page 2-25 for the Workload by Major Outputs under the heading, Payments).

The Consolidated Revenue Fund's banking responsibilities of the Receiver General, amounts to $16,826,000 and 403 person-years of this activity's resources in 1985-86 (see above for the sub-activity description and Figure 12, page 2-25 for the Workload by Major Outputs under the heading CRF operations).

The Central Accounting and reporting function, involving the maintenance of the central accounts of Canada, amounts to $26,833,000 and 497 person-years of this activity's resources in 1985-86 (see above for the sub-activity description and Figure 12 for the Workload by Major Outputs under the heading, Central Accounting and Reporting).

Figure 12: Workload by Major Outputs

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84	Service Delivery Targets	Achievement (%)
Payments					
Pay payments	12,619,271	12,594,571	11,618,467	Within 15 days of receipt of request.	98

B. Compensation Administration

Objective

To provide the administrative services to carry out the pay function for government employees and those services required to administer the government employee pension benefit and insurance plans.

Resource Summary

This activity accounts for approximately 18% of total 1985-86 Services Program expenditures and 24% of Program person-years.

Figure 13: Activity Expenditures ($000) and Person-Years

* Activity dollars and person-years for 1983-84 Actual and Main Estimates have been pro-rated to the sub-activity levels, based on a detailed analysis carried-out for the 1984-85 Main Estimates.

Description

This activity covers the administrative and support services required to administer the pay, pension and other benefit functions for the public service, the Canadian Forces and the Royal Canadian Mounted Police.

As part of the administration of pay, Services accepts data from the employing department for the maintenance of payroll records for the public service and Royal Canadian Mounted Police and the post-audit of some elements of pay for the Canadian Forces.

Services also administers the employee pension and other benefit plans for all public servants who are covered by the Public Service Superannuation Act, for members of the Canadian Forces and the Royal Canadian Mounted Police, members of Parliament, judges, and for the employees of some Crown agencies. The services provided include maintenance of records of contribution and eligibility, the calculation of benefits (with the exception of the Canadian Forces Superannuation and Judges' Pensions), and the preparation of statistical and other reports. These functions are carried out in the regional offices with the bulk of the administration services performed by the Shediac, New Brunswick, office.

Performance Information/Resource Justification

The two major workloads of this activity account for 98% of the total activity resources. The workload volumes are displayed in Figure 16.

Figure 16: Workload by Major Outputs

	237,872	228,659	215,589		

[1] Volume transactions represent public service pay only.

[2] No measure available for contributors.

The Complexity of salary contract settlements and pension legislation has a pronounced effect on the resources required for administration. Thus, resources required for this activity do not vary directly with changes in volume. The most meaningful indicator of resources required to carry out this activity is the volume of individual transactions required to process the payments involved and to maintain accurate and up-to-date individual pay and pension accounts.

Pay Administration: This sub-activity records the processing of all data received from employing departments for the maintenance of payroll records. As illustrated in Figure 16, priority is given to all critical pay transactions (new and departing employees) which are usually processed within fifteen days of receipt from a department. All other pay transactions (amendments to existing payroll records) are processed within thirty days of receipt.

Resource levels are determined for the most part by the expected transaction level. Marginal decreases are expected in transaction levels in 1985-86. The use of transactions as the primary measure of resource requirements commenced in 1982-83 and is considered to be the best indicator available. Time standards were used in 1983-84 to further test the relationship of transaction volumes to resource needs in a variety of work situations. The results indicate further development is required before a definitive link is achieved.

Employee Benefit Plan Administration: This sub-activity includes the maintenance of superannuation contributor records of superannuation benefits. The number of recipients is expected to increase marginally in 1985-86.

In 1985-86, the person-year resources for this sub-activity will decline by approximately 0.9 per cent. Reductions in person-year requirements are a result of improved productivity. These reductions are partially offset by an increased person-year requirement to improve and enhance the Canadian Forces Superannuation System.

C. Management and Administrative Services

Objective

To provide common and other services on request to client departments or to the government as a whole as directed by central agencies in such areas as finance, management, advisory and administrative services.

Resource Summary

This activity accounts for approximately 24% of total 1985-86 Services Program expenditures and 17% of total person-years.

Figure 17: Activity Expenditures ($000) and Person-Years

* Activity dollars and person-years for 1983-84 Actual and Main Estimates have been pro-rated to the sub-activity levels, based on a detailed analysis carried-out for the 1984-85 Main Estimates.

The net decrease of $2.6 million between 1984-85 Forecast and 1985-86 Estimates is primarily the result of the following factors:

	($ millions)
• salary increases	1.7
• reduction in net requirements for the Centre for Service to the Public and Telidon Exploitation Program	(6.3)
• net increase in demands for Management Services, mainly for accounting services	1.5
• other increases in expenditures	0.5

	Actual*	Main Estimates*	Change
Accounting	27,618	26,468	1,150
Advisory	30,674	29,397	1,277
Information Management Services	6,111	5,857	254
	64,403	61,722	2,681

* Activity dollars and person-years for 1983-84 Actual and Main Estimates have been pro-rated to the sub-activity levels, based on a detailed analysis carried-out for the 1984-85 Main Estimates.

Description

This activity covers accounting, advisory and information management services impacting on such fields as auditing, finance, personnel and consulting, as well as mechanisms that improve service to the public, accounting and other services that are provided on request to departments and agencies. This activity also involves developing, updating and maintaining files on recipient records for social programs; and other information management services which are derivatives of Receiver General functions.

Performance Information/Resource Justification

The resource needs in this activity are directly related to the requests made by departments and agencies for services or the provision of services to the government as a whole as directed by central agencies. The level of service is determined by the recipient department or central agency. The costs of providing the requested services are recovered from departments while central agency requests are funded by appropriations. Figure 20 presents workload information for this activity.

Figure 20: Workload by Major Outputs

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
No. of audit assignments completed[1]	3,000	3,000	3,048
No. of consulting assignments	450	430	658
No. of departments and agencies receiving financial and/or related services[2]	52 to 60	50 to 60	54 to 64
No. of Files maintained in support of Information Management Systems[3]	29,185,250	28,079,950	24,718,330

[1] in previous years, basis was number of audit assignments completed plus those in progress during the year.

[2] not all clients take every service.

[3] includes Family Allowance, Old Age Security and Canada Pension Plan files.

In 1985-86 the planned level of services provided to departments and agencies on a fee-for-service basis is $61.9 million. This includes performing 3,000 audit assignments on behalf of about 50 departments and agencies by a professional staff of some 300 auditors and about 450 consulting assignments in some 60 departments and agencies by a professional staff of about 110. The scope of the audit assignments encompasses the areas of internal audit of the operations of the clients (36%), external audit of grants and contributions (16%), external audit of government contracts (30%) and audits of federal-provincial agreements and other work (18%). The in-house staffs are supplemented by private sector firms when warranted.

This activity includes $3.3 million for mechanisms that improve service to the public which covers the toll-free telephone services to the public and the production and distribution of an index to federal government programs and services. In addition, this activity includes the maintenance of recipient files in support of information management systems for social programs such as Family Allowance, Old Age Security and the Canada Pension Plan.

D. Departmental Administration

Objective

To provide the administrative support and associated services common to the Services and Supply programs at minimum overall cost.

Resource Summary

The Departmental Administration activity accounts for approximately 7% of the total Services Program expenditures and 7% of the total person-years.

Figure 21: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Departmental Administration	20,400	374	21,573	393	19,080	391
Less: Receipts and Revenues Credited to the Vote	8,308		8,105		7,721	
	12,092	374	13,468	393	11,359	391

The net decrease of $1.4 million between 1984-85 forecast and 1985-86 Estimates is the result of the following factors:

	($ millions)
• salary increases	0.7
• planned person-year reduction	(0.5)
• reduction in tenant services and other minor items	(1.2)
• other	(0.4)

Figure 22: Activity Expenditures by Object ($000)

Past Financial Performance

Figure 23: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Departmental Administration	19,080	18,524	556

Description

This activity includes the office of the Minister and all administrative, personnel and information services that support the operational programs of Supply and Services. Certain aspects of the United Way Campaign are also part of this activity.

This is the area in which the central support for the entire Department is housed. It includes the functional direction of all personnel services and administration within the Department. Support is also provided to both Programs in respect to accommodation, communications, mail, transcribing, library services, records and materiel management. There is also a small internal advisory group that supports all the operational units responsible for providing common services across the government.

Performance Information/Resource Justification

Figures 24 and 25 show the ratios of Departmental Administration person-years and costs to the total departmental operating resource level. In both instances the ratios remain relatively constant over the three year period.

Figure 24: Relationship of Departmental Administration Person-Years to Total Departmental Person-Years

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Total Department	10,445	10,562	10,506
Departmental Administration	374	393	391
Percentage of Total	3.6	3.7	3.7

Figure 25: Relationship of Departmental Administration Expenditures to Total Departmental Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Total Department*	590,311	578,074	534,105
Departmental Administration	20,400	21,573	19,080
Percentage of Total	3.5	3.7	3.6

* This represents the operating expenditures of the Department; i.e. gross expenditures for both the Supply and Services programs.

E. Program Administration

Objective

To manage the Program and to ensure that plans, financial and other management controls are provided to subordinate managers to ensure a clear program focus.

Resource Summary

This activity accounts for approximately 3% of the Services Program's expenditures and 2% of the total person-years.

Figure 26: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Program Administration	9,552	135	9,480	158	9,136	155

There are no significant changes in the net expenditures between the 1984-85 forecast and 1985-86 Estimates for this activity.

Figure 28: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Program Administration	9,136	8,551	585

Description

This activity includes the offices of the Deputy Minister and the three assistant deputy ministers and their staff groups. The responsibilities of these groups cover planning, financial management, internal audit, evaluation, security, human rights and the personnel functions of staffing and classification.

Performance Information/Resource Justification

Figures 29 and 30 show the ratios of Program Administration person-years and costs to the total Services resource level. In both instances the ratios remain relatively constant over the three year period.

Figure 29: Relationship of Program Administration Person-Years to Total Services Program Person-Years

Casuals and Others	262	251	504		20,964

* The conversion of Senior Auditing (AU) positions into the Senior Management category received retroactive approval in June 1984 and impacts on the "Authorized Person-Years" levels.

Note: The person-year column displays the forecast distribution of the authorized person-years for the program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Figure 33 shows the total cost of each of the activities of the Program. "Other Costs" shown cover the cost of accommodation ($25,950,000), group surgical medical plan and provincial health insurance ($3,767,000) and employee compensation payments ($107,000). These costs represent services provided without charge by other government departments. Revenues comprise recoveries from Canada Pension and Unemployment Insurance Funds as required by legislation and from departments and agencies for services provided to them on request. See page 2-44 for details.

Figure 33: Net Cost of Program by Activity ($000)

	Expenditures 1985-86	Deduct Revenue	Main Estimates 1985-86	Other Costs	**Net Cost**	Total Forecast 1984-85
Receiver General Functions	145,527	19,732	125,795	14,816	**140,611**	135,170
Compensation Administration	53,413	4,452	48,961	7,203	**56,164**	54,432
Management and Administrative Services	73,580	61,891	11,689	5,097	**16,786**	19,463
Departmental Administration	20,400	8,308	12,092	1,990	**14,082**	15,510
Program Administration	9,552		9,552	718	**10,270**	10,302
	302,472	94,383	208,089	29,824	**237,913**	234,877

C. Revenue Analysis

The figure below shows a comparison of the actual revenues received in 1983-84 and the anticipated revenues for the following two fiscal years. The revenues are categorized as those required to be collected by legislation, from revolving funds and from departments that are provided services on request.

Figure 34: Revenue by Type ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Legislation			
Canada Pension Plan	14,129	14,062	11,993
Unemployment Insurance	9,370	9,168	8,349
Revolving Fund			
Supply Program	13,240	11,880	12,064
Departmental Requests			
Accounting Services	30,562	24,382	22,259
Data Processing Services	9,253	9,946	9,619
All Other	17,829	20,156	18,240
	94,383	89,594	82,524

Legislation requires the government to recover from the appropriate fund the cost of certain services provided in support of the administration of the Canada Pension Plan and Unemployment Insurance Funds. These services include payment services to employees, suppliers accounts and the issuing of Canada Pension Plan (CPP) cheques.

In accordance with Treasury Board regulations the Services Program may recover the cost of administrative services provided to the Supply Program from its Revolving Fund. Figure 34 also includes Supply's share of the centralized Departmental Administration Activity, which supports both the Supply and Services Programs.

Recoveries for departmental requests cover mainly auditing and consulting services and provision of data processing services such as file maintenance for Family Allowance and Old Age Security.

D. Relationship of Former Activities to New Activities

Figures 35 and 36 show the relationship between the former activities used during 1984-85 and the new activity structure as set out in Section II.

Figure 35: Comparison of Former Activities to New Activities - $000

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $29,949,000 in support of the Supply Program. Under separate statutory authorities, the Supply Revolving Fund is expected to require an amount of $18,582,000 and the Defence Production Revolving Fund is expected to require an amount of $2,000.

Parliament has previously authorized a total drawdown of $200,000,000 for the Supply Revolving Fund. In addition, the total drawdown previously authorized by Parliament for the Defence Production Revolving Fund is $100,000,000.

Financial Requirements by Authority

Vote 5	Supply--Program expenditures including expenditures on behalf of government departments and agencies for unsolicited research and development proposals and authority to make commitments during the current fiscal year of $18,000,000 in respect of such proposals.	28,349,000	28,349,000	26,607,070
	Total Program	73,829,000	37,167,000	35,425,377

Note 1: For statutory items, the figures for total appropriations and actual use are the same amount because of the non-lapsing or continuing nature of the authority.

Note 2: The actual use excludes a statutory expenditure of $679,230 for a federal court judgement.

Section I
Program Overview: Supply Revolving Fund

A. Plans for 1985-86

1. Highlights

The Supply Administration has established the following plans for 1985-86:

- the Supply Revolving Fund projects a surplus of $1.371 million for 1985-86 (see page 3-23);
- the proposed person-year requirement of 4,839 for 1985-86 decreased from the 1984-85 level due to the continued implementation of the Corporate Performance Improvement Plan (see page 3-7);
- a further 2% rate reduction on acquisition services will be implemented each year, 1986-87 and 1987-88. This is additional to the reduction of 3% achieved in each year 1983-84 to 1985-86 respectively (see page 3-13);
- a new directorate, the Allocations Management Directorate, has been established to develop criteria related to the allocations process used in the Supply Administration. The aim of this project is to encourage yet higher efficiency and more economy in our operations by providing the Department with a new basis upon which to match our resources with the demands made upon us by our customers (see page 3-16);
- the production costs of the Canada Gazette will be transferred to Supply Administration from the Privy Council Office effective April 1, 1985 (see page 3-46); and
- A Major Crown Project Activity has been established as part of the Supply Administration Operational Plan Framework to provide enhanced management and control of the resources allocated to carrying out this activity and to assist in the measurement of results (see page 3-36).

2. Financial Summary

Figure 1: Summary of Financial Requirements (modified cash basis in $000)

	1985-86 Estimates			1984-85 Forecast		For Details See Page

Authorized person-years			**4,839**	4,905	(66)	

Explanation of Change: For Supply Operations, the increase of $958,000 is caused by additional working capital requirements. The change of $11,562,000 in Defence Production Operations is caused by the significant reduction of working capital in the previous year. The net increase of $1,083,000 is mainly attributable to the transfer-in of the Canadian Unity Information Office and the production costs of the Canada Gazette.

Explanation of 1984-85 Forecast: Forecast financial requirements are $6.961 million higher than the 1984-85 Main Estimates (Page 3-4). The main reasons for the increase are:

- additional capital expenditures of $7 million and additional working capital requirements of $3.852 million (Supply Operations); and
- decrease of $3.891 million in working capital requirements (Defence Production Operations).

B. Recent Performance

1. Highlights

The 1983-84 Program Expenditure Plan set out a number of objectives. Highlights of performance realized against these objectives are as follows:

- the Supply Revolving Fund achieved a surplus of $6.965 million as compared to $.843 million included in the Plan (see page 3-25);

- actual person-years utilized 4,879 (see page 3-10);

- work on the Procurement and Acquisition Support System (PASS) is intended to improve customer service by providing the customer with better access to acquisition information and to streamline the acquisition process in both the Supply Administration Headquarters and Regional line organizations. It is estimated that the saving of some $7 million over the next two fiscal years will be facilitated by PASS and other related productivity initiatives (see page 3-19);

- the Pricing and Charging Committee, originally set up to review the pricing and charging procedures and practices related to acquisition services, has now become a permanent body comprised of representatives from the Supply Administration, customer departments and the Treasury Board Secretariat. Its mandate is to review rates, charging principles and practices associated with all Supply Administration services. Customer departments wishing to make proposals or resolve rate issues may appear at the Committee for such purposes;

- a Management Call Program was initiated. It consists of Supply Administration managers meeting, on a regular and frequent basis, with their counterparts in customer departments. The intent of these discussions is to provide an opportunity for both parties to review Supply Administration policies and procedures with a view to considering ways and means to improve the levels of service and also to cover particular points of importance to the customers (see page 3-19);

- the first Annual Procurement Plan and Strategy was released in 1983-84. This document supports and actively encourages an open and wide-ranging exploration of procurement opportunities for the development of Canada's economic base. The 1984-85 APPS, which has been released, built upon the experiences and initiatives of the first plan (see page 3-21);

- in 1983-84, the Supply Administration re-allocated $275 million of procurement from its headquarters directorates to regional offices. In 1984-85 an additional $100 million of business is targeted for transfer. This initiative will be continued in 1985-86 (see page 3-19);

- work is continuing, as planned, on a number of Major Crown Projects (see page 3-17 to 3-19) such as:

  - the Canadian Patrol Frigate - CPF (DND);
  - CF 18 (Hornet) - (DND);
  - Radar Modernization Program - RAMP (Dept. of Transport);
  - Low Level Air Defence - LLAD (DND);
  - 2 1/2 Ton Medium Logistics Vehicle - MLVW (DND);
  - ILTIS 1/2 Ton Utility Vehicles (DND);
  - Tribal Update Modernization Program (DND);
  - Light Armoured Vehicle - LAV (DND); and
  - the Mobile Satellite Program - MSAT (Dept. of Communications);
  - Polar 8 Icebreaker (DOT);
  - Recovery, Assist, Secure and Traverse Systems - RAST (CCC);
  - Small Arms Replacement Project - SARP (DND); and

- new projects on which major work commenced in 1984-85 include:

  - the 5 Ton Military Operations Support Trucks - MOST (DND); and
  - Bell Helicopter (DND).

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Requirements (modified cash basis in $000)

	Actual			Main Estimates	
	Total Expen-ditures	Revenue	Financial Require-ments	Financial Require-ments	Change
Supply Operations	551,931	542,336	9,595	16,762	(7,167)
Defence Production Operations	25,866	26,643	(777)	28,718	(29,495)
Unsolicited Proposals	14,985	-	14,985	15,000	(15)
Free and Subsidized Publications	3,499	-	3,499	3,349	150
Source Development	8,058	-	8,058	10,000	(1,942)
Public Awareness	65	-	65	-	65
	604,404	568,979	35,425*	73,829	(38,404)
Authorized person-years			4,879	4,859	20

* Excluding a statutory expenditure of $679,230 for a federal court judgement.

Explanation of Change: The net decrease in financial requirements of $38,404,000 was caused mainly by favourable operational variances in the following two areas:

- Supply Operations financial requirements was $7,167,000 lower than originally projected which is due to favourable changes of $11,632,000 in working capital, $3,344,000 in capital expenditures, $6,122,000 in operating surplus but offset by $13,818,000 in payable at year end (PAYE) and other transactions.

- The Defence Production Operation's contribution of $29,495,000 in reduced financial requirements is caused mainly by a reduction in working capital requirements resulting basically from the elimination of stockpiling defence supplies and payable at year end transactions.

C. Background

1. Introduction

The Supply Program includes all the operations of the Supply Administration of the Department of Supply and Services. The Supply Administration is a common service agency responsible for the provision of goods and related services to all federal departments and agencies listed in Schedules A and B of the Financial Administration Act. In this capacity, the Supply Administration acquires or provides a wide range of goods and services used for civilian and military purposes that vary in complexity from simple, readily-available, low dollar value items to unique, custom-made products costing millions of dollars. The Supply Administration currently offers this wide range of supply services to 114 customers under the authority provided by the DSS Act and subsequent Governor-in-Council decisions. During 1983-84 the Supply Administration issued 350,232 contractual documents for approximately $10.6 billion worth of goods and services. These services were delivered to over 20,000 different locations in Canada and abroad.

The Supply Administration also manages two other types of activities. The first relates to the acquiring, transporting and stockpiling of defence supplies and strategic materiel. The second relates to supporting, through the procurement process, the attainment of the government's objectives that deal with the mission-oriented science and technology requirements of the government; the development of sources of supply in Canada and the printing and publishing of parliamentary papers and government publications.

2. Legal Mandate

The principal elements of the statutory framework within which the Supply Program operates are the Department of Supply and Services Act, the Defence Production Act and the Surplus Crown Assets Act. A number of Orders-in-Council also apply as well as several Memoranda of Understanding.

3. Program Objective

The Supply Program objective is to acquire and provide goods and/or services required by departments and agencies, taking into account the contribution of supply to the realization of national objectives, and to provide services for the disposal of Crown-owned materiel, all in the most economical manner.

In fulfilling its role, the Supply Administration serves three client groups; its customers, its suppliers and the Canadian people. To customer departments and agencies, the Supply Administration has the responsibility of demonstrating sensitivity and responsiveness to their needs and requirements. In regards to suppliers, the Administration must provide fair and equal opportunities to private business to compete for government work. Respecting the Canadian people, the Administration must ensure economy and efficiency (productivity) in its operations, the exercise of prudence and probity and sustained support of national objectives through supply.

4. Program Organization for Delivery

Activity Structure: The Supply Program is currently structured into nine activities, each having its own objectives. The Supply Revolving Fund is divided into seven activities: Commercial Acquisitions, Science and Engineering Acquisitions, Regional Supply, Printing and Communications, Major Crown Projects, Export Supply and Program Administration (see page 3-24). The Defence Production Revolving Fund (see page 3-42) and the Procurement Support Initiatives (see page 3-45) are linked to the contracting process and do not as such have person-years assigned to them as the work is carried out by Supply Revolving Fund staff.

Figure 3: Activity Structure

Revenue Dependent Method of Financing: The Supply Operations Activities are the largest component of the Supply Program. These activities are operated through the Supply Revolving Fund (SRF). The SRF provides a $200 million non-lapsing authority to make payments out of the Consolidated Revenue Fund for working capital, capital acquisitions, and temporary financing of operating deficits. The Supply Revolving Fund is managed on a "full-cost" revenue dependent basis. Under this system, Supply Operations are financed by charging users for the services provided in accordance with rates approved annually by Treasury Board. For certain higher dollar acquisitions (generally those over $50 million) and project management services, rates are established through negotiations with client departments and agencies. In this context, the essential financial management principles of the Supply Administration's revenue dependency system are that the full costs of services provided to other agencies should be exposed and that the rates applicable to the provision of such services are in line with the effort applied by the Supply Administration and are fair, equitable and stand the test of comparison with other similar services.

The objective of the Supply Revolving Fund is to break even on an annual basis. Where the Supply Administration receives revenues in excess of expenditures, that excess is termed "surplus". Conversely, any shortfall of revenues against expenditures is a "deficit". It is considered that this approach to Supply Revolving Fund management is most conducive to the achievement of continuing productivity improvements.

The Defence Production Operations Activity is also funded by a non-lapsing statutory appropriation. This authority applies to two separate financial accounts, the Defence Production Revolving Fund and the Defence Production Loan Account. The authority provides for a maximum combined draw-down of $100 million from the Consolidated Revenue Fund.

Revisions to the Rate Structure: As a result of a continuing review of the charging principles and practices associated with the Acquisition and Non-Acquisition Services, several significant changes have been incorporated in the FY 1985-86 rate structure on rates applicable to Supply Administration services. A reduction in acquisition charges for 1985-86 by 3% will be implemented as planned. In addition, a 2% reduction in acquisition charges has been planned for both 1986-87 and 1987-88. A series of changes to the rates set for the non-acquisition services will further reduce this component of Supply Administration revenues by 3% in 1985-86 when adjusted for inflation.

Organization Structure: In line with the activity re-alignment, the organization of the Supply Administration was also changed, effective March 20, 1984. The Deputy Minister (Supply) remains the manager accountable for the administrative performance of the Supply Program in total. To carry out this responsibility, the Supply Administration is organized into the following three sectors: Operations; Regional Operations; and Corporate Finance, Planning, Systems and Support Services; and a directorate, Supply Management. Each sector is headed by an Assistant Deputy Minister to whom directors general or directors of directorates or branches report. The Director General, Supply Management, reports directly to the Deputy Minister, Supply.

The roles of these components are:

Operations Sector: responsible for the day-to-day management and direction of all headquarters supply operations, namely, the delivery of required goods and services on a timely basis, satisfactory to the Supply Administration's customers. The directorates of the Sector are organized along lines of commodity expertise.

Regional Operations Sector: responsible for the day-to-day management and direction of all domestic (Canadian Operations Directorate) and international (Export Supply Directorate, Washington and European Offices) operations, namely the delivery of the required goods and services on a timely basis satisfactory to Supply Administration's customers.

Corporate Finance, Planning, Systems and Support Services Sector: responsible for all aspects of financial planning, systems development and support, corporate planning, human resources management, corporate relations, security and contracts settlement.

Supply Management Directorate: responsible for formulating the Supply Administration's general objectives, policies, plans and strategies in support of operations and has the additional responsibility for quality assurance.

In addition to the components outlined above, the Director General Program Evaluation and Audit, the Director General Allocations and the Corporate Secretary report to the Deputy Minister.

Figure 4: Relationship between Departmental Organization and Activities (1985-86 Main Estimates in $000 - Note 1)

(ACCRUAL BASIS)	ADM Operations Sector Revenue	ADM Operations Sector Expenses	ADM Regional Operations Sector Revenue	ADM Regional Operations Sector Expenses	ADM Corporate Finance, Planning, Systems & Support Services Sector Revenue	ADM Corporate Finance, Planning, Systems & Support Services Sector Expenses	DG Supply Management Revenue	DG Supply Management Expenses	Total Revenue	Total Expenses

Total Procurement Support Initiatives	29,949	29,949

Note 1 - The Prime Minister announced January 8, 1985, there would be one Deputy Minister for the Department of Supply and Services. As a result of this announcement, there will be organizational changes to reflect the administrative integration of the two administrations, Supply and Services.

Note 2 - Includes expenses of $4,377,000 for the Deputy Minister's office, Program Evaluation and Audit and $11,655,000 for the Supply Administration's share of common departmental services.

D. Planning Perspective

1. Environment

The main factors affecting the Supply Program planning assumptions for the period 1985-86 to 1987-88 are:

Regional Strengths: A major opportunity for increasing employment exists through the expansion of Canada's industrial and resource sectors throughout the country. It is government policy to increase its presence in the regions so as to ensure that all regions participate in and benefit from government programs. In this context, the Supply Administration has and will continue to put in place the necessary mechanisms to ensure that increased business is transacted in the regions close to the point of use and consistent with a cost effective approach to supply. In support of these initiatives, the Supply Administration has indicated its intention to significantly increase the delegated Local Purchasing Authority to client departments from its current level of $500 to a higher threshold.

Economic Restraint: In view of a slow but steady economic recovery and the government's commitment to link its expenditure increases to real GNP growth, the Supply Administration anticipates that expenditure restraint will continue during the forecast period. Total annual business volume is not likely to diminish as general spending reductions will be more than offset by the continuing defence re-equipment program. Additionally, the search for government-wide economies could lead to the establishment of new services within the Supply Program, or the privatization of other currently provided services, resulting in a change in Supply Administration activities.

Technological Change: It is anticipated that an increasingly rapid application of emerging office technology will play a major role in supply business. This evaluation will have a major impact on operational productivity and levels of service to customers. Also, as new technologies are introduced and more data are electronically stored and tele-transmitted, requirements for certain activities (i.e. filing, record-keeping, etc.) may lessen. Such developments will permit a redeployment of some resources engaged in these activities to other areas. A key management challenge in realizing these positive benefits will be to provide for the implementation and use of technology in a cost-effective manner while maintaining the flexibility necessary to achieve technological integration in the longer term. In addition, a significant part of our management philosophy is to ensure that systems integration work is performed in a manner which takes into account the requirements to achieve an effective person/machine interface and in full consideration of the vital requirement to maintain high quality employer-employee relations.

Supplier Performance: Although the current economic situation is improving, the long term effects of the recession have affected the ability of a number of firms to respond to government tenders, to undertake the type of new investment necessary to improve productivity, create lasting and rewarding jobs and to stimulate the expansion of business and to upgrade our competitiveness internally and on world markets. The Supply Administration will play an active role to ensure that suppliers are not prevented from competing for government business due to business complexity, administrative burden or geographic location.

2. Initiatives

The following are major Supply Program initiatives for 1985-86:

Operational Initiatives

- The Annual Procurement Plan and Strategy (APPS) is intended to identify at an early stage emerging supply needs of customer departments so that demands can be linked with Canadian sources of supply and encourage a broader interdepartmental search for new economic and regional development opportunities and additional expenditure discretion within the totality of federal purchases of goods and services and ensure that these opportunities are brought to Cabinet's attention as appropriate in the context of strategic alternatives. The 1984-85 Plan was prepared in consultation with private industry and departments of the federal government. Building on the experience of the previous two plans, the 1985-86 Plan will reflect input received from the private and public sector at the regional, national and international level and identify procurement opportunities which will contribute to a stronger industrial base for Canada.

- The Supply Administration plans to hold a series of consultations and briefings in all regions as part of a comprehensive Regional Communications Plan. The objective of this plan is to provide firms in the regions with a clear understanding of business opportunities and to explain to them how to do business with the federal government.

- The Allocations Directorate was recently established to develop criteria related to the allocations process used in the Supply Administration. The criteria will allow all incoming requisitions to be categorized in terms of the complexity of the requirements and the level of effort that must be expended to acquire the item. The aim is to encourage yet higher and more consistent levels of customer service and more economy in our operations by providing the Supply Administration with a new basis upon which to match our resources with the demands made upon us by our customers.

- An extensive series of Procurement Outlook conferences has been planned. These conferences will be directed at specific sectors of the Canadian supply base and will contribute to greater supplier understanding of future procurement requirements of government departments, particularly with respect to product innovation and technological transfers.

- In support of government restraint and greater economy in delivering government programs, a further 2% rate reduction in acquisition revenue dependency charges will be implemented in each year, 1986-87 and 1987-88. This figure is in addition to the original plan to reduce those charges by 3% in 1983-84 to 1985-86 respectively. Also, progress has been and will continue to be made towards the achievement of the Supply Administration's Corporate Productivity Improvement Target of reducing the person-year complement by 258 over the period of 1984-85 to 1986-87. The Supply Administration will take all reasonable measures to ensure that any impact on employees resulting from the achievement of these targets will be minimized.

- To provide additional support towards the objective to lighten the burden of controls on public sector operations, the Supply Administration plans to significantly increase the delegated Local Purchase Authority to departments. The Local Purchase Authority will be raised from the current level of $500 to a higher threshold. Additionally, steps have been taken to reduce administrative burdens within the procurement process. In this regard, the Supply Administration has proposed to Treasury Board that it delegate to the Supply Administration authority to contract beyond the current limits.

Major Crown Projects

- The Tribal Class Destroyers Update and Modernization Project (TRUMP) is to carry out a mid-life refit and modernization of the four (4) DDH 280 Class Destroyers at an estimated cost of $650 million. Contract award for the Definition Phase was awarded in July 1984. The Implementation Phase is scheduled for contract award in mid-1985 with the first ship entering dry-dock for update 15 months later.

- The Polar 8 Icebreaker received Treasury Board approval for the contract Definition Phase in October 1983, including preparation of a construction proposal. Contracts are being negotiated with three Canadian shipbuilding firms and Implementation Proposals and Offers have been submitted. Construction of the Polar 8 Icebreaker, if approved, will take 54 months to complete at a cost of $485 million and provide an estimated 4,350 person-years of work.

- The Small Arms Replacement Project (SARP) consists of the establishment of a Canadian facility to produce the Canadian Armed Forces requirement for a new rifle and carbine as well as a capability to manufacture spare parts for a light machine gun. The Program is funded at $231 million (1983 $). A contract was awarded to DIEMACO Inc., Kitchener, in January 1984 for the establishment of this facility and the supply, under licence of COLT, U.S.A., of rifles, carbines and accessories with an estimated value of $107.8 million. The balance of the $231 million will cover licencing agreements with Fabrique Nationale Herstal, Belgium, for the supply of light machine guns.

- The Drone Systems Project involves the development and pre-production of a vehicle-launched airborne surveillance system valued in excess of $193 million for which Canadair is the prime contractor. The development of the CL 289 system has achieved successful completion of the Customer Evaluation/Troop Trails flight test trials conducted by the Federal Republic of Germany and arrangements are being made for a Canada/Germany production phase.

- The Infra Red Search Track and Designation Project (IRSTD) is a joint Canada/U.S.A. project to develop and supply three Engineering Development Models (EDMs) of an IRSTD system, plus associated documentation and test support. Two EDMs are to be delivered to the U.S. Navy and one to Department of National Defence for operational tests in FY 1988-89. Project costs are shared 67/33 between the U.S. and Canada respectively. The Canadian share is borne by DND and Department of Regional Industrial Expansion and the prime contractor is SPAR Aerospace Ltd. The estimated value of the project is $85 million.

- A requirement has been identified for a number of Medium Oversnow Vehicles (MOSV). A MOSV is an articulated oversnow personnel carrier consisting of a front and rear cabin and four tracks. At the present time, the requirement consists of 90 vehicles to support the Canadian Forces in Europe. These vehicles are required to be operational by the start of the winter season 1985 and the cost of this procurement is estimated at $18.5 million. This procurement will form the first phase of a Major Crown Project which will result in the procurement of approximately 800 to 1,000 vehicles during the 1988-1990 timeframe.

3. Update on Previously Reported Initiatives

The following are highlights of the Supply Program's past performance:

Major Crown Projects

- The Low Level Air Defence (LLAD) project to upgrade the Canadian Armed Forces capabilities is proceeding on schedule. A Request for Proposal was released in February 1984. Bidders had until August 31,

1984 to propose a system that would meet operational requirements. After evaluation of those bids, there will be a contract definition phase with plans toward the contract in early 1986. Delivery will be expected within 24 months of the contracts being awarded.

- The Canadian Patrol Frigate Program was awarded to St. John Shipbuilding and Dry Dock Co. Ltd., Saint John, N.B. at a target cost of $2.845 billion, a target price of $3.269 billion and a ceiling of $4.001 billion. The project will generate 32,000 person-years of employment spread across several regions of Canada.

- The Radar Modernization Project (RAMP) is a program to replace Canada's air traffic control systems across the country. Contracts for the radar site package Definition Phase were awarded in September 1983, and, after extensive evaluation, Raytheon Canada was awarded a contract valued at $391 million. Proposals for the display site packages were requested from Canadian industry in May 1984. The estimated total cost of the RAMP in budget year dollars is $810 million. RAMP is on schedule, within budget and meeting its industrial benefits requirements.

Operational Initiatives

- The Procurement and Acquisition Support System (PASS) is intended to provide much more rapid interchange of acquisition information between the Supply Administration and its clients. The system will enable client and Supply Administration staff to monitor acquisition progress from the time the requisition is sent until the contract is closed out, ensuring a high level of customer service. It is expected that the system will move from the pilot stage to the implementation of specific aspects of the Contract Information and Allocations Process on a corporate wide basis.

- A Management Call Program which consists of meetings held on a regular and frequent basis between managers of the Supply Administration and their counterparts in client departments was initiated the past year. Discussions are intended to centre on Supply Administration policies and procedures with a view to considering ways and means to improve the level of service and cover particular points of importance to the customers. Prompt attention is given to areas of concern. The success of the Program will continue to be a top priority in 1985-86, so as to ensure that the Department continues to provide a highly responsive service to its customers.

- In 1983-84, the Supply Administration re-allocated $275.2 million of procurement from its headquarters to the regional offices, a further $100 million was re-allocated in 1984-85. This initiative will continue in 1985-86, as part of the Supply Administration's efforts to more effectively respond to the needs of its regionally-dispersed clients.

Finally, changes were made to the Supply Administration Operational Plan Framework which provide clearer lines of management accountability for the results-oriented planning elements which link results to both resources utilized and program objectives.

4. Program Effectiveness

The effectiveness of the Supply Program is measured in three ways: efficiency and economy in operating and product costs, customer satisfaction and contribution to national objectives.

Efficiency and Economy in Operating and Product Costs: The Supply Administration embarked on a series of cost cutting measures which yielded a 3% reduction in acquisition rates in both 1983-84 and 1984-85 respectively. A further minimum 3% acquisition rate reduction will be implemented in 1985-86. To continue this downward pressure on costs for 1986-87 and 1987-88, an additional rate reduction of 2% in each of these years has been planned. Methods of supply reviews are also anticipated to yield significant economies. Current studies include procurement of drugs, film, fuel and software. This program is expected to yield substantial operational savings. In order to effect this reduction in expenditures, a corporate productivity improvement target was set, which involved the overall reduction in Supply Administration person-years by 258 PYs over the years 1984-85 to 1986-87. Progress to date against this goal is being made and the goal should be achieved without recourse to lay-offs. This reduction in acquisition rates and person-years will be accomplished while continuing to deliver estimated business volumes of approximately $6 billion with improved levels of service.

Customer Satisfaction: The measurement of customer satisfaction is determined in two forms: quantitative and qualitative. Quantitative measurement of customer satisfaction is conducted through performance measures established in each of the activities which monitor time and cost standards. For example, in the acquisition services, performance is monitored on both the number of days to award a contract and also on the cost of issuing a contract. Through continual pressure to improve these standards, increasing levels of customer satisfaction and productivity will be realized. Details as to specific standards and results achieved are provided in Section II (Analysis by Activity).

With respect to qualitative measures of customer satisfaction, the Supply Administration has embarked on a two-part program to improve customer relations. Senior officials have commenced a structured visitation program with counterparts of client departments to identify any service areas that require attention and/or resolution. The second part of the program is the preparation of annual customer reports in which the Supply Administration provides an overview of the business conducted over the past year and identifies significant achievements and problem areas. Through the visitation program and annual reports, significant feedback will be received which will permit an ongoing evaluation of the service provided to customers and allow for rapid adjustment as required.

In addition to the visitation program, Program Evaluation is carried out on components of the Supply Program on a regular and frequent basis. Surveys of customers contacted as part of these evaluations reflect a generally high level of satisfaction with the services provided. The recommendations based on the findings of these studies provide the Supply Administration with another means of providing a better, more responsive service.

Contribution to National Objectives: With regard to the aspect of program effectiveness dealing with contribution to national objectives, the Supply Administration has procurement policies and activities which support certain economic and regional development objectives of the government. These objectives aim at achieving three main goals.

The first is to procure as much of the federal government requirement as possible from Canadian suppliers thereby increasing domestic industrial development. This is primarily achieved within the Supply Program by limiting calls for tenders to Canadian-based firms, provided that there are at least three sources of supply to guarantee competition. In 1983-84, 90.9% of the annual value of Supply Program contracting was placed with Canadian-based suppliers as compared to 87.3% in 1982-83. The typical contracts with firms outside Canada are for high-dollar-value, high technology defence-related equipment. In these cases, benefits for Canadian industry result from offset clauses negotiated by the Supply Administration with foreign prime contractors which generate large sub-contracts for Canadian industry. Additionally, bilateral defence agreements with NATO countries such as the Defence Production Sharing Arrangement with the United States, give Canadian firms prime contracting opportunities with foreign governments that would otherwise not exist.

The second goal of the government socio-economic program is to contribute to regional economic development. In this context, the Supply Administration will continue to put in place the necessary mechanisms to ensure that increased business is transacted in the regions, close to the point of use. This action, particularly if supported by parallel steps by client departments to decentralize their material management and purchasing functions, can significantly support regional development and increase employment opportunities in the various regions of Canada. In 1983-84, the Supply Administration re-allocated $275 million of procurement from its headquarters directorates to regional offices, in 1984-85 an additional $100 million is targeted.

Finally, the Supply Administration supports a number of other government programs including support to small business, rehabilitation of inmates and sheltered workshops for the severely handicapped.

A recent aspect of the Supply Administration's efforts towards the contribution of national objectives is the introduction (in 1983-84) of the Annual Procurement Plan and Strategy (APPS). This document is formulated prior to the beginning of the fiscal year and is intended to: identify at an early stage emerging supply needs of customer departments so that demands can be consolidated across programs and linked with Canadian sources of supply and

encourage a broader interdepartmental search for new economic and regional development opportunities and additional expenditure discretion within the totality of federal purchases of goods and services; and to ensure that these opportunities are brought to Cabinet's attention as appropriate in the context of other strategic alternatives. This exercise has become an important element in assessing the effectiveness of the Supply Program, and the experience and knowledge gained through the development of these plans has been translated into the goals and policies of the Department.

With regard to the other components of the Supply Program in 1983-84, the Unsolicited Proposals Fund supported 220 contracts valued at $33.5 million and the Source Development Fund (SDF) expended $3.73 million on 17 different projects in support of development of Canadian sources of supply. The following positive impacts of the SDF were noted in a joint DSS/DRIE evaluation of 31 projects: the minimum level of sales of supported products through 1987 is estimated to be $154 million; the number of person-years of new jobs created over the same period is 1,160; of the 27 new products generated, 12 are direct substitutions for products previously imported to Canada and 15 of these products contribute directly to client departments productivity. In addition, 63% of the products supported by the SDF have been developed by small businesses.

Section II
Analysis by Activity

A1. Supply Operations Activities - Overview

This sub-section provides an overview of the seven Supply Program activities financed by the Supply Revolving Fund. Because their operations are carried out within the Supply Revolving Fund, these activities differ in two major respects from those funded by annually lapsing appropriations. First, for financial purposes, they are treated as a separate entity and an overall objective applies with respect to financial performance. Secondly, in order to measure attainment of this objective, methods of accounting similar to those in the private sector are used.

Financial Objective

The overall financial objective is to break even on an annual basis.

Planned Financial Performance

Figure 5: Supply Operations Activities - Summary of Planned Financial Performance (accrual basis in $000)

	Estimates 1985-86	Forecast 1984-85	Change
Revenue	619,233	592,051	27,182
Expenses			
Product costs	330,023	308,363	21,660
Operating costs	287,839	282,999	4,840
	617,862	591,362	26,500
Surplus (Deficit) for the year	1,371	689	682
Resources Required (Provided From)			
Surplus for the year	(1,371)	(689)	(682)
Depreciation	(3,177)	(2,989)	(188)
Working capital changes	9,896	9,643	253
Capital expenditures	13,234	11,659	1,575
Financial requirement	18,582	17,624	958

Explanation of change in surplus: The key changes expected to affect the planned financial surplus for 1985-86 are as follows:

- an increase of 4.6% or $27.2 million in revenue is caused by:
  - an increase of $23.7 million due to inflation,
  - a net increase of $11.3 million in business volume, and
  - a net reduction of $7.8 million due to rate structure changes arising mainly from the 3% rate reduction for acquisition services.
- the increase of 7% or $22.3 million in product costs is mainly attributable to inflation; and
- the 1.7% or $4.8 million net increase in operating costs is caused by inflation less savings in person-years included in the Corporate Performance Improvement Plan.

Figure 6 shows how each of the seven activities included in the Supply Revolving Fund is expected to contribute to the overall financial performance planned for 1985-86.

Figure 6: Supply Operations by Activity (accrual basis in $000)

	1985-86 Estimates			1984-85 Forecast			
	Revenues	Expenses	Contribution (Reduction) to Surplus	Revenues	Expenses	Contribution (Reduction) to Surplus	For Details See Page
Commercial Acquisitions	187,601	182,946	4,655	183,309	174,111	9,198	3-26
Science and Engineering Acquisitions	40,410	39,807	603	41,660	38,762	2,898	3-28
Regional Supply	179,608	141,040	38,568	173,797	136,205	37,592	3-30
Printing and Communications	182,772	168,415	14,357	164,448	157,174	7,274	3-33
Major Crown Projects	20,892	13,162	7,730	21,160	14,299	6,861	3-36
Export Supply	6,540	5,846	694	6,321	5,640	681	3-38
Program Administration	1,410	66,646	(65,236)	1,356	65,171	(63,815)	3-40
	619,233	617,862	1,371	592,051	591,362	689	3-23

Past Financial Performance

Figure 7: Supply Operations Activities - Overview of 1983-84 Financial Performance (accrual basis in $000 - Note 1)

	Actual	Main[2] Estimates	Change
Revenue	562,193	553,953	8,240
Expenses			
Product costs	300,305	284,762	15,543
Operating costs	254,923	268,348	(13,425)
(Note 3)	555,228	553,110	2,118
Surplus for the year	6,965	843	6,122
Resources Required (Provided From)			
Surplus for the year	(6,965)	(843)	(6,122)
Depreciation	(2,836)	(2,954)	118
Working capital changes	(4,281)	7,351	(11,632)
Capital Expenditures	5,028	8,372	(3,344)
Payable at year end (PAYE) and other transactions	18,649	4,836	13,813
Financial Requirement	9,595	16,762	(7,167)

Note 1: The elimination of internal revenues and product costs is not reflected.

Note 2: The 1983-84 Main Estimates were reduced by the discontinuance of centralized billings in Printing Operations.

Note 3: Section III C. page 3-54 provides further details by activity of financial performance for 1983-84.

A.2 Commercial Acquisitions

Objective

To acquire and deliver on a timely basis satisfactory to the Supply Administration's customers and in the most economical manner, commercially available goods and services such as office technologies, traffic management and industrial products required by departments and agencies, taking into account the contribution of supply to the realization of national objectives.

Description

The provision of goods and services of a general commercial nature usually procured in the production and manufacturing market, including acquisition planning, sourcing, tendering, contract negotiation, contracting, contract administration, project management and contract close out and audit; and the provision of traffic and transportation services.

Resource Summary

This part of Supply Operations accounts for 30% of revenues and 30% of expenses.

Figure 8: Statement of Operations (accrual basis in $000)

	Estimates 1985-86	Forecast 1984-85	Change	Actual 1983-84
Revenue	187,601	183,309	4,292	170,536
Expenses				
Product costs	152,225	143,735	8,490	132,592
Operating costs	30,721	30,376	345	29,555
	182,946	174,111	8,835	162,147
Contribution margin	4,655	9,198	(4,543)	8,389
Person-Years	580	588	(8)	622

Explanation of Change: Changes in revenue are due to inflationary factors in traffic management services offset by rate decreases in acquisition fees and also in traffic management services. A reduction in person-years is reflected in operating costs.

Performance Information/Resource Justification

Business Volume: Business volume consists of contracting value for acquisitions and the number of activities for traffic management.

Figure 9: Summary of Business Volume

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Acquisitions:			
Contracting ($ Millions)	1,782	1,755	1,405
Traffic Management:			
Number of trips	221,186	225,700	239,832
Number of moves	5,000	5,000	4,015
Number of freight invoices	475,000	463,945	437,539
Number of overseas shipments	1,500	1,500	1,623
Number of vehicles and equipment managed	22,200	22,200	22,232

Performance Information: Contracts will be awarded within 66 calendar days for low complexity contracts through to 154 calendar days for high complexity contracts 75% of the time in the aggregate and in the most economical manner.

Significant Events: In the past, purchases of aviation and naval fuel were on the basis of a discount from the posted prices. This resulted in a number of price changes during a 12 month period. A new pricing formula has been adopted which permits bids on fixed pricing basis for the first six months of the agreement and identifies increases for the second six month period. This new pricing will bring stability to the prices paid by the Government and enhance the competitive nature of the bid process.

Contribution to National Objectives: During the year 1983-84, 132 Master Standing Offers for electronic data processing professional services were awarded to 96 firms, 89 of which are Canadian-owned and all work is performed in Canada. These standing offers provide an estimated 625 person-years of employment across Canada. This method of supply is cost efficient, allowing the Crown to obtain maximum benefit for the dollar, while maintaining an efficient level of service, which is easily accessed by the client departments, with a minimum of administrative overhead.

A.3 Science and Engineering Acquisitions

Objective

To acquire and deliver, on a timely basis, satisfactory to the Supply Administration's customers and in the most economical manner, complex, unique, custom-made goods and services such as science and professional, aerospace and armament, marine, electronics and industrial systems required by departments and agencies, taking into account the contribution of supply to the realization of national objectives.

Description

The provision of scientific, research and development, professional services and technically complex engineering products and services including acquisition planning, sourcing, tendering, contract negotiation, contracting, contract administration, project management and contract close out and audit.

Resource Summary

This part of Supply Operations accounts for 7% of revenues and 6% of expenses.

Figure 10: Statement of Operations (accrual basis in $000)

	Estimates 1985-86	Forecast 1984-85	Change	Actual 1983-84
Revenue	40,410	41,660	(1,250)	44,238
Expenses				
Product costs	-	548	(548)	1,827
Operating costs	39,807	38,214	1,593	36,941
	39,807	38,762	1,045	38,768
Contribution margin	603	2,898	(2,295)	5,470
Person-Years	671	689	(18)	687

Explanation of Change: Changes in revenue are due to rate decreases in acquisition fees.

Performance Information/Resource Justification

Business Volume: The activity for this acquisition service is reflected by the output of contractual value awarded.

Figure 11: Summary of Business Volume

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contracting Value ($ Million)	2,348	2,417	2,299

Performance Information: Contracts pertaining to Science and Engineering Acquisitions will be awarded within 86 days for low complexity contracts through to 302 days for high complexity contracts 75% of the time in the aggregate and in the most economical manner.

Significant Events: A contract valued at $3.2 million was awarded to Bell Canada for the design, installation, operation and maintenance of a leased satellite data circuit. This is the first commercial service of this type under a recently signed transborder agreement and paves the way for further utilization of Canadian satellite technology.

The Canadian General Standards Board (CGSB) celebrated its 50th Anniversary in 1984, having been established in 1934 by the Royal Commission on Price Spreads. To mark its Golden Anniversary, CGSB sponsored an international essay contest on the subject of "Standards in International Trade". The successful author was Mr. Walter Cropper of Sante Fe, New Mexico who received the David Wolochow award for his paper entitled "International Standards in a Global Economy".

Contribution to National Objectives: During 1983-84 a total of 79% of the annual value of contracts was placed with Canadian based suppliers. This is marginally down from last year by a half of one percent.

A.4 Regional Supply

Objective

To acquire, deliver and/or dispose as appropriate, on a timely basis satisfactory to Supply Administration's customers and in the most economical manner, a wide range of goods and services available locally and of a commercial nature and also including printing products, stocked items, maintenance and repair, warehousing and disposal services and assets management systems and/or services required by departments and agencies, taking into account the contribution of regional supply to the realization of national objectives.

Description

The procurement, locally, of goods and services usually procured in the retail and wholesale market; the repair and maintenance of office equipment and furniture; the provision of warehousing services; the issuance of stocked items through supply centres and self-service stores; the provision of disposal services for surplus material in the custody of government departments, agencies and Crown corporations; the provision of generally low-value, short-run, non-specialized printing services; exhibition and audio-visual display services; and assets management services, including the provision of advice on the management of moveable assets to government departments and agencies, the provision of management services related to the maintenance of Crown-owned production assets, and the care, maintenance and custody of standby defence plants.

Resource Summary

This part of Supply Operations accounts for 29% of revenues and 23% of expenses.

Figure 12: Statement of Operations (accrual basis in $000)

	Estimates 1985-86	Forecast 1984-85	Change	Actual 1983-84
Revenue	**179,608**	173,797	5,811	153,871
Expenses				
Product costs	**71,842**	68,031	3,811	63,493
Operating costs	**69,198**	68,174	1,024	63,112
	141,040	136,205	4,835	126,605
Contribution margin	**38,568**	37,592	976	27,266
Person-Years	**1,347**	1,375	(28)	1,381

Explanation of Change: The increase in revenue of $5.8 million or 3.3% is due primarily to growth in Regional Acquisitions as a result of increased regionalization of business volume from Headquarters offset by rate decreases in acquisition fees. Increase in operating costs of $1.0 million or 1.5% is due primarily to inflation, offset by decreases in person-year requirements.

Performance Information/Resource Justification

Business Volume: The output for the Regional Supply activity is measured by the all-inclusive production units. This composite weighted output indicator reflects the complexity and related effort of the diverse results as outlined in the description of activity.

Figure 13: Summary of Business Volume

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
No. of Production Units	1,882,520	1,878,130	1,821,000

Performance Information: The performance measurement developed for this service represents output per direct person-year.

	1985-86	1984-85	1983-84
Productivity in production units per direct person-year	1,610	1,583	1,547

Significant Events: The Regional Operations Sector, headed by an Assistant Deputy Minister, was created on March 20, 1984. This decision reflects the importance with which the Supply Administration views the need for further decentralization of its supply activities in order to promote regional economic development.

In an effort to improve customer service, facilitate small business dealings with the Federal Government and enhance Federal Government presence in the Regions, the Supply Administration has opened new district offices in Charlottetown, PEI (Sept, 4, 1984) and Thunder Bay, Ontario (Oct. 1, 1984). An office in Pembroke, Ontario, is planned to be opened in January, 1985. The possibility of opening additional offices during FY 1985-86 will also be studied.

The Supply Administration will continue to actively pursue the identification of opportunities for shifting some Regional services to the private sector where it is consistent with economy and efficiency.

Contribution to National Objectives: To support the government's socio-economic program by contributing to regional economic development, $275 million of business volume was transferred from Headquarters to the Regional Supply Offices during FY 1983-84. An additional $100 million of business volume is planned to be transferred for FY 1984-85.

Regional Supply Contracting

	1985-86	1984-85	1983-84
No. of Contractual Documents	303,104	298,324	291,566
Value of Contractual Documents ($000)	1,634,821	1,813,243	1,316,771

Reasons for the change in business volume from 1983-84 to 1984-85 is partly due to the transfer of business to Regions from Headquarters and in large part due to the Washington Office commencing to report business volume as part of the Regional Supply planning element in 1983-84. In addition, in 1984-85, there has been a significant increase in business volume for the office as a result of DND purchases of weaponry for the CF-18 and the Canadian Patrol Frigate. This business volume should stabilize to more historical levels in 1985-86.

A.5 Printing and Communications

Objective

To produce and/or provide on a timely basis satisfactory to the Supply Administration's customers and in the most economical manner, printing, publishing, advertising and expositions services required by departments and agencies, taking into account the contribution of supply to the realization of national objectives.

Description

The supply of generally high volume, specialized printing services to Parliament and government departments and agencies through operation of multi-faceted government printing facilities; publishing and marketing in Canada and abroad priced publications which federal departments and agencies make available; providing a range of exhibit and associated audio-visual services required for exhibition and display purposes; and the provision of advertising services including acquisition, advisory services, auditing, payment and billing services.

Resource Summary

This part of Supply Operations accounts for 30% of revenues and 27% of expenses.

Figure 14: Statement of Operations (accrual basis in $000)

	Estimates 1985-86	Forecast 1984-85	Change	Actual 1983-84
Revenue	182,772	164,448	18,324	170,807
Expenses				
Product costs	104,629	94,962	9,667	102,286
Operating costs	63,786	62,212	1,574	57,022
	168,415	157,174	11,241	159,308
Contribution margin	14,357	7,274	7,083	11,499
Person-Years	1,399	1,356	43	1,365

Explanation of Change: Business volume in Printing Production declined in 1984-85 due to the federal election. However, the 1985-86 Estimates represent normal business volume for this activity.

Performance Information/Resource Justification

Business Volume: Business volume reflects revenues from printing, publishing, advertising, expositions, and film and video activities.

Figure 15: Summary of Business Volume ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Revenues from activities	182,772	164,448	170,807

Performance Information: The performance indicators developed for these activities are described in terms of time and cost. In the case of the time standards described in Figure 16, the goal for 1985-86 is to achieve an overall performance level of 90%.

Figure 16: Performance Indicators

ACTIVITIES	TIME STANDARD	COST STANDARDS
PUBLISHING	Order throughput time is an average of 5.4 calendar days	OPERATING COST PER $100 SALES $45.00
ADVERTISING	Pay invoices to capture all available prompt payment discounts	COST PER INVOICE PROCESSED $40.00
EXPOSITIONS	Meet customer delivery dates for exhibit services	OPERATING COST PER $100.00 SALES $25.00
PRINTING PRODUCTION	A) Short Run - - within one working hour B) Medium Run - within two working days C) Longer Runs - or more complex jobs - deadline negotiated. D) Meet customer delivery date/time for parliamentary and confidential government requirements to customer deadlines.	OPERATING COST PER $100 SALES $62.00
FILM AND VIDEO	Meet Customer deadlines for film and video services	OPERATING COST PER $100 SALES $28.00

Significant Events: The Sponsored Film Division and the Canadian Government Photo Centre, formerly of the National Film Board, were integrated with the Communications Services Directorate. The transfer, which became effective on October 1, 1984, resulted from recommendations made in the document entitled "National Film and Video Strategy".

The Communications Services Directorate participated on the Review of Printing Task Force which was established to examine customer service for all printing requirements as well as the make/buy guidelines and their application. In addition, the Task Force will be seeking ways of improving the effectiveness and efficiency of this service.

A review of the publishing services provided to departments by the Canadian Government Publishing Centre was conducted during 1984-85. As a result, a series of meetings were held with all the major publishing departments to increase their awareness of the services provided by the Centre, as well as to ensure compliance with the co-publishing and depository services program.

Contribution to National Objectives: A major project for the Canadian Government Expositions Centre in 1985 is the development of the Canadian Pavilion at EXPO '85 in Tsukaba, Japan. It is anticipated that twenty million people will visit the exhibit, providing an opportunity for Canada to promote Tourism, Science and Technology and EXPO '86. The theme of EXPO '85 is "Dwellings and Surroundings - Science and Technology for Man at Home".

A series of seminars are to be held across Canada. The aim of these seminars is twofold:

- to familiarize the Canadian printing industry with Federal Government national and regional printing requirements thereby encouraging their full participation in federal government printing business; and

- to improve the industry's access to new technology in the field of printing operations.

A.6 Major Crown Projects

Objective

To manage those projects defined as Major Crown Projects by the Treasury Board, as prescribed in individual project briefs and approved interdepartmental Memoranda of Understanding in an efficient, effective and economical manner satisfactory to Supply Administration's customers.

Description

The effective, efficient and economical management on behalf of departments and agencies of Major Crown Projects including project definition work, project planning, tendering, contract negotiation, contracting, contract administration and contract close out and audit.

Resource Summary

This part of Supply Operations accounts for 3% of revenues and 2% of expenses.

Figure 17: Statement of Operations (accrual basis in $000)

	Estimates 1985-86	Forecast 1984-85	Change	Actual 1983-84
Revenue	**20,892**	21,160	(268)	14,865
Expenses				
Product Costs	**1,327**	1,087	240	107
Operating costs	**11,835**	13,212	(1,377)	10,222
	13,162	14,299	(1,137)	10,329
Contribution margin (Reduction in surplus)	**7,730**	6,861	869	4,536
Person-Years	**175**	193	(18)	144

Explanation of Change: The number of approved projects and projects in the preliminary stage necessitates continuous review during a fiscal year for this activity. The Treasury Board Policy on Major Crown Projects directs the Supply Administration, as a common service organization, to be involved at the earliest possible moment following the identification of a client's requirement. The role of Supply Administration with respect to management and control of these projects applies to both approved and preliminary projects.

Business Volume: Major Crown Projects (MCP) consist of any project where:

- the expenditure consists of public funds;
- estimated cost is at least $100 million; and
- the federal government is the owner or major user.

The activity for this output is reflected by the number of projects managed. In 1985-86, 19 fully approved projects and 12 projects in the planning stage have been identified.

Figure 18: Summary of Business Volume

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contracting Value ($ million)	3,148	1,868	4,691

Performance and Resource Justification Information: Performance is established on a project basis and includes both cost and time schedule considerations agreed with customer departments.

Description of individual Major Crown Projects: Summary and details of individual Major Crown Projects are included in Section I, Pages 3-9, 3-17, 3-18 and 3-19.

A.7 Export Supply

Objective

To acquire and deliver on a timely basis and in the most economical manner, whatever goods and services are required by the Canadian Commercial Corporation (CCC) to meet foreign governments' and international agencies' requirements.

Description

The acquisition of goods and services required by the Canadian Commercial Corporation on behalf of foreign countries, including contract arrangement and contract management, as well as business development and comprehensive financial services.

Resource Summary

This part of Supply Operations accounts for 1% of revenues and 1% of expenses.

Figure 19: Statement of Operations (accrual basis in $000)

	Estimates 1985-86	Forecast 1984-85	Change	Actual 1983-84
Revenue	**6,540**	6,321	219	6,340
Expenses Operating costs	**5,846**	5,640	206	5,279
Contribution margin	**694**	681	13	1,061
Person-Years	**97**	98	(1)	98

Explanation of Change: Adjustments were made to the method of assessing Export Supply Branch operating costs during 1984-85 resulting in a reduction of revenue from Canadian Commercial Corporation (CCC).

Performance Information/Resource Justification

Business Volume: The output reflects contracting value for acquisitions. Export Supply Branch (ESB) must cater to a non-captive market in order to maintain its share and develop new opportunities. Changing world socio-economic and political circumstances affect this trade. The resources available and the ability to deal with these factors are major determinants in the achievement of business volumes and the measurement of performance.

Figure 20: Summary of Business Volume

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Contracting Value in $Million	900	750	610

Performance Information:

- ESB will, as market conditions and resources permit, increase the number of bids and offers submitted by 20%;
- bid processing will be turned around in 3 working days for 80% of the volume;
- ESB will continue to contain its operating costs at less than 1% of business volume; and
- ESB will make payments to suppliers in Canada within 30 days and "optimize" investments for maximum interest returns.

Contribution to National Objectives: ESB/CCC business volume will contribute directly to job preservation and creation. These exports will stimulate economic recovery by the influx of foreign exchange as well as provide practical opportunities for increasing Canadian sources and capabilities.

A.8 Program Administration

Objective

To provide direction and control for the Supply Administration.

Description

The provision of direction and control for the efficient and effective delivery of the Supply Revolving Fund, Defence Production Revolving Fund and Vote 10, also including the provision of support services, e.g. development and operation of financial management systems and development, maintenance and enhancement of other systems in support of operations; development of strategic plans; allocation and monitoring of resources; formulation and maintenance of policies; development of standards; coordination of effective customer and supplier relations; human resources planning and development; and security.

Resource Summary

This part of Supply Operations accounts for 11% of expenses.

Figure 21: Statement of Operations (accrual basis in $000)

	Estimates 1985-86	Forecast 1984-85	Change	Actual 1983-84
Revenue	**1,410**	1,356	54	1,536
Expenses Operating costs	**66,646**	65,171	1,475	52,792
Contribution margin (Reduction in surplus)	**(65,236)**	(63,815)	(1,421)	(51,256)
Person-Years	**570**	606	(36)	582

Explanation of Change: Program Administration costs, in real terms, have declined due to reduced person-year requirements.

Performance Information/Resource Justification

Performance Information: Program Administration is planning to maintain its operating costs equal to 20% of the total Supply Administration 1985-86 operating expenditure excluding Centralized Audit and Interest Expense.

Figure 22: Cost Components of Program Administration for 1985-86 Fiscal Year

Components	($000)	Person-Years
Program Executive	5,287	62
Supply Management	777	8
Finance Planning & Systems	40,344	500
Departmental Administration	11,655	-
Assessment for Department of Justice	930	
Centralized Audit	2,848	-
Interest Expense	4,805	-
Operating Costs	66,646	570

Significant Events: The Operational Plan Framework was modified for the Supply Administration and approved by the Treasury Board on December 6, 1984 and provides the basis for the change in the 1985-86 activity structure.

B. Defence Production Operations

Objective

To assist in carrying out the responsibilities specified in the Defence Production Act related to the acquisition, transportation and stockpiling of strategic materiel and defence supplies.

Description

This Activity finances as required, on a cost reimbursable basis, the acquisition of defence supplies for eventual delivery to clients, and finances the stockpiling of strategic materiel or defence supplies.

The Activity is funded by the Defence Production Revolving Fund. Rates are set to enable recovery of the full cost of service provided. These costs include:

- the costs of acquisition, storage, maintenance and transportation in relation to approved rates;
- interest charges based on the draw-down from the Consolidated Revenue Fund; and
- the write-off of normal inventory losses.

The Activity operates without any direct person-years. The acquisition and other support services needed to carry out its operation form part of the Supply Operations Activities.

Resource Summary

Figure 23: Statement of Operations (accrual basis $000)

	Estimates 1985-86	Forecast 1984-85	Change
Revenue	10,767	15,632	(4,865)
Expenses	10,767	15,632	(4,865)
Surplus for the year	-	-	-
Resources Required (Provided From)			
Surplus for the year	-	-	-
Repayment of Long Term Receivables	(300)	(231)	(69)
Other working capital changes	302	(11,329)	11,631
Financial Requirement	2	(11,560)	11,562

Explanation of Change: The change of $11,562,000 for the Defence Production Revolving Fund is attributed to these two factors:

- a decrease of $69,000 in repayment of long-term receivables caused by the direct financing of the Department of National Defence; and
- an increase of $11,631,000 in the other working capital requirements.

Past Financial Performance

Figure 24: Overview of 1983-84 Financial Performance (accrual basis in $000)

	1983-84		
	Actual	Main Estimates	Change
Revenue	28,519	87,061	(58,542)
Expenses	28,519	87,061	(58,542)
Surplus for the year	-	-	-
Resources Required (Provided From)			
Surplus for the year	-	-	-
Repayment of Long Term Receivables	(307)	(300)	(7)
Payable at year end	(11,051)	-	(11,051)
Working capital changes	10,581	29,018	(18,437)
Financial Requirement	(777)	28,718	(29,495)

Explanation of Change: The change of $29,495,000 for the Defence Production Revolving Fund is caused basically by the following factors:

- a decrease of $18,437,000 in working capital requirements such as accounts receivable, progress payments to customers and accounts payable; and
- a decrease of payable at year end transactions.

C. Procurement Support Initiatives

Objective

To encourage research and development in the private sector which contributes to departmental programs; to help finance certain costs incurred on government contracts resulting from the use of those contracts to support industrial research or industrial development objectives in Canada, including the expansion of Canadian technology and Canadian content in federal government purchases; to provide free and subsidized distribution of government publications and Parliamentary papers thereby enhancing public access to such documents; and to promote greater public awareness of the role, impact and potential of science and technology.

Description

The review and provision of bridge funding of unsolicited proposals from the private sector which meet the mission oriented science and technology requirements of government departments; the funding, as prescribed, of proposals involving incremental costs on contracts used to create or maintain sources of supply in Canada; the evaluation and support of proposals which will increase public awareness of science and technology; and the funding of the subscription to and distribution of certain government publications and Parliamentary papers.

Resource Summary

Figure 25: Distribution of Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Change	Actual 1983-84
Unsolicited Proposals	15,000	15,000	-	14,985
Free & Subsidized Publications & Communications	13,507	3,866	9,641	3,499
Source Development Fund	-	8,500	(8,500)	8,058
Public Awareness Program	1,442	1,500	(58)	65
	29,949	28,866	1,083	26,607

Explanation of Change: The net increase of $1,083,000 is mainly attributable to the transfer-in of the Canadian Unity Information Office and the production costs of the Canada Gazette. Funding of Source Development Fund for 1985-86 and future years is subject to Cabinet review.

Performance Information/Resource Justification

Unsolicited Proposals: The temporary funding of research and development projects assists in increasing departmental awareness of the capabilities of Canadian industry. It also helps to:

- increase private sector capability, particularly industrial research and development;
- increase private sector business opportunities in the form of new or improved products and services for commercial markets;
- increase credibility of new products and services in domestic and foreign markets;
- promote technology transfer to and from government laboratories; and
- increase opportunities for interaction of researchers from government, industry and universities.

Public Awareness Program: This activity provides financial contributions to projects which:

- increase the general public awareness of scientific and technological achievements and potential, particularly those of Canadian origin or application;
- stimulate greater public interest in, and understanding of, the role and impact of science and technology in contemporary society;
- improve communication between scientists and non-scientists, between the creators and users of technology and to those who generate technological change and those affected by it;
- help to understand the impact of technology on the workplace and on society;
- provide information on opportunities for technological growth; and
- provide information on current and historical aspects of Canada's technological strengths.

Significant Events: Canadian Unity Information Office was transferred to Supply in September, 1984. The responsibility of production costs associated with the Canada Gazette will be transferred to Supply from the Privy Council Office effective April 1, 1985. These costs are reflected in the sub-activity of Free and Subsidized Publications and Communications (see page 3-45).

Section III
Supplementary Information

A. Analysis By Object

1. Expenditures By Object

Figure 26: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and Wages	158,681	155,313	144,347
Contribution to Employee Benefit Plan	25,157	23,341	19,903
	183,838	178,654	164,250
Goods and Services			
Transportation and communication	168,392	159,765	146,428
Information	63,835	63,705	76,523
Professional and special services	66,924	58,263	44,609
Rentals	30,806	29,803	26,328
Purchased repair and upkeep	8,599	7,290	8,293
Utilities, materiels and supplies	120,849	127,588	132,030
Transfer Payments	1,442	1,500	65
All other	9,119	12,760	12,539
Total operating	653,804	639,328	611,065
Capital			
Construction and acquisition of machinery and equipment	13,234	11,659	5,028
Total expenditures	667,038	650,987	616,093
Less: Receipts credited to the Appropriation Authority	618,505	616,057	584,200
Net expenditures charged to Appropriation Authority	48,533	34,930	31,893

2. Personnel Expenditures

Figure 27: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	128	129	113	50,350 - 96,300	63,617

Computer Systems	94	78	84	18,766 - 61,433	34,840
Other	72	70	71	14,099 - 60,076	39,222
Technical	143	105	106	14,431 - 47,079	35,068
Administrative Support					
Clerical and Regulatory	1,207	1,195	1,246	12,932 - 31,743	21,674
Secretarial, Stenographic and Typing	184	194	227	12,636 - 31,946	21,237
Data Processing	73	63	75	13,352 - 37,130	23,373
Other	30	63	3	14,015 - 28,548	19,718
Operational					
General Labour and Trades	101	145	109	14,776 - 40,676	22,543
General Services	240	218	248	13,253 - 39,988	21,398
Printing Operations	987	1,048	1,081	15,340 - 39,895	25,034

Note: The person-year column displays the forecast distribution by occupational group of the authorized person-years for the program. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. **Person-Year Requirements**

Figure 28: Person-Years by Activity

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Commercial Acquisitions	580	588	622
Science & Engineering Acquisitions	671	689	687
Regional Supply	1,347	1,375	1,381
Printing & Communications	1,399	1,356	1,365
Major Crown Projects	175	193	144
Export Supply	97	98	98
Program Administration	570	606	582
	4,839	4,905	4,879

4. Capital Expenditures

Figure 29: Capital Requirements ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Equipment and Furniture	4,554	3,929	4,288
Leasehold improvements	1,680	730	740
Electronic and data processing equipment	7,000	7,000	-
	13,234	11,659	5,028

Equipment and furniture and leasehold improvement capital expenditures are required to maintain a normal service level.

The annual depreciation is calculated on the basis of the straight-line method on the equipment life span ranging from 5 to 10 years.

5. Revenue - Summary of Rate Structure

Consistent with Revenue Dependent Method of Financing, the Supply Revolving Fund is managed on a "full-cost" revenue dependent basis. Under this system, Supply Operations is financed by charging client departments and agencies for the services provided in accordance with the rates approved annually by the Treasury Board. The overriding criterion in the establishment of the rates and rate structure is for the Supply Revolving Fund to break even on an annual basis.

The following is a typical example of the 1985-86 rates and rate structure for the respective services provided to client departments and agencies.

Figure 30: Example of Proposed 1985-86 Rates and Rate Structure

Activity	Service Provided			
SCIENCE & ENGINEERING ACQUISITIONS	ACQUISITIONS * (Scale of rates applied to $ Business Volume by Value Class Interval - VCI)	Value Class Interval $ (VCI)	Base Charge $	Rate % (1)
		1 - 249	20	0.0
		250 - 2,499	20	5.0
		2,500 - 9,999	133	4.0
		10,000 - 49,999	433	3.5
		50,000 - 199,999	1,833	2.25
		200,000 - 999,999	5,208	1.5
		1,000,000 - 4,999,999	17,208	1.0
		5,000,000 - 50,000,000	57,208	0.5
		50,000,001 Plus	negotiated charge	
		(2) non-core	0	0.5
	PROJECT MANAGEMENT	Negotiated charge per project		
	MARINE INSPECTION	$364/Person-day utilized		
	MARINE & SPECIALIZED ENGINEERING DESIGN & CONSULTING - Maximum rate per chargeable person-hour plus direct travelling costs	$40.50/Person-hour		

(1) Rate percentage applied to contract value in excess of immediately lower VCI break-point.

(2) The non-core rate covers the following commodity areas: bulk foods; printing production paper; petroleum products excluding packaged products and special oils and lubricants; guard services; Race Track Surveillance, Canada Student Loan Collection and Photo Finish Services.

Note: The above rate structure also applies to all Positive Value Amendments.

* The acquisitions rate also applies to Commercial Acquisitions and Printing Acquisitions.

B. Use of Revolving Fund Authorities

1. Supply Revolving Fund

Figure 31: Projected 1985-86 Use of Authority ($000)

Authority		200,000
Drawdown:		
Balance April 1, 1985	121,313	
Total Estimates (Net Cash required)	18,582	
Less: Balance March 31, 1986		139,895
Unused Authority as at March 31, 1986		60,105

This fund operates under the continuing authority of the Adjustment of Accounts Act (S.C. 1980, c.17).

Figure 32: Supply Revolving Fund Statement of Fund Position ($000)

C. Summary of 1983-84 Actual Compared to Planned Performance - Supply Operations Activities

1. Financial Summary by Activity

Figure 35: Statement of Operations (accrual basis $000)

Revenues			Activities	Expenses		
Actual 1983-84	Main Estimates 1983-84	Change		Actual 1983-84	Main Estimates 1983-84	Change
170,536	165,460	5,076	Commercial Acquisitions	162,147	153,749	8,398
44,238	43,130	1,108	Science & Engineering Acquisition	38,768	38,319	449
153,871	162,198	(8,327)	Regional Supply	126,605	138,092	(11,487)
170,807	159,712*	11,095	Printing & Communications	159,308	149,814*	9,494
14,865	15,128	(263)	Major Crown Projects	10,329	10,634	(305)
6,340	6,775	(435)	Export Supply	5,279	5,619	(340)
1,536	1,550	(14)	Program Administration	52,792	56,883	(4,091)
562,193	553,953*	8,240	Total	555,228	553,110*	2,118

* 1983-84 Main Estimates were reduced by the discontinuance of centralized billings in Printing of approximately $133 million in revenues and expenses. In addition, they have been recast in the 1985-86 structure. As a result, the comparison of planned to actual financial performance for 1983-84 (Figure 35) is based on the 1985-86 activity structure. Operational performance information as reported in the 1983-84 Estimates Part III Expenditure Plan were discontinued and replaced by performance indicators related to the new activity structure.

Explanation of Significant Variances Between 1983-84 Main Estimates and Actual: There are no activities where the variance between actual and planned financial results are 10% or greater.

2. Relationship of Revised Activity Structure to 1984-85 Activity Structure

The 1983-84 Main Estimates were prepared on the basis of 13 activities. Effective April 1, 1983, these were changed to the 7 activities used in the 1984-85 Main Estimates and the figures for 1983-84 were restated accordingly. In 1985-86, a minor revision was made to this structure by deleting Assets Management as an activity, and creating a new one, Major Crown Projects.

Figure 36 illustrates the effect of this restatement on 1983-84 financial figures by comparing the actual operating expenditures, under the 1984-85 structure and the 1985-86 revised structure.

Figure 36: Comparison of 1984-85 Activity Structure to Revised 1985-86 Structure (1983-84 Operating Expenses in $000)

REVISED ACTIVITIES / 1984-85 ACTIVITIES	Comm. Acq.	Science & Eng. Acq.	Regional Supply	Printing & Comm.	Major Crown Projects	Export Supply	Program Admin.	TOTAL

1985–86 Estimates

Part III

Expenditure Plan

4341

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Supreme Court of Canada

4345

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This plan is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the Program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the Program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The Table of Contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $4,143,000 in 1985-86 in support of the Supreme Court of Canada. Additional expenditures, estimated at $1,654,000 for Judges' Salaries, Allowances and Annuities, and Annuities to Spouses and Children of Judges as well as $297,000 for contributions to employee benefit plans, will be made under existing statutory authority.

Total Program	5,223,000	5,280,989	5,272,139

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

In 1985-86 highlights of the Supreme Court of Canada Program will be:

- maintenance of Court services through a budget of $6,094,000 and 69 person-years (see Figure 1); and
- for the first time Canadians will have access to the Court through use of a new closed-circuit television system installed in 1984-85. Motions for leave to appeal can now be heard by means of video facilities in cities and locations outside of Ottawa (see page 8).

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast * 1984-85	Change	For Details See Page
Administration	4,440	4,205	235	14
Judges' Salaries, Allowances and Annuities; and Annuities to Spouses and Children of Judges	1,654	1,520	134	18
	6,094	5,725	369	
Authorized person-years	69	68	1	

* There is no change from the 1984-85 Main Estimates (Extracts from Part II of the Estimates, page 4).

4351

Explanation of Change: The financial requirements for 1985-86 are 6.4% or $369,000 higher than the 1984-85 forecast expenditures. This increase is due primarily to:

	($000)
• a general increase in salaries and contributions to employee benefit plans	253
• a net increase under statutory authority for judges' salaries, judges' operating costs and annuities to Judges and Spouses of Judges	134

B. Recent Performance

1. Highlights

- The number of motions for leave to appeal increased significantly in 1983-84. 553 motions were heard representing an increase of 31% over 1982-83.

- The Main Court room was refurbished and video facilities were installed. The installation of modern equipment will enlarge the scope of the Court and will make it more accessible and available to all Canadians. The implementation cost is forecast at $500,000 in 1984-85.

2. Review of Financial Performance

Figure 2: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Administration	3,825	3,806	19
Judges' Salaries Allowances and Annuities; and Annuities to Spouses and Children of Judges	1,447	1,417	30
	5,272	5,223	49

There were no material variances. The increase over Main Estimates was funded by increases to statutory authorities.

C. Background

1. Introduction

The Canadian judicial system is a hierarchial system with levels of courts in the provinces ranging from County or District Courts to Provincial Courts (called a Supreme Court of the province, or the Superior Court of Quebec, or the Court of Queen's Bench, as in Manitoba, Saskatchewan, Alberta and New Brunswick) and to a Provincial Court of Appeal, the highest court in a province.

Appeals heard by the Supreme Court arise from judgments rendered in various Appeal Courts. Appeals may arise from the Federal Court of Canada (Appeal Division) or provincial courts of appeal. Appeals that arise from a Provincial Court of Appeal will normally have been previously heard by a County, District or other Provincial Court.

The Supreme Court of Canada stands at the apex of the Canadian judicial system. It is the final court of appeal in all causes, the last judicial resort of litigants or of governments of Canada. As a general court of appeal for both criminal and civil cases its jurisdiction embraces the civil law of Quebec as well as the common law of the nine common law provinces.

In most cases leave to appeal may be granted by the Supreme Court itself, or a Court of Appeal.

Also, in a few defined situations the Supreme Court is required to hear matters referred to it by the Government of Canada. Examples are important questions of law or fact concerning the interpretation of the Constitution Act, 1982, interpretation of federal or provincial legislation and the powers of Parliament.

2. Legal Mandate

Although the Supreme Court of Canada is not specifically mentioned in the British North America Act, 1867 authority to establish such a final court with a wide national jurisdiction was reposed in the Parliament of Canada by Section 101 of the Act, enabling Parliament to provide for "the constitution, maintenance and organization of a general Court of Appeal for Canada".

The Court operates under the Supreme Court Act.

3. Program Objective

The objective of the Supreme Court of Canada is "to provide a general Court of Appeal for Canada".

4. Program Organization for Delivery

Activity Structure: The Supreme Court of Canada Program is composed of two activities:

- Administration; and
- Judges' Salaries, Allowances and Annuities; and Annuities to Spouses and Children of Judges.

These activities are described in Section II of the Plan. It should be noted that all person-year resources of the Program relate to the Administration Activity.

Organization Structure: The Court, which is located in Ottawa, is composed of the Chief Justice and eight puisne Judges, all of whom are appointed by the Governor in Council to consider motions for appeals and to hear appeals.

The Registrar, who is also appointed by the Governor in Council, is responsible for the administration of the Court and reports to Parliament through the Minister of Justice. He has authority to exercise the jurisdiction of a Judge sitting in chambers as may be conferred upon him by general rules or orders made under the Supreme Court Act and undertakes other duties and responsibilites which may be assigned to him by the Chief Justice. The Registrar is assisted by a Deputy Registrar, appointed by the Governor in Council, who may exercise and perform all the powers and duties of the Registrar in the event that the Registrar is absent or unable to act.

Others reporting to the Registrar are the Chief Librarian, the Assistant Registrar Process, a Chief Law Editor, a Finance Officer and a Personnel and Administrative Officer. The Judges' support staff includes secretaries and attendants to the Chief Justice and the Puisne Judges.

The distribution of resources available to the Supreme Court is illustrated in Figure 3.

Figure 3: Resources by Organization/Activity ($000)

									ACTIVITY TOTAL

	692	714	1,224	615	200	904	91	1,654	6,094

D. Planning Perspective

1. Environment

The direction and nature of the Administration of the Supreme Court is determined by the content of the Supreme Court Act and the Judges' Act. Consequently, changes in either of these Acts could have significant impact upon the Program.

Issues that come before the Supreme Court are based on laws enacted by Parliament and provincial legislatures, therefore particular or special items of legislation will eventually affect the Program. As an example, 30% of the increase in the number of appeals heard in 1983-84 is attributable to the Charter of Rights and Freedoms.

The new modern technology is without question one of the factors which will influence the Program in the near future. In fact, the geographic barrier will not exist anymore as the Court will be able to hear motions to appeal as well as appeals from remote locations through video facilities.

Influences such as economic and social situation may also have a significant impact upon the Program since it intensifies the concerns of the people. Consequently, their need for submission for legal decision and judicial resort will be increased.

The Court operates in a milieu which is particular and unique. The expectations of the public, the legal community and the governments towards the Court are very important as the Court is the final court of appeal in Canada. Nevertheless, the Court must act within a rigid prescribed framework.

2. Initiatives

One initiative related to the Library (see page 16) is to be pursued in 1985-86 as follow:

- To review and evaluate the Library functions in order to appraise the effectiveness and efficiency of the library's operations. The audit will be performed by the Audit Services Bureau at an estimated cost of $26,000.

3. Update on Previously Reported Initiatives

- The complexity of cases now heard by the Court has increased the need of legal research. As a result, in 1983-84 three additional Law Clerks were employed under contract at a cost of $63,000 in order to provide an adequate level of research capability to current workload.

- The transfer of the security account from the Bank of Montreal to the Consolidated Revenue Fund is to be completed during 1984-85. The government will now benefit from the use of this fund.

- Technical and administrative support capabilities to ensure that the Court can provide prompt, simultaneous bilingual reports on reasons for judgments have been improved. The cost of the publications for 1984-85 is estimated at $334,000.

- The Library will continue planning for the implementation of an automated information retrieval system. The limited resources available for this project have necessitated that the time frame over which the project would be accomplished be extended.

- Studies to solve space and environmental concerns related to the protection of the library collection have been undertaken by Public Works Canada. The project is now at the design stage. There will be no cost incurred by the Court in 1985-86.

4. Program Effectiveness

The quality of administrative services provided by the Program to applicants, and subsequently, appellants and defendants, contributes to the overall effectiveness of the Court. A key indicator, although certainly not absolute, is the responsiveness of the Process Division to applicants, appellants and defendants. The Court's operations are organized to ensure that, when an applicant, appellant or defendant provides the appropriate documentation to the Court, the next stage in the appeal process will be scheduled.

Each motion for leave to appeal must be heard by a panel of three Judges which either dismisses the appeal, reserves judgment or grants leave to appeal. Consequently there is a direct effect upon the operation of the Court when applications or motions for leave to appeal are filed.

The Court holds three sessions during the year. The first begins on the fourth Tuesday in January and ends just before Easter, the second begins on the fourth Tuesday in April and continues until the end of June, and the third begins on the first Tuesday in October and ends shortly before Christmas.

All motions for leave to appeal received by the Court's Process Division prior to a hearing date are scheduled for the next hearing date unless the applicant requests a delay. Motions for leave to appeal are heard twice a month

when the Court is in session. If the Court is unable to hear all outstanding motions on scheduled hearing days, additional time is scheduled prior to the end of the session. Thus all motions for leave to appeal are heard prior to the end of a session.

The determination of the scheduled date for hearing an appeal is largely dependent upon the time taken by the appellant and defendant to file the necessary documentation.

The Assistant Registrar Process, after consultation with the Chief Justice, endeavours to satisfy appellants' requests for specific hearing dates.

The extensive reference material available in the Supreme Court Library is accessible to litigants and their legal representatives to assist them in the preparation and presentation of their appeals.

Section II
Analysis by Activity

A. Administration

Objective

To manage the operations of the Supreme Court efficiently and economically in accordance with the requirements of the Supreme Court Act and Judges' Act.

Resource Summary

The Administration Activity represents 72.9% of the Supreme Court expenditures for 1985-86 and 100% of the person-years.

Figure 4: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Administration	4,440	69	4,205	68	3,825	68

1983-84 Financial Performance: Actual financial requirements for 1983-84 were only .5% or $19,000 higher than planned. Refer to Figure 2 on page 8.

Description

The activity is composed of the following four functions:

Editing and Publication: This function encompasses all the tasks necessary to produce the Supreme Court Reports which contain the final published version of judgments rendered by the Court. The reports are produced in both official languages in bound form as a permanent record of the appeals. Qualified legal staff prepare a headnote summary, which receives the approval of the Court, edit and standardize the text of each judgment. The Canadian Government Printing Office, Supply and Services Canada undertakes publication and distribution of the Reports; proofreading however is done at the Court. The Reports for each calendar year consist of two volumes of six parts each.

Library: The library contains an extensive collection of approximately 200,000 volumes covering both common law and civil law systems, including Commonwealth materials and European civil law publications. These volumes constitute one of the most important collections in Canada of legal literature.

The Library is mainly responsible for supporting the research of the Court and counsel appearing before the Court. It is also open to members of the legal community and the public at large for reference use of materials not available elsewhere.

Process Registry: This function is responsible for receiving, checking and processing all applications for leave to appeal and other motions to be heard before the Court or in Judges' chambers as well as the appeals themselves. It is also responsible for finalizing documentation after judgments have been rendered as well as providing advice and assistance to litigants concerning rules of procedure before the Court.

Personnel, Finance and Administration: This function includes all aspects of personnel and financial administration as well as the provision of materiel management, records management and communication services required to support the operation of the Court.

Performance Information/Resource Justification

The workload of the Court is difficult to predict with any degree of accuracy because the operations of the Court are largely dependent upon external factors which are not under the control of the program. Consequently, the workload experienced by the Administration Activity when providing the services necessary to ensure the efficient operations of the Court is also hard to predict. The planning for the administration activity must ensure that a minimum resource level is available to cope with anticipated workload. These required services are of a standby nature and do not necessarily vary directly with the number of motions to appeal or appeals heard.

Editing and Publication: The Court distributes its reasons for judgment in two forms. The first distribution is prepared for release on the day the Court renders its decision; it includes the reasons and the summary in both official languages. The formal bilingual report constitutes the second distribution which is published at a later date. Prior to the publication of these reports, the texts are subjected to extensive editing and review to ensure that content and references are correct. The need for accuracy is essential because these reports are official and used as reference documents by Judges who are hearing cases and by lawyers who are preparing cases to be heard in courts throughout the land.

Figure 5: Publication Costs - Supreme Court Reports

	1983-84	1982-83	1981-82
Number of pages completed	1,940	1,562	1,519
Total cost (including salaries)	$493,239	$412,896	$330,828
Cost/page	$254.24	$264.33	$217.80
Person-Years	7.5	6.4	5.5

A bulletin of proceedings taken in the Supreme Court is also published on a regular basis. During Court sessions the bulletin is issued weekly and contains information on motions before a Judge, the status of motions for leave to appeal and appeals filed as well as summaries of cases, a weekly agenda and changes to the Court list of appeals to be heard. Cumulative indexes of appeals and motions for leave to appeal are also provided. Approximately 35 issues containing an average of 50 pages per issue are published annually.

Library: The Library provides a variety of services to the Supreme Court, to counsel appearing before the Court, to the legal community, to other libraries and to the public at large. Hence the Library must maintain a current comprehensive collection in order to have access to all major common and civil law jurisprudence. The staff, therefore, provide three types of service, namely: Technical, Reference and Research Services. The Research Service which consists of preparing research memos is available only to the judges of the Supreme Court. The workload for Technical Services and Reference Services is illustrated in Figure 6 below.

Figure 6: Technical and Reference Services

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Technical Services			
Additions to collection			
Volumes	8,000	7,000	7,000*
Microforms	8,000	8,000	7,617
Titles catalogued	5,800	2,500	2,223
Books bound or repaired	4,600	4,600	4,506
Reference Services			
Circulation			
Intra Court	3,500	3,500	3,349
Inter library	1,500	1,500	1,315
In library use (volumes consulted)	50,000	50,000	4[illegible],694
Reference inquiries	15,000	15,000	12,988
Person-Years	18	17	17

* This is an estimation of the actual acquisitions for 1983-84.

As reported in 1984-85, the library is planning for the automation of some of its operations. The first phase of the project is scheduled to start in 1985-86. The cost for 1985-86 is estimated at $137,000. This improvement, and the initiative described on page 11 (total cost of $26,000 in 1985-86), are expected to better serve the library in 1985-86 and future years particularily in respect to the level and quality of services.

Process Registry: The Process Registry workload is mainly associated with the number of applications for leave to appeal and appeals requested. Therefore, a change in any factors affecting the number of applications will also have an impact on the workload of the Process Registry, law support and administrative staff.

Figure 7: Cost of Processing Motions for Leave to Appeal and Appeals

	1983-84	1982-83	1981-82
Number of New Dockets	986	586	400
Number of Motions for Leave to Appeal	553	419	409
Number of Notices of Appeal	153	128	102
Direct cost of processing*	$186,000	$154,381	$145,909
Person-Years	6.5	6.0	5.7

*Salaries of process registry staff, secretarial and legal support.

B. Judges' Salaries, Allowances and Annuities; and Annuities to Spouses and Children of Judges

Objective

To pay salaries, allowances and annuities to Judges of the Supreme Court of Canada and annuities to spouses and children of Judges as authorized by the Judges' Act; to pay gratuities to spouses or such dependants of Judges who die while in office.

Resource Summary

Expenditures of $1,654,000 for this activity will account for 27.1% of the Supreme Court's total program expenditures in 1985-86.

Figure 8: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Judges Salaries, Allowances and Annuities	**1,654**	1,520	1,447

1983-84 Financial Performance: Actual financial requirements for 1983-84 were 2% or $30,000 higher than planned. Refer to Figure 2 on page 8.

Performance Information/Resource Justification

Estimated expenditures in 1985-86 for this activity are made, with the exception of gratuities paid to spouses or such dependants of judges who die while in office, under statutory authority and are distributed as follows:

Judges' salaries	$ 997,000
Allowances	66,000
Pensions	591,000
Total	1,654,000

The administrative resources required to administer the activity and to provide for the disbursements to nine active Judges, five retired Judges and spouses of five Judges are less than one person-year.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 9: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	3,119	2,855	2,649

Operational					
General Services	11	11	11	13,253-39,988	23,072
Other	1	1	1		

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 11: Annuities to Judges and to Spouses and Children of Judges ($000)

	1985-86	1984-85	1983-84
Annuities to Judges and to Spouses and Children of Judges	591	516	491

B. Cost Analysis

Figure 12: Program Cost by Activity ($000)

	1985-86 Expenditures	Add Other Costs	**1985-86 Total Cost**	1984-85 Total Cost
Administration	4,440	2,031	**6,471**	7,896
Judges' Salaries, Allowances and Annuities	1,654		**1,654**	1,520
	6,094	2,031	**8,125**	9,416

Costs added to expenditures to obtain the total cost for 1985-86 include accommodation provided without charge by the Department of Public Works ($1,979,000) and services provided without charge by other departments ($52,000).

Tariff Board

1985–86 Estimates

Part III

Expenditure Plan

4367

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Tariff Board

4371

Preface

This Expenditure Plan is designed to be used as a reference document and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into three sections. Section I presents an overview of the Program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

Section I is preceded by extracts from Part II of the Estimates in order to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts provided as an aid in assessing the Program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section and a financial summary in Section I provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

4375

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

During 1985-86 the Tariff Board has the following goals:

- to continue investigations into safeguard petitions under Reference 158, pertaining to the General Preferential Tariff, to complete the public inquiry and investigation into the Harmonized System of Customs Classification (Reference 163), and to undertake a public review of a further extension of the Orders-in-Council excluding colour television receiving sets (Reference 160) and rubber footwear (Reference 161) from the General Preferential Tariff (see page 14);

- to process and/or adjudicate approximately 170 appeals registered with the Board from rulings made by the Deputy Minister of National Revenue for Customs and Excise (see page 12); and

- to maintain a hearing turnover rate so as to increase the ratio of appeals heard within six months of date of appeal to total appeals (see page 13).

2. Financial Summary by Activity

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast* 1984-85	Change	For Details See Page
Appeals	560	529	31	12
References	1,715	1,416	299	14
Administration	423	404	19	16
	2,698	2,349	349	
Authorized person-years	41	41	-	

*There has been no change from the 1984-85 Main Estimates (see extracts from Part II of the Estimates on page 4).

Explanation of Change: The financial requirements for 1985-86 are $349 thousand or 15% greater than the 1984-85 forecast expenditures. The increase is required for the public inquiry and study by the Board of the draft schedule of a new system of classifying imports for customs duty purposes. This new tariff classification would replace the current system in operation under "An Act Respecting the Duties of Customs", called the Customs Tariff and its Schedules. The new schedule under study is based on the Harmonized Commodity Description and Coding System, approved by the Customs Cooperation Council, of which Canada is a member.

4377

B. Recent Performance

1. Highlights

Highlights of the Program's performance during 1983-84 are:

- The completion of Reference 159 "Customs Valuation", the continuation of the Board's inquiry into "Made/Not Made in Canada", Reference 157 and into "General Preferential Tariff Safeguard Petitions", Reference 158. Also, the beginning of its investigation into "Woollen and Worsted Yarns and Fabrics", Reference 162, and the "Harmonized System of Customs Classification", Reference 163 (see page 14);

- Adjudicated 50 appeals from rulings made by the Deputy Minister of National Revenue for Customs and Excise (see page 13); and,

- Added capacity to courtroom facilities allowed for the processing of a larger number of appeals, thus reducing the backlog of unheard appeals. This permitted appellants to be heard within a shorter period of time (see page 10).

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Appeals	408	497	(89)
References	1,132	1,367	(235)
Administration	571	388	183
	2,111	2,252	(141)

Explanation of Change: Lower levels of activity in appeals and references made funds available for utilization in administration for lower priority projects.

C. Background

1. Introduction

The Tariff Board, made up of a Chairman and six members, carries out one program consisting of two functions: to act as an independent commission of inquiry into matters on tariffs and trade, and to act as a quasi-judicial court of appeal. As required by law, three members constitute a panel for the purpose of appeal hearings and the Chairman may appoint any member or members for the purpose of an inquiry.

In its role as a commission of inquiry, the Board undertakes specific trade and tariff studies at the request of the Minister of Finance. In conducting an inquiry, the Board invites the submission of briefs and holds public hearings at which the views of importers, manufacturers and consumers can be heard. Based upon those hearings and the work of its own research staff, the Board makes such recommendations on these matters as it deems appropriate.

In its role as a court, the Board hears appeals resulting from rulings by National Revenue, Customs and Excise on tariff classification, valuation of goods for customs purposes, and the federal sales tax. The Board's powers also include the hearing of appeals on charges levied on petroleum and petroleum products and on the exportation of any oils. Its rulings are appealable to the Federal Court and the Supreme Court.

2. Legal Mandate

The Tariff Board was established in 1931. Its authority to carry out inquiries and to hear appeals is provided for under the Tariff Board Act. Its role as a quasi-judicial court of appeals is further specified in the Customs Act, the Excise Tax Act, and Anti-dumping Act and the Petroleum Administration Act.

3. Program Objective

The statutory responsibility of the Board is to adjudicate upon appeals from customs and excise rulings made by the Department of National Revenue and to conduct studies of the Customs Tariff structure as directed by the Minister of Finance.

4. Program Organization for Delivery

Activity Structure: The Tariff Board has one program consisting of three activities which parallel its organizational structure.

Organization Structure: The Board has a total staff of 41 person-years. The members of the Board are appointed by the Governor in Council. The operations are entirely centralized in Ottawa although hearings and appeals are heard in other centres throughout Canada as appropriate.

Figure 3: 1985-86 Resources by Organization/Activity ($000)

			Activity Totals
Appeals		560	560
References	1,715		1,715
Administration		423	423
($000)	1,715	983	2,698
Person-years	26	15	41

D. Planning Perspective

1. Environment

The number of appeals received is a function of various factors, all of which are beyond the control of the Board. The following developments are expected to increase the growth of received appeals in the years to come:

- the federal sales tax legislation;
- the Customs Act legislation in respect of valuation for duty; and
- the adoption of the new Harmonized System of Customs Classification (also called the Customs Co-operative Council Nomenclature) which will involve a complete change in Canada's tariff classificaiton schedule and its import classification system.

2. Initiatives

No new initiatives are planned.

3. Update on Previously Reported Initiatives

In order to improve its administrative efficiency in appeals, the Board recently increased its capacity of hearing appeals by operating two courtrooms instead of

one. The Board is now scheduling two simultaneous hearings whenever necessary. During 1983-84 both courtrooms were used simultaneously 29% of the time.

4. Program Effectiveness

The number of appeals heard within six months compared to the total number of appeals received is one indicator of the level of service provided by the program. Figure 4 illustrates this ratio. The 1984-85 ratio is based on the first eight months of the year.

Figure 4: Ratio of Appeals Heard Within Six Months to Total Appeals Received

Insofar as the inquiry role is concerned, a measure of effectiveness is the timeliness of the submission of reports to the Minister of Finance and the acceptance of its recommendations.

Another indicator of the effectiveness of the Board's reference operation is the extent to which its recommendations to the government have been implemented. A study of this covering the period 1954 to 1979 revealed that between 80-90% of the Board's recommendations had been positively acted upon. Implementation of the proposals made more recently with respect to the General Preferential Tariff (Reference 158), customs valuation (Reference 159 -Part I), and rubber footwear and colour television sets (References 160 and 161) indicate that the earlier level is being maintained.

Section II
Analysis by Activity

A. Appeals

Objectives

To process all appeals registered with the Board from rulings made by the Department of National Revenue, Customs and Excise and to adjudicate upon all those that are not withdrawn.

Resource Summary

The Appeals Activity represents 21% of the Tariff Board's budget for 1985-86, of which 86% are personnel-related costs.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Appeals	560	9	529	9	408	9

Past Financial Performance

Figure 6 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 6: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Appeals	408	497	(89)
	408	497	(89)

Explanation of Change: The change is due to funds lapsed because the number of appeals actually heard was less than those scheduled. The ratio of the number of appeals that are heard to the numbers received and withdrawn varies from year to year.

Description

In its role as a court of appeal, panels of three members of the Board hold public hearings and declare on appeals from rulings of National Revenue, Customs and Excise.

An appeal to the Board may be made from a ruling by the Deputy Minister, National Revenue, Customs and Excise on tariff classification or value for duty under section 47 of the Customs Act. The Board also hears as an appeal a reference by the Deputy Minister, under section 49 of the Customs Act. A ruling by the same Deputy Minister on the normal value and import price of goods may be appealed to the Board under section 19 of the Anti-dumping Act.

The Board may declare on what rate of federal sales tax is payable on an article or on transportation by air, or on whether or not the article or transportation by air is exempt from tax under section 59 of the Excise Tax Act. The Board may also declare on whether any charge is payable or the amount of the charges payable on any petroleum or petroleum products or on the exportation of any oils under the Petroleum Administration Act.

A declaration of the Tariff Board is final and conclusive, subject only to appeal to the Federal Court of Canada. There are no court costs or charges assessed to parties appearing before the Tariff Board. Although many appellants are represented at a hearing by counsel or by a customs consultant, an appellant may appear on his own behalf and conduct his own case.

The rules of the Board are informal in order to keep it a court of easy access. The Board publishes "An Informal Guide for Parties in Appeals Before the Tariff Board", which is available without charge from the Secretary. Appeals are usually heard in the Board's courtroom in Ottawa. The Board hears appeals in Western Canada in the fall session and in the Atlantic provinces in the spring session.

Performance Information/Resource Justification

Resources can be justified by the number of appeals received, the number of appeals heard, and the average lapse of time from the receipt of an appeal to the Board's declaration. This information is provided in Figure 7.

Figure 7: Number of Appeals Received and Heard and Turnaround Time

	1985-86*	1984-85*	1983-84	1982-83
No. of appeals received	170	180	160	119
No. of appeals heard and declared	80	70	50	82
Turnaround (in months)	7	8	11	16

*Projected figures.

B. References

Objectives

To undertake inquiries into tariffs and trade matters as referred by the Minister of Finance.

Resource Summary

The References Activity represents 63% of the Tariff Board's budget for 1985-86, of which 88% are personnel-related costs.

Figure 8: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
References	1,715	26	1,416	26	1,132	24

Past Financial Performance

Figure 9 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 9: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
References	1,132	1,367	(235)
	1,132	1,367	(235)

Explanation of Change: The change is due to the reference operations in that year requiring fewer person-years than approved and hence less expenditures on salaries than forecast.

Description

This activity comprises the compilation of data and information, of which the non-confidential portion is distributed in background papers to interested parties prior to the hearing to encourage informed discussions of the subject matter under review. It also consists of independent statistical research and economic analysis by the staff. It includes, furthermore, analysis of submissions from interested parties and the formulation of questions for examining these parties at the public hearing. Public inquiries also involve the preparation of reports appraising and evaluating all evidence brought before the Board and gathered by means of independent investigations, which are provided to all interested parties prior to the final hearing.

On completion of the inquiry, a report is prepared containing the Board's conclusions and recommendations on rates of duty, the wording of tariff items and any other matters referred to the Board by the Minister. The report of the Board is printed and forwarded to the Minister of Finance who is required by law to table it in Parliament, if in session, within fifteen days, or if not in session, within fifteen days of the first day of the next session. At this point the report becomes a public document which can be obtained by any interested person.

Hearings of the Board or inquiries are conducted on an informal basis to ensure the fullest public participation and openness in presenting viewpoints. People making oral submissions or presenting briefs do not need to be represented by counsel.

Performance Information/Resource Justification

As every reference differs in its complexity, it is not possible to measure performance on this basis. Resources can, however, be justified on the basis of the number of references completed, ongoing and started in one year. Figure 10 displays the trend.

Figure 10: Statistics on References

	1985-86*	1984-85*	1983-84	1982-83
Total person-years	26	26	24	24
On-going references at beginning of fiscal year (F-Y)	4	5	2	6
References started in F-Y	1	3	4	2
Total references	5	8	6	8
References completed during F-Y	3	4	1	6

*Projected figures.

C. Administration

Objective

To provide administrative, personnel and financial services to the Tariff Board.

Resource Summary

The Administration Activity represents 16% of the Tariff Board's budget for 1985-86, of which 65% are personnel-related costs.

Figure 11: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Administration	423	6	404	6	571	6

Past Financial Performance

Figure 12 summarizes the major changes in financial requirements which occurred in 1983-84.

Figure 12: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Administration	571	388	183
	571	388	183

Explanation of Change: Lower than normal levels of activity in appeals and references made funds available for utilization in Administration for lower priority projects which would have been otherwise postponed. The change is also due to the procurement of requirements for a second courtroom and ancillary accommodation for which DPW provided funds for design and construction only.

Description

Administrative Services: administration, design and maintenance of office support systems.

Financial Services: administration, design and maintenance of financial system; provision of financial services and advice.

Personnel Services: administration, design and maintenance of personnel system; provision of personnel services and advice.

Performance Information/Resource Justification

A measure of the performance of this activity is the percentage of dollars spent on this activity in relation to the total budget of the Program. The trend is displayed in Figure 13.

Figure 13: Comparison of Administration Expenditures and Program Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Administration	423	404	571
Total Program	2,698	2,349	2,111
Percentage	16	17	27

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 14: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	1,917	1,720	1,487
Contributions to Employee benefit plans	268	224	239
Goods and Services			
Transportation and communications	170	159	108
Information	68	53	48
Professional and special services	182	111	157
Rentals	23	21	23
Purchased repairs and upkeep	11	7	10
Materials, utilities and supplies	40	36	20
All other expenditures	6	5	3
Total operating	2,685	2,336	2,095
Capital	13	13	16
Total expenditures	2,698	2,349	2,111

2. Personnel Expenditures

Figure 15: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	8	8	8	50,350 - 96,300	75,354
Scientific, professional and administration	12	12	10	14,570 - 63,870	56,671
Technical	6	6	6	12,635 - 57,691	33,388
Administrative support	14	14	14	12,636 - 31,946	22,352

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Figure 16: Program Cost by Activity for 1985-86 ($000)

	1985-86 Operating Expenditures	Add Other Costs*	Total Cost 1985-86	Total 1984-85
Appeals	560	83	643	609
References	1,715	255	1,970	1,627
Administration	423	55	478	457
	2,698	393	3,091	2,693

*Other costs represent services provided without charge by other departments, mainly accommodation from the Department of Public Works.

1985–86 Estimates

Part III

Expenditure Plan

4391

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Tax Court of Canada

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains several levels of detail to respond to the various needs of its audience.

This Plan is divided into two sections. Section I presents an overview of the Program including a description, information on its background, objectives and planning perspective, as well as performance information that form the basis for the resources requested. Section II provides further information on costs and expenditures by object which the reader may require to understand the Program more fully.

In order to provide continuity with other Estimates documents, Section I is preceded by extracts from Part II of the Estimates. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the Program's financial performance over the past year.

This document is designed to permit easy access to specific information that the reader may require. The table of contents provides a detailed guide to the contents of each section. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is requested in these Estimates to spend $3,813,000 in support of the 1985-86 Tax Court of Canada Program. The remaining expenditures, estimated at $224,000 for employee benefit plans will be made under existing statutory authority.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

During 1985-86, the Administration of the Tax Court of Canada, will continue to provide efficient and effective administrative support services to the Court. Additionally, the Administration will assist the Court in addressing the significant increase in appeals to the Court on matters arising under Part IV of the Unemployment Insurance Act, 1971 by, for instance, improving the courtroom facilities and by administratively supporting the Deputy Judges of the Court assigned to hear the appeals in unemployment insurance matters (see page 13).

2. Financial Summary

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast* 1984-85	Change
Administration of the Tax Court of Canada	**4,037**	4,716	(679)
Authorized person-years	**60**	62	(2)

* The 1984-85 Forecast is $.5 million or 12% higher than the 1984-85 Main Estimates of $4.2 million (Extracts from Part II of the Estimates, page 4). The increase is due to the establishment of two courtrooms in Toronto and the completion of the Court's new headquarters in Ottawa as approved in Supplementary Estimates.

The Administration program of the Tax Court of Canada excludes the person-years and salaries of the Judges of the Court but does provide for the salaries of the Deputy Judges.

Explanation of Change: The financial requirements for 1985-86 are $.7 million or 14% lower than the 1984-85 forecast expenditures. This decrease results primarily from the completion of the Court's start-up activities in 1984-85 as mentioned above.

B. Recent Performance

1. Highlights

Highlights of the Tax Court of Canada Program during 1983-84 were:

- The Tax Court of Canada was created in July, 1983, by the proclamation in force of the Tax Court of Canada Act (S.C. 1980-81-82-83, c.158) which repealed the Tax Review Board Act.

- In order to enable the Court to fulfill its mandate and to achieve its objective, the Tax Court of Canada Act established the number of judges at twelve.

- Also with the proclamation in force of the Tax Court of Canada Act, the Administration of the Tax Court became independent of the Department of Justice and totally responsible and accountable for its services, including the management of financial, personnel and administrative functions, and all other services usually required and associated with a department.

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Administration of the Tax Court of Canada	2,290	2,488	(198)
Person-years	38	40	(2)

Explanation of Change: Actual financial requirements for 1983-84 were $.2 million or 8% lower than outlined in the Main Estimates. This was primarily due to Members' Salaries, allowances, annuities and amounts paid pursuant to subsection 19(1) of the Tax Review Board Act which was repealed upon proclamation of the Tax Court of Canada Act.

C. Background

1. Introduction

The Program provides administrative services to the Tax Court of Canada which has original jurisdiction to hear and determine appeals to the Court on matters arising under the Income Tax Act, the Canada Pension Plan, the Petroleum and Gas Revenue Tax Act and Part IV of the Unemployment Insurance Act, 1971 and any other Act of Parliament in respect of which an appeal is provided under any such Act to the Court.

2. Legal Mandate

The Tax Court of Canada is established under the legislative authority of the Tax Court of Canada Act.

3. Program Objective

The objective of the Program is to provide an easily accessible and independent court for the informal and expeditious disposition of disputes between taxpayers and the Minister of National Revenue.

4. Program Description

The Administration of the Tax Court of Canada provides administrative services to the Judges which includes Court Reporters and Court Registrars, records management, library services, court facilities throughout Canada, office accommodations and other administrative services.

5. Program Organization for Delivery

Activity Structure: The Program consists of one activity which provides for the Administration of the Tax Court of Canada.

Organization Structure: The Court, with its headquarters located in Ottawa, is comprised of the Chief Judge, the Associate Chief Judge and eleven other Judges all of whom are appointed by the Governor in Council. The Chief Judge, in order to sustain the purely judicial workload, is also provided with the authority under legislation to recommend for appointment retired federally and/or provincially appointed Judges to act as Deputy Judges of the Court.

The Chief Judge is responsible for the apportionment of the work among the Judges and the assignment of individual Judges to specific sittings of the Court. The Court has its own court accommodations in Edmonton, London, Toronto, and Montreal, and shares with the Federal Court of Canada on a trial basis, in Vancouver, Calgary, and Winnipeg. The Court sits at various other locations throughout Canada, including in every province at least once a year. No personnel are situated at these locations unless the Court is in session.

The Registrar, who is the Deputy Head of the staff of the Court, through complete delegation of authority under legislation reports to the Commissioner for Federal Judicial Affairs who in turn reports to the Minister of Justice. The Registrar is responsible for the administration of the Court and is assisted by the Deputy Registrar. The Program supports the Tax Court through the work of the following organizational units.

Registrar: The Registrar is responsible for the overall direction of the administration of the Court.

Deputy Registrar: The Deputy Registrar is supported by the Hearings Coordinators who schedule hearings and provide advice and assistance to the litigants regarding the practices and procedures of the Court.

Finance and Administration: The Finance and Administration unit provides to the Court: Financial Services, Administrative Services and Personnel Services. These services include: financial planning, budgeting, accounting, courtroom and other related facilities, office accommodations, furniture and equipment, printing and publications, stationery and supplies, library services and secretarial services.

D. Planning Perspective

1. Environment

Legislative: Changes in the Income Tax Act, the Canada Pension Plan, the Petroleum and Gas Revenue Tax Act, and Part IV of the Unemployment Insurance Act, 1971, have a potential for significant impact not only on the volume of appeals filed but on the complexity of the appeals heard.

Social and Economic Conditions: Various social and economic factors have a bearing upon the Program. As the public has become more aware of its rights, more taxpayers tend to appeal (see page 10). Unemployment insurance appeals, for example, have increased by 325% in 1984-85 (see page 13).

2. Initiatives

During 1985-86, the Administration of the Tax Court of Canada does not plan to undertake any major initiatives but shall react positively to any new policy statements.

3. Update on Previously Reported Initiatives

The fiscal year 1983-84 was one of transition, evolving from the Tax Review Board to the Tax Court of Canada during which 655 taxpayers had their appeals heard.

4. Program Effectiveness

The Program is to provide appellants with assistance and advice to enable them to bring their case to the Court. Its effectiveness can be measured in part by its responsiveness to appellants and in its ability to provide appellants with an opportunity to have their case heard at a location convenient to them.

Access: With respect to appeals arising under the Income Tax Act, the Court sits in at least 24 major centres throughout Canada thus appellants usually need not travel outside their own areas in order to have their case heard. With respect to appeals arising under Part IV of the Unemployment Insurance Act, 1971, these are heard by Deputy Judges of the Court who travel to over 70 locations throughout Canada.

Expeditious Processing: The lapsed time between the date an appeal is filed and the date on which it is heard or disposed of is not completely within the Program's control. The individual appellants require variable amounts of time to prepare their appeals particularly the more complex cases. The Program ensures that the appeals are readily scheduled and are set down for hearing in chronological order.

Informality: The Court proceedings are informal. The Court is not bound by technical rules of evidence and taxpayers may argue their cases on their own if they so desire. Court hearings are open to the public; in camera hearings are held only in exceptional cases.

5. Performance Information/Resource Justification

The resource requirements of the Program are principally based on the volume of actions filed and their individual complexity.

Income Tax Act: The Income Tax Act has become increasingly complex. This complexity has a direct and significant effect on the Program. Figure 3 shows the actual and expected number of Actions filed with the Tax Court of Canada.

Figure 3: Number of Actions filed

The number of actions filed represents the total of Appeals instituted (Figure 4) and Applications under section 167 and section 174 of the Income Tax Act (Figure 5). For easy reference, and in order to enable one to better understand the Court's responsabilities in income tax litigation, the definitions of these sections of the Income Tax Act are as follows:

Section 167 applications: This is an application which may be made to the Tax Court of Canada for an order extending the time within which a notice of objection may be served or an appeal instituted and the Court may, if in its opinion the circumstances of the case are such that it would be just and equitable to do so, make an order extending the time for objecting or appealing and may impose such terms as it deems fit.

Section 174 applications: Where the Minister of National Revenue is of the opinion that a question of law, fact or mixed law and fact arising out of one and the same transaction or occurence or series of transactions or occurences is common to assessments or proposed assessments in respect of two or more taxpayers, he may apply to the Tax Court of Canada for a determination of the question. If the Court is satisfied that the determination will affect assessments or proposed assessments in respect of two or more taxpayers, who have been served with a copy of the application and who are named in the determination

to be made, it may determine the question in such a manner as it deems appropriate if no appeal from the assessment has been made, or if a taxpayer has appealed, it may join a party to any appeal and proceed to determine the question. The determination, when made, is final and conclusive.

Figure 4: Number of Appeals Filed

Figure 5: Applications Filed (Sec.167 and 174)

Part IV of the Unemployment Insurance Act, 1971: The Court was granted legislative authority and commenced hearing and determining appeals on matters arising under Part IV of the Unemployment Insurance Act, 1971 on September 30, 1983. The total inventory of appeals tranferred to the Court at that time was 663 and the annual forecasted volume of appeals provided by Employment and Immigration was approximately 200 a year. However, after one year of operation the statistics have shown an increase of 325% over the 200 appeals previously forecasted and it is anticipated that in 1985-86, and possibly in future years, the volume of appeals will reach approximately 1,000 per annum. The resource implications of this significant increase will be assessed in 1985-86.

Total Expenditures	4,037	4,716	2,290

2. Personnel Expenditures

In 1985-86 it is expected that the Tax Court of Canada will utilize approximately 60% of its resources on personnel costs. Figure 7 illustrates the average annual salary by employment category.

Figure 7 : Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	2	2	2		46,197
Scientific and Professional	2	3	-	19,782 - 88,120	41,761
Administrative and Foreign Service					
Administrative Services	9	16	8	13,912 - 57,987	33,864
Financial Administration	3	3	3	13,853 - 57,980	34,414
Other	1	2	1		
Administrative Support					
Clerical and Regulatory	22	17	14	12,932 - 31,743	20,933
Secretarial, Stenographic, Typing	20	17	15	12,636 - 31,946	22,272
Other	1	2	4		

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Transport Canada

Preface

This Expenditure Plan is designed to be used as a reference document and as such contains several levels of detail to respond to the various needs of its audience.

There are five chapters in this document. The first provides an introduction to the Department. The other four present the Expenditure Plans for each of the Department's programs.

Each chapter begins with extracts from Part II of the Estimates for the particular program being described. This is to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

Each Program Expenditure Plan is divided into three sections. Each provides increasing levels of detail. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that form the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

This document is designed to permit easy access to specific information that the reader may require. A general table of contents lists the various chapters, and detailed tables of contents are provided for each program. Within each Program Expenditure Plan, a schedule of financial requirements provides cross-references to the more detailed information found in Section II. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Departmental Summary

Role and Responsibilities

The Department of Transport was established in 1936 by the Department of Transport Act which amalgamated the functions of the Department of Railways and Canals, the Department of Marine, and the Civil Aviation Branch of the Department of National Defence.

The federal responsibility with respect to transportation is derived from the jurisdiction outlined in the BNA Act. This responsibility has evolved to include that of coordination and regulation to ensure safety and efficiency with respect to aeronautics and to navigation, shipping facilities, ferries, railways and canals connecting provinces or connecting a province with any foreign country and is exercised through the Department of Transport.

The department's role is "to attend to the development and operation of a safe and efficient national transportation system that contributes to the achievement of government objectives and to operate specific elements of this system". This role can accommodate changes in the economic, social and political environment, and there is now a new emphasis which recognizes that the framework of economic regulation requires careful assessment to ensure it does not unduly inhibit economic efficiency and system productivity.

Transportation Outlook

The forecast for the Canadian economy is for moderate economic and population growth in the 1980s, slowing inflation, soft labour market conditions, stable fuel prices, and a need to restore regional perspectives.

The moderating trend in fuel prices and inflation in general should reduce cost pressure on rates and fare increases. On the other hand, the burden of debt servicing could be heavy, as carriers undertake capital investments delayed during the recession. Passenger travel is expected to continue its revival over the next few years due to economic recovery, increased incomes and a more competitive policy framework.

Structural trends in the demand for resources suggest lower than average growth in freight traffic. There are still grounds for optimism about prospects for resource demand, and hence freight traffic, especially in Western Canada, where the growth of traffic will exceed that of Eastern Canada.

Organization and Programs

Transport Canada carries out its role through a complex structure which includes a headquarters organization; three operating administrations for Air, Marine and Surface transportation; and a number of Crown corporations and Agencies with varying degrees of autonomy. Some of the Crown corporations operate within the departmental framework while others, such as Air Canada and Canadian National, are totally independent and report to Parliament through the Minister.

The department is managed centrally from the perspective of long-term planning, inter-modal policy and inter-program resource allocation. Certain inter-modal operational program areas such as transportation of dangerous goods, specialist training and Stores are also managed centrally. In day-to-day operations, Air, Marine and Surface activities are managed as separate programs.

Two new Agencies, formerly carrying out work as departmental operations, will now report directly to the Minister. The Canadian Aviation Safety Board (CASB) and Grain Transportation Agency (GTA) operations are being resourced from commensurate reductions in the department's Air and Surface programs, respectively. Responsibility for the Northern Pipeline Agency (NPA), previously reporting to the Minister of State for Economic and Regional Development, is now vested with the Minister of Transport. These Agencies, in their own right, will be presenting separate Estimates submissions. Finally, responsibility for the Canada Harbour Place Corporation - an EXPO 86 - related Crown Corporation - has been transferred from Public Works Canada to Transport Canada. Figure 1 presents the organization of Transport Canada.

Figure 1: Organization Structure - Transport Canada

*Includes the following Crown corporations:
Ports Canada, St. Lawrence Seaway Authority, Atlantic Pilotage Authority, Laurentian Pilotage Authority, Great Lakes Pilotage Authority, Pacific Pilotage Authority and the Canarctic Shipping Company Limited.

Priorities

The objectives and priorities of the federal government reflect its desire to promote economic recovery. The government's efforts place significant emphasis on economic development, particularly on productive investment, and on achieving federal objectives in conjunction with the private sector.

The objectives for the Department of Transport over the next few years, in the light of the government's objectives and their implications for transportation, are for increased efficiency in the transportation system including regulatory reform, enhanced competition, lower departmental operating expenditures, a high level of safety, improved efficiency and effectiveness of the management process, and an improved relationship between transportation Crown corporations and Agencies and the department.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

For 1985-86 the Departmental Administration Program has established the following objectives:

- to continue the development and implementation of department-wide systems in order to improve the management and control of the department's financial, personnel, and materiel resources (see pages 2-17 and 2-27).

- to implement, subject to promulgation of necessary regulations, a comprehensive program of inspection, training, and emergency response information in support of the Transport of Dangerous Goods Act by:

  - continuing a training program for inspectors and for emergency response preparedness;

  - commencing compliance program activities in respect to handlers and offerers of dangerous goods for transport;

  - implementing a public awareness program jointly with the provinces.

  - establishing a dangerous goods data management information system to ensure efficient program evaluation and management.

- to strengthen transportation research and development capability to improve productivity and safety related to large capital procurements and operation of transport systems.

2. Financial Summary by Activity

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Direction and Coordination	17,089	19,967	(2,878)	2-19
Planning, Research and Development	22,800	25,956	(3,156)	2-22
Administration and Common Services*	55,182	63,682	(8,500)	2-27
Transportation Training	40,498	38,546	1,952	2-32
	135,569	1/ 151	(12,582)	
Less Revenue				
Administration and Common Services	3,090	3,165	75	2-28
Transportation Training	2,737	2,737		2-32
Departmental Operations	129,742	142,249	(12,507)	
Payment to Canada Harbour Place Corporation	60,609	44,615	15,994	2-42
Total Program	190,351	186,864	3,487	
Authorized person-years	1,767	1,821	(54)	

* This activity includes net cash requirements of $3.6 million for the Stores Revolving Fund. For details see page 2-41.

Explanation of Change: The financial requirements for 1985-86 are approximately $3.5 million higher than the 1984-85 forecast. This increase is primarily due to the:

	(Decrease) Increase
• payment to Canada Harbour Place Corporation formerly in Public Works Canada	$16.0 million
• decrease in Energy Panel R&D funds allocated from EMR (Planning, Research and Development)	($3.3 million)
• increase in Stores Revolving Fund drawdown (Administration and Common Services)	$ .9 million
• decrease in Systems Development resources (Direction and Coordination)	($ .6 million)
• decrease in capital requirements for EDP Facilities (Administration and Common Services)	($4.4 million)
• completion of the Safety Survey and Safety Advertising Campaign (Direction and Coordination)	($2.5 million)

Explanation of 1984-85 Forecast: The 1984-85 forecast for Departmental Operations is $13.3 million or 10.3% higher than the 1984-85 Main Estimates of $128.9 million. The difference of $13.3 million reflects the following major items:

• Increase in Stores Revolving Fund drawdown (Purchase of RAMP Equipment)	$2.1 million
• Implementation of a Safety Survey and Safety Advertising Campaign	$2.5 million
• Reprofiling of systems development resources ($ .9 million) and Electronic Data Processing Facilities ($1.3 million) from 1983-84	$2.1 million
• Implementation of a comprehensive Internal Audit and Program Evaluation Plan	$1.5 million
• Reinstatement of University Grants and Contribution program in support of transportation	$2.1 million
• Reprofiling of capital project for expansion of Coast Guard College	$3.1 million

The forecast $44.6 million payment to the Canada Harbour Place Corporation is higher than the 1984-85 Main Estimates as final approval of a revised forecast had not been received at the time of Main Estimates submission. As a consequence funding for 1984-85 was accomplished through supplementary estimates. The 1984-85 and prior years payments were made through the Department of Public Works.

B. Recent Performance

1. Highlights

Major developments during 1984-85 are as follows:

- The promulgation of regulations under the Transportation of Dangerous Goods Act. These regulations deal with the classification and listing of dangerous goods, the documentation of consignments of dangerous goods, the use of safety markings such as labels and placards, safety requirements to be followed by shippers and carriers of dangerous goods, notification of public authorities in the event of accidents and the training of employees.

- Implementation of a safety advertising program.

Highlights of the program's performance during 1983-84 are:

- In Research and Development during 1983-84 and peaking in 1984-85:

  - Significant progress has been made in Marine projects including provision of detailed technological analysis of ship design and performance standards for navigation in ice covered waters, as a basis for regulatory developments; and development and demonstration of real time navigation systems for ice covered waters and for detecting and monitoring icebergs.

  - In Rail projects, the highlight was the development, based on previous departmental and British Columbia Railway initiatives, of the Advanced Train Control program. The period was marked by completion of the construction and bringing into revenue operation of the electrified branch line of the British Columbia Railway.

  - In Energy Conservation projects, new knowledge has begun to emerge on the exact nature and magnitude of the energy penalty of cold temperature driving. This has resulted from a cooperative program with the motor vehicle industry. Another key success in conservation, resulting in part from the energy program, has been in the air sector where improved automated air traffic flow procedures is leading to substantial jet fuel savings in excess of $40 million annually for carriers.

- In Alternative Fuels projects, a major review of the safety of natural gas retailing and use in road vehicles was underway during 1983-84 and completed in 1984-85. In addition a major research and development program on the use of methanol (derived from natural gas) in automobiles is underway with the first phase work completed on cold starting.

- Delays in the capital acquisition of the Electronic Data Processing Facilities ($1.3 million) caused a delay in development and implementation of systems and resulted in reprofiling of resources to 1984-85 and beyond ($1.6 million), (see pages 12 and 17).

- Because the promulgation of Dangerous Goods regulations did not take place as anticipated in 1983-84, the increase in planned inspections did not occur as programmed ($2.4 million), (see pages 12 and 17).

- The Air Traffic Services Training increase in student training days did not materialize and 18,300 actual days for training were lower than anticipated, although operational training needs were met.

- The Flight Services Training Plan was shelved as a result of a downturn in training demand. This downturn made it possible to carry out a similar training course for native people.

- The goal of increasing the level and volume of Telecommunications and Electronics training was achieved.

2. Review of Financial Performance

Figure 2: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
	$	$	$
Direction and Coordination	**10,841**	**11,160**	**(319)**
Planning, Research and Development	23,754	25,711	(1,957)
Administration and Common Services	57,889	64,907	(7,018)
Transportation Training	29,873	35,217	(5,344)
	122,357	136,995	(14,638)
Revenue			
Administration and Common Services	(3,296)	(3,090)	(206)
Transportation Training	(2,308)	(2,738)	430
	116,753	131,167	(14,414)
Authorized person years	1,777	1,737	40

Explanation of change: Actual financial requirements were $14.4 million or 10.9% lower than projected in Main Estimates. The major causes of this decrease are as follows:

- delay in Dangerous Goods regulations being promulgated (Direction and Co-ordination) — $2.4 million
- delay in implementation of Conservation Funds and Alternative Fuel research and development projects (Planning, Research and Development) — $2.4 million
- decrease in Stores Revolving Fund drawdown (Administration and Common Services) — $2.9 million
- reprofiling of financial systems development resources (Administration and Common Services) — $1.6 million
- lower student loading at the Transport Canada Training Institute (Transportation Training) — $1.3 million

- postponement, contract issuance delay, and reprofiling of capital projects

- Flight Simulator (Transportation Training)	$1.2 million
- Boathouse and Machine Shop (Transportation Training)	$1.5 million
- EDP Facilities (Administration and Common Services)	$1.3 million

C. Background

1. Introduction

The Departmental Administration Program provides direction, policy advice, coordination, and common services for the three operating Programs. Research and development policies and programs, especially in the area of energy, are developed, and in some cases implemented, within this Program. Through this program, liaison is maintained with international organizations, other levels of government in Canada, Federal Economic Development Coordinators, Crown Corporations and Agencies concerned with transportation and the transportation industry.

Within the Departmental Administration Program there are three operational areas. The Transportation of Dangerous Goods Directorate is responsible for implementing a comprehensive program to regulate the handling, offering for transport and movement of dangerous goods and to provide support in response to accidents. The Research and Development Directorate is responsible for developing research and development programs in support of departmental and other federal, provincial, and transportation industry needs for achieving enhanced productivity and safety through technological innovations. This is done on a coordinated basis in such areas as Arctic Marine, rail traffic, and radar communications systems. The Transportation Training Activity is also largely operational. Within this activity falls responsibility for two major training facilities: the Transport Canada Training Institute at Cornwall, Ontario and the Canadian Coast Guard College at Sydney, Nova Scotia. (Figure 3)

2. Legal Mandate

The National Transportation Act and the Transportation of Dangerous Goods Act provide the legal basis for the Program.

3. Program Objective

The objective of the Departmental Administration Program is to attend to the development and operation of a safe and efficient national transportation system that contributes to the achievement of government objectives, and to operate specific elements of this system.

The role of the Program is to furnish general direction to the Department and to provide overall policy development, strategic planning, research, and coordination. In addition, common services in such areas as finance, data processing, administrative telecommunications, materiel management, contracting, personnel, training, public affairs, legal advice, management systems, and review (which includes program evaluation and internal audit) are also provided.

4. Program Organization for Delivery

Activity Structure: The Departmental Administration Program consists of four activities and 20 sub-activities as shown in Figure 3.

Figure 3: Activity Structure

Organization Structure: The Program is divided into three main areas of responsibility: Planning and Co-ordination, Personnel and Finance. Each of these is headed by an Assistant Deputy Minister. The resources for Departmental Operations are set out by organization and activity in Figure 4.

Figure 4: Resources by Organization and Activity (1985-86 Estimates in $000)

Activities	Assistant DM Planning and Coordination	Assistant DM Personnel	Assistant DM Finance	Others[1]	Activity Total
Direction and Coordination	12,063	-	-	5,026	17,089

Notes: [1] Includes expenses of the Offices of the Ministers, Deputy Minister, Associate Deputy Minister, Public Affairs, Legal Counsel, Review, and EXPO 86 Secretariat.

D. Planning Perspective

1. Environment

For the transportation system, it is expected that 1985-86 will experience:

- continued growth in the demand for freight transportation services by resource-based and chemical producing industries; and

- reduced escalation in fuel prices that will decrease pressure on transportation costs of all modes.

Efficient transportation plays an important role in the current program of economic development. Initiatives will be required to ensure system productivity. Safety in transportation, particularly with respect to dangerous goods, remains high in the public's perspective. Continued government restraint means increased effectiveness and productivity must be achieved in the department's operation.

2. Initiatives

In 1985-86, initiatives begun in 1983-84 and 1984-85 are continuing as reported in the following section, entitled, "Update on Previously Reported Initiatives."

3. Update on Previously Reported Initiatives

Transportation of Dangerous Goods Initiative: The promulgation of regulations regarding transportation of dangerous goods did not take place in 1983-84 as originally anticipated. As a result, the planned inspection program and the training of increased numbers of inspectors did not take place in 1983-84 and 1984-85.

The Transportation of Dangerous Goods regulations represent an attempt to develop a harmonized set of multi-modal regulations which will replace existing modal ones. With the promulgation of portions of the regulations in 1984-85, the compliance program will be commenced based upon regional offices in a number of cities. The compliance program will be preceded by an extensive industry awareness campaign.

The long-term benefits expected from this expanded program include the value of the information gathered by inspectors in identifying potential problems in dangerous goods transportation and the allaying of public anxiety through the presence of a visible and active compliance program. It is expected there should be a reduction in the number of accidents involving dangerous goods and a mitigation of the consequences of many of those which would still occur.

Electronic Data Processing Initiatives: The installation of the Electronic Data Processing Facilities (Distributed Data Processing Network) is well on the road to completion, and all facilities will be operational by the end of fiscal year 1984-85. The personnel, finance, and materiel applications are all in advanced stages of development and implementation. They will be operational across the network over the fiscal year. The base pay portion of the Personnel Management Information System is currently implemented in five regions. While base pay is only part of the overall development, it is the foundation of the total system and is the most complex part. Completion of the redeveloped personnel information system is forecast for 1986. The Materiel Management System is operating in pilot mode in the Atlantic Region of the Air Administration and will be implemented in other regions commencing in 1985-86. Similarly automated financial systems are operating in several regions and are being implemented on a phased basis in the other regions. Systems other than the Finance, Personnel and Materiel systems have also made significant progress in moving to the on-line environment. Many are in operation (such as Program Information System - Capital (PROGIS-CAP), National Integrated Marketing System (NIMS), and Civil Aircraft Register System (CARS)). Others such as the Airports Maintenance Management System (AMMS) are being piloted in regions. The capital costs related to this initiative amount to $12.8 million all of which will be spent by the end of 1984-85.

Training Activity Initiative: Demands for Air Traffic Services Training over the short term have declined due to changes in operational requirements, resulting in only 18,300 student training days in 1983-84. This met client demands which are forecast to stabilize at approximately 20,000 student days per year. Similarly, while client demands were met in the Flight Services Specialists Training, a downturn of student training days was experienced.

Section II
Analysis by Activity

A. Direction and Coordination

Objectives

To ensure that the objectives of Transport Canada are implemented in a consistent manner, to provide co-ordination of departmental policy, and to improve all aspects of safety in the handling, offering for transport or transportation of dangerous goods.

The major initiatives for 1985-86 focus on the implementation of legislation concerning the transportation of dangerous goods:

- the commencement of a compliance program relating to dangerous goods manufacturing, shipping and container manufacturing activities;
- training of inspectors;
- conducting education and awareness sessions for industry and the provinces; and
- establishment of a data Management Information System to ensure efficient program evaluation and direction.

Resource Summary

This activity accounts for approximately 12.6% of the total 1985-86 gross expenditures and 11.8% of total person-years for departmental operations.

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

	10,841	198	11,160	167	(319)	31

Description and Resource Justification

The Offices of the Ministers, Deputy Minister and Associate Deputy Minister are funded through this activity, as are the departmental security and EXPO 86 Secretariat functions.

Coordination Group: This group deals with any issue not specific to any one mode of transportation and provides functional advice and authority on corporate matters in the following service areas:

- advice on short term policy issues or those relating to Crown Corporations reporting to the Minister of Transport;
- coordination of a Transport-wide program to improve transport services for the elderly and handicapped;
- advice to the Minister on appeals against decisions of the Canadian Transport Commission;
- advice to the Minister on international, provincial and industrial issues which are likely to have an impact on Transport Canada and its policies;
- advice to Cabinet on petitions to the Governor in Council;
- coordination of Transport Canada's external relations with other governments, other levels of government, agencies, international organizations, and industry (carriers and shippers), as well as management of the Federal-Provincial agreements subsidiary to the Economic and Regional Development agreements;
- coordination and advice, privacy and access to information, human rights, transportation of the handicapped, and the Alaska Highway Gas Pipeline;
- emergency planning and operation of the Transport Canada Situation Centre.
- liaison with Federal Economic Development Coordinators,
- implementation and enforcement of the Transportation of Dangerous Goods Act;
- responsibilities related to the Transportation of Dangerous Goods include the development and evaluation of regulations and standards, education and examination of inspectors, the carrying-out of inspections, and the provision of support programs for response to dangerous goods accidents; and
- support services to the Office of the Minister (Parliamentary liaison, correspondence).

Professional and special services expenditures (Figure 6) are split almost evenly between security services and the Transportation of Dangerous Goods. Resources for the latter will be spent on the development of a management information system, standards, improved emergency response data, training and inspection programs.

B. Planning, Research and Development

Objectives

To formulate and promote policies, systems plans and strategies to ensure the efficient, safe and technologically progressive development of the multi-modal transportation system in Canada that contributes to the achievement of national objectives and responds to legislative and policy requirements such as those outlined in the National Transportation Act.

The following major projects will be pursued in 1985-86 by the department within this activity:

- Marine: studies, laboratory and field tests of new technologies in conjunction with the Marine Transportation Program, for improved vessel traffic management systems, including ice detection operations, and for the design of ice-breaking vessels as required for the movement of ships in the East Coast and Arctic zones, at a cost of $2.1M;

- Railways: extension of rail freight R&D program to promising technologies for improved productivity of the Canadian Railway Network at a cost of $3.3M;

- Energy: as an integral part of the federal Energy R&D program, described in EMR's program submissions, studies and tests to enhance the energy efficiency and the commercialization of new fuels for the transportation system at a cost of $6.0M.

- Internal Planning: the implementation of a revised strategic planning process to make it more effective. This reformulated process will ensure better consideration of governmental and ministerial objectives and priorities.

Resource Summary

This activity accounts for approximately 16.8% of the total 1985-86 gross expenditures and 6.1% of total person-years for departmental operations.

Figure 8: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Description and Resource Justification

The Strategic Planning sub-activity encompasses the operations of transportation related Economic Forecasting and Studies, Corporate Planning and Policy Studies. A department-wide perspective is taken in these operations in order to ensure compatible forecasts and data bases, consistency among departmental policies and plans, and appropriate inputs and responses to government priorities and objectives.

Economic Forecasting and Studies:

Specific services include:

- undertaking transportation economic analysis pertaining to human resource use, productivity, passenger and freight transportation policy, future demand and cost revenue performance, capital requirements and energy use and efficiency;
- developing transport-oriented economic forecasts as inputs into other groups' modelling for policy analysis;
- developing multimodal passenger freight forecasting and simulation models for policy analysis and formulation; and
- developing transportation energy demand models and supporting data for policy analysis and formulation.

Corporate Planning:

Specific activities include:

- planning and organization senior level planning meetings to identify strategic issues and priorities for the department;
- articulating these issues as goals to be addressed by specified units within the department;
- developing solutions to the issues by proposing new options or redefining strategic directions; and
- monitoring and reviewing progress towards implementation of the strategies selected and approved by management.

Policy Studies:

Specific activities include:

- undertaking a wide range of transportation policy analyses pertaining to human resource use, productivity, passenger transportation policy, freight transportation policy, future passenger and freight demand and cost revenue performance, capital requirements and energy use and efficiency;
- reviewing, formulating and recommending long-term transportation objectives, principles and policies;
- formulating and recommending resource allocation priorities, regulatory, pricing and cost recovery policies;
- helping to provide an adequate level of university training and research in transportation through research awards to universities and regional transportation centres and through fellowships to students;
- identification and assessment of broad trends and issues in the multimodal transportation; and
- analyses of major elements of the national and regional transportation systems.

The Transportation Research sub-activity consists of the work carried out by the Research and Development Directorate.

Research and Development: This unit's activities include:

- monitoring, contributing to, and influencing the policies that affect transportation technology in Canada; and
- the programming, implementation, project control, and assessment of Transportation Research and Development activities.
- formulating and recommending strategies and plans needed for the total transportation system to adjust to the projected energy changes;

Transport Canada's energy R&D activities are fully integrated interdepartmentally through the Panel on Energy R&D. The work continues to provide technical input into policy, regulation, program and commercial development to enhance energy efficiency in all modes of transport, to introduce new transport fuels, and ensure the safe, efficient and timely transport of new off-shore resources. As in 1984-85, increased emphasis is directed toward:

- automobile fuel economy standards;
- the introduction of propane, Compressed Natural Gas and alcohol for automobile engines;
- accelerated development of East Coast and Arctic navigation system; and
- commercialization of research and development results.

Of the total expenditures on energy, 92% is for research and development projects and 8% is for project management staff costs.

The expenditures on Professional and Special Services (Figure 9) are for research and development contracts.

C. Administration and Common Services

Objectives

To see to the acquisition, safeguard, control and disposal of adequate financial, human and materiel resources to meet departmental objectives and to assist the department in the efficient and effective management of its programs.

Specific initiatives for 1985-86 are:

- to continue the development of integrated financial systems;
- to complete development and Phase I implementation of the Materiel Management System (TCMMS) at a cost of $.9M and a recurring cost for systems maintenance of $.6M, and to complete development and implementation of the Fleet Management System (MVFMIS) at a cost of $25K for development and a recurring cost for maintenance of $78K.
- to continue the implementation of the Personnel Management Information System and the Automated Personnel Pay and Leave System;
- to operate and maintain the Distributed Data Processing Network in support of automation needs at a recurring cost of $8.1M.
- to implement the approved annual Internal Audit and Program Evaluation plans to improve management control of program activities and to achieve a more effective use of Transport resources;
- to provide assistance to the TC Program Control Board by performing a challenge function on all policy and program proposals involving resources.

Resource Summary

This activity accounts for approximately 40.7% of the total 1985-86 gross expenditures and 58.7% of total person-years for departmental operations.

Figure 11: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84

	52,092	1,038	60,517	1,050	54,593	1,023

1 The resources displayed for 1985-86 and 1984-85 reflect net figures due to anticipated savings of $4.7 million and $2.2 million respectively, which are targeted department-wide, resulting from the implementation of the Electronic Data Processing Network.

2 Includes cash expenditures of $25.7 million and receipts of $22.1 million. See page 2-41 in Section III for further details.

The revenue is generated through the provision of Electronic Data Processing services by the Communications and Informatics Branch. This unit provides, to the operating Programs, a data processing service which is partially cost recoverable.

Figure 12: Activity Expenditures by Object ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	%	$	%	$	%

	52,092	100	60,517	100	54,593	100

1983-84 Financial Performance: Changes between 1983-84 planned and actual financial performance occurred, as a result of reprofiling to future years of EDP Systems Development ($1.6 million), a delay in the implementation of the capital program to upgrade the central electronic data processing facilities ($1.3 million), and decreased drawdown for the Stores Revolving Fund ($2.9 million).

Figure 13: 1983-84 Financial Performance ($000)

	54,593	1,023	61,817	1,007	(7,224)	16

Description and Resource Justification

Included in this activity are records, mail, accommodation, publishing, library, electronic data processing and systems design, audit, management improvement, materiel management and contracting, finance, legal, personnel, and program evaluation and internal audit.

Transport Canada has approximately $1 billion of materiel assets (excluding real property assets) in use, based on original purchase price. The need to support this equipment through inventories of spare parts and other materiel needs brought about the creation of the Transport Canada Stores Revolving Fund (Figure 24, page 2-41).

In 1983-84 the level of authority for this revolving fund was raised to $43.7 million to enable the financing of increased levels of inventories required to support the departmental operating programs. The drawdown projected for 1985-86 is $3.6 million and the accumulated charge remains within the maximum authorized level. The actual cost of purchases, excluding overhead, is recovered from users.

In 1984-85 the development of the Materiel Management System (TCMMS) will be completed and, for the first time, department-wide management of inventories will be possible. Based on departmental stocked inventories of some 200,000 line items, with an estimated value of $60-70 million, the TCMMS will permit cost avoidance/savings of some $6.6 million on the critical, lifetime and insurance spares portion of the inventory and of some $2.1 million per year on the active part of the inventory beginning in 1986-87. While these systems may not result in net reduction of current resources they will reduce further increases.

The initiative to improve the management of resources using automation is approaching implementation. Installation of the national distributed data processing network will be completed in 1984-85. Development of applications supporting financial, personnel, and materiel operations are nearing completion and will be implemented across the network during 1985-86. New automation initiatives in support of the Administrations are being planned such as Ships Inspection Reporting System, Airports Maintenance Management System, National Airports Management Information System, Civil Aircraft Information Data Base and Dangerous Goods.

D. Transportation Training

Objectives

To ensure a competent professional, technical and managerial work force to meet the operational needs of the national transportation system.

Specific goals within these objectives are:

- to train a sufficient number of ab initio air traffic controllers in order to license about 70 annually;
- to continue the provision of telecommunications and electronics training associated with the acquisition of new equipment, new developments in technology and the demand for courses in both official languages;
- to increase the output of qualified Marine Officer graduates to 110 per year by 1989.

Resource Summary

Approximately 29.9% of gross expenditures and 23.4% of total person-years for departmental operations are accounted for by the Transportation Training Activity.

Figure 14: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Director-General - Training	325	6	185	3	345	3
Training Coordination and Control	1,399	24	1,498	28	1,317	26
Training Priorities and Systems	316	6	284	7	272	7
Transport Canada Training Institute - Cornwall, Ont.	21,198	281	20,546	284	18,816	294
Canadian Coast Guard College - Sydney, N.S.	17,300	96	16,033	106	9,123	94
	40,498	413	38,546	428	29,873	424
Revenue	(2,737)	-	(2,737)	-	(2,308)	-
	37,761	413	35,809	428	27,565	424

Revenues in this Activity are generated through the recovery of costs for management development courses provided by the Management Training Centre, living costs for course participants at the Transport Canada Training Institute, and rental income on Public Service accommodation at the Coast Guard College. The Transport Canada Training Institute provides training to other federal government departments on a partial recovery of living costs.

Figure 15: Expenditures by Object ($000)

	37,761	100	35,809	100	27,565	100

1983-84 Financial Performance: Changes between 1983-84 planned and actual financial performance occurred, as a result of capital program slippages notably contract delays in Boathouse and Machine Shop construction ($1.5 million), and the postponement of the Flight Simulator Project ($1.2 million), and a lower student loading at the Training Institute resulting in reduced campus service costs ($1.3 million).

Figure 16: 1983-84 Financial Performance ($000)

	27,565	424	32,479	431	(4,914)	(7)

Description and Resource Justification

The Transport Canada Training Institute (TCTI) at Cornwall, Ontario provides a range of basic and advanced technological training courses of varying lengths for air traffic controllers, electronics technicians and engineers, marine personnel, meteorological technicians and flight service specialists. It also offers courses in Training Technology for instructional staff and transportation management courses for intermediate and senior management personnel. The use of the Cornwall facility as a course site and conference centre by departmental and other government organizations is becoming a major Institute activity. Training days provided by TCTI in 1983-84 were 114,000; in 1984-85 it is anticipated that 125,000 student days of training will be provided, and 145,000 student days of training in 1985-86.

At the Canadian Coast Guard College in Sydney, Nova Scotia, both men and women are trained to become Officers. Training is provided to each Officer Cadet in French or in English in one of the two disciplines of Navigation or Marine Engineering. Students graduate after three years,

which include sea duty, to serve in the Fleet as either Deck Officers or Engineer Officers. The College provided 34,200 days of training in 1983-84. In 1984-85, the College will provide approximately 35,000 student days of training, and 36,000 student days in 1985-86.

The major portion of the resources in this activity is for salaries and wages (Figure 15). Capital expenditures are for the purchase of equipment for training and the construction of facilities at the Canadian Coast Guard College.

With the introduction of a new program for Air Traffic Controllers, the TCTI clientele should stabilize between 6,200 and 6,600 persons per year over the next five years. Furthermore, the new ab initio air traffic controller training program at TCTI has been lengthened from 3½ months to 9 months and will concentrate more on simulation and evaluation activities. The number of student training days in 1983-84 was 18,300. It is forecast that this will be approximately 19,700 in 1984-85 and will remain in the range of 19,000 - 20,000 student training days in 1985-86.

In the area of telecommunications and electronics training, the centre at TCTI is operating at full capacity. Demands for training are increasing, due to new systems being developed and the requirement for additional training days. In 1982-83 some 35% of client demands could not be met. This was reduced to 20-25% in 1983-84. While internal improvements have been made to accommodate additional courses and training days without any increase in resources, it is anticipated that in 1984-85 and 1985-86, approximately 35% of client demands will not be met.

The continuing objective for departmental supervisory and management training is 700 supervisors and 350 middle managers annually.

In 1983-84 the Coast Guard College established training courses for approximately 120 students, in order to meet the annual demand of fifty-five qualified marine officers. This program will continue in 1985-86 and future years with the objective of meeting 50% of the Fleet's needs for qualified officers.

The CG College expansion project at $17.2 million is intended to increase the output of qualified Marine Officer graduates to 110 per year in approximately 1989. The project involves construction of a new residence block containing 238 berths (individual bedrooms) and structural alterations to the existing academic block to provide the necessary additional administrative space, and related new furniture.

Projects for a machine shop and boat house for the Coast Guard College, in the period 1983-86, have a combined total estimated cost of $9.9 million.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Departmental Administration Program expenditures, by object, are presented in Figure 17. **The Figure includes expenditures and receipts for the Stores Revolving Fund and payments to the Canadian Harbour Place Corporation.**

Figure 17: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	64,225	63,727	57,809
Contributions to employee benefit plans	8,985	8,285	8,316
Goods and Services			
Transportation and communications	5,440	6,930	4,874
Information	1,969	4,305	791
Other Professional and special services	28,540	34,677	26,951
Rentals	796	2,447	1,832
Purchased repair and upkeep	1,298	2,090	1,447
Utilities, materials and supplies	31,089	28,393	20,366
Payments to Crown Corporations	60,609	44,615	20,935
All other expenditures	57	68	54
Total operating costs	203,008	195,537	143,375
Capital			
Construction and acquisition of land building and works	9,744	8,560	3,112
Construction and acquisition of machinery and equipment	2,230	6,301	10,385
Total capital	11,974	14,861	13,497

Transfer payments	**3,296**	2,368	1,126
Total expenditures	**218,278**	212,766	157,998
Revenue	**(27,927)**	(25,902)	(20,310)
	190,351	186,864	137,688

The estimated 1985-86 gross operating expenditures (excluding Stores Revolving Fund and Payments to Crown Corporations) will be about 9.0% below the 1984-85 forecast. Operating costs represent 90.3% of the total estimates for the Departmental Administration Program.

Figure 18: Operating Costs in Current Dollars for the Years 1983-84 to 1985-86 ($ 000)

	Personnel Costs	Other Costs	Total Operating	% Change
1983-84 Actual	66,125	41,378	107,503	-

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Figure 21: Major Capital Projects ($000)

Project by Activities	Total Estimated Final Cost		Total Forecast Costs to Mar. 31/85	Estimates 1985-86	Future Years' Requirements
	Previous Estimate	Current Estimate			
TRANSPORTATION TRAINING

College Expansion, Sydney, N.S.	18,300	17,185	6,191	5,675	5,319

4. Transfer Payments

Figure 22: Transfer Payments ($000)

Project	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Grants			
Grants to universities, other organizations, university students and other individuals for transportation research	1,304	1,304	692
National Transportation Week Committee	20	20	20
Total Grants	1,324	1,324	712
Contributions			
Contributions to Provinces and Agencies in accordance with Terms and Conditions prescribed by the Governor in Council for transportation development initiatives undertaken under Subsidiary Agreements to Economic and Regional Development Agreements	1,200	266	-
Contributions for the support of transportation studies at universities and other institutions	751	758	414
Provincial and municipal governments for transportation research and demonstrations	21	20	-
Total contributions	1,972	1,044	414
Total	3,296	2,368	1,126

B. Cost Analysis

The net cost of the Departmental Administration Program by Activity include only those expenditures to be charged to the department's voted and statutory payments excluding the Stores Revolving Fund and the Payment to Canada Harbour Place Corporation. Also to be taken into consideration in establishing the actual costs to operate the Program are other cost items and revenues generated.

Figure 23: Net Cost of Program by Activity for 1985-86 ($000)

	1985-86 Expendi-tures	Add Other Costs	Total Cost	Deduct Revenue	**Total Net Costs**	Total Net 1984-85
Direction and Coordination	17,089	-	17,089	-	**17,089**	12,758
Planning, Research and Development	22,800	-	22,800	-	**22,800**	24,836
Administration and Common Services	51,582	9,719	61,301	3,090	**58,211**	58,210
Transportation Training	40,498	-	40,498	2,737	**37,761**	41,044
	131,969	9,719	141,688	5,827	**135,861**	136,848

The adjustments made to the estimated operating expenditures to arrive at a total net cost include: accommodation provided without charge by Public Works ($ 8.3 million) and other services provided without charge by other departments ($ 1.4 million); and inclusion of all revenues generated by the Program.

C. Stores Revolving Fund - Additional Information

Actual expenditures and receipts are displayed to March 31, 1984. Forecast expenditures and receipts are displayed for the fiscal years 1984-85 and 1985-86.

Figure 24: Statement of Changes in Stores Revolving Fund Drawdown ($000)

Fiscal Year	Opening Balance	Expenditures	Receipts	Closing Balance
1982-83	32,000	14,200	13,500	32,700
1983-84	32,700	15,000	14,700	33,000
1984-85	33,000	24,800	20,000	37,800
1985-86	37,800	25,700	22,100	41,400

D. Payment to Canada Harbour Place Corporation

Canada Harbour Place Corporation was incorporated on June 18, 1982 for the following purposes:

- to acquire, develop, administer and dispose of land, and to manage real property for the Government of Canada in Vancouver, British Columbia;
- to design and construct a facility at Pier B-C, including a cruise ship terminal and a Canadian host pavilion for Expo '86;
- to design, construct and manage other facilities on the site as required; and
- to organize, operate and manage the participation of Canada as host nation for Expo '86 at Pier B-C.

Figure 25: Canada Harbour Place Corporation Summary of Expenses and Revenue ($000)

	Estimates 1985-86	Forecast 1984-85
Operating Costs	10,941	5,832
Capital Expenditures	68,987	56,220
Non-Government Receipts	(12,329)	(17,166)
Government's Payments	67,599	44,886
- Other Departments	6,990	271
- Funding through TC	60,609	44,615
Planned Person-Years	62	46

Effective July 1, 1984, the Minister of Transport was designated as the Minister responsible for federal participation in EXPO 86.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested to spend $824,910,578 to operate the Marine Transportation Program during the 1985-86 fiscal year. This amount includes $7,971,000 of non-budgetary expenditures, representing advances to Canada Ports for capital purposes. Existing statutes authorize the expenditure of an additional $31,730,422.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

For 1985-86, the Marine Transportation Program has set the following goals:

- to finalize work associated with proposed amendments to the Canada Shipping Act to address recommendations from recent Marine inquiries and to update the legislation relating to pollution prevention, compensation for oil pollution damage, training of seafarers and vessel traffic services;

- to continue the federal government's preparedness to support Arctic resource development by participating in an interdepartmental program of R & D for Arctic transportation and related marine services;

- to implement the fleet replacement program by introducing into service three new Class 1100, one Class 1050 and two Class 800 Coast Guard Navaid Tenders; (see page 3-26)

- to implement the recommendations of the 1984 "Study on Marine Casualty Investigations in Canada" which pertain to the marine mode; (see page 3-43)

- to formulate and execute improved safety inspection practices of mobile offshore drilling units; and

- to undertake a project with the objective of defining levels-of-service goals for the Coast Guard short-range aids and icebreaking.

2. Financial Summary by Activity

	25,064	47,164	(22,100)	
	848,670	903,975	(55,305)	
Non-Budgetary				
Crown Corporations				
Major Ports	7,971	4,190	3,781	3-49
	856,641	908,165	(51,524)	
Departmental Operations				
Authorized person-years	6,884	6,905	(21)	3-63

*The 1984-85 forecast, based on information available to management as of October 31, 1984, is $38.4 million or 4% lower than the 1984-85 Main Estimates of $946.6 million ("Extracts from Part II of the Estimates", page 3-4). This difference is explained in "Recent Performance - Highlights", page 3-11.

Explanation of Change: The financial requirements for 1985-86 are $52 million or 6% lower than the 1984-85 forecast expenditures. The decrease is a result of the following factors:

Budgetary - Departmental Operations

Capital expenditures

• lower capital expenditures as construction of vessels approaches completion	($51.5 million)

Operating expenditures

• provision of 4% for increase in salaries, wages, and employee benefits	$19.0 million
• workload increases for dredging; ship refit; helicopter services; regulation and inspection of mobile offshore drilling units; and development of a Coast Guard Northern region	$5.9 million
• cost reduction imposed by the government relating to search and rescue; vessel traffic services; fleet; and ship inspection	($5.0 million)
• reduction in payments to Canarctic	($1.6 million)

Budgetary - Crown Corporations

• Rehabilitation of the Welland Canal now completed	($3.0 million)
• Development of new port facilities at Sept-Iles and Chicoutimi approaching completion	($15.0 million)
• Grain Elevator at Halifax now completed	($1.8 million)
• No appropriation granted to Pilotage authorities	($2.2 million)

Non-Budgetary - Crown Corporations

• Construction of a container terminal at Halifax	$6.8 million
• Bulk potash terminal at Saint John to be completed in 1985-86	($3.0 million)

B. Recent Performance

1. Highlights

1983-84:

- The construction of replacement vessels was accelerated under a special capital program.
- The long range radio navigation system (Loran 'C') for Canada's east coast was completed in 1984-85 at a total cost of $15.6 million, versus the estimated cost of $17 million.
- All the other capital projects planned for 1983-84 were also initiated; however, some of them did not reach the planned progress stage. Delays in contract awards and in the design of vessels, adverse weather conditions and late equipment delivery were the main reasons for the lapse of $34 million in the capital program.

1984-85:

The major program of vessel construction is now expected to be completed at a lower cost than anticipated. The savings will be used partly for meeting larger payments to Crown Corporations and funding increased capital construction for Public Wharves and Harbours. The difference between the 1984-85 forecast and the 1984-85 Estimates is explained as follows:

• cost savings for construction of vessels, reflected in the Aids to Navigation and Icebreaking activities	($54 million)
• an increase in capital construction expenditures, reflected in the Public Wharves and Harbours activity	$11 million
• a reduction in operating expenditures for wharf repairs, partly offset by increased payments to Harbour Commissions, reflected in the Public Wharves and Harbour activity	($ 2 million)
• an increase in payments to Canada Ports Corporation, due to a change in cash flow of capital projects	$ 5 million
• a forecast deficit for the Laurentian Pilotage Authority	$ 2 million
Reduction in original spending plans	($38 million)

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Requirements ($000)

	1983-84		
	Actual	Main Estimates	Change
Budgetary			
Departmental Operations			
Aids to Navigation	241,295	253,280	(11,985)
Ship Movement Systems and Services	62,791	68,767	(5,976)
Icebreaking, Arctic and Other Ship Support	97,873	112,368	(14,495)
Marine Search and Rescue	55,427	60,469	(5,042)
Regulatory	31,695	32,654	(959)
Public Wharves and Harbours	51,894	50,931	963
Direction and Administration	26,329	31,020	(4,691)
	567,304	609,489	(42,185)
Crown Corporations			
Major Ports	19,148	27,577	(8,429)
Bridges	3,396	3,396	-
Canals	3,000	-	3,000
Pilotage Services	1,216	430	786
	26,760	31,403	(4,643)
	594,064	640,892	(46,828)
Non-Budgetary			
Major Ports	4,881	4,909	(28)
	598,945	645,801	(46,856)
Authorized person-years	6,750	6,688	62

Explanation of change: The authorized person-years and level of spending were increased to 6,767 PYs and $683.6 million through Supplementary Estimates, mainly in response to the government's economic initiative of accelerating or advancing some capital projects. The revised authority, by type of expenditures, is displayed in the "Extracts from Volume II of the Public Accounts", page 3-7. The large surplus is attributed to the following factors:

Budgetary - Departmental Operations

Operating Expenditures: The Program lapsed $32.0 million (7%) from its original plan and in addition, $4.5 million of the $14.0 million received through Supplementary Estimates. The major factors are as follows:

- Coast Guard experienced a surplus from the following activities: Search and Rescue due to the delay in placing new search-and-rescue vessels into operation ($3 million); Aids to Navigation and Icebreaking due to the postponement of ship refits and because some vessels were inoperative ($10 million) ..... $13.0 million

- Harbours and Ports experienced savings because dredging was done at lower costs than anticipated and projects for wharf repairs and shore protection works were delayed or deferred ..... $ 8.0 million

- Savings were realized in all activities as a result of salary increases remaining below provisions and stiffer controls on travel and overtime authorization, and on the purchase of printing, office supplies, and professional and special services ..... $10.5 million

- Payments to the Canarctic Shipping Company Limited were reduced ($0.6 million from original plan and $0.4 million from Supp. Est.) ..... $ 1.0 million

- The contingency fund of $3 million received through Supplementary Estimates to provide emergency response in the event of a major oil spill was not required ..... $ 3.0 million

- The provision of $3.3 million received through Supplementary Estimates for payments to Harbour Commissions to assist in the realization of special capital projects was not fully utilized ($2.2 million only) ..... $ 1.1 million

Capital Expenditures: The Program slipped $25.5 million (15%) from its original plan and in addition, lapsed $9.0 million of the $15 million received through Supplementary Estimates. The major factors are as follows:

- The construction and refit of fleet vessels for Aids to Navigation and Icebreaking did not proceed at the expected pace. Additional funding provided through Supplementary Estimates also lapsed ..... $22.7 million

- The cash flow of the remaining capital program was some five percent below planned levels due to some projects being delayed ..... $10.0 million

- One capital project was completed at lower cost ..... $ 1.8 million

Budgetary - Crown Corporations

Payments to Crown Corporations: The Program lapsed $10.4 million against the original plan and in addition, $2.9 million of the $8.6 million received through Supplementary Estimates, due to the following:

- Payments to Ports Canada - lapse of $10 million of original plan and $2.7 million of appropriation received through Supplementary Estimates (for details, see page 3-50) ..... $12.7 million

- Payments to Atlantic Pilotage Authority (for details, see page 3-59) ..... $ 0.4 million

- Payments to Laurentian Pilotage Authority lower than the appropriation received through Supplementary Estimates ..... $ 0.2 million

C. Background

1. Introduction

The federal government has extensive responsibilities with respect to the marine transportation system in Canada. The principal areas involving the Marine Transportation Program are:

- safety-oriented regulation of marine transportation;
- provision of navigation services (e.g., traffic control, conventional aids such as lighthouses, radio aids and buoys, and pilotage services);
- provision of a search-and-rescue capability;
- ship-source pollution prevention;
- development and maintenance of waterways (e.g., icebreaking, escorting of ships in ice-covered waters and operation of the St. Lawrence Seaway); and
- development, operation and maintenance of a national network of 13 ports, 9 commission harbours and 366 public harbours and wharves.

Crown Corporations usually provide these services when all or substantially all of the costs can be recovered from the users. Currently, Crown Corporations provide the pilotage services and operate the St. Lawrence Seaway (as well as several bridges over the St. Lawrence River) and the 13 ports.

The Marine Transportation Program includes all the other marine transportation services (Departmental Operations components - Figure 1) and is the vehicle through which the government funds certain of the Crown Corporations' investments in fixed assets and, if necessary, covers operating losses (Crown Corporations - Figure 1). The Program also includes some marine freight services, principally in the Arctic.

2. Legal Mandate

The following are the 12 principal acts that deal with the federal government's responsibilities for federal marine way and terminal activities and relate to the activities of the Program: National Transportation Act, Canada Shipping Act, Navigable Waters Protection Act, Arctic Waters Pollution Prevention Act, Canada Ports Corporation Act, St. Lawrence Seaway Authority Act, Pilotage Act, Harbour Commissions Act, Toronto Harbour Commissioners Act, Hamilton Harbour Commissioners Act, Public Harbours and Port Facilities Act and Carriage of Goods by Water Act.

3. Program Objective

The objective of the Program is to attend to the development and operation of a safe and efficient national marine transportation system that contributes to the achievement of government objectives, and to operate specific elements of this system.

In addition, the Program has a number of sub-objectives that deal with such matters as accessibility, equity, productivity and cost recovery.

4. Program Organization for Delivery

Activity Structure: The Marine Transportation Program is divided into 11 activities, of which 4 relate to funding of the operations of Crown Corporations. The left-hand column of Figure 3 illustrates the activity structure. A reclassification of some functions, effective April 1, 1985, results in a transfer of person-years and associated costs between activities. The new distribution is used in presenting the financial plan for 1985-86, along with the financial forecasts for 1984-85, and in reporting on actual financial performance for 1983-84. The financial plan for 1983-84, as originally presented in that year's Main Estimates, has been restated in terms of the new distribution. (Figure 66, page 3-76, compares the restated version with the original by activity).

Organization Structure: The basis for the Canadian Marine Transportation Administration (CMTA) is the concept of a single body to co-ordinate the administration and management of federal marine way and terminal activities. The Marine Administrator directs the formulation and implementation of marine policies and programs. In addition, he is responsible for the management of all operational, developmental and regulatory activities of the Department in support of marine transportation and the development of ports and marine commerce in Canada. The individual operating components of the CMTA (Figure 3) exercise a high degree of autonomy in the performance of their activities, but are subject to central management control exercised through the Administrator in the areas of:

- policy setting;
- major resource allocation and investment decisions;
- operational decisions affecting more than one component;
- the planning, programming, budgeting and finance processes;
- senior management information systems; and
- operational review and performance measurement.

The organization structure differs from the Program's activity structure. Figure 3 illustrates their relationship and shows the dollar resources that are provided to the various components through appropriations.

Figure 3: Distribution of Resources by Activity/Organization ($000)

ACTIVITY RESOURCES PROVIDED THROUGH APPROPRIATIONS										Estimates 1985-86
Departmental Operations

D. Planning Perspective

1. Environment

Total marine traffic growth to 1995 is expected to be 1.3% annually (Figure 4). Total volume of waterborne commodities should increase from 356.7 million tonnes in 1981 to 428.6 million tonnes in 1995. However, traffic growth rates will vary among regions, with the highest average rate of growth (2.8%) likely to be registered in British Columbia and a real decline (-1.6%) likely to occur in the Prairies.

Figure 4: Forecasts of Marine Traffic to 1995
(in millions of tonnes)

REGION	LOADINGS		UNLOADINGS		TOTAL	
	Base Year 1981	Average Annual % Growth	Base Year 1981	Average Annual % Growth	Base Year 1981	Average Annual % Growth
Atlantic	22.4	3.2	21.1	-1.3	43.5	1.4
Quebec	80.8	0.2	45.7	0.6	126.5	0.3
Ontario	34.1	1.0	40.5	0.0	74.6	0.5
Prairies	0.5	-1.6	-	-	0.5	-1.6
British Columbia*	79.5	3.2	32.1	1.6	111.6	2.8
Canada	217.3	1.9	139.4	0.4	356.7	1.3

* Includes N.W.T.

For the Seaway, virtually no growth in traffic is foreseen for 1984 and 1985. Improvements are foreseen however for the next five years. With 1981 as the base year, the 1995 outlook shows very modest average annual growth of 1.0% for both the Montreal - Lake Ontario and Welland Canal sections of the Seaway (Figure 5).

Figure 5: St. Lawrence Seaway Traffic Forecast to 1995
(in millions of tonnes)

YEAR	MONTREAL - LAKE ONTARIO	WELLAND CANAL
1981	50.57	58.85
1982	42.82	49.02
1983	45.06	50.14
1985 forecast	45.95	54.87
1990 forecast	53.51	62.51
1995 forecast	57.68	67.31

Several projects have been underway for the development and shipment of oil and gas from the Canadian Arctic, especially in the Beaufort Sea. Exploration has already affected and will continue to affect the volume of traffic and the demand for marine services. On the assumption that the marine transportation mode will be used in lieu of pipeline, between 24 and 48 one-way oil vessel transits from the Beaufort Sea are forecast per annum over the 1991-1995 period.

There has been a noticeable decline in the optimism with which the Arctic had previously been viewed as a major frontier of resource development. This decline has been due partly to the sluggish recovery of the economy from the recession and partly to the effectiveness of world-wide conservation measures leading to reduced energy demand in the face of a world-wide oil surplus. As a result, the urgency for year-round Arctic exploration and production has diminished.

Prospects for eastern offshore developments have not changed significantly from the forecasts of a year ago, except for the Labrador sea area. Only marginal growth in marine traffic is expected through 1995, with existing vessel bottoms able to carry the majority of any new production in eastern offshore areas.

With respect to commercial fishing, it is known that some 41,100 registered fishing vessels existed in Canada in 1982. Approximately 91% of all registered vessels in 1982 were salt-water vessels. In terms of distribution, approximately 67% of the vessels were located in the Atlantic provinces, 9% in Quebec and Ontario, and 24% on the West Coast. Approximately 86% of the total Canadian catch of 1.4 million tonnes in 1982 originated in the Atlantic provinces. The situation is not likely to change significantly, either in proportion or in level of activity. Nevertheless, we may expect to see some rationalization of the east-coast fleet over the long term and some real reduction in the size of the Pacific fleet because of overcapacity. Reductions could run up to 1,000 vessels by 1995. Since commercial fishing traffic is not expected to change significantly, no additional demand for Coast Guard services, such as search and rescue, is foreseen.

Pleasure boating and sport fishing put pressure on such marine services as communications and search and rescue. In 1982, more than 1.7 million pleasure craft were in use in Canada. It is expected that the 6.9% annual growth in pleasure-craft population over the 1974-1982 period will not continue over the medium term. In the long term, it is likely to grow at 2.6% annually, more in line with the rate of growth of personal disposable income. Although marine incidents are likely to increase over time with traffic, the rate of increase will probably decline somewhat as a result of enhanced prevention measures.

2. New Initiatives

Currently ongoing initiatives will be continued with emphasis on implementing the recommendations of the Study on Marine Casualty Investigations in Canada, and on improving the safety practices of mobile offshore drilling units.

3. Update on Previously Reported Initiatives

Establishment of Local Ports Corporations

Following proclamation in February 1983 of the Canada Ports Corporation Act, the new corporate Board fully committed itself to attain the objectives set out in the legislation, specifically a move toward greater port autonomy.

Since then, several ports have been established as local port corporations; they are: Montreal and Vancouver on July 1, 1983; Halifax, Quebec and Prince Rupert on June 1, 1984. The Port of St. John's is expected to be proclaimed Local Port Corporation in 1985.

Fleet Capital Investment Plan (FCIP)

The initial Fleet acquisition project, which listed for 1983-84 the planned construction start of five vessels at a total cost of $242.3 million was significantly expanded with the introduction of a special capital program in the spring of 1983. Aside from boosting vessel construction to eleven ships plus three modernization projects with a total initial price tag of close to $700 million, the program also spawned a number of ports and other projects, notably at Sept-Iles and Chicoutimi. The total value of projects embraced by the capital spending initiative thus reached $824 million; additional funding of $34.4 million was obtained in 1983-84 supplementary estimates.

Partly due to a highly competitive market situation, the cost of the vessel acquisition program has fallen to about $600 million. As well, spending on the various vessels and ports projects did not reach targetted levels in 1983-84 as the implicit pace proved too ambitious. In 1984-85 again, spending is projected to fall below the level planned in the Main Estimates ($332 million compared with $390 million). About two-thirds of the 1984-85 spending decrease is represented by the reduction in the total cost of vessel acquisition; the rest may be regarded as work carried into 1985-86.

Figure 6 displays the specific capital projects and spending over the three years (further project detail is provided in the full list of capital projects in Figure 59, page 3-65).

Figure 6: Special Capital Program ($ millions)

Activity	Description	1985-86 Estimates	1984-85 Forecast	1983-84 Actual

4. Program Effectiveness

The different operational situations faced by Marine components preclude the development of a single comprehensive indicator. Measures of achievement are available for most activities and are presented in the activity analysis section.

Section II
Analysis by Activity

A. Aids to Navigation

Objective

To develop, provide, maintain and ensure the efficient operation of aids to navigation, such as conventional aids, radio aids, ship channels and canals to facilitate the safe and efficient movement of marine transportation in Canadian waters.

Resource Summary

The Aids to Navigation activity accounts for approximately 43% of the total 1985-86 Marine Transportation Program expenditures and 44% of the total person-years.

Figure 7: Activity Expenditures ($000) and Person-Years

	Estimates 1985-1986		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Conventional aids	151,354	2,594	141,747	2,581	123,707	2,432
Radio aids	9,881	157	9,621	168	12,461	202
Sounding and dredging	19,712	153	18,219	157	19,150	162
Canso Canal operation	1,324	24	1,234	24	1,304	23
Operating expenditures*	182,271	2,928	170,821	2,930	156,622	2,819
Capital expenditures	191,370	67	278,110	59	85,905	64
Anticipated capital lapse	(4,062)	-	-	-	-	-
Total expenditures	369,579	2,995	448,931	2,989	242,527	2,883
Revenue credited to vote	(1,623)	-	(1,614)	-	(1,232)	-
Net resource requirements	367,956	2,995	447,317	2,989	241,295	2,883

*Includes grants and contributions of $7,000 (1984-85, $57,000; 1983-84, $62,000).

The decrease of approximately $91 million in capital reflects a reduction in the vessel replacement program. The increase in operating expenditures is due to the provision of 4% for increases in salaries, a one million dollar workload increase for ship refit and a transfer of resources from the Department of Public Works for the cost recovery of dredging.

Revenue results from the recovery of costs for services provided to other government agencies. Helicopter services provided to the Department of Fisheries and Oceans account for $1.2 million.

1983-84 Financial Performance: Savings were realized as a result of salary increases remaining below provisions and because some vessels were inoperative. A change in cash flow for the vessel replacement program is responsible for the capital lapse of $8 million.

Figure 8: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y

Capital expenditures	85,905	64	94,134	11	(8,229)	53
Total expenditures	242,527	2,883	254,781	2,827	(12,254)	56
revenue	(1,232)	-	(1,501)	-	269	-
Net	241,295	2,883	253,280	2,827	(11,985)	56

Description

This activity facilitates the safe and efficient movement of marine traffic by the following means.

Conventional Aids: A network of fixed and floating aids such as buoys, lighthouses and range-lights marks channels, harbour entrances and prominent landmarks and obstructions. Major operating tasks are to determine the marine aids needed and to develop, place, operate and maintain these aids. The placement, operation and maintenance of the aids require substantial support from the Coast Guard fleet of vessels and aircraft.

Radio Aids: Radio positioning systems such as Loran 'C', radio beacons and racons are provided for long-, medium- and short-range navigation.

Sounding and Dredging: Water-depth monitoring and, where necessary, dredging ensure that ship channels remain at the stated depth and width.

Canso Canal Operation: The canal is operated and maintained to provide a short-cut for vessels from the St. Lawrence Gulf to the eastern coastline of Nova Scotia and the Atlantic coast of the United States.

Performance Information/Resource Justification

Conventional Aids: The network consists of approximately 13,200 floating aids (buoys) and 7,300 land-based aids, of which 272 are major lighthouses. The locations of aids are shown on charts, and the positions and characteristics of lighted aids are in the List of Lights, Buoys and Fog

Signals, both of which references are used by ships in Canadian waters. The Canadian aids-to-navigation system is in accordance with the international system adopted by the International Association of Lighthouse Authorities. The Coast Guard delivers its services through a decentralized operational structure consisting of five regional headquarters. The regions operate 11 main bases and 5 sub-bases in delivering the aids program. (See Figure 67, page 3-77.)

The primary indicator of operational effectiveness is the degree to which these aids are in service and operating as advertised. The main measure of operational effectiveness is the time that a conventional aid is not in service. Figure 9 shows planned and actual achievement on average for all conventional aids since 1977-78.

Figure 9: Actual and Planned Average Days for which a Conventional Aid is not Available

Figure 10 summarizes the operating resources needed to achieve these results for the three years to 1985-86 and the key underlying variables affecting these resource requirements.

Figure 10: Performance and Resource Data - Conventional Aids

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Operating expenditures ($000)			
Ship support	68,440	67,222	53,985
Aircraft support	9,995	7,491	7,490
Other	72,919	67,034	62,232
	151,354	141,747	123,707
Key resource determinants			
No. of aids	20,500	20,500	20,510
Amount of fleet support hours provided	179,400	179,400	184,382

Radio Aids: The radio location system consists of some 200 electronic aids, such as racons and beacons, and a long-range electronic navigational aids system, Loran 'C'.

The Loran 'C' program on the east coast was completed in 1984-85. The replacement of Decca and Loran 'A' systems with Loran 'C' has resulted in a saving of 24 person-years.

The main indicator of operational effectiveness is the functioning of the aids in accordance with advertised characteristics. The measure of operational effectiveness is the percentage of time the aids are functioning. Planned availability for Loran 'C' is 99.7%. This target has been consistently met.

Sounding and Dredging: The Coast Guard's dredging program relates to main shipping channels and approach channels to ports and harbours. Dredging programs are carried out in each Coast Guard region for general maintenance of channels and provision of new channels in response to requests from local and regional interests seeking waterway improvements for trade expansion. The dredging is carried out on Coast Guard's behalf by Public Works Canada (PWC) and by private dredging firms under contract.

Water-depth sounding is conducted to provide data for dredging operations and to determine periodically the status of the channels. Sounding work is carried out on behalf of Coast Guard by PWC, except in the St. Lawrence and Saguenay Rivers, where Coast Guard equipment is employed to sound approximately 7,500 hectares annually.

Figure 11 summarizes the sounding and dredging program planned for 1985-86.

Figure 11: Resource Data - Sounding and Dredging ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Water depth sounding	5,395	5,138	3,862
PWC dredging	8,590	7,034	6,933
Contracted dredging	5,727	6,047	8,355
Total resource requirements	19,712	18,219	19,150

Canso Canal Operation: On average, the canal is kept open between 280 and 295 days a year and provides transit for some 2,600 vessels.

Capital Expenditures: Figure 12 outlines the planned 1985-86 capital program. The program calls for the commissioning of three class 1100, one class 1050 and two class 800 vessels during the 1985-86 fiscal year.

Figure 12: Summary of Main Estimates Capital Projects, 1985-86 ($000)

	Total Estimated Cost	Forecast Spending to March 31/85	Planned Spending 1985-86	Future Years' Spending
Conventional aids

B. Ship Movement Systems and Services

Objective

To develop, provide, maintain and ensure the efficient operation of vessel traffic services facilities, a network of coastal radio stations, and other communications and information systems to facilitate the safe and expeditious movement of marine traffic in Canadian and adjacent waters.

Resource Summary

The Ship Movement Systems and Services activity accounts for approximately 9% of the total 1985-86 Marine Transportation Program expenditures and 14% of the person-years.

Figure 13: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Vessel traffic services	25,901	447	28,357	510	23,524	507
Communications services	30,891	494	29,719	494	27,783	512
Operating expenditures*	56,792	941	58,076	1,004	51,307	1,019
Capital expenditures	17,363	-	12,412	2	11,782	2
Total expenditures	74,155	941	70,488	1,006	63,089	1,021
Revenue credited to vote	(415)	-	(415)	-	(298)	-
Net resource requirements	73,740	941	70,073	1,006	62,791	1,021

* Includes grants and contributions of $27,000 in 1983-84.

Revenue is generated from services provided to other government agencies. Recovery is also made for a radio message service provided to the private sector. This revenue (estimated at $2.4 million for 1985-86) is credited to the Consolidated Revenue Fund and is not available for use by the activity.

1983-84 Financial Performance: Savings were realized as a result of salary increases remaining below provisions and due to an under-utilization of person-years. The lapse of $3 million in capital expenditures was caused by the delay of the following projects: VTM Prince Rupert, VTM Halifax and new generation communications control system.

Figure 14: 1983-84 Financial Performance ($000)

Net	62,791	1,021	68,767	1,061	(5,976)	(40)

Description

The Ship Movement Systems and Services activity supports marine traffic through two services.

Vessel Traffic Services: This component provides vessel traffic information, advice, instruction and emergency coordination resources on a 24 hour, 7 day a week basis to ensure the safe and efficient movement of ships in selected Canadian waters. The service is provided through 9 systems using 12 vessel traffic centres, including one seasonal, across Canada (Figure 68, page 3-77). The majority of these systems are responsible for interactive traffic management. Additionally, the Eastern Canada Traffic System (ECAREG) and the Arctic Canada Traffic System (NORDREG) are respectively mandatory and voluntary reporting and clearance systems for ships under the Canada Shipping Act. Marine information is prepared and disseminated through the Notices to Mariners, List of Lights and Notices to Shipping. The primary purpose of these systems is to reduce the risk to shipping, lives, property and the environment by providing marine information on navigation, meteorology, shipping, ice conditions, and regulations for the benefit of external marine and shipping interests, internal Coast Guard operations and the public. Their secondary purpose is to ensure compliance with Canadian regulations by ships entering Canadian waters.

Communications Services: These consist of a national network of Coast Guard radio stations, both manned and remote controlled, and operated 24 hours a day, 7 days a week. Coast Guard radio stations have two major roles. The primary is to provide shipping in Canadian and adjacent water with a safety service to meet the requirement of the Safety of Life at Sea (SOLAS) Convention. This role is fulfilled by maintaining a continuous listening watch on the distress and calling frequencies to detect radio transmissions from mariners in distress. The secondary role is to provide administrative and commercial communications services through the provision of a public correspondence service. Closely allied to this service is the communications service required for the command and control of the Canadian government's civilian fleet.

Performance Information/Resource Justification

Vessel Traffic Services: Performance is based on a 99.5% availability of services. To date this target has consistently been met. Statistical information is shown in Figure 15.

Figure 15: Performance and Resource Data - Vessel Traffic Services

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Operating expenditures ($000)			
Vessel traffic services	25,901	28,357	23,524
Selected key resource variables			
Hours of operation at traffic centres	113,900	113,900	113,056
Trends in use of services			
Ship movements	419,000	419,000	435,700
Messages processed	994,000	994,000	1,026,800

Other key variables include the amount and age of equipment to be maintained and the standards to which it is maintained.

Communications Services: Operational effectiveness is assessed primarily by the degree to which communications equipment is functioning as intended. Through a back-up equipment system, the service is made available at all times. Figure 16 shows resource requirements and one key trend in operations. Other key resource variables include the amount, type and age of the equipment to be maintained and the standards to which it is maintained.

Figure 16: Performance and Resource Data - Communications Services

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Operating expenditures ($000)			
Radio station operations and equipment maintenance	30,891	29,719	27,783
Key resource variables			
Hours of operation at manned radio stations	502,240	502,240	502,240

Capital Expenditures: Figure 17 outlines the planned 1985-86 capital program.

Figure 17: Summary of Main Estimates Capital Projects 1985-86 ($000)

	53,872	16,521	17,363	19,988

C. Icebreaking, Arctic and Other Ship Support

Objective

To develop, maintain and ensure the efficient utilization of icebreakers, helicopters and other facilities and services to facilitate the safe and expeditious movement of marine traffic through ice-covered waters and to prevent flooding caused by ice jams on the St. Lawrence River and other areas as required, and also to support specific non-Coast-Guard activities and the transportation by sea of equipment and supplies to government locations, private companies and individuals located in the Arctic.

Resource Summary

This activity accounts for approximately 21% of the total 1985-86 Marine Transportation Program expenditures and 17% of the total person-years.

Figure 18: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Icebreaking and escorting	55,908	826	54,193	825	49,497	757
Flood control	8,963	125	8,491	125	8,302	118
Ice reconnaissance	15,650	-	14,293	-	12,692	-
Arctic research and development	4,665	9	4,622	9	1,485	-
Other support	26,813	229	28,421	222	23,973	225
Operating expenditures	111,999	1,189	110,020	1,181	95,949	1,100
Capital expenditures	71,765	5	23,916	-	8,723	-
Total expenditures	183,764	1,194	133,936	1,181	104,672	1,100
Revenue credited to vote	(6,722)	-	(6,722)	-	(6,799)	-
Net resource requirements	177,042	1,194	127,214	1,181	97,873	1,100

The increase of $48 million in capital is to provide for the construction of an icebreaker, class 1200, under the vessel replacement program.

Revenue credited to the vote arises from the co-ordination of the annual delivery of equipment and supplies to the Arctic (contracted through the private sector) for other government departments. In addition, revenue of $6.8 million is credited to the Consolidated Revenue Fund from the charter of the cable ship CCGV John Cabot for transatlantic-cable repair work. This work is performed for Teleglobe Canada on a full cost-recovery basis.

1983-84 Financial Performance: The 1983-84 plan was increased by a supplementary budget of $3.3 million to provide for a payment to Canarctic for effecting modifications to the vessel "M.V. Arctic". The actual payments to Canarctic were $1.0 million lower than planned. The other actual costs are under plan due to a postponement of mid-life vessel refit and to savings in operating costs accruing from the unscheduled lay-up of vessels for repairs.

Figure 19: 1983-84 Financial Performance ($000)

Revenue	(6,799)	-	(6,409)	-	(390)	-
Net	97,873	1,100	112,368	1,125	(14,495)	(25)

Description

Icebreaking and Escorting: This service involves the escorting of ships through ice-covered waters on the east coast, in the Gulf of St. Lawrence and the Great Lakes during winter months and in the Arctic during the summer months. Specific harbours are also opened on request to facilitate movement of cargo and fishing vessels.

Flood Control: Ice in the St. Lawrence River below Montreal is managed to facilitate the orderly circulation of ice and thus prevent damage to or loss of property threatened by flood.

Ice Reconnaissance: Aircraft are chartered for ice reconnaissance, through contract administered by the Department of Environment, to advise the shipping industry of ice conditions.

Arctic Research and Development: This service includes sponsorship of mission-oriented research and development projects in the Canadian Arctic. Transport Canada plays a co-ordinating role in this program, which is shared with Fisheries and Oceans Canada and Environment Canada.

Other Support: The other services provided by this activity are:

- Arctic Resupply - This involves the co-ordination of an annual Eastern Arctic Sealift to provide food, materials, fuel and equipment to northern settlements and defence sites.

- Support to Other Government Departments and Agencies - This service provides vessels and aircraft to support specific operations of other government departments and agencies. The most significant of these services is the charter of the CCGV John Cabot to Teleglobe Canada and the provision of ships to the Department of Fisheries and Oceans for hydrographic work in the Arctic.

- Canarctic Shipping Company Limited - Through this company (government share 51%, North Water Navigation Ltd. 49%), the government operates the M.V. Arctic, an experimental Arctic Class 2 bulkcarrier, to further the development of Canadian expertise in cargo-ship/icebreaker technology and to demonstrate the feasibility of an extended Arctic navigation season. Canarctic Shipping Company has contracted to carry the entire output of the Nanisivik Mine, by means of the M.V. Arctic during the summer season. In a joint venture with Federal Commerce and Navigation, the Company has also contracted with Cominco to carry 75% of the output of the Polaris Mine on Little Cornwallis Island. The M.V. Arctic is also being used as a laboratory for studying vessel design and investigating ice conditions in Arctic areas, with the results being made available to Canadian shipbuilding and shipping companies.

Performance Information/Resource Justification

Icebreaking and Escorting: To respond to the requirement for icebreaking assistance, seven dedicated icebreaking vessels are employed. This fleet is complemented by those aids-to-navigation vessels that have icebreaking capability. Statistical performance data are shown in Figure 20.

Figure 20: Performance and Resource Data - Icebreaking and Escorting

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Operating expenditures ($000)			
Ship support	49,982	48,735	38,473
Aircraft support	1,567	1,446	2,290
Other	4,359	4,012	8,734
	55,908	54,193	49,497
Demand for service			
Ships assisted	3,150	3,100	3,015
Coast Guard fleet support			
Ship hours provided	51,000	47,645	40,274

The 1985-86 Estimates and the 1984-85 forecast are based on average ice conditions experienced in the areas served over the past years. Actual resource requirements will vary if actual ice conditions depart significantly from the average.

Flood Control: Operating resource requirements are based on an average of 130 days (116 days for 1983-84) of ship support for control of ice build-up. This figure has not varied significantly over the past years.

Ice Reconnaissance: The estimated 1985-86 operating cost for this service is $15.7 million, which represents the contract cost for 2,200 hours of flying time.

Arctic Research and Development: This program funds approximately 100 research projects related to Arctic marine transportation. The program was evaluated last year and the essential conclusion of the review was that the program has been very effective in accomplishing its objectives. Most of the benefits of the program apply to marine transportation in general and not just to the Arctic, and some of the technological benefits also go well beyond marine transportation.

Other Support: Figures 21 and 22 set out performance data and the operating expenditures required for the other three services offered under this activity.

Figure 21: Performance and Resource Data - Other Support

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Operating expenditures ($000)			
Arctic resupply	7,057	7,513	8,222
Support to other government departments and agencies	18,047	17,091	10,533
Canarctic Shipping Company Limited	1,709	3,817	5,218
	26,813	28,421	23,973
Performance data			
Arctic resupply			
Cargo tonnage delivered	42,000	45,200	40,353
Support to other government departments and agencies			
Ships hours provided	14,500	14,300	13,559

Performance data for Canarctic Shipping Company Limited are displayed separately in Figure 22 because the Company operates on a calendar year basis.

Figure 22: Financial and Operational Statistics of Canarctic Shipping Company Limited

	1981	1982	1983	Forecast 1984	Forecast 1985
Financial results ($000)					
Revenues	4,711	6,485	6,730	5,491	10,303
Expenditures	9,384	9,695	9,216	8,794	12,012
Excess of expenditures over revenue	4,673	3,210	2,486	3,303	1,709
Modification to the vessel M.V. Arctic	-	-	2,732	514	-
Government subsidy	4,673	3,210	5,218	3,817	1,709
Cargo tonnage transported (000)	133	131	132	133	185

Capital Expenditures: Figure 23 outlines the planned 1985-86 capital program.

Figure 23: Summary of Main Estimates Capital Projects, 1985-86 ($000)

	Total Estimated Cost	Forecast Spending to March 31/85	Planned Spending 1985-86	Future Years' Spending
Vessel replacement:				
1 Class 1200 Icebreaker to replace CCGV Labrador	108,100	15,464	52,000	40,636
Major mid-life refit of the Sir John A Macdonald	13,972	-	13,972	-
Misc equipment	28,627	15,481	5,793	7,353
	150,699	30,945	71,765	47,989

Canarctic intends to carry out important modifications to the M.V. Arctic which will enhance the vessel's navigation capability in the Arctic and enable it to participate in the Panarctic demonstration project for the shipment of oil out of Bent Horn. The estimated cost of the modifications is approximately $25 million. Planned lease financing will have an impact on future years' appropriations only.

D. Marine Search and Rescue

Objective

To develop, maintain and ensure the efficient operation of facilities and services to minimize loss of life and personal injuries in the marine environment as a result of search and rescue incidents, and also to increase volunteer participation in promoting safe boating through existing public- and private-sector education programs to minimize the demand on Coast Guard search-and-rescue resources.

Resource Summary

The Search and Rescue (SAR) activity accounts for approximately 7% of the total 1985-86 Marine Transportation Program expenditures and 11% of the total person-years.

Figure 24: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Anticipated capital lapse	(2,052)	-	-	-	-	-
Total resource requirements	62,390	749	59,165	753	55,427	720

*Includes grants and contributions of $610,000 in 1985-86 and 1984-85 (1983-84, $712,000). See page 3-69 for details.

1983-84 Financial Performance: A delay in the vessel building program, due to design difficulties, resulted in a lapse of funds provided for placing new SAR vessels in operation.

Figure 25: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Operating expenditures	39,042	720	43,799	765	(4,757)	(45)
Capital expenditures	16,385	-	16,670	-	(285)	-
Total expenditures	55,427	720	60,469	765	(5,042)	(45)

Description

This activity attempts to minimize loss of life in the marine environment by the following means.

Coast Guard Rescue Operations: The provision of dedicated search and rescue units and associated facilities, in conjunction with the Department of National Defence.

Search and Rescue Prevention: Small-craft boating safety is promoted through educational programs designed to foster increased public awareness of safety-related matters.

Canadian Marine Rescue Auxiliary Promotion and Support: To complement the Coast Guard rescue operations, the Coast Guard promotes and supports the activities of the Canadian Marine Rescue Auxiliary which provides search and rescue capability and participates in boating safety programs across the country.

Performance Information/Resource Justification

Coast Guard Rescue Operations: In conjunction with the Department of National Defence, the CCG mans the rescue co-ordination centres in Halifax, N.S.; Trenton, Ont.; and Victoria, B.C.; and operates marine rescue sub-centres in St. John's, Nfld., and Québec City, P.Q. In addition, Coast Guard operates 40 SAR vessels, 30 inshore rescue boats (IRB) and 3 hovercraft. Primary units operate on a 24-hour, 7-day-a-week basis and provide both offshore and inshore SAR coverage in areas where incident analysis has shown the need for dedicated SAR coverage. These units are required to be underway to the scene of an accident within 30 minutes of notification for action. The IRB program is pursued during the summer months only to deal with increased pleasure boating activity.

Figure 26: Performance and Resource Data - Coast Guard Rescue Operations

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Operating expenditures ($000)			
Ship support	35,210	33,654	31,663
Other	8,192	7,080	4,164
	43,402	40,734	35,827
Selected key resource variables			
Ship hours provided	294,000	293,165	292,258
Utilization of service			
Incidents responded to by Coast Guard	5,200	5,100	5,100

Search and Rescue Prevention: An extensive boating safety program, at an estimated cost of $1.2 million in 1985-86, is conducted to minimize the number of small-boat incidents. These funds are used to produce educational safety movies, television commercials and programs, publications such as the Boating Safety Handbook, to conduct safety demonstrations and to carry out courtesy examinations. The number of boating safety demonstrations is projected to increase from 2,300 in 1983-84 to 2,400 in 1984-85 and 2,500 in 1985-86. Previously, the number of courses were reported as a workload indicator, however, the emphasis has now shifted to boating safety demonstrations, which are considered to be more effective.

Canadian Marine Rescue Auxiliary Promotion and Support: Rescue operations are supplemented by vessels owned by voluntary Canadian Marine Rescue Auxiliary (CMRA) units. Figure 27 shows the growth of the auxiliary, along with its rescue activity. The annual cost of this program is $1.5 million. The auxiliary units are compensated for fuel and insurance costs incurred when they respond to a search-and-rescue incident and for authorized training and travel costs for their crews. CMRA members also participate in the SAR prevention program.

Figure 27: Trends In Canadian Marine Auxiliary Growth and Workload

Year	No. of Members	No. of Vessels	No. of Incidents Attended
1981	1,126	492	844
1982	1,298	607	1,042

E. Regulatory

Objective

To develop, administer and enforce regulations and standards to ensure the seaworthiness of ships, the safety of their cargoes, the safety of operations to minimize shipping casualties and crew accidents, and also the probability of pollution from ships; to ensure that works placed in, upon, over, under, through or across any navigable waters do not interfere with the public's right of navigation; and to mitigate the effects of pollution on the environment from ship-source spills.

Resource Summary

The Regulatory activity accounts for approximately 4% of the total 1985-86 Marine Transportation Program expenditures and 8% of the total person-years.

Figure 29: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Ship safety	22,233	405	21,812	402	20,085	378
Emergencies	6,743	53	6,660	53	5,298	63

Navigable waters protection	1,906	28	1,731	28	1,430	31
Operating expenditures*	33,488	530	32,557	524	28,391	512
Capital expenditures	3,587	-	6,178	-	3,304	-
Total resource requirements	37,075	530	38,735	524	31,695	512

*Includes grants and contributions of $29,000 in 1984-85 and 1985-86 (1983-84, $15,000). See page 3-69 for details.

Approximately $3.5 million will be recovered from the private sector for inspections and examinations by the ship-safety element. This revenue is credited to the Consolidated Revenue Fund and is not available for use by the activity.

1983-84 Financial Performance: Unplanned costs for clean-up operations and legal fees to defend damage claims are mainly responsible for the operating expenditures in excess of the plan. The postponement of the National Marine Testing and Training project is responsible for the $3 million lapse in capital expenditures.

Figure 30: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y

Total expenditures	31,695	512	32,654	492	(959)	20

Description

The Regulatory activity consists of the following four organizations.

Ship Safety: This organization administers the Canada Shipping Act on behalf of the Minister. This function involves the development and promulgation of regulations and standards; the inspection of ships and ships' equipment, oil-drilling rigs and cargoes to ensure seaworthiness; and the registration of ships and licensing of vessels. The organization also inspects, registers, and licenses air cushion vehicles (ACVs), monitors the marine safety training program, and examines and certifies officers and crews to ensure that ships are manned with competent personnel. This organization is also responsible for the surveillance, investigation and enforcement of pollution regulations that concern ships.

Emergencies: This organization is involved in clean-up of pollution from shipping and acts as a resource agency for marine pollution incidents from other sources. The organization evaluates, acquires and maintains the Coast Guard's pollution countermeasures equipment and regularly provides exercises for Coast Guard and other personnel.

Marine Casualty Investigation: On behalf of the Minister, this organization is responsible for the investigation of shipping casualties and crew accidents; for the administration and technical presentation of formal investigations (public hearings); for the review of all investigation reports and the formulation of recommendations for preventing a recurrence; for the recording of all casualties and accidents; for the production of annual statistics; and, upon request, for the provision of information on casualties and accidents.

Navigable Waters Protection: Under the Navigable Waters Protection Act, the Coast Guard is responsible for the review, analysis and approval of works (bridges, dams, wharves, overhead and submarine power and telephone cables, etc.) constructed in navigable waters to protect the public right of navigation; for the removal of wrecked vessels; and for the investigation of incidents of obstruction to navigation. Under the Canada Shipping Act, this organization is also responsible for the administration of Receiver of Wreck activities, which provide for the preservation, protection and disposal of wrecked vessels.

Performance Information/Resource Justification

Ship Safety: Of the 35,622 vessels registered in Canada, 5,758 require inspections. The Ship Safety Branch conducted 3,229 ship inspections and 15,121 personnel examinations in 1983-84. To meet the Branch's responsibilities, 30 district offices, employing 229 inspectors and examiners reporting to 5 regional headquarters, are established throughout Canada. Figure 31 shows statistical information over the past years.

Figure 31: Performance and Resource Data - Ship Safety

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Operating expenditures ($000)			
Ship Safety	22,233	21,812	20,085
Performance data			
Ship inspections	3,800	3,463	3,299
Ship plans and drawings verified	13,400	12,700	11,300
Personnel examinations carried out	14,000	13,600	15,121
Exemptions issued	570	570	662

Emergencies: To respond to clean-up requirements, the Coast Guard has a core of 53 employees located in headquarters, regional and district offices of the Canadian Coast Guard. Since all clean-up operations are carried out on a full cost-recovery basis, only salary and equipment maintenance costs are included in the appropriation. Figure 32 shows oil-spill responses and costs over the past years.

Figure 32: Oil-Spill Countermeasure Responses and Related Costs ($000)

Year	Number of Responses	Total Expenditures
1980-81	128	4,981
1981-82	68	7,198
1982-83	41	6,056
1983-84	139	2,099

Marine Casualty Investigations: Twenty-six investigators located in Marine headquarters and regional offices investigate shipping casualties and crew accidents.

Following the release of the "Study on Marine Casualty Investigations in Canada" in September, 1984, the responsibility for this activity was transferred, in the interim, from the Commissioner of the Coast Guard to the Marine Administrator and the organization was renamed the "Marine Casualty Investigations Division". In addition, a dedicated team has been established to give effect to, or provide advice on, those of the Study's one hundred recommendations which pertain to the marine mode.

Figure 33: Marine Casualty Investigations - Workload Statistics

	Number of Incidents	Number of Fatalities	Number of Reports Issued
Calendar year			
1980	972	72	176
1981	1,365	70	163
1982	1,463	181	161
1983	1,345	47	155

Navigable Waters Protection: In 1983-84, 1,743 applications were processed pursuant to the requirements of the Act, which regulates the construction of works placed in, upon, over, under, across and through navigable waterways to protect the public's right of navigation. The projected number of applications for 1984-85 and 1985-86 is 1,875 each year.

Capital Expenditures: Miscellaneous small-equipment purchases for marine emergencies in the amount of $1.5 million account for the majority of the capital expenditures.

F. Public Wharves and Harbours

Objective

To develop, administer and maintain designated harbours and port facilities, in order to meet commercial shipping needs and to support a safe and efficient national marine transportation system.

Resource Summary

This activity accounts for roughly 8% of the total 1985-86 Marine Transportation Program expenditures and 1% of the total person-years.

Figure 34: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Public Wharves and Harbours						
Dredging	6,096	-	6,254	-	5,403	-
Repairs	26,679	-	22,540	-	15,576	-
Management of ports	5,219	90	3,754	90	4,935	78
Operating expenditures	37,994	90	32,548	90	25,914	78
Capital expenditures	39,671	3	43,327	3	23,764	-
Anticipated capital lapse	(7,868)	-	-	-	-	-
	69,797	93	75,875	93	49,678	78
Harbour Commissions payments	2,000	-	3,480	-	2,216	-
Total resource requirements	71,797	93	79,355	93	51,894	78

In 1985-86, recoveries of $10.2 million will be achieved through wharfage and harbour charges. This revenue is credited to the Consolidated Revenue Fund and is not available for use by the activity.

1983-84 Financial Performance: The lapse of $8.5 million in operating expenditures and Harbour Commission payments occurred because dredging was done at lower costs than anticipated and projects for wharf repairs and shore protection works were delayed or deferred. The deficit of $9.5 million in capital expenditures was financed mainly through a supplementary budget, as part of the special capital program to accelerate the construction of terminals and the extension of wharves and sheds.

Figure 35: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Operating expenditures	25,914	78	30,027	91	(4,113)	(13)
Capital expenditures	23,764	-	14,230	-	9,534	-
Harbour Commissions payments	2,216	-	6,674	-	(4,458)	-
Total Expenditures	51,894	78	50,931	91	963	(13)

Description

Public Wharves and Harbours: This organization maintains, administers and develops 366 sites in support of commercial transport. The smallest of these ports have limited traffic and exist only to provide access to isolated communities. The larger ports are very active, and their support to local industries is of great significance to regional economies. In total, these ports account for 20% of the national marine tonnage. As most of the ports are not financially self-sufficient, they are administered by Transport Canada as public ports.

Wharves, sheds, storage areas and harbours are provided at the ports on the basis of users' needs. Day-to-day local operational activity at the ports includes such functions as enforcing regulations regarding facility use, arbitrating between users and collecting user fees. Not provided are such direct services as cargo handling.

Harbour Commissions Payments: Nine Harbour Commissions, which handle approximately 20% of the national marine tonnage, exist as quasi- commercial bodies and are largely financially self-sufficient. However, contributions, grants or loans may be sought for major port development. Loans of approximately $3 million are presently outstanding. (See Figure 63, page 3-72.)

Performance Information/Resource Justification

Public Wharves and Harbours: Most operating expenditures go to the repair, rebuilding and preventive maintenance of existing capital structures and works. The plans for 1985-86 consist of at least 174 infrastructure maintenance and repair projects and 19 maintenance dredging projects, at an estimated cost of $33 million. In 1984-85, the budget was also $33 million for the repair and dredging projects while 1983-84 budget was $29 million. Some wharf repairs scheduled for 1983-84 and 1984-85 were cancelled and plans for reconstruction of the wharves are now underway, as detailed studies of the sites determined that repairs would not suffice to bring the wharves to an acceptable standard. This explains the lower forecast for 1984-85 and the lower actual expenditures for 1983-84.

Planned program rationalization is expected to reduce the number of sites administered and thereby control growth in the maintenance budget. Maintenance and inspection standards are also being developed to allow for better workplans that will stabilize the facilities-maintenance budget.

Harbour Commissions Payments: Included in the Marine Program are commitments to provide financial assistance to Harbour Commissions for certain capital projects. The following projects were funded from the special capital program.

Figure 36: Payments to Harbour Commissions ($000)

Harbour Commission / application	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Hamilton - construction of the East Port Complex	2,000	2,965	1,831
Windsor - West End Marina	-	515	385
Total	2,000	3,480	2,216

Capital Expenditures: Capital expenditures are made primarily to meet user requirements for wharves, sheds, storage areas, dredged harbours, breakwaters and other infrastructures required for efficient port operations. For a detailed list of the major capital projects, refer to Figure 59, page 3-65.

G. Direction and Administration

Objective

To develop policies and directives and to administer efficiently the specific marine facilities and services essential to the national transportation system and within the federal government's jurisdiction and according to the Department of Transport's overall policies, regulations, directives and guidelines.

Resource Summary

This activity accounts for 4% of the total 1985-86 Marine Transportation Program expenditures and 5% of the total person-years.

Figure 37: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Marine Administration	4,672	76	4,602	73	4,821	83
Coast Guard Administration	15,896	306	16,754	286	16,290	353
Operating expenditures*	20,568	382	21,356	359	21,111	436
Capital expenditures	13,038	-	13,596	-	5,218	-
Total resource requirements	33,606	382	34,952	359	26,329	436

*Includes grants and contributions of $50,000 in 1984-85 and 1985-86 (1983-84, $117,000) See page 3-69 for details.

1983-84 Financial Performance: A delay in the construction of bases is responsible for the $5 million lapse in capital expenditures. The over-utilization of person-years is compensated by an under-utilization in other activities.

Figure 38: 1983-84 Financial Performance ($000)

	1983-84					
	Actual		Main Estimates		Change	
	$	P-Y	$	P-Y	$	P-Y
Operating expenditures	21,111	436	20,981	327	130	109
Capital expenditures	5,218	-	10,039	-	(4,821)	-
Total expenditures	26,329	436	31,020	327	(4,691)	109

Description

Marine Administration: This Administration consists of the offices of the Marine Administrator and the Marine Deputy Administrator, Policy and Planning, supported by various staff groups. Their functions are to formulate and direct national marine policy; to establish corporate goals, objectives, priorities and accountability measures; to direct the planning, programming, budgeting and operations review processes; to administer research and development programs; to exercise financial control; and to administer management information systems. Staff also provide policy advice to those Crown Corporations reporting to the Marine Administrator.

Coast Guard Administration: This Administration consists of the offices of the Commissioner and the Director General for each region. This group deals with any issue specific to the Coast Guard operations and is responsible for the development of policies, directives and guidelines and for the provision of services respecting planning, programming, finance, office and personnel. Previously, this activity included the materiel management and accommodation services, and the offices of the District Managers (see page 3-76, figure 66).

Performance Information/Resource Justification

This activity accounts for the following percentage of the total operating expenditures and transfer payments of the Program:

Figure 39: Direction and Administration as a Percentage of Total Operating Expenditures and Transfer Payments

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Total operating expenditures including transfer payments (in thousands of dollars)	483,218	475,816	420,552
Direction and Administration operating expenditures including transfer payments (in thousands of dollars)	20,568	21,356	21,111
Direction and Administration as a percentage of total operating expenditures	4.26%	4.49%	5.02%

Capital Expenditures: The major items are the reconstructions of the Prescott and Parry Sound Bases, at a total estimated cost of $25.5 million, of which $8.3 million is budgeted for 1985-86.

H. Major Ports

Introduction

This subsection summarizes the financial support provided by the federal government to Ports Canada. The Canada Ports Corporation and the Local Port Corporations (of which there are presently five), are all Schedule C-2 Crown corporations. The presentation also provides background information about corporate operations and the other sources of financial support available to the Corporations.

Objective: The objective of the national ports policy for Canada, as stated in the Canada Ports Corporation Act, is to create a port system that:

- is an effective instrument of support for the achievement of Canadian international trade objectives and of national, regional and local economic and social objectives;
- is efficient;
- provides accessibility and equitable treatment in the movement of goods and persons to users of Canadian ports;
- provides local port corporations with a high degree of autonomy for the management and operation of ports at which they are established, consistent with the responsibility of the Minister of Transport to ensure the integrity and efficiency of the national ports system and the optimum deployment of resources; and
- is co-ordinated with other marine activities and surface and air transportation systems.

Resource Summary

This activity accounts for approximately 3% of the Marine Program's total resources.

Figure 40: Activity Expenditures and Disbursements ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Financial support to Ports Canada for fixed-asset acquisitions and renovations:			
Budgetary payments	21,209	37,529	19,148
Loans	7,971	4,190	4,881
	29,180	41,719	24,029

All Ports Canada loans bear interest at rates that range from 6.25% to 15.625%. Refer to the loan schedule (Figure 63, page 3-72) for a complete listing.

1983-84 Financial Performance: A change in cash flow for the construction of the Prince Rupert coal and grain terminals ($9.3 million) and the Halifax Dust Control ($0.7 million) resulted in a lapse of $10.0 million. On the other hand, as part of the special capital program, the Corporation received authority in Supplementary Estimates to advance the construction of new port facilities at Sept-Iles and Chicoutimi and subsequently spent $1.6 million that had not been budgeted in the original Estimates.

Figure 41: 1983-84 Financial Performance ($000)

	1983-1984		
	Actual	Main Estimates	Change
Financial support to Ports Canada for fixed-asset acquisitions and renovations:			
Budgetary payments	19,148	27,577	(8,429)
Loans	4,881	4,909	(28)
	24,029	32,486	(8,457)

Description

Ports Canada, whose head office is in Ottawa, operates ports and related facilities at 15 locations across Canada (see Figure 69, page 3-78). These ports handle approximately half the marine freight tonnage in Canada. Several of the ports also operate passenger terminals. The ports are operated either as non-corporate ports within the Corporation or as separate local port corporations. In addition, Ports Canada is a majority shareholder in Ridley Terminals Inc., a joint venture of the Corporation and Federal Commerce and Navigation Limited, a major Montreal-based company. The Corporation holds 90% of the common (voting) shares. Debt financing, guaranteed by the Government of Canada up to $205 million, has been arranged for partial financing of the coal-handling facilities; Ridley Terminals Inc. has provided the remaining funding requirement through equal equity contributions by its two partners. The land and infrastructure are being leased from the Prince Rupert Port Corporation.

Other Background Information

Spending on the capital program planned by Ports Canada for its 1985 fiscal year is budgeted at $139.5 million, of which $7.971 million is in the form of loans from the government and $21.209 million is to be funded by budgetary grants. Ports Canada also plans to repay $8.7 million of loans to the government during the year. Because the Corporation operates on a calendar year as opposed to the government's fiscal year, the amount of government funding provided through appropriations will not necessarily coincide with the Corporation's reported use of such resource in a given year. Figure 42 summarizes these financial requirements. Figure 43 summarizes the financial results of the Corporation's operations.

Figure 42: Ports Canada - Summary of Capital Requirements funded from Appropriations (by calendar year in $000)

	Total Estimated Cost	Prior Years' Forecast Expenditures	Budget 1985	Future Years' Requirements
Sept-Iles--Pointe-Noire, Que.				
Renewal of port facilities	36,150	17,422	14,047	4,681

*Excludes Ridley Terminals Inc.

I. Bridges

Introduction

This subsection summarizes the financial support provided by the federal government to The Jacques Cartier and Champlain Bridges Incorporated, a wholly owned subsidiary of The St. Lawrence Seaway Authority. The Corporation manages, controls, operates and maintains the Jacques Cartier Bridge and the Champlain Bridge which includes a portion of the Bonaventure Autoroute in Montreal, Quebec.

Objective: The objective of the Corporation is to provide the public with a safe and efficient transit over the bridges, roadways and autoroute pertaining to its jurisdiction, and to provide such service without the need of appropriations.

Resource Summary

This activity's expenditures represent less than 1% of the Marine Program's total expenditures.

Figure 44: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Financial support to The Jacques Cartier and Champlain Bridges Incorporated:			
Budgetary payments	3,855	4,387	3,396

1983-84 Financial Performance: Although the Corporation withdrew the full amount of its authority, figure 46 shows that the actual financial support required was only $3,363,000. Lower than expected expenditures towards the end of the year contributed to the surplus which was refunded to the Consolidated Revenue Fund in 1984-85 fiscal year.

Figure 45: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Financial support to The Jacques Cartier and Champlain Bridges Incorporated:			
Budgetary payments	3,396	3,396	-

Description

The Jacques Cartier and Champlain Bridges Incorporated: The Corporation earns most of its revenues (90% approx.) from toll charges to the users of the Champlain Bridge. There has been no change in the toll rate since the bridge opened in 1962. The Jacques Cartier bridge has been toll-free since 1962. The Corporation, with liabilities exceeding assets by approximately $85 million, is financially dependent on the federal government and is currently seeking means to improve its financial position.

The federal government follows the practice of reimbursing the Corporation for operating deficits after adjusting for items such as depreciation and accrued employee-termination benefits that do not require an outlay of cash.

Other Background Information

Figure 46 summarizes the basis upon which the federal government determines the amount of financial support to provide the Corporation.

Figure 46: The Jacques Cartier and Champlain Bridges Incorporated Summary Statement of Operations and Financial Requirements ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

Funds required for operations	3,767	4,242	3,297
Fixed-asset expenditures	88	145	66
Total financial support required	3,855	4,387	3,363

J. Canals

Introduction

This subsection provides background information about the operations, financial requirements and sources of funds of the St. Lawrence Seaway Authority, a Schedule C-1 Crown Corporation. The presentation also summarizes the special financing that the federal government provides to the Authority under the special capital program.

Objectives: The Authority's objectives are:

- to provide, operate and maintain an efficient deep waterway from Montreal to Lake Erie;
- to ensure the safe and efficient movement of marine traffic and the protection of the environment; and
- to recover the associated costs so as to operate on a self-sustained basis.

Resource Summary

The Authority has not required financial support from the federal government in recent years. However, during 1983-84 and 1984-85, the federal government provided $6 million for projects to rehabilitate the Welland Canal, as part of the special capital program. The funding for 1983-84 was provided through Supplementary Estimates.

Figure 47: Activity Expenditures and Disbursements ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Budgetary payment to The St. Lawrence Seaway Authority for rehabilitation work	-	3,000	3,000

Description

The St. Lawrence Seaway Authority is responsible for providing, operating and maintaining a deep waterway between the Port of Montreal and Lake Erie, in conjunction with the Saint Lawrence Seaway Development Corporation in the United States. Close collaboration between the two entities is required, especially on tariff and operational matters.

The Seaway system takes vessels from six metres above sea level at Montreal (Figure 70, page 3-78) through seven locks (five Canadian and two American) to Lake Ontario, some 75 metres above sea level. The Welland Canal, with its eight locks, lifts the vessels to Lake Erie at an elevation of 174 metres. All Seaway locks are similar in size and accommodate vessels up to 222.5 metres long and 23.2 metres in beam.

Other Background Information

Figures 47 and 48 show how the government concluded that no financial support other than for the rehabilitation project would be needed.

Figure 47: The St. Lawrence Seaway Authority - Summary of Financial Requirements and Methods of Funding ($000)

	Budget 1985-86	Forecast 1984-85	Actual 1983-84
Financial requirements:			
Fixed-asset additions and renovations	4,910	5,165	4,160
Investment in long-term reserve	-	8,000	5,000
Miscellaneous	1,100	660	934
	6,010	13,825	10,094

Operations	1,541	7,602	10,291
Working capital and other internal sources	4,469	6,223	(197)
	6,010	13,825	10,094

Figure 48: The St. Lawrence Seaway Authority - Summary Statement of Operations ($000)

	Budget 1985-86	Forecast 1984-85	Actual 1983-84
Operating revenue	63,603	63,781	58,552
Operating expenses	78,472	76,583	66,955
Income (Loss) from operations	(14,869)	(12,802)	(8,403)
Other income	5,834	6,836	5,498
Contribution from Government of Canada	-	3,000	3,000
Net income (Loss) for the year	(9,035)	(2,966)	95
Add:			
Depreciation	9,204	9,000	8,839
Other items not requiring a cash outlay	1,372	1,568	1,357
Funds provided from operations	1,541	7,602	10,291

The projected demand does not require additional Welland transit capacity during this planning period, but the Traffic Control Improvement Program that is already underway will be completed, albeit at a slightly slower pace. By the end of the planning period, this program will add approximately 450 transits to the current transit capacity of 7820. The total cost for the program is $8.0 million, down from the original estimate of $10.2 million.

Some improvements planned in response to a more rapidly increasing demand have been postponed beyond this planning period. The Authority will continuously monitor the need for capacity increases, and implementation of such projects will be resumed once warranted by future traffic projections.

The toll revisions of 1978, phased in over the years 1978 to 1980, were designed to provide sufficient revenues to cover operating and maintenance costs and depreciation. A further joint Canada-U.S. toll review in 1981 led to the decision to increase tolls by about 18% in 1982 and 10% in 1983. When these revisions were negotiated, the depth of the present recession was not yet evident. As it turned out, the St. Lawrence Seaway system underwent sharp recession-related decreases in 1982 traffic; consequently, the SLSA suffered a loss of $3.7 million for the year 1982-83. However, improved economic conditions which began in early 1983 resulted in an upward trend in Seaway traffic and a minor profit for the Crown Corporation in 1983-84.

To provide a measure of short term relief to the users of the Seaway who had suffered under the adverse economic conditions of the recession, the Tariff of Tolls was frozen for 1984 and 1985. The 1985 decision was accompanied by a revision of the SLSA share of the Montreal - Lake Ontario tolls from 71% to 73%.

It is emphasized that the implementation of toll increases is a complex process requiring international negotiations. Therefore the actual increases will be decided according to the prevailing circumstances.

The Authority will continue to monitor traffic to assess the effect of toll increases. No adverse effect has been noted to date.

K. Pilotage Services

Introduction

This subsection provides background information about the operations, financial requirements and sources of funds of the four pilotage authorities: Atlantic Pilotage Authority, Great Lakes Pilotage Authority Limited, Laurentian Pilotage Authority, and Pacific Pilotage Authority. All are Schedule C-1 Crown Corporations and are owned directly by the government, except for the Great Lakes Pilotage Authority which is a wholly owned subsidiary of The St. Lawrence Seaway Authority.

Objectives: The objectives of each of these Pilotage Authorities are:

- to establish, operate, maintain and administer, in the interest of safety, an efficient pilotage service within their respective regions; and
- to prescribe tariffs of pilotage charges that are fair and reasonable, and that provide revenue sufficient to permit each authority to be financially self-sustaining.

Resource Summary

Since their establishment in 1972, the Pilotage Authorities gradually have developed tariff and financial structures that enable them to operate with little or no financial assistance from the government. The recent decline of vessel traffic in some regions has resulted in some need for financial support because it was not possible to offset revenue reductions fully through cost-cutting measures. At the same time, tariff increases had to be limited to 6% and 5%.

As part of the federal government's contribution to the 450th anniversary celebrations of the arrival of Jacques Cartier in Canada, Cabinet approved compensation of the Atlantic and Laurentian Pilotage Authorities up to $206,000 for pilotage services to be provided to participants of the Tall Ships Event in the 1984-85 fiscal year. However, only $122,000 was required.

Figure 49: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Financial support to Pilotage Authorities for operating losses and forgone revenue (Quebec 1534-1984)			
• Atlantic	-	44	-
• Laurentian	-	2,204	966
• Great Lakes	-	-	250
Budgetary Payments	-	2,248	1,216

1983-84 Financial Performance: The Laurentian and Great Lakes Pilotage Authorities did not request any appropriation in the 1983-84 fiscal year, break-even positions having been budgeted. However, revenue shortfalls caused by a decline in traffic forced the Authorities to seek appropriations through Supplementary Estimates. Furthermore, the acquisition by Laurentian Pilotage of a pilot boat, previously scheduled for 1984 but advanced because of the attractive price ($380K), further depleted the Authority's rather modest cash resources and forced it to seek reimbursement of its total net cash outflow. The Atlantic Pilotage Authority, in contrast, experienced an increase in traffic volume and a consequent increase in revenue. The excess revenue (4%) coupled with savings in expenditures (4%) eliminated the need for the budgeted appropriation.

Description

The Authorities guide ships through confined waters in designated areas. The Great Lakes Pilotage Authority guides ships through a system of locks.

The Authorities, with the approval of the Governor-in-Council, establish areas where use of pilotage services is compulsory for specified ships or classes of ships; specify the qualifications and conditions for the issue of pilotage licences and certificates; set limits to the number of licences for any district; outline conditions for waiving compulsory pilotage; and set tariffs for pilotage and other services. The Great Lakes Pilotage Authority works within a "Memorandum of Arrangements" that sets out the sharing of revenues between Canada and the United States in the international sections within which the Authority has responsibility.

Other Background Information

Figures 51 to 53 summarize, for three of the Pilotage Authorities respectively, the factors giving rise to the need for financial support in the past. No financial support is provided in 1985-86 Estimates and the Authorities are to seek ways of returning to financial self-sufficiency. Figure 54 presents an overview of the operations of the fourth Pilotage Authority, which is in no need of financial support.

Figure 51: Atlantic Pilotage Authority - Summary Statement of Operations and Financial Requirements (by calendar year in $000)

	Budget 1985	Forecast 1984	Actual 1983
Revenue	6,123	6,025	5,480

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average-salary column reflects the estimated base salary costs, including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

The Marine Program has a planned capital budget for 1985-86 of $340.4 million. Figure 59 lists the major projects already in process or scheduled to start in 1985-86. Other capital projects are also funded by appropriation through the Marine Program for the Crown Corporation "Ports Canada". The payments to Ports Canada scheduled for 1985-86 total $29.2 million; the projects involved are listed in the activity analysis, page 3-51, figure 42.

Figure 59: Details of Major Capital Projects ($000)

	Total Estimated Final Cost		Total Forecast Costs to Mar. 31 1985	Estimates 1985-86	Future Years' Requirements

Total Grants and Contributions	1,135,617	1,051,287	970,357

B. Cost Analysis

The Program's Estimates include only those expenditures to be charged to the Department's voted appropriations and statutory payments, less the receipts and revenues credited to the vote. Other cost items, as well as receipts credited to the Consolidated Revenue Fund (Figure 62), must also be considered in determining the full cost of operating the Program.

Figure 61: Net Cost of Program by Activity for 1985-86 ($000) (excluding capital expenditures)

	1985-86 Operating Expendi-tures	Add Other Costs	Total Cost	Deduct Revenue	Net Cost	Forecast 1984-85
Departmental Operations						
Aids to Navigation	182,271	7,470	189,741	1,623	**188,118**	168,050
Ship Movement Systems and Services	56,792	2,347	59,139	2,815	**56,324**	51,912
Icebreaking, Arctic and Other Ship Support	111,999	2,977	114,976	13,492	**101,484**	103,230
Marine Search and Rescue	46,865	1,871	48,736	-	**48,736**	46,710
Regulatory	33,489	1,322	34,811	3,500	**31,311**	29,277
Public Wharves and Harbours	39,994	232	40,226	10,213	**30,013**	29,093
Direction and Administration	20,568	952	21,520	4,667	**16,853**	25,322
Payments to Crown Corporations						
Major Ports	21,209	-	21,209	-	**21,209**	37,529
Bridges	3,855	-	3,855	-	**3,855**	4,387

Canals	-	-	-	-	**-**	3,000
	517,042	17,187	534,229	36,310	**497,919**	500,758

The 'other costs' represent the following free services:

- accommodation provided by this Department 3,000
- accommodation provided by Public Works 7,387
- accounting services provided by Supply and Services 693
- employee benefits absorbed by Treasury Board 4,626
- workers' compensation payments absorbed by Labour 1,481

C. Revenue Analysis

Cost recovery will continue to be a major concern of the Marine Transportation Program. Emphasis will be placed on financing new or extended services through user contributions. However, tariff and fee changes should be gradual and regular rather than large and disruptive. Figure 62 presents in detail the various revenue sources.

Figure 62: Revenue Sources ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Vote Netting Revenue			
Cost Recovery Re:			
Arctic Resupply Operations	6,722	6,722	6,799
Prescott Shops Operation	90	132	85
Marine Helicopter Services (from Fisheries and Oceans)	1,219	1,219	774
Marine Telecom Services (from Environment)	131	146	132
Marine Telecom Services (from Air Program)	160	160	131
Employee Deductions for Rental Housing	438	372	408
	8,760	8,751	8,329
Revenue Credited to the Consolidated Revenue Fund			
Wharfage and Harbour Dues	10,213	7,515	6,828
Ship Safety & Registration Dues	3,500	1,644	1,598
Marine Radio Traffic Revenue	2,400	1,781	1,768
Charter of Cable Repair Ship	6,770	6,510	7,966
Interest on Investment*	3,168	3,257	3,400
Other	1,499	8,263	7,215
	27,550	28,970	28,775
Total Revenue	36,310	37,721	37,104

*For details, see Figure 63. Interest will be deferred until 1989 on some of the Saint John loans; this explains the different interest quoted in Figures 62 and 63 for 1985-86.

Deferred Interest	($000)
1983-84:	1,855
1984-85:	2,393
1985-86:	2,849

D. Loans

The various loans presently outstanding are summarized in Figure 63. The interest collected from the loans is credited to the Consolidated Revenue Fund (see Figure 62).

16	300	Search and Rescue Lifeboats	16,700
8	100	Small Rescue Craft	9,400
174		Various-size workboats	22,900
31		Inshore Rescue Boats	700
34		Helicopters	101,000
5		Hovercraft	35,400
1		Fixed-wing aircraft	6,000
			2,931,000

* The estimated replacement cost is based upon either actual recent replacement costs or inflated historical costs.

F. Maritime Pollution Claims Fund

Background

The Marine Program has within its accounts a trust account that provides for the operation of the Maritime Pollution Claims Fund, established February 15, 1972, by amendment to the Canada Shipping Act. From this fund, claims may be paid for losses caused by pollutants discharged from vessels in Canadian waters. Under the Act, a levy of 0.15¢ per ton was assessed against carriers of oil in bulk landed at or shipped from a port in Canada. This levy was revoked by a further amendment to the Act, effective September 1, 1976. The balance of the fund, at that time, was $40,189,441. The Department of Transport provides administrative support at no cost to the fund. An Administrator, appointed by the Governor in Council and reporting to the Minister of Transport, is responsible for the fund's operation.

Purpose

The fund is established to ensure payment to any claimant who has taken reasonable steps to recover from the shipowner the cost of remedial action or of actual loss or damage arising from the pollutant discharge and who has been unsuccessful in so recovering. Depending on the circumstances of each case, the Administration of the fund is required to pay to the claimant the amount by which the established claim exceeds the limit of the shipowner's liability, any amount remaining unpaid after reasonable steps to effect recovery, any amount due from a ship that cannot be identified, and any interest due on delayed payments.

Statement for the period ended September 30, 1984:

• Net levies (February '72 to September '76)	$34.9 million
• ADD: Interest and penalties credited to the fund	$62.5 million
	$97.4 million
• LESS: Administration expenses	$(0.3) million
Claims settlements	$(2.7) million
• Balance in the fund - September 30, 1984	$94.4 million

G. 1983-84 Main Estimates - Financial Comparison of the Restated Financial Plan with the Original by Activity

The distribution of person-years and associated costs is being changed effective April 1, 1985. Financial information throughout this document has been presented on the basis of the new distribution. Figure 66 provides a financial reconciliation between the new distribution and the old distribution used in the 1983-84 Main Estimates.

Figure 66: Reconciliation of new and old distribution of person-years and associated costs ($000) by activity for 1983-84 Main Estimates

Extracts from Part II of the Estimates

Appropriation Authority

Authority is sought in these Estimates to spend $812,668,000 in support of the 1985-86 Air Transportation Program. Other expenditures estimated at $58,996,000 for contributions to employee benefit plans will be made under existing statutory authority. It is estimated, however, that the activities of the Self-Supporting Airports and Associated Ground Services Revolving Fund will result in a net cash inflow of $94,390,000.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985–86 Main Estimates	1984–85 Main Estimates
	Air Transportation Program		
55	Operating expenditures	358,522	344,878
60	Capital expenditures	397,685	372,652
65	Grants and contributions	49,263	48,063
70	Payment to Revolving Fund – Capital expenditures	7,198	121,732
(S)	Contributions to employee benefit plans	58,996	50,896
(S)	Self-Supporting Airports and Associated Ground Services Revolving Fund	–94,390	16,253
	Total Program	*777,274*	*954,474*

Votes - Wording and Amounts

Vote No.	Department or agency (dollars)	1985–86 Main Estimates
	Air Transportation Program	
55	Air Transportation – Operating expenditures including expenditures on other than federal property and authority to spend revenue received during the year including the spending of an amount equal, in the opinion of the Minister of National Revenue, to the net amount received during the year from the air transportation tax payable under Part II of the Excise Tax Act minus the portion thereof credited to the Airports Revolving Fund; and to authorize the payment of commissions for revenue collection pursuant to the Aeronautics Act	358,522,000
60	Air Transportation – Capital expenditures including contributions towards construction done by local or private authorities	397,685,000
65	Air Transportation – The grants listed in the Estimates and contributions	49,263,000
70	Air Transportation – Notwithstanding Subsections 31 (2) and (3) of the Adjustment of Accounts Act and in accordance with Section 33 of the Act, to authorize for the current fiscal year the use of appropriations for capital expenditures and to provide in this respect an amount of	7,198,000

Sub-total	**11,124**	**595,023**	**397,685**	**49,263**	**1,041,971**	**177,505**	**864,466**	**816,489**
	13,072	**874,532**	**490,771**	**49,263**	**1,414,566**	**637,292**	**777,274**	**954,474**

* The Self-Supporting Airports and Associated Ground Services activity is funded through the use of a Revolving Fund. The Estimates shown on this table refer to the cash requirements for the Fund over the fiscal year. These do not directly reflect the operating profit or loss that the Fund will realize since the latter is calculated on an accrual accounting basis. Therefore, some cash expenditures included in the Estimates do not impact upon the operating balance and certain other items that must be taken into consideration in calculating the profit or loss do not require a direct cash expenditure.

4547

Section I
Program Overview

A. Highlights

During 1985-86 the Air Transportation Program intends:

- to continue the implementation of the Radar Modernization Project (RAMP). The project will take approximately nine more years to complete at a total estimated cost of $811 million. The forecast expenditures to the end of the fiscal year 1984-85 are $48 million with planned spending of $89 million in 1985-86 (see page 4-15);

- to continue with a major program to renovate, replace and expand airport facilities and air navigation equipment. The program (excluding RAMP) has a total estimated cost of $1,158 million with forecast spending of $331 million to the end of the fiscal year 1984-85 and planned expenditures of $300 million for 1985-86 (see pages 4-24, 4-28, 4-32);

- to continue improving the framework for civil aviation by completing the implementation of the recommendations made by the Commission of Inquiry on Aviation Safety (see page 4-16).

The Air Transportation Program Activity Structure for 1985-86 has been modified to reflect important legislative changes and management initiatives:

- the Regulatory Services Activity has been amended to exclude the accident investigation function which has been transferred to the independent Canadian Aviation Safety Board which was formally established by Act of Parliament on October 1, 1984 (see page 4-33);

- the Aircraft Services Activity is a new activity for the program, established to consolidate the management of the departmental aircraft fleet under one common support service organization which is responsible for aircraft services required to support program operations of the department and in addition those of other government departments (see page 4-35);

- the financial structure and composition of the Self-supporting Airports Activity has been revised to reduce the number of airports included in the Airports Revolving fund from 23 to 9 to highlight the self-sufficient performance targets and management objectives set for this network of major airports (see page 4-20).

B. Financial Summary by Activity

Figure 1: Summary of Net Resource Requirements by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See page
Airports and Associated Ground Services				
Self-Supporting Airports	(87,192)	101,400	(188,592)	4-20
Other Airports	233,987	230,893	3,094	4-25
	146,795	332,293	(185,498)	
Air Navigational Services	400,981	315,200	85,781	4-30
Regulatory Services	51,574	52,770	(1,196)	4-33
Aircraft Services	126,986	141,285	(14,299)	4-35
Direction and Administration	50,938	59,200	(8,262)	4-37
	777,274	900,748	(123,474)	
Authorized person years	13,072	13,430	(358)	4-40

Explanation of Change: The financial requirements for 1985-86 are 14% or $123 million lower than the 1984-85 forecast expenditures. This decrease is primarily due to:

	$ Million
• increase in salaries and personnel cost $21.4, reduction in overtime ($4.6) and transfer of resources to the Canadian Aviation Safety Board ($7.4)	$ 9.4
• decrease in grants and contributions	(11.0)
• increase in revenue due to increase in aircraft and passenger movements as well as rate increases in air transportation tax, concession and landing fees	(121.9)

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of September 30, 1984) is $54 million or 6% lower than the 1984-85 Main Estimates of $954 million The difference of $54 million reflects the following major items:

	$ Million
• decrease in goods and services due to restraints on travel and hiring and discretionary spending on material and supplies	$(12.0)
• decrease in capital requirement	(45.0)
• increase in grants and contributions	12.0
• increase in revenue due to increase in aircraft and passenger movements resulting in additional air transportation tax, concession and landing fees	(9.0)

Figure 2: Estimated 1985-86 Program Expenditures and Receipts ($000)

	Expenditures					
	Operating	Capital	Grants & Contributions	Total	Revenue Recoveries and Other Receipts	Net Resource Requirement
Airports and Associated Ground Services						
Self-Supporting Airports	279,509	93,086	-	372,595	459,787	(87,192)
Other Airports	189,182	140,776	47,846	377,804	143,817	233,987

	970,926*	490,771	49,263	1,510,960	733,686*	777,274

* Includes internal transactions totalling $96.4 million.

Figure 3: Ten Year Overview of Total Expenditures - Percentage Distribution by Type of Resource

C. Background

1. Introduction

The Air Transportation Program is the vehicle for discharging a major part of the federal government's responsibility for the national civil air transportation system. This system has four important components:

- the terminals (airports);
- the airways (Canadian and international airspace);
- the vehicles (aircraft); and
- the operators (air carriers and aircraft operators).

The Program includes:

- the aeronautical regulation of all components of the system;
- the development and operation of the national system of civil airports owned by the federal government; and
- the development and operation of air navigational services necessary to permit the safe and efficient operation of civil aircraft in Canadian and adjacent international airspace.

The Program also includes the operation and maintenance of aircraft used to support the Program's operations and those of other government programs.

These responsibilities require considerable liaison with air carriers and aircraft operators, provincial and foreign governments, and other federal government departments such as National Defence and Regional Industrial Expansion. The economic regulation of commercial air services by the Canadian Transport Commission also affects the operations and funding of this Program.

2. Legal Mandate

The National Transportation Act and the Aeronautics Act are the principal acts governing the Air Transportation Program. The Aeronautics Act, in particular, requires the Minister of Transport to control and regulate civil aviation and to supervise all matters connected with civil aeronautics. It also enables the Minister to develop, operate and maintain airports and air navigational services.

3. Program Objective

The objective of the Air Transportation Program is "to attend to the development and operation of a safe and efficient national civil air transportation system that contributes to the achievement of government objectives, and to operate specific elements of the system".

In addition, the Program has a number of sub-objectives which address such matters as productivity, cost recovery, equity and accessibility in the national civil air transportation system.

4. Program Organization for Delivery

Activity Structure: Figure 4 shows the activities of the Program. The Airports and Associated Ground Services activity is subdivided into two for Main Estimates display purposes - Self-supporting Airports, and Other Airports. The reason for this subdivision is that the self-supporting group of airports is expected to recover its costs from revenues earned whereas the other airports, because they serve the less densely populated areas of the country, are expected to recover only a part of the cost of their operations from revenues earned. As a consequence, these airports require funding from general government revenue to support their continued operation. This difference in goals is reflected in the use of two funding mechanisms for the Airports activity: a revolving fund for the Self-supporting Airports and an annual appropriation providing authority to spend revenues received for the Other Airports.

Changes to Activity Structure: Effective October 1, 1984 the accident investigation function formerly part of the Regulatory Services was transferred to the newly created Canadian Aviation Safety Board. The Aircraft Services to government also formerly part of the Regulatory Services was transferred into the newly created Activity Aircraft Services. Furthermore, effective April 1, 1985, the Self-supporting Airports Activity which consisted of 23 airports was reduced to 9 airports to highlight the self-sufficient performance targets and management objectives set for this network of major airports. The nine airports remaining in the revolving fund are Halifax, Montreal/Dorval, Montreal/Mirabel, Toronto/Lester B. Pearson, Ottawa, Winnipeg, Calgary, Edmonton and Vancouver. The remaining 14 airports located at Gander, St. John's, Charlottetown, Sydney, Saint John, Fredericton, Moncton, Quebec, London, Windsor, Thunder Bay, Regina, Saskatoon and Victoria were transferred to the Other Airport Activity.

Figure 4: Activity Summary

Organizational Structure: The Canadian Air Transportation Administration is responsible for the Program. The Administration uses a decentralized organization structure as shown in Figure 5.

Figure 5: 1985-86 Activity Operating Expenditures by Organizational Component ($000)

Activity	Airports & Associated Ground Services		Air Navigation Services	Regulatory Services	Aircraft Services	Direction & Administration	Program Totals	
	Self Supporting	Other Airports					$000	P-Y
C.A.T.A. Headquarters Ottawa	-	22,269	60,581	21,489	32,421	21,293	158,053	2,213
Administrator Atlantic Region Moncton	14,518	47,914	51,620	3,165	3,325	4,303	124,845	2,006

* Includes internal transactions totalling $96.4 million.

D. Planning Perspective

1. Environment

Technological Factors: Since the end of the second world war, air transportation has been at the forefront of technological change. During this time, aircraft size, speed and numbers have increased dramatically and have put pressure on the Air Transportation Program to accommodate these changes. The changes in the number and complexity of aircraft also resulted in increased demands for the licensing of aircraft and of the associated personnel.

Since the mid 1970s, particularly as a result of the dramatic increases in the price of fuel, the emphasis in aircraft technology has changed from bigger and faster to more efficient. Aircraft fuel now constitutes approximately 30% of the cost of aircraft operation, as compared to about 10% in the 1960s. Aircraft manufacturers are reacting by producing much more fuel-efficient aircraft, with fuel utilization as much as 30% better than the aircraft fleet of the 1970s.

Economic Factors: The major Canadian air carriers saw an improvement in traffic and their financial positions amidst a recent upturn in the economy. In addition, regulatory reform of the airline industry is expected to provide an added stimulus to the passenger traffic of the Canadian air carriers as increased competition puts downward pressures on costs and fares.

Air Transportation Demand: Total mainline plus international charter enplaned and deplaned passengers at the "Top 30" airports increased dramatically during the 1970's, doubling between 1971 (23.0 million passengers and 1980 (48.6 million passengers). However, traffic has been severely depressed by the recession. It is expected that the 1980 traffic volume, the previous high, will be reached again by 1985. Growth in the second half of the 1980's is projected to be in the order of 5% per annum.

Itinerant air carrier aircraft movements at the tower controlled airports increased by 50% between 1971 and 1980. More recently, the number of air carrier movements declined between 1980 and 1982 (6.2%) with a further 3.1% decrease in 1983, reflecting the continuing impact of the recession. Air carrier aircraft movements during the 1970's have generally grown at a rate below that of the passenger demand, reflecting increasing load factors and larger aircraft. The trend toward a steady increase in average aircraft size is no longer expected to continue as airlines seek to acquire and increase the utilization of medium size aircraft in order to offer higher frequency and better service. The forecast of air carrier movements is based on the forecast of passenger demand and assumptions on load factor and aircraft size. The result is a forecast of fairly rapid growth in the short term in line with the expected growth in passenger demand. In the longer term, the growth in air carrier movements is expected to stabilize at a lower rate,

resulting in an average growth rate of 5.0% per annum between 1983 and 1991. Itinerant movements, the combination of air carrier and general aviation aircraft movements are predicted to grow at 4.8% per annum between 1983 and 1991.

Figures 6 and 7 show actual and forecast volumes of passenger traffic and itinerant movements respectively at the "Top 30" Canadian airports and at the tower controlled airports. The forecasts were prepared in November 1984.

Other significant variables affecting the Program are air cargo traffic, the size of the registered aircraft fleet with valid certificate of airworthiness and the number of licenced personnel. Forecast average annual growth of these variables based on data available as of November 1984 is as follows:

	1983-1991
Air Cargo Traffic (Top 30 Airports)	5.8%
Number of Registered Aircraft with Valid C of A	2.3%
Number of Licenced Personnel	3.1%

Figure 6: Enplaned & Deplaned Passengers at Canadian Airports (000)

Figure 7: Itinerant Aircraft Movements at Top 30 Canadian Airports (000)

Maintenance of Airport and Air Navigation Infrastructure: Until the mid- 70s, there was a heavy investment of available resources in new and more sophisticated infrastructure in order to meet rapid growth in demand. Much of the infrastructure now in place was completed between the mid-60s and mid-70s and requires significant capital resources to maintain the existing facilities and equipment in acceptable operational condition. This trend is evident in the percentage of available resources allocated to operate and maintain the infrastructure that exists. Thus, 75% to 85% of available capital resources have been used for maintaining the existing plant over the last five years and this trend is expected to continue over the medium term.

2. Initiatives

Modernization and Expansion of Facilities

Radar Modernization Project (RAMP): This major program to replace ageing, existing primary and secondary radar and display systems is proceeding into its second phase, the procurement of radar site equipment. The contract for this equipment was awarded in the spring of 1984. It is anticipated that further contracts will be awarded during 1985-86 for display site equipment and the Radar Data Processing system (RDPS). The overall major crown project will take approximately 10 years to complete and is expected to cost $ 811 million in current dollars. Funding for 1985-86 is budgeted at $89 million.

Special Government Capital Projects: The Air Administration continues with the implementation of these projects which started in 1983. The remaining 18 projects with a total estimated cost of $339 million, and spending forecast to the end of the 1984-85 fiscal year of $180 million, are budgeted for 1985-86 at $123 million. Major projects include reconstruction and expansion of air terminal buildings at Hamilton, Sault Ste. Marie, Fort McMurray, Frobisher Bay, and Inuvik; construction of a regional office building; utility systems restoration; and replacement of obsolete communication and instrument landing systems. (For further details see Section III, Figure 35, pages 4-57 and 4-58).

Other Restoration and Replacement: A further $149 million will be spent during 1985-86 to restore and replace airport facilities across Canada. Major projects include reconstruction of air terminal buildings and rebuilding of runways and taxiways.

In addition to the amounts shown above for the RAMP project, some $40 million in capital expenditures will be spent during 1985-86 on replacement of air traffic service facilities and equipment; communication systems, and air navigation and landing systems.

System Expansion to Meet Increased Demand: Air terminal buildings and facilities, totalling $76 million, are underway or will start in 1985-86 to satisfy increased demand which has already occurred and to accommodate forecast growth. Forecast expenditures on these projects to the end of 1984-85 total $11 million with spending of $32 million budgeted during 1985-86. An additional $13 million is budgeted in 1985-86 for expansion of aircraft manoeuvring areas and maintenance buildings.

Some $30 million will be spent during 1985-86 on expansion of capacity to meet increased demand of air traffic services facilities and air navigation and landing systems.

For further details of the capital program refer to Section II, pages 4-24, 4-28 and 4-32 and to Section III, Figure 35, Capital Projects by Major Project and Location (page 4-42).

Management and Organizational Initiatives

Aviation Safety: In response to Dubin Commission recommendations, a number of actions have been undertaken such as:

- establishment of the Canadian Aviation Safety Board;
- implementation of all recommendations concerning enforcement (these recommendations relate to a more vigorous and strict policy of enforcement, a new manual of enforcement procedures, and amendments to the Aeronautics Act to provide a sound legal basis for the new enforcement system and to establish a Civil Aviation Appeal Tribunal);

- development of a Canadian Airworthiness Code with an Advisory Board that includes industry representatives to assist in its development;

- arrangements to ensure that the departmental aircraft fleet is operated to standards demanded of commercial air carriers;

- development of bilateral airworthiness agreements with the U.K., France, West Germany, Netherlands and Italy modelled on the recently concluded Canada-United States agreement;

- implementation of improved surveillance program of air carrier like maintenance activities;

- enhancement of airworthiness type approval capability to support the Government initiatives in developing a Canadian domestic helicopter industry;

- implementation of a Continuing Airworthiness Division within the Airworthiness Branch to review and provide corrective action for service difficulties on Canadian operated or manufactured aeronautical products; and

- development of an improved incident occurrence reporting system, including voluntary incident reporting.

Canadian Airspace System Development Plan: To ensure rational evolution of the Canadian airspace system, the Administration is attempting to define a long-range technical framework for the acquisition and development of facilities and equipment that will likely be needed up to the year 2000 for the provision of air navigational services. An approach which coordinates all major anticipated expenditures to the year 2000 and which will improve services and increase productivity has been developed for discussion with users of the airspace system. Following extensive discussion and consultation with users of the system during 1984-85, efforts will be directed to the orderly replacement/restoration of ANS facilities in accordance with the requirements outlined in the Canadian Airspace System Development Plan.

3. Program Effectiveness

The program objective of "attending to the development and operation of a safe and efficient national civil air transportation system" requires results in two main areas: safety of the system and development and operation of an efficient system. Summary statistical information about aviation safety is presented below.

Aviation Safety: Since the earliest days of air transportation, safety has been a major preoccupation of the Air Transportation Program. To date, the national civil air transportation system has achieved a consistently high level of safety. Figures 8 and 9 demonstrate the record achieved over the last few years.

The five-year average number of accidents per year to Canadian registered aircraft for the period 1969-73 was 580.6. After a moderate increase to 691.4 in the period 1974-78, the five-year average number of accidents fell to 630.8 in the period 1979-83. At the same time, the number of registered aircraft in Canada rose from 10,772 in 1969 to 25,899 in 1984, a 140% increase.

Figure 8: Five-year average number of accidents per year to Canadian registered aircraft by type of operation (Note 1)

Type of Operation	1969-1973	1974-1978	1979-1983
Scheduled	3.2	2.2	2.8
Non-scheduled[2]	9.2	7.6	6.4
Charter and contract	139.4	141.0	137.6
Speciality	99.4	123.4	112.4
Flying clubs	23.2	24.2	22.6
State	5.2	6.0	6.4
Private	285.2	357.4	322.4
Commercial non-revenue[3]	15.8	29.6	20.2
All Aircraft[4]	580.6	691.4	630.8

Notes: 1. Data on number of aviation incidents is not included since it has only been collected consistently over the last three years and is not yet considered to be useful for comparison.

2. Non-scheduled operations refer to commercial air carriers offering public transportation to passengers and cargo at a toll per unit of traffic but not on a fixed schedule. Examples include most carriers serving northern Canada.

3. Commercial non-revenue operations are non-revenue producing flights by commercial operators for aircraft ferrying and crew training.

4. Data on ultralight accidents is not included. Number of recorded ultralight accidents are: 1981-6; 1982-24; 1983-60.

Figure 9: Accident Rates per 100,000 hours of flying by Type of Operation

Note: The activity data for 1983, 1984 and 1985 have been estimated and are subject to change when Statistics Canada figures are finalized.

The effectiveness of the Program's efforts to improve safety is reflected by the downward trend in accidents per 100,000 hours of flying for all but scheduled type of operations. The accident rate for scheduled operations has remained virtually constant at a very low level.

Section II
Analysis by Activity

A. Airports and Associated Ground Services

The over-all objective of this Activity is to foster and promote the development and operation of a safe and efficient national civil airports system that contributes to the achievement of government objectives.

The presentation which follows sub-divides the Activity into two components, Self-Supporting Airports and Other Airports, because of the different sub-objectives and funding mechanisms that apply to each of these components.

A.1 Self-supporting Airports Component

Sub-Objective

To develop and operate those international and national airports included in the Self-Supporting Airports Revolving Fund in such a way as to recover their costs.

Resource Summary

This component accounts for approximately 29% of the Program's total operating expenditures and 19% of its capital expenditures.

Figure 10: Self-supporting Airports - Statement of Revolving Fund Operations ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Revenue	499,787	410,000	392,426
Expenses	337,267	433,581	394,876
Operating Profit (Loss)	122,520	(23,581)	(2,450)
Add: Depreciation	57,758	62,581	59,081
Resources Provided from Operations	180,278	39,000	56,631
Capital Expenditures	93,086	140,400	87,890
Net Resource Required (Provided)	(87,192)	101,400	31,259
Funded as follows:			
Self-supporting Airports Revolving Fund	(94,390)	2,100	17,185
Vote 70	7,198	99,300	14,074
	(87,192)	101,400	31,259
No. of Airports	9	23	23

For summaries of the projected use of the revolving fund authority and profit or loss by individual airport see Section III - Supplementary Information, page 4-63.

Description

Airports Included: Effective April 1, 1985, this component includes 7 of the 8 international and 2 of the 17 national airports in Canada. The international airports are located at: Halifax, Montreal/Mirabel, Toronto, Winnipeg, Calgary, Edmonton and Vancouver. The 2 national airports included in this component are located at: Montreal-Dorval and Ottawa. Prior to April 1, 1985, this component consisted of 23 airports of which 14 airports located at Gander, St. John's, Charlottetown, Sydney, Saint John, Fredericton, Moncton, Quebec, London, Windsor, Thunder Bay, Regina, Saskatoon and Victoria were transferred to Other Airports component.

Operations: The two main tasks involved in the operation of these airports are: the provision of airport services to passengers and aircraft; and the maintenance and upkeep of airport facilities. The main airport services offered are aircraft firefighting and crash rescue, airport policing and passenger security.

The airport facilities requiring maintenance and upkeep include a wide range of building structures (e.g., airport terminals, parking garages, maintenance and other ancillary buildings); surface structures (e.g. runways, taxiways, aprons, roads, and parking lots); mechanical and electrical systems and various types of fixed and mobile equipment. Included in the maintenance and upkeep of these facilities are such costs as utilities, cleaning of buildings, snow removal and repairs.

Performance Information/Resource Justification

Expenses: Figure 11 provides a breakdown of the estimated expenses that will be incurred to operate the Self-Supporting Airports during 1985-86. Because these airports are expected to recover all costs of operations, the expenses include a charge for the air traffic control services provided in the immediate vicinity of each airport by the Air Navigational Services Activity, depreciation, the grants in lieu of taxes paid by Public Works and interest expense related to the net amount of spending charged against the Self-Supporting Airports Revolving Fund appropriation authority. The Management and Specialized Support Services charge represents recoveries made by the Other Airports component and the Direction and Administration Activity for management, marketing, administrative, architectural, engineering and other technical support services provided to this component. (For details of this charge and the Air Traffic Control charge, refer to page 4-62).

Figure 11: Self-Supporting Airports - Summary of Expenses ($000)

	Estimates 1985-86		Forecast 1984-85	
	$	P-Y	$	P-Y
Site Operations				
Airport Services	46,689	483	61,414	719
Maintenance and Upkeep of Facilities	89,359	1,102	111,967	1,464
Management, Administration and Other Specialized Staff Support	19,014	363	25,128	474
	155,042	1,948	198,509	2,657
Other Costs and Charges				
Air Traffic Control Charges	52,676	-	84,622	-
Management and Specialized Support Services	43,718	-	57,618	-
Depreciation	57,758	-	62,581	-
Grants in Lieu of Taxes	21,309	-	21,875	-
Interest	6,764	-	8,376	-
	182,225	-	235,072	-
	337,267	1,948	433,581	2,657
No. of Airports	9		23	

Ongoing airport operations will consume $155 million or 46% of the total Self-Supporting Airports program operating budget. Two major factors (Figure 12) affecting the cost of airport site operations are the hours an airport is open to provide the services to air carriers and the travelling public and the scale of the airport facilities maintained for the arrival and departure of aircraft.

Figure 12: Summary of Key Workload Determinants

		Forecast 1984-85
Total Published Hours of Operation at 7 International and 2 national airports		65,437
	No.	Area (000s)m^2
Principal airport facilities maintained[1]		
Air Terminal Buildings	11	597
Runways	25	4,160
Taxiways	155	3,124
Aprons	49	3,697

Note 1: Inventory as at 31 March, 1985. Planned inventory figures for 1985-86 were not available when this document was prepared.

Revenue Analysis: Figure 13 shows the actual and projected degree to which this component has been achieving its objective of full cost recovery for the eight year period ending March 31, 1985. On April 1, 1985, the Self-Supporting Airport Revolving Fund was reduced from 23 to the 9 largest airports. This new group of airports is expected to be near full cost recovery in 1985-86.

Costs are defined so as to approximate the costs which a commercial operator would normally incur. As a result, the expenses shown in Figure 11 are adjusted to provide for interest on the total amount of the government's investment and to deduct the estimated cost of services provided to state and military aircraft. For details of the types and amount of revenue earned by the Self- Supporting Airports, refer to Section III A. 5. Program Revenues, page 4-60.

Figure 13: Recovery of Costs by Self-Supporting Airports

4565

Capital Expenditure Analysis: Figure 14 provides a summary analysis of the capital program planned for 1985-86. For details by project, see Section III, Figure 35, pages 4-42 to 4-45 and page 4-57.

Figure 14: Summary of 1985-86 Estimates Capital Projects, Self-Supporting Airports ($000)

	Total Estimated Cost	Forecast Spending to March 31, 1985	Estimates 1985-86	Balance to Complete
Restoration due to physical or functional obsolescence				
Terminal buildings and facilities	133,587	50,821	55,071	27,695
Aircraft manoeuvring areas	50,837	11,032	22,660	17,145
Maintenance buildings and equipment	4,212	1,602	151	2,459

Miscellaneous projects under $250,000	3,329	-	3,329	-
	193,939	63,455	83,185	47,299
Expansion of capacity to meet increased demand				
Terminal buildings and facilities	19,921	12,718	7,203	-
Aircraft manoeuvring areas	5,930	1,905	2,672	1,353
Maintenance buildings and equipment	806	-	26	780
	26,657	14,623	9,901	2,133
	220,596	78,078	93,086	49,432

A.2 Other Airports Component

Sub-Objectives

To attend to the development and operation of a network of regional and local airports that enables all areas of Canada to have reasonable access to air transportation.

To recover costs from airport users to the extent feasible.

Because the airports in this component serve the less densely populated and also the more isolated areas of the country, there is a substantially lower volume of aircraft and passenger movements from which revenue can be earned. In the interest of equitable treatment of air transportation system users, the government assumes unrecovered costs required to provide and maintain an adequate system capacity and level of service across the entire country.

Resource Summary

This component accounts for 20% of the Program's total operating expenditures and 29% of its capital expenditures.

Figure 15: Other Airports - Net Resource Requirements ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Airports Operated by Transport Canada*			
Operating Expenditures			
Site Operations and Activity-Wide Support Services	**189,182**	141,000	124,498
Capital expenditures	**140,776**	128,000	99,742
	329,958	269,000	224,240
Airports Operated by Others			
Operating Contributions	**16,967**	19,642	16,461

	233,987	230,893	169,187

Note: 1985-86 Estimates reflect the transfer of the 14 airports from Self-supporting airports. 1984-85 Forecast and 1983-84 Actual reflect the activity prior to the transfer which was effective April 1, 1985.

4567

Description

Airports Operated by Transport Canada: Effective April 1, 1985, this component is responsible for the operation of the international airport at Gander, the national airports located at St. John's, Charlottetown, Sydney, Saint John, Fredericton, Moncton, Quebec, London, Windsor, Thunder Bay, Regina, Saskatoon, Victoria, Whitehorse and Yellowknife. It also includes the operation of 131 regional and local airports. Prior to April 1, 1985, this component did not include the international and national airports mentioned above with the exception of Whitehorse and Yellowknife. The nature of the operations at the airports included in this component is similar to those at Self-supporting Airports. The main difference is a much smaller scale of operations in most instances. (For a description of the nature of operations, refer to page 4-20).

Airports Operated by Others: The component also provides financial assistance to regional and local airports.

Resource Justification/Performance Information

Airports Operated by Transport Canada: Figure 16 provides a summary of expenditures for site operations, the total expenditures on activity-wide support services that are planned and controlled from this component and the amount of the recovery from Self-Supporting Airports for these support services. Figure 17 provides a summary of major workload determinants affecting site operations.

Figure 16: Regional and Local Airports Operated by Transport Canada - Gross Operating Expenditures ($000)

	Estimates 1985-86		Forecast 1984-85	
	$	P-Y	$	P-Y
Site Operations				
Airport Services	38,445	628	21,961	419
Maintenance and Upkeep of Facilities	86,854	1,180	61,270	857
	125,299	1,808	83,231	1,276
Activity-wide Support Services				
Architectural and Engineering Support	22,000	430	21,357	449
Management and Administration	33,127	604	28,991	567
Other	8,756	143	7,421	135
	63,883	1,177	57,769	1,151
Total Expenditures	189,182	2,985	141,000	2,427
Recovery from Self-Supporting Airports	37,598	-	49,600	-

Note: Estimates 1985-86 reflect the activity including the transfer of 14 airports. 1984-85 forecast refelect the activity prior to the transfer.

Figure 17: Summary of Key Workload Determinants

		Forecast 1984-85
Total Published Hours of Operation at 1 International, 15 national, 23 regional and 62 local airports[1]		250,354
Principal regional and local airport facilities maintained (inventory as of March 31, 1985)2	No.	Area (000s)m^2
Air Terminal Buildings/Passenger Shelters	94	153
Runways	192	15,946
Taxiways	305	2,897
Aprons	149	4,904

Note: 1. This figure excludes those airports which operate without Published Hours of Operations. An example of airports without Published Hours of Operation are Arctic Community Airports in the Northwest Territories and the Yukon.

Note: 2. Planned inventory figures for 1985-86 were not available when this document was prepared. The inventory figures are for 101 of the 147 airports in this component.

Figure 18 provides an estimate of the degree to which the regional and local airports operated by Transport Canada recover their full costs of operation. Costs are defined to approximate those that a commercial operator would normally incur. The operating expenditures shown in Figure 16 are adjusted to reflect:

- the cost of any air traffic control services provided by Air Navigational Services in the immediate vicinity of these airports; and

- an allowance for depreciation, grants in lieu of taxes and for interest on the government's investment in these airports.

A deduction is made for the estimated cost of services provided to state and military aircraft. (The approach is the same as that used for Self-Supporting Airports.)

Figure 18: Recovery of Costs - Regional and Local Airports Operated by Transport Canada

Capital Expenditures Analysis: Figure 19 provides a summary analysis of the capital program planned for 1985-86. For details by project, see Section III, Figure 35, pages 4-45 to 4-49 and pages 4-57 to 4-58.

Figure 19: Summary of 1985-86 Estimates Capital Projects for the Regional and Local Airports Operated by Transport Canada ($000)

	Total Estimated Cost	Forecast spending to March 31, 1985	Estimates 1985-86	Balance to Complete
Restoration due to physical or functional obsolescence				
Terminal buildings & facilities	143,647	66,942	47,608	29,097
Aircraft manoeuvring areas	43,479	23,837	16,071	3,571
Maintenance buildings & equipment	19,577	9,308	7,687	2,582

	47,846	58,733	33,943

B. Air Navigational Services

Objective

The principal objective of this Activity is to assure the safe and efficient movement of civil aircraft in Canadian and adjacent international airspace.

Resource Summary

The Activity accounts for 36% of the Program's total operating expenditures and 32% of the capital expenditures.

Figure 21: Activity's Net Resource Requirements ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Air Navigational Services	400,981	315,200	243,746
Consisting of:			
Operating Expenditures	353,103	345,600	303,692
Capital Expenditures	155,299	103,000	64,684
Grants and Contributions	1,303	100	434
Total Expenditures	509,705	448,700	368,810
Revenue and Recoveries	108,724	133,500	125,064
	400,981	315,200	243,746

Description

This Activity offers three main services to support air transportation, all related to helping aircraft move safely and efficiently from one point to another. These are air traffic control, flight information services and navigational aids. A network of 7 area control centres, 9 terminal control units and 61 airport control towers exist to provide enroute, arrival and departure air traffic control in certain air corridors and in the vicinity of the busier airports. Some 114 flight service stations, located at airports across the country, provide flight information services ranging from weather reports and the availability of navigational aids to search and rescue alerting services. In addition, several hundred navigational aids, located at airports and various other places across the country, exist to assist pilots in determining their location and direction while enroute between airports and to help them land and take off safely.

For operating purposes, the Activity is divided into two main functions, Air Traffic Services and Technical Support Services for Systems Operation and Maintenance. The Air Traffic Services function consists mainly of the personnel required to operate the various air traffic control facilities and flight service stations. The Technical Support Services for Systems Operation and Maintenance function consists of the personnel, goods and services needed to develop and maintain the facilities and equipment systems used to provide air traffic control and flight information services, as well as the navigational aids service. This functional breakdown is used to present the resource justification and performance information which follows.

Performance Information/Resource Justification

Operating Expenditures: The Air Traffic Services function is expected to require 58% of operating expenditures and 63% of the human resources planned for this Activity. Technical Support Services for Systems Operation and Maintenance account for 39% of operating expenditures and 34% of the personnel allocation. Activity management and staff support account for the remaining 3% of operating expenditures and personnel requirements.

Figure 22: Air Navigational Services - Operating Expenditures ($000)

	Estimates 1985-86		Forecast 1984-85	
	$	P-Y	$	P-Y
Air Traffic Services				
Air Traffic Control	168,080	2,901	164,478	2,956
Flight Service Stations	37,388	824	36,604	834
	205,468	3,725	201,082	3,790
Technical Support Services for Systems Operation and Maintenance	137,185	2,011	134,278	2,018
Management and Staff Support	10,450	154	10,240	156
	353,103	5,890	345,600	5,964

Figure 23 summarizes some of the key variables that affect this Activity's operating resource requirements.

Figure 23 - Key Variables Affecting Operating Resources

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Air Traffic Control			
No. of Air Traffic Control Sites	77	77	77
Hours Open for Service	514,004	514,004	511,108
Aircraft movements in controlled airspace (000)	1,874	1,779	1,600
Flight Service Stations			
No. of Flight Station Service Stations	114	114	114
Hours Open for Service	946,080	946,080	948,672
Flight Plans Filed	581,923	555,270	529,838
Technical Support Services for System Operation and Maintenance			
No. of Sites with Equipment Requiring Maintenance			
Surveillance (radar) Systems	22	22	22
Navigation Aids	934	923	920
Communications Systems	339	339	339

Capital Expenditure Analysis: Figure 24 provides a summary analysis of the Capital Program planned for 1985-86. For details by project see Section III, Figure 35, pages 4-49 to 4-56 and page 4-58.

Figure 24: Summary of 1985-86 Estimates Capital Projects - Air Navigation Services ($000)

	Total Estimated Cost	Forecast Spending to March 31, 1985	Estimates 1985-86	Balance to Complete
Restoration due to physical or functional obsolescence				
Air traffic services facilities and equipment	76,042	17,373	11,204	47,465
Surveillance systems	810,504	47,539	88,700	674,265
Communication systems	50,161	13,964	10,551	25,646
Air navigation and landing systems	392,547	62,609	18,300	311,638
	1,329,254	141,485	128,755	1,059,014
Expansion of capacity to meet increased demand				
Air traffic services facilities and equipment	33,519	6,072	13,672	13,775
Surveillance systems	14,455	7,233	5,180	2,042
Communication systems	3,105	908	627	1,570
Air navigation and landing systems	22,745	6,553	7,065	9,127
	73,824	20,766	26,544	26,514
	1,403,078	162,251	155,299	1,085,528

Revenue Analysis: For details of the type and amount of revenue earned by this activity, refer to Section III, A. 5. Program Revenues, page 4-60.

C. Regulatory Services

Objectives

To promote and maintain safe flight in the national civil air transportation system.

Resource Summary

The operating expenditures for this Activity are 5% of total operating expenditures for the Program.

Figure 25: Activity Resource Requirements ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Aeronautical Regulatory Services	51,309	49,000	48,552
Aviation Safety*	-	3,500	6,758
Total Operating Expenditures	51,309	52,500	55,310
Capital Expenditures	1,007	1,000	1,145
Grant and Contributions	80	55	93
Total Expenditures	52,396	53,555	56,548
Revenue and Recoveries	822	785	734
	51,574	52,770	55,814

* Aviation safety resources were transferred to the Canadian Aviation Safety Board on October 1, 1984. The forecast covers the six month period operating expenditures were absorbed by this activity.

Description

Aeronautical Regulatory Services: This element performs all regulatory functions connected with civil aeronautics other than for the economic regulation handled by the Canadian Transport Commission. It certifies and monitors:

- the competence of aeronautical personnel such as pilots, flight engineers, aircraft maintenance engineers and air traffic control operators;
- the airworthiness of aircraft;
- the reliability and safe operation of airport and air navigation facilities and equipment; and
- the operations of scheduled airlines and other commercial aircraft companies.

An extensive program of examinations, licensing, inspections and surveillance exists to carry out these functions.

Performance Information/Resource Justification

Aeronautical Regulatory Services: Figure 26 provides a breakdown of operating resource requirements.

Figure 26: Aeronautical Regulatory Services - Operating Expenditures ($000)

	Estimates 1985-86		Forecast 1984-85	
	$	P-Y	$	P-Y
Licencing, Inspection & Surveillance	42,830	683	40,923	683
Legislation, Standards and Enforcement Actions	5,214	80	4,971	80
Management & Administration	3,265	44	3,106	44
	51,309	807	49,000	807

Major workload variables affecting the operating expenditures are the degree of regulatory coverage required for each of the national air transportation system's components and the growth of these components. Figure 27 summarizes the sizes of these components.

Figure 27: Summary of Key Workload Variables

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
No. of Licenced Pilots	63,700	63,300	62,900
No. of Registered Aircraft	28,613	27,306	26,058
No. of Commercial Operators	1,007	952	907
No. of Licenced Airports	1,275	1,225	1,200

In 1983, revisions to the Air Regulations made the registration of ultra-light aeroplanes and the licensing of ultra-light aeroplane pilots mandatory. As of September 30, 1984, the Administration has registered 1,807 ultra-light aeroplanes and issued 958 ultra-light aeroplane pilot licences. Because the costs of acquisition and operation of these ultra- lights are low when compared to the costs for conventional aircraft, the Administration anticipates that this workload variable will increase in 1985-86 and subsequent years.

Revenue: Licensing and examination fees ($0.8 million) are the main sources of revenue for this Activity. For further details of revenue, refer to Section III, A. 5. Program Revenues, page 4-60.

D. Aircraft Services

Objective

To provide efficient aircraft services.

Resource Summary

The operating expenditures for this activity are 5% of the total operating expenditure for the Program. Capital accounts for 19% of the Program's requirements.

Figure 28: Activity Resource Requirements ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Operating Expenditures	46,932	43,900	40,215
Capital Expenditures	93,775	109,000	-
Total Expenditures	140,707	152,900	40,215
Revenues and Recoveries	13,721	11,615	11,297
	126,986	141,285	28,918

Description

The main task of this element is to operate and maintain the Program's aircraft fleet. This aircraft fleet is used for calibration and inspection of air navigation aids, and for transportation and training of Program personnel. It also provides aircraft flight and maintenance services to other government programs, the main one being the operation and maintenance of Canadian Coast Guard aircraft and helicopters for the Marine Transportation program.

Performance Information/Resource Justification

Figure 29 provides a breakdown of operating resource requirements.

Figure 29: Aircraft Services - Operating Expenditures ($000)

	Estimates 1985-86		Forecast 1984-85	
	$	P-Y	$	P-Y
Aircraft Operations	12,828	89	12,000	89
Maintenance	26,728	345	25,000	347
Training	2,138	29	2,000	29
Management & Administration	5,238	48	4,900	48
	46,932	511	43,900	513

Key workload determinants for the Aircraft Services component include the hours of flying demanded by the various users of the aircraft and the number and types of aircrafts operated. Figure 30 summarizes these key variables.

Figure 30: Summary of Key Workload Variables

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
No. of Aircraft	93	91	89
Total Hours of Flying			
Transport Canada Operations	29,000	26,500	24,330
Other Government Programs	18,500	18,000	16,437
	47,500	44,500	40,767

E. Direction and Administration

Objective

To manage the Air Transportation Program to assure the development and operation of a safe and efficient national civil air transportation system responsive to air transportation user requirements and to federal government socio-economic objectives.

Resource Summary

This Activity accounts for 5% of the Program's operating expenditures (Figure 31).

Figure 31: Activity Resource Requirements ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Personnel	7,596	222	8,583	226	7,391	201
Planning	6,586	98	7,438	98	6,137	97
Finance	18,773	278	21,212	283	15,294	261
Purchasing and Supply	3,346	100	3,781	102	3,562	101
Management and Administration	14,590	233	16,486	237	13,568	229
Total Operating Expenditures	50,891	931	57,500	946	45,952	889
Capital Expenditures	6,828		9,000		1,835	
Grants and Contributions	34		1,400		544	
Total Expenditures	57,753		67,900		48,331	
Revenue and Recoveries	6,815		8,700		7,702	
	50,938	931	59,200	946	40,629	889

Description and Resource Justification

The Direction and Administration Activity provides the Program-wide management, policy and administrative functions. It consists of the offices of the Canadian Air Transportation Administrator and the Regional Administrators, headquarters policy and liaison staff, and the headquarters and regional units that provide program-wide support in the following functional areas: planning, finance, personnel, purchasing and supply, and internal administrative services.

Capital Expenditures: The Air Administration is accelerating the construction of office accommodation to house the Quebec Region Air Administration headquarters in Montreal at a total estimated cost of $17 million. Spending of $6 million is budgeted during 1985-86 and includes minor expenditures for office furnishings and equipment.

Revenue: The major item is a recovery for management services ($6 million) provided to the Self-Supporting Airports. For further details, refer to Section III, A. 5. Program Revenues, Page 4-60.

Section III
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 32 presents the Air Transportation program expenditures by object. This Figure includes expenditures made from the Self-Supporting Airports Revolving Fund, net of internal charges for air traffic control and management services (Figure 37, page 4-61).

Figure 32: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	467,691	459,553	417,595

Grants and Contributions	49,263	60,288	35,014
	777,274	900,748	583,629

2. Personnel Expenditures

The Air Program's personnel costs (including statutory contributions to employee benefit plans) account for 64% of the total operating expenditures.

Figure 33 below provides a breakdown of the authorized number of personnel by activity, and Figure 34 shows the authorized person-years and the annual salary provision by occupational category. It indicates the variety of human resources required to operate and maintain facilities and provide air transportation services.

Firefighting	728	724	731	21,147	37,036	29,357
General Services	143	140	134	13,253	39,988	23,658
Heating and Power	121	126	129	18,242	35,598	26,624

Note The person-year column displays the forecast distribution by occupational group of the authorized person-years for the program. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and reclassifications divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

Figure 35 summarizes capital expenditures by major project and location. This figure identifies capital projects having a total estimated cost of $250,000 or more.

Figure 35: Capital Expenditures by Major Project and Location

Projects by Activities	Previously Estimated Total Cost	Currently Estimated Total Cost	Forecast Expenditures to March 31, 1985	**Estimates 1985-86**	Future Years Requirements
	(thousands of dollars)				
AIRPORTS AND ASSOCIATED GROUND SERVICES					
SELF-SUPPORTING AIRPORTS					
NOVA SCOTIA					
HALIFAX INTERNATIONAL AIRPORT					
Install air conditioning..	6,715	7,048	392	**5,193**	1,463
Rehabilitate main entrance road	307	284	117	**167**	-
Replace air terminal building curtain walls .	2,930	2,970	166	**1,444**	1,360
Replace cable tray 15 approach	-	388	-	**388**	-
Replace public furniture air terminal building ..	-	272	-	**272**	-
QUEBEC					
DORVAL NATIONAL AIRPORT					
Elaboration of Airport Master plan	-	731	448	**218**	65
MIRABEL INTERNATIONAL AIRPORT					
Repair hot water system ..	749	749	75	**674**	-
ONTARIO					
OTTAWA NATIONAL AIRPORT					
Apron improvements phase III	-	4,265	-	**4,265**	-
Terminal complex development and asbestos removal	48,600	48,600	25,079	**19,421**	4,100
Develop commercial industrial area	2,455	2,449	100	**2,349**	-

	49,263	60,288	35,014

5. Program Revenues

Description of Revenue Sources

Over 95% of Program revenues come from the air transportation tax, rentals, concessions, and the fees charged for airport services (Figure 37 next page).

Air Transportation Tax: This tax is paid by the passenger at the time a ticket is purchased and is applicable to most commercial airline traffic. Revenue Canada Customs and Excise collects this tax and transfers the funds to the Program. The air navigational services activity receives an allocation of 14% of the revenue from the tax. This allocation is intended as a contribution towards the recovery of the costs of domestic enroute air traffic services. The other 86% is allocated to individual airports based on the number of passengers taking off and landing at each airport in relation to the total numbers taking off and landing in Canada. The methodology for allocating tax revenue between airports and domestic enroute facilities, and among individual airports, is currently under review.

Rentals and Concessions: These revenues come mainly from the rental or lease of terminal building space and related facilities such as parking lots. There are two main types of leasing arrangements: (1) where the arrangement includes a charge based on a percentage of the sales made in the space leased (usually applies to operators of retail services such as car rentals, restaurants, shops and parking lots). (2) a fixed charge per square metre of space occupied. The most significant source of revenue is from the rental of space to airlines for ticket counters and offices.

Landing Fees: Landing fees, assessed on the basis of aircraft weight, also vary with the origin of the flight and the type of airport and aircraft used. The highest fee is for trans-Atlantic flights made by jet aircraft landing at one of the airports in the Self-Supporting Airports Revolving Fund. The lowest fee applies to a domestic flight made by turboprop aircraft landing at an airport located in northern Canada.

General Terminal Fees: These fees, applicable only at 23 major airports, are levied when an aircraft makes use of an air terminal building for processing passengers. The fee is based on the seating capacity of the aircraft. The rate for international flights is higher than for domestic flights due to the need to provide more space for services such as customs and immigration clearance.

Other Revenue:

Other Nationally-Established Airport Fees: The other nationally established airport fees include the fuel concession fee and the passenger security fee. The fuel concession fee, the largest revenue producer of the fees in this category, is set at a fixed rate per litre

of fuel pumped and is payable by the concessionaire operating the service.

Miscellaneous - Airports Activities: These range from recoveries for electricity and heat used by tenants to loading bridge, snow removal and garbage disposal fees.

Figure 37: Summary of Estimated 1985-86 Revenue, Recoveries and Other Receipts by Source and Activity ($000)

	1985-86 Estimates							
	Self-Supporting Airports	Other Airports	Air Navigational Services	Regulatory Services	Aircraft Services	Direction & Administration	Total	1984-85 Forecast Total

Environmental Services Program Weather Services	117	539	827	-	-	-	**1,483**	1,776
Total Recoveries	117	38,137	54,466	-	12,711	6,120	**111,551**	155,894
Total Revenue and Recoveries	459,787	143,817	108,724	822	13,721	6,815	**733,686**	661,440

Miscellaneous - Other Activities: Air Navigational Services also receives revenue from air traffic services to international flights passing through the north Atlantic and polar air routes, and from the use of the activity's telecommunication facilities. These two types of revenue are expected to amount to $13.1 million in 1985-86. The principal sources of revenue in the regulatory activity are fees such as pilots' licence fees.

Assumptions Used to Project 1985-86 Revenue

Increases due to traffic changes are related to forecasts of the number of take-offs and landings (landing and general terminal fees) and to forecasts of the number of passengers (the air transportation tax and most concession fees). Projected rate increases are subject to consultation with the aviation industry. Price level changes affect the amount of revenue collected from concessions, because such fees are generally based on a percentage of the concessionaire's sales, subject to a minimum guarantee.

Description of Recoveries

The Air Transportation Program also charges certain government users for the services they receive. These charges are referred to as recoveries. A description of the largest two follows.

Air Traffic Control Charge: The Air Navigational Services Activity includes all air traffic services, of which, a significant portion relate to control in the immediate vicinity of self-supporting airports. The Activity therefore charges the Fund for these services. The charge is based on the costs of air traffic control towers and other air navigation facilities at an airport, as well as an allocation of a part of the costs of off-airport facilities, such as area control centres, which provide essential navigational services to aircraft approching and departing from the airport.

Management Services Charge: The Self-supporting Airports also receive management and functional services, the latter including expertise in emergency and security services, maintenance and construction of facilities, personnel, finance, planning and administration. The charge for these services is 30% of the direct personnel and other operating costs incurred by the self-supporting airports. The Other Airports are credited with 86% of this charge. The balance is credited to the Direction and Administration activity.

B. Self-Supporting Airports Revolving Fund

1. Financial Summary by Airport

The self-supporting group of airports operates using commercially oriented accounting practices. The financial summaries presented in this sub- section show the profit or loss by individual airport and by category of airport (Figures 38 to 40).

Figure 38: Self-Supporting Airports Revolving Fund Financial Summary by Airport - 1985-86 Estimates ($000)

Airport	Operating Results			Capital Expenditures
	Revenue	Expenses	Profit (Loss)	
Halifax	7,890	16,736	(8,846)	7,464

Victoria	4,134	5,440	(1,306)	850
	35,821	82,931	(47,110)	38,754
Total	392,426	394,876	(2,450)	87,890

2. Projected Use of Authority

The Fund operates under the continuing authority of the Adjustment of Accounts Act (S.C. 1980, c.17):

	($000)
Anticipated Unused Authority as of April 1, 1985 . .	NIL
1985-86 Main Estimates (net cash required)	(94,390)
Anticipated Unused Authority as of April 1, 1986 . .	94,390

C. Investment in Fixed Assets

Figure 41 presents a summary of the Program's investment in fixed assets at March 31, 1984 at replacement value.

Figure 41: Air Transportation Program Fixed Assets Excluding Land at March 31, 1984 ($000)

	Replacement Value
Buildings	2,555,000
Support facilities and structures	5,056,000
Vehicles, furniture and equipment	251,000
Navigational and telecommunications equipment	2,310,000
Aircraft	289,000
Other assets	17,000
	10,478,000

Investment in fixed assets is shown at replacement value reflecting the cost of replacing current assets at 1984 dollars. Most of the investment in support facilities and structures consists of runways, taxiways and other airside surfaces at airports, and roads, bridges, ramps and parking areas. It also includes sewage and drainage, power and light, and heating and refrigeration systems. Other assets consist of developmental costs (including land acquisition costs) for expansion of facilities, the construction of which has not yet started plus miscellaneous other assets.

D. Cost Analysis

The Program's 1985-86 Estimates include all the revenues and most, but not all, of the expenditures that must be taken into account when the net operating cost is determined. Figure 42 provides an estimate of the net cost to operate the Program for 1985-86. It includes the following adjustments to its net financial requirements (Figure 1):

- the removal of capital expenditures; and
- the inclusion of services provided without charge by Public Works, Supply and Services, Treasury Board and other departments.
- the inclusion of the cost of accommodation provided without charge by this department.

Figure 42: Estimated Net Operating Cost of Program by Activity for 1985-86 ($000)

	1985-86					1984-85
	Operating Expenditures	Add Other Costs	Total Costs	Deduct Revenue	**Net Cost**	Forecast Net Cost
Airports & Associated Ground Services						
Self-Supporting Airports	279,509		279,509	459,787	**(180,278)**	(39,000)
Other Airports	189,182		189,182	143,817	**45,365**	44,160
	468,691		468,691	603,604	**(134,913)**	5,160
Air Navigation Services	353,103		353,103	108,724	**244,379**	212,100
Regulatory Services	51,309		51,309	822	**50,487**	51,715
Aircraft Services	46,932		46,932	13,721	**33,211**	32,285
Direction and Administration	50,891	78,047	128,938	6,815	**122,123**	128,927
	970,926	78,047	1,048,973	733,686	**315,287**	430,187

This Figure makes no provision for certain other adjustments that should be made to arrive at an estimate of the Program's net cost. These adjustments are:

- an allowance for depreciation;
- inclusion of the effect of increases or decreases in accounts receivable and inventories; and
- certain accrued expenses.

The 1985-86 allowance for depreciation for the Program as a whole would amount to $58 million (1984-85 $63 million). However, records are not detailed enough to provide a breakdown by Activity. Information about inventories and accounts receivable, other than for Self-Supporting Airports, is not available.

Use of Appropriations for 1983-84 (Cont'd)

	Main Estimates	Total Appropriations	Total Use
Budgetary	$	$	$
Vote 80 - Payments to VIA Rail Canada Inc. in respect of the costs of the management of the Company, payments for capital purposes and payments for the provision of rail passenger services in Canada in accordance with contracts entered into pursuant to subparagraph (c)(i) of Transport Vote 52d, Appropriation Act No. 1, 1977, and payments to a railway company for the prescribed portion of the costs incurred by the Company for the provision of income maintenance benefits, layoff benefits, relocation expenses, early retirement benefits, severance benefits and other benefits to its employees where such costs are incurred as a result of the implementation of the provisions of the contract or discontinuance of a rail passenger service pursuant to subparagraph (c)(ii) of Transport Vote 52d, Appropriation Act No. 1, 1977 ..... (As previously provided in Appropriation Act No. 2, 1982-83)	755,400,000	763,979,115	611,112,965
Vote 85 - Payments to reimburse, in accordance with regulations prescribed by the Governor in Council, Canadian National Railway Company and CN Marine Inc., for the prescribed portion of the costs incurred by them for benefits provided to their adversely affected employees in respect of changes of a permanent nature arising from the rationalization of railway operations provided by the Terra Transport Division of Canadian National Railway Company, in Newfoundland and implemented in accordance with government approved plans for the provision of Newfoundland transportation services ..... (As previously provided in Appropriation Act No. 2, 1982-83)	2,000,000	2,000,000	958,287
Vote 90 - Payments to the Canadian National Railway Company (CNR) in accordance with terms and conditions approved by Treasury Board to conduct a program of testing and evaluation of railway operations in Newfoundland consistent with the objectives of the Government of Canada and the with principles of the National Transportation Act and to reimburse CN, from the program, for wage and wage-related costs incurred by CN at the request of the Minister during the testing and evaluation period ..... (As previously provided in Appropriation Act No. 2, 1982-83)	21,000,000	21,000,000	12,810,426
Statutory - Payments to the Canadian Railway Company in respect of the termination of the collection of tolls on the Victoria Bridge, Montreal.	2,200,000	1,659,218	1,659,218
Statutory - Contributions to Employee Benefit Plans	1,404,000	1,563,000	1,563,000
Statutory - Total authorized limit in accordance with Section 73 (2) of the Western Grain Transportation Act	-	177,000,000	141,993,110
	1,215,084,000	1,725,741,154	1,496,683,873
Non-Budgetary			
Vote L96 - To authorize the Minister to acquire in trust for Her Majesty on such terms and conditions as may be negotiated with Canadian National Railway Company (CNR) and approved by the Governor in Council, in respect of the East Coast ferry and coastal services no par value shares in the capital stock of CNR which shares CNR shall issue ..... (As previously provided in Appropriation Act No. 2, 1982-83)	42,900,000	69,084,000	69,032,000
Total Program	1,257,984,000	1,794,825,154	1,564,715,873

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

The Surface Transportation Program has established these 1985-86 goals:

- to contribute to a reduction in roadway traffic casualties through a continuing cooperative effort with provincial road safety authorities. Federal efforts will focus on responsibilities for improving and enforcing motor vehicle safety standards, research to identify new safety measures, and public information (see pages 5-23 and 5-28);

- to contribute to a reduction in fuel consumption by administering the government/industry voluntary fuel economy program, which has a target of 8.6 L/(100 Km) for the 1986 passenger car fleet (see pages 5-24 and 5-28);

- to work with provinces and territories through the Canadian Conference of Motor Transport Administrators (CCMTA) to develop and implement Phase I of regulatory reform in the trucking industry (see page 5-33);

- to provide financial assistance of $59.5 million for Maritime provinces highway strengthening and improvement programs (see pages 5-20 and 5-33);

- to improve the efficiency and effectiveness of interprovincial ferries and to reduce costs per unit of output through the provision of new equipment and adjustment to administrative practices (see page 5-37);

- to reduce CN Marine Inc. operating costs by the provision of new, more efficient vessels (see pages 5-19 and 5-42);

- to improve the safe, efficient and competitive operation of the rail freight system throughout the country through revisions to railway transportation policies, regulations and selective financial assistance (see page 5-45);

- to review the Western Grain Transportation Act (see page 5-45);

- to provide a contribution of $99.8 million for rehabilitation work on grain dependent Prairie Branch Lines (see page 5-45);

- to improve the institutional, legal and management aspects of the rail passenger program (see pages 5-19 and 5-51);
- to restore specific rail passenger services (see pages 5-19 and 5-51);
- to continue to fund a comprehensive capital program for VIA Rail to increase efficiencies in operation and improve the quality of service (see pages 5-19 and 5-51);
- to undertake a comprehensive audit of VIA Rail to ensure the program is being delivered economically, efficiently and effectively (see pages 5-19 and 5-51);
- to contribute to reducing accidents at level crossings through participation in a public information program as well as financial assistance under the Railway Relocation and Crossing Act (see pages 5-24 and 5-25);
- to develop a more structured approach to the transportation needs of the disabled in the surface modes (see page 5-25); and
- to undertake the development of a new program for urban transportation (see page 5-25).

2. Financial Summary by Activity

Figure 1: Financial Requirements by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Budgetary				
Urban Transport	16,989	19,825	(2,836)	5-25
Road Safety and Motor Vehicle Regulation	14,366	14,681	(315)	5-28
Highway Transport	61,942	85,174	(23,232)	5-33
Water Transport	166,145	203,174	(37,029)	5-37
Rail Freight Transport	126,537	361,574	(235,037)	5-45
Rail Passenger Transport	610,756	575,588	35,168	5-51
Direction and Administration	9,610	11,602	(1,992)	5-56
	1,006,345	1,271,618	(265,273)	
Non-Budgetary				
Water Transport				
Investment in CNR	-	6,100	(6,100)	5-44
	1,006,345	1,277,718	(271,373)	
Authorized person-years	288	295	(7)	

Explanation of Change The 1985-86 estimated expenditures of $1.006 billion represent a net decrease of $271.4 million or 21% below the 1984-85 forecast. Major items accounting for the change include:

	Increase (Decrease) ($ million)
• decrease in highway expenditures due to the completion of these projects in 1985-86 ($19.7 million); completion of Newfoundland Highway Strengthening Program in 1984-85 ($7.4 million) (Highway Transport);	(27.1)
• reduced requirement due to CN Marine Inc. becoming a separate crown corporation thereby eliminating a profit allowance and a dividend payment to CN Marine Inc. ($21.5); selective increased cost recovery and operating efficiencies arising from restructuring the coastal Newfoundland, Gulf and Bay of Fundy services ($16.1 million) (Water Transport);	(37.6)
• Hopper Car purchases made in 1984-85 ($164.7 million), reprofiling of contributions to the railways for Prairie Branch Line Rehabilitation ($33.1 million), Western Grain Transportation Act payments not required for 1985-86 ($29.3 million) (Rail Freight Transport);	(227.1)
• the increased expenditures in 1985-86 arise because forecasted expenditures for 1984-85 are approximately $104 million less than original estimates due to the elimination of depreciation and advanced payments. Reference levels for VIA in 1985-86 are $600.7 million some $80 million less than 1984-85 (Rail Passenger Transport; and	32.0
• reduction in drawdown requirement by CN Marine for the acquisition of capital assets (Water Transport) (Non-Budgetary)	(6.1)

Explanation of 1984-85 Forecast: The 1984-85 forecast is $75.0 million or 6% higher than the 1984-85 Main Estimates of $1.203 billion. The difference of $75.0 million reflects the following major offsetting items:

	Increase (Decrease) ($ million)
• Payments in support of the Urban Transportation Assistance Program ($6.5 million) (Urban Transport);	6.5
• Increase in special government program for Highway Projects for 1984-85 due to delays in engineering and planning in 1983-84 ($12.7 million); N.B. Highway Program - ERDA initiated in 1984-85 for which no funding was included in 1984-85 Main Estimates ($7.1 million) (Highway Transport);	19.8

4623

	Increase (Decrease) ($ million)
• Contributions to the railways for Prairie Branch Line rehabilitation ($61.5 million); purchases of Hopper Cars ($68.8 million); payments under the Western Grain Transportation Act for which no funding included in 1984-85 Main Estimates ($29.3 million) (Rail Freight Transport); and	159.6
• Decrease in VIA Rail payments due to decrease of VIA internal working capital ($110.7 million) (Rail Passenger Transport).	(110.7)

Figure 2: Gross Expenditures by Activity (Percentage Distribution) 1985-86

Figure 3: Gross Expenditures by Expense Category (Percentage Distribution)

B. Recent Performance

1. Highlights

The following activities reflect the major accomplishments of the Surface Administration during 1984-85. In all but three cases these initiatives were an integral part of the goals established at the beginning of the fiscal year. The three exceptions were the decisions on making CN Marine Inc. a crown corporation, the review of VIA Rail by the Rail Passenger Action Force and the implementation of certain program adjustments.

- new motor vehicle safety standards were developed for, among others, child seating, more effective rearbrake lights, and aerodynamic headlights for fuel economy purposes;

- in 1984, the road fatalities are estimated to be 4,113 a reduction of 2.4% from 1983;

- under the Primary Highway Strengthening/Improvement Program, a special government program for highway improvements, and Transportation Subsidiary Agreements under the overall Economic and Regional Development Agreements to support cost-shared programs of road construction and upgrading activities on provincial highways, secondary roads and access roads will amount to $31.5 million, $42.6 million and $8.6 million respectively;

- agreement in principle was reached between federal and provincial ministers to substantially reform economic and administrative regulation of the trucking industry;

- implementation of the demonstration project for accessibility of handicapped travellers to the Roadcruiser bus in Newfoundland as well as a demonstration project of special transportation services for seniors;

- work was begun on setting CN Marine Inc. up as a separate Crown Corporation reporting directly to the Minister of Transport as well as making a number of adjustments to the east coast ferry services and fares. In accordance with the Auditor General's recommendations, Water Transportation Assistance Directorate initiated a pre-negotiation audit of CN Marine Inc. to improve contract negotiations;

- a $571.4 million Prairie Branch Line Rehabilitation program was approved. This amount includes an Improvement Reserve to help finance the costs of rail and non-rail improvements to the grain transportation system. As well the Senior Grain Transportation Committee was established to advise the Minister on matters relating to the transportation and handling of grain;

- a method of Payment Inquiry in respect of grain transportation was initiated with a final report to be available March 31, 1985; and

- a Rail Passenger Action Force was set up to implement a new national rail passenger plan which encompasses long term capital investment and the restoration of services. As well, the group has a mandate to direct a comprehensive audit of VIA Rail, to clarify and rationalize the costing charges imposed by CN and CP and assist in the preparation of new rail passenger legislation.

Highlights of the Program's performance during 1983-84 are:

- the traffic fatality rate was 2.3 fatalities per 100 million vehicle kilometres, which was the original target for the 1979-1983 cooperative road safety program;

- fuel consumption for 1984 model-year cars sold in Canada averaged 8.4 L/(100 Km), which exceeded the goal of 8.7 L/(100 Km);

- Transport Canada made contributions of $68.8 million to the four Provinces of the Atlantic Region under the Federal/Provincial Primary Highway/Strengthening Agreement and a special government program to support cost-shared programs of highway construction and upgrading projects;

- contributions totalling $48.59 million were made under the Urban Transportation Assistance Program, see page 5-26 for more details on type of projects; and

- the Tripartite agreement with CNR and CN Marine Inc. was renegotiated towards the end of 1983-84, except for the Return on Equity issue which was extended at the current rate for 1 year only. A comprehensive audit of CN Marine Inc. was completed by a private consulting firm for the Department.

2. Review of 1983-84 Financial Performance

Figure 4: Financial Requirements by Activity ($000)

	Actual 1983-84	Main Estimates* 1983-84	Change
	$	$	$
Budgetary			
Urban Transport	59,813	61,943	(2,130)
Road Safety and Motor Vehicle Regulation	13,104	11,661	1,443
Highway Transport	70,012	43,664	26,348
Water Transport	189,824	191,635	(1,811)
Rail Freight Transport	539,384	139,565	399,819
Rail Passenger Transport	612,624	757,173	(144,549)
Direction and Administration	10,923	9,443	1,480
	1,495,684	1,215,084	280,600
Non-Budgetary			
Water Transport Investments in CNR	69,032	42,900	26,132
	1,564,716	1,257,984	306,743
Person-Years	309	300	9

* The Main Estimates activity figures have been restated to conform with the revised activity structure implemented in 1984-85. For further details see Section III page 5-67.

The difference between actual expenditures and the Main Estimates results mainly from the following major items:

	Increase (Decrease) ($ millions)
• a special government program was initiated for rail relocation and urban improvements (Urban Transport);	6.9
• a special government program was initiated for highway improvements in New Brunswick ($6.1 million) and Newfoundland ($7.4 million) (Highway Transport);	13.5
• payments to railways resulting from the implementation of the Western Grain Transportation Act ($324.6 million), hopper car purchases ($88.2 million) decrease in Newfoundland Testing and Evaluation and Employee Assistance Program ($9.2 million) (Rail Freight Transport);	403.2
• the resolution of issues affecting VIA Rail's 1983 operating budget as well as reductions in railway charges decreased government funding requirements (Rail Passenger Transport); and	(148.1)
• CNR Share purchases exceeded original projections because of an acceleration in payments for the construction of the new M.V. Caribou.	26.1

C. Background

1. Introduction

The Surface Transportation Program discharges the federal government's responsibilities for urban, highway, ferry, rail freight and rail passenger transportation and for road safety and motor vehicle regulation. Because of the pervasive influence of transportation on the economy, there is considerable liaison with provincial governments and other federal government departments, such as the Departments of Energy, Mines and Resources, Environment and Public Works, which have particular transportation responsibilities. Crown corporations (CN, VIA Rail and CN Marine Inc.) play a crucial role in providing surface transportation services. As well, the operations and funding of this Program are significantly affected by the economic and technical regulation of surface transportation by the Canadian Transport Commission.

The Program has regulatory responsibilities only in motor vehicle and tire safety, exhaust emissions and fuel consumption. Its single major operations facility is the motor vehicle test centre at Blainville, Quebec. The Surface Program has a minor capital responsibility arising from the ownership of four ferry terminals and four ships. Rather than operate facilities and provide services directly, it contracts for certain transportation services (e.g. rail passenger, ferry and coastal shipping) and makes contributions for the transportation of grain by rail, improvements to highway networks, and safer railway crossings.

Because the Federal Government has delegated a large part of it's responsibility over extra-provincial trucking and bus undertakings to provincial regulatory agencies, the Surface Administration has only a small group co-ordinating federal and provincial policy in this area. The provinces bear all other operating and administrative costs.

2. Legal Mandate

The principal acts governing the Program's undertakings are the National Transportation Act (Parts III and IV), the Railway Act, the Western Grain Transportation Act, the Canadian National Railways Act, the Motor Vehicle Transport Act, the Motor Vehicle Safety Act, the Motor Vehicle Tire Safety Act, the Motor Vehicle Fuel Consumption Standards Act and the Railway Relocation and Crossing Act. The provision of certain ferry services is also part of the Minister's mandate as required under Sections 31 and 32 of the Terms of Union with Newfoundland and the terms under which Prince Edward Island entered Confederation. Also the Crown corporations provisions of the Financial Administration Act have a significant impact on the interactions between CN, CN Marine Inc., VIA Rail and the Surface Administration.

3. Program Objective

The Surface Transportation Program attends to the development and operation of a safe and efficient national surface transportation system that contributes to the achievement of government objectives, and operates specific elements of this system.

In addition, the Program has sub-objectives which address, in more detail, safety, efficiency, equity and accessibility in the transportation system and which support the federal government's social and economic objectives.

4. Program Organization for Delivery

Activity Structure: The activity structure which came into effect on April 1, 1984 is used to present the financial plan for 1985-86, along with the financial forecast for 1984-85, and to report on actual financial performance for 1983-84. As a result, the 1983-84 financial plan as originally presented in that year's Main Estimates has been restated in terms of the new activity structure. (Figure 52, page 5-67, provides a comparison of the restated to the original break-out of the 1983-84 Main Estimates financial plan by activity.)

Figure 5: Activity Structure

Organization Structure: Each activity is the responsibility of a single Director General. Each Director General reports to the Administrator, Canadian Surface Transportation Administration, who in turn reports to the Deputy Minister of Transport.

D. Planning Perspective

1. Environment

For surface transportation, a wide range of policy decision and financing options have traditionally been available to government both to achieve its transportation objectives and to accommodate, at times competing, public demands.

This latter point is exemplified by a general desire for more moderate government in a climate where there is demand for a transportation system which provides services to all regions of Canada, provides a choice of modes, with modern equipment and facilities, and is also reliable and relatively affordable. The challenge will be to balance these demands with the ability to provide such a transportation system within government and industry fiscal capacities.

Although there has been reduced traffic growth in surface modes, there is persistent pressure on the system for improved rail passenger and ferry passenger services; two parts of the system which are largely funded by the federal government. The movement of grain, coal and other commodities has and will continue to require the investment in transportation infrastructure for Canada's economic performance to improve.

The Surface Program has grown significantly over the past 10 years in response to specific modal and regional problems. Major contributors to the growth in expenditures have been the rail passenger program (following the transfer of responsibility for administering rail passenger subsidies from the Canadian Transport Commission to Transport Canada), the increased costs to provide ferry services in Eastern Canada and assistance for the construction of highways. The Program experienced further temporary growth in 1983-84 and 1984-85 due to transitional arrangements related to interim payments to CNR and CPR for losses incurred in the transportation of grain. Subject to major changes in policy direction, overall program expenditures should decline over the next few years and then level off.

Given generally limited fiscal flexibility, the best avenues to pursue transportation efficiency improvements will continue to be the selective introduction of changes to the transportation system, the identification and implementation of productivity measures and the introduction of new technology.

Continued public awareness of safety-related issues have led the provinces, industry, road safety associations and consumer groups to rely heavily on the federal government as the necessary catalyst to undertake and coordinate national safety initiatives. Road traffic casualties will likely continue at present levels for the next one to two years.

Pressure to improve the efficiency and productivity of surface transportation plus regulatory reform initiatives in the United States have led Canada to consider its own regulatory structure. Provincial transport ministers and the Federal minister have agreed in principle to a program of economic and administrative reform in Canada for the trucking industry. A review of the impact of railway deregulation will also require continued attention over the next few years.

2. New Initiatives

VIA Rail: Efforts are focussing on the following major initiatives:

- legislation is to be developed and enacted to provide an appropriate and effective framework for the delivery of rail passenger services in Canada;
- a comprehensive management, operational, and financial evaluation of the Rail Passenger Program is being carried out to ensure it is being delivered in the most cost-effective and efficient manner;
- a review of operating railway charges to VIA Rail for services rendered and facilities used is being conducted with the aim of establishing a fair and reasonable basis of compensation;
- VIA's fleet is to be upgraded to modern cost-efficient standards though the purchase of new equipment; and
- service improvements across Canada were approved to go into effect in 1985. They include restoration of the "Atlantic" eastern transcontinental train service (Montreal to Halifax via Sherbrooke and Saint John, N.B.), restoration of the Super Continental service (Winnipeg, Edmonton, Vancouver), the Canadian Service (Montreal, Ottawa, Sudbury) and three regional services, (the Montreal to Sherbrooke service, the Mont Joli to Montreal service and the Toronto - Peterborough - Havelock service).

CN Marine Inc.: In order to increase the efficiency in the Gulf and Newfoundland coastal services, new vessels will be acquired which will reduce operating costs while maintaining the effectiveness of these services.

Economic and Regional Development Agreements: Subsidiary agreements on Transportation Development containing specific highway and road construction and upgrading programs were executed during 1984/85 with the provinces of Prince Edward Island and New Brunswick. These programs of road construction activities cover a five-year period terminating on March 31, 1989 with federal contributions amounting to $16.4 million in P.E.I. and $63.4 million in N.B.

3. Update on Previously Reported Initiatives

Special Government Program: Approximately $34.2 million is expected to be spent in 1985-86 on this program. Major program expenditures relate to highway construction projects, grade separation projects, and VIA Rail station improvements.

Figure 6: Expenditures on Projects by Activity ($000)

	1983-84	1984-85	1985-86	Total
	$	$	$	$
Urban Transportation	7,650	11,065	2,194	20,909
Highway Transport	13,744	42,633	22,944	79,321
Rail Freight Transport	292	-	-	292
Rail Passenger Transport	3,907	20,693	9,152	33,752
	25,593	74,391	34,290	134,274

Grain Transportation: Approval was received for additional program funding for the Branchline Rehabilitation Program, the establishment of the System Improvement Reserve and hopper car purchases. A three-year (1986-87 to 1988-89) $51.3 million System Improvement Reserve was established to help finance both rail and non-rail projects associated with the grain transportation system. In 1984-85, 2,460 hopper cars were purchased at a cost of $161.0 million.

As well, the Grain Transportation Agency and the Senior Grain Transportation Committee were established in 1984-85 to carry out their responsibilities under the Act. A Commission of Inquiry has been created to review the method of payment issue and submit recommendations to the Minister by March 31, 1985.

Rail Passenger Transport: Due to the decision of the government to implement a national rail passenger plan a revised capital investment program has been developed. The maintenance facility under construction at Toronto will be completed in 1985. The modernization of VIA Rail's fleet is considered to be a high priority due to the age of the majority of VIA Rail's fleet and the direct impact equipment has on the public. Delivery of the second order of ten LRC train sets was completed in 1984.

Upgrading of infrastructure, mainly between Toronto and Ottawa, planned for 1984 at a forecasted cost of $27.6 million has been completed. VIA's efforts to improve productivity and cost-efficiency are continuing. In 1984, lower than anticipated earnings, mainly the result of a depressed travel market, were offset partly as a result of improved productivity and improved equipment utilization and maintenance practices.

Water Transport: Renegotiation of the Tripartite Agreement with CN Marine Inc. and CNR was completed toward the end of fiscal year 1983-84. With the decision to make CN Marine Inc. a separate Crown Corporation some further revisions to the Agreement will be required to reflect the new financial and management arrangements.

Regulatory Reform in Trucking: Transport Canada in collaboration with provincial and territorial transportation ministries and agencies, will continue toward development and implementation of reformed economic and administrative regulation for the trucking industry.

4. Program Effectiveness

General: The federal government pursues its stated objectives for surface transportation mainly through the Program expenditures. This role is complicated because surface transportation includes three quite dissimilar modes of transport (railway, ferry and highway) and the federal government's jurisdiction varies within these three modes. Rail and interprovincial ferries are largely under federal jurisdiction, but the highway mode is primarily the responsibility of provincial governments.

Because there are split jurisdictions and several non-quantifiable objectives, there are no comprehensive indicators of the extent to which the Program is "attending to the provision of a safe and efficient national surface transportation system". But there are specific measures of efficiency and safety for the major undertakings of the Surface Program, and together these can be used as a proxy for assessing the Program's overall effectiveness. These are presented in Figures 7 to 11, together with brief comments and references to greater detail in Section II, Analysis by Activity.

The Program meets its stated objectives in close cooperation with various other federal groups, with Crown Corporations, with other levels of government, and with industry. Thus changes in any of these measures of achievement cannot be attributed solely to the performance of the Program.

Efficiency: Two important indicators of the progress towards greater efficiency are the level of subsidies for rail passenger and ferry services.

Rail Passenger Program: One measure is the average level of federal operating subsidy per revenue passenger kilometre. This must be qualified because rail passenger services include a mixed service, from the relatively efficient inter-city services to those provided for access to remote areas. The latter are very poor financial performers but are provided to meet the basic transportation needs of the areas served.

Figure 7: Average Operating Subsidy per Revenue Passenger Kilometre*

*A revenue passenger kilometre is defined as "the movement of a paying passenger the distance of one kilometre".

Ferry Subsidies: Figure 8 shows the trend in average operating subsidy payments for all ferry services to which the Surface Transportation Program contributes. Again, the need to improve access to remote communities and promote economic development must be taken into account. More details are provided on page 5-37.

The federal government meets its constitutional commitments to Prince Edward Island and Newfoundland through CN Marine Inc. The company also runs two services across the Bay of Fundy on behalf of the federal government. Factors such as the scope of operation, the type of ships required, the operating environment and the level of service requested by government limit the value of comparisons with other operators.

Figure 8: Subsidy per Auto-Equivalent Nautical Miles of Capacity Offered

Note: Auto-equivalent nautical miles of capacity = maximum capacity of vessel in auto-equivalent units X # of trips per vessel X crossing length in nautical miles.

Safety: The Program's major areas of emphasis are on motor vehicle and railway crossing safety.

Motor Vehicle Safety: The Program has been participating with provincial governments and the automobile industry in complementary programs to reduce the road fatality rate. Figure 9 summarizes actual achievement and targets for this effort; more details are provided on page 5-30. Traffic fatality reductions were likely influenced by economic conditions as well as federal and provincial safety efforts to increase seat belt and child restraint use, improve motor vehicle safety, and increased enforcement of traffic offenses.

Figure 9: Annual Fatalities per 100 Million Vehicle Kilometres

Railway Crossings: The Program contributes to the reduction of railway crossing accidents by providing financial assistance to the construction of grade separations. Details are on page 5-27.

Figure 10: Railway Crossing Accidents in Canada, 1975-1983

Fuel Consumption: The Program contributes to reducing the fuel consumption of motor vehicles by establishing and carefully monitoring voluntary fuel economy standards for new cars sold in Canada and by undertaking energy-related highway and motor vehicle R&D with industry and the provinces. Recent performance and future targets are presented in Figure 11 and explained in more detail on page 5-31.

Figure 11: Average Fuel Consumption of New Vehicle Sales (L/100 Km)

Vehicle Emissions: The federal government program of vehicle exhaust emission standards and enforcement continues to reduce fleet-average emission levels as new vehicles replace old ones. Overall levels of emissions are estimated to have decreased 25 to 30% since 1973. Additional information is provided on page 5-31.

Section II
Analysis by Activity

A. Urban Transport

Objective

To improve the efficiency of the urban transportation system; to improve the standards of urban environmental quality and land use efficiency, to conserve energy, and to improve safety at railway crossings.

Resource Summary

This activity accounts for approximately 2% of the total 1985-86 Program expenditures and 1% of the total person-years. Approximately 98% of the funds for this activity are contributions.

Figure 12: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Payments for:						
Urban Transportation Assistance	750	-	6,536	-	48,596	-
Railway Relocations and Crossings	15,634	-	12,625	-	10,965	-
Seniors Transportation Demonstration Project	311	-	262	-	-	-
Policy and Administration	294	2	402	4	252	6
	16,989	2	19,825	4	59,813	6

1983-84 Financial Performance: There were no significant changes between actual and planned financial requirements.

Figure 13: 1983-84 Financial Performance ($000)

	Actual 1983-84		Main Estimates 1983-84		Change	
	$	P-Y	$	P-Y	$	P-Y
Payments for:						
Urban Transportation Assistance	48,596	-	55,400	-	(6,804)	-
Railway Relocations and Crossings	10,965	-	6,070	-	4,895	-
Policy and Administration	252	6	473	6	(221)	-
	59,813	6	61,943	6	(2,130)	-

Explanation of Change: Decrease in Urban Transportation Assistance was due to slower than anticipated implementation. Increase was due to a special government program for the Railway Relocations and Crossings in Ontario.

Description

Urban transportation is primarily a provincial and municipal government responsibility. Financial support from the federal government is provided for Railway Relocation and Crossing Act projects and the Urban Transportation Assistance Program (UTAP). The current UTAP will be completed on March 31, 1985.

Performance Information/Resource Justification

Urban Transportation Assistance Program: Under the current program, which expires March 31, 1985, some 207 projects were carried out. Federal contributions to these projects totalled $228.2 million.

Figure 14: Breakdown of Urban Transportation Assistance Program Projects

Type of Project	Number	UTAP Contribution ($ millions)
Urban Transportation Projects	73	21.8
Commuter Rail Projects	1	29.9
Surface Metro Projects	1	2.9
Rail Relocation Studies	7	0.4
Rail Relocations	1	3.0
Rail Grade Separations	124	170.2
	207	228.2

The urban projects have consisted of bus purchases, improvements to maintenance facilities, bus shelters and radio communications systems for existing transit systems, as well as the buy-out of private companies to form a public system and even the establishment of a complete transit system (transit study, purchase of buses, construction of a storage facility, bus shelters and signs, a bus terminal and radio communication system). Special vehicles for the handicapped have been purchased, pedestrian walkways built and traffic or transportation studies have been carried out. A large project for the upgrading of the commuter rail facilities in Montreal required a UTAP contribution of $30 million.

Funding was also begun in June 1984 for a two-part demonstration project of special transportation services for senior citizens in the Winnipeg, Manitoba to be carried out over two years (1984-85 and 1985-86). The demonstration is intended to test door-to-door services in a densely populated urban milieu and a fixed-route service in a suburban setting. Each component will be testing and evaluating the suitability of a specially designed "kneeling" bus intended for the use of the transportation of the disabled.

Railway Relocations and Crossings: Figure 15 details funding by type of project. Operation Lifesaver is a publicity program to warn drivers of the dangers at railway crossings.

Figure 15: Distribution of Railway Relocations and Crossings Payments ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Regina Railway Relocation	5,560	160	1,080
Railway Relocation and Crossing Act Projects	9,974	12,365	8,511
Operation Lifesaver	100	100	75
Port Colborne - (SCI)	-	-	1,300
	15,634	12,625	10,966

The Regina Relocation Project has a total federal commitment of $23.75 million, of which $3 million has been provided under the Urban Transportation Assistance Program.

In grade separation projects, the removal of hazardous road/rail level crossings invariably results in improved safety. The total number of accidents at level crossings in 1974 was 1,074 with 114 fatalities while in 1983 there were 563 accidents with 57 fatalities. The number of injuries in the period went from 664 to 265. Further decreases are expected in all categories for the 1984 calendar year despite a 25% increase in motor vehicle registration since 1975. Reduced fatality rates at railway crossings are not solely attributed to grade separations improvements but are a result of other federal and provincial road safety programs as well.

B. Road Safety and Motor Vehicle Regulation

Objective

To contribute to the reduction of deaths, injuries and property damage resulting from motor vehicle use through improved safety of motor vehicles; to contribute to a reduction in health impairment by reducing exhaust emission levels of new motor vehicles; and to contribute to energy conservation by reducing the average fuel consumption of new motor vehicles.

Specific related goals and initiatives are:

- to contribute to achieving fewer road fatalities during the period 1984-1988 than in 1979-1983, through improved vehicle safety standards, increased safety information for the public, and cooperative programs with provincial governments to increase seat belt use and reduce impaired driving;
- to ensure new vehicles comply with the 1986 fuel consumption objective of 8.6 L/100 km, and to inform the public of fuel consumption ratings of all new cars on the Canadian market; and
- to ensure new motor vehicles built in 1985 do not exceed existing vehicle emissions standards (hydrocarbons (2.0 grams/mile), carbon monoxide (25.0 grams/mile) and oxides of nitrogen (3.1 grams/mile).

Resource Summary

This activity accounts for approximately 1% of the total 1985-86 Program expenditures and 47% of the total person-years.

Figure 16: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Road Safety and Motor Vehicle Regulation	14,366	136	14,681	138	13,104	140

Revenue is generated through the recovery of costs from industrial and other government users of the Motor Vehicle Test Centre and also from the disposition of capital acquisitions, such as vehicles, after testing is completed. This revenue, estimated at $.3 million in 1985-86, is credited to the Consolidated Revenue Fund and is not available for use by the activity.

1983-84 Financial Performance: No significant changes between 1983-84 planned and actual financial performance occurred. Increases were due to increased workload necessary to ensure satisfactory enforcement of the Motor Vehicle Safety and Tire Safety Acts, and to develop proposed Fuel Consumption Standards for Post-1985. An additional three person-years were used for the Summer Canada Program.

Figure 17: 1983-84 Financial Performance ($000)

	Actual 1983-84		Main Estimates 1983-84		Change	
	$	P-Y	$	P-Y	$	P-Y
Road Safety and Motor Vehicle Regulation	13,104	140	11,661	131	1,443	9

Description

Although provincial governments have responsibility for the construction and operation of road systems, the federal government retains responsibility for the development, implementation and monitoring of policies and programs concerning:

- road safety research and safety standards for new motor vehicles and parts;
- fuel consumption; and
- vehicle emissions.

These responsibilities are administered by the following elements of the Road Safety and Motor Vehicle Directorate:

Organizational Element	Responsibilities
Traffic Safety Standards and Research	data bases and related national statistics; research; standards.
Vehicle Safety and Energy Operations	compliance with standards and provisions of the fuel economy program; public complaints of alleged defects and correction by manufacturers/importers.
Motor Vehicle Test Centre	vehicle test programs; outside client and industry programs for motor vehicle improvements.
Planning and Regional Operations	accident investigations; development and dissemination of technical information.

Performance Information/Resource Justification

Road Safety: Research and standards development activities will continue to focus on improving motor vehicle safety, with particular emphasis on occupant restraints, braking, vehicle lighting, and transportation for the disabled. Industry compliance with safety standards will require testing of approximately 100 vehicles (at the Motor Vehicle Test Centre) and 2,500 components, technical audits of 700 manufacturers/importers, investigation of 1,500 public complaints, and monitoring of recall campaigns. Approximately 1,000 detailed accident investigations will support research and standards development activities. Technical information on road and motor vehicle safety, fuel economy and emissions will be provided to Canadians.

Capital resources will be used to purchase vehicles used for compliance testing and to purchase/modify testing equipment for the Motor Vehicle Test Centre.

A contribution of $147,000 will be made to the Roads and Transportation Association of Canada. This non-profit association of voluntary members (federal/provincial/municipal governments, carriers, manufacturers, consultants, etc.) deals with policy, economic and technical issues for all modes of transportation. Also, contributions for countermeasures research will be made to organizations, agencies, associations and institutions that conduct research, develop or evaluate studies of road safety problems or accident countermeasures affecting the road user, the vehicle or the roadway system.

As a result of Transport Canada's road safety programs, complementary provincial/territorial programs and industry efforts, Canada's road fatality rate was reduced by 45% from 1974 to 1984, primarily through improved motor vehicle safety, identification of cost-effective safety measures subsequently implemented by other levels of government, and public information. Efforts will continue to improve motor vehicle safety and cooperate with provincial governments to forestall anticipated increases in traffic fatalities. As shown in Figure 18, the road system is still the scene of 90% of all transportation accidents.

Figure 18: Fatality Percentage by Mode of Transportation

Based on Approximations for 1983

Fuel Consumption: Canada now consumes about 3.2 million terajoules of petroleum annually. Approximately 30% is used by private automobiles and light trucks, and 15% by commercial transportation. In January, 1976 the government announced an economy program directed primarily at privately operated passenger vehicles. Manufacturers agreed to voluntarily comply with this program. To define this program and monitor compliance by industry, the Surface Program has produced guidelines and standard test methods, audited manufacturers' data on consumption, analysed public complaints, and conducted surveys on vehicle labelling and the issuance of fuel consumption information to the public. As shown in Figure 19, this has contributed to annual reductions in the Canadian new car fleet average fuel consumption since 1973. To ensure the continuing improvement in motor vehicle fuel efficiency, Parliament passed the Motor Vehicle Fuel Consumption Standards Act in 1982. Additional resources of $225,000 and three person-years have been approved for 1985-86 to evaluate and develop proposed fuel consumption standards for the post-1985 period, establish improved data systems and draft supporting regulations.

Vehicle Emissions: Closely associated with efficient fuel consumption is the desired level of emissions produced by fuel-efficient vehicles. Standards for emissions of airborne pollutants have been developed in close liaison with the Departments of Environment and Energy, Mines and Resources, and other North American engineering and energy organizations. Vehicles are purchased each year - the number and variety depend on the degree of technological change - and they are tested against current consumption and/or emission standards. Socio-economic impact analyses are being conducted jointly with the Department of the Environment for the review of the adequacy of exhaust emission standards for the post-1985 period.

Figure 20 shows the predicted rates of harmful emissions. This reflects the replacement of older vehicles with newer vehicles meeting current standards.

Figure 19: New Car Fleet Fuel Consumption Averages

Figure 20: Predicted Average Automobile Emission Rates

C. Highway Transport

Objective

To promote the safe and efficient flow of people and goods by motor vehicles across provincial and international boundaries and to ensure the adequate provision and maintenance of a continuous highway network in Canada, nationally and regionally.

Specific related goals and initiatives are:

- to continue efforts with the provinces and industry to reduce or remove unnecessary motor carrier regulations in a uniform manner;
- to monitor and improve the compatibility between U.S./Canada trucking regulatory regimes;
- to administer the Federal/Provincial Primary Highway Strengthening/Improvement Program (Phase II) in the Atlantic Region where, in 1985-86, contributions of $23.0 million will be made to support upgrading of links of the national primary highway network. Over the course of this five-year, cost-shared program, Federal contributions will total $120.0 million;
- to administer $23.0 million that will be spent in providing assistance in Newfoundland and New Brunswick for road construction and improvement on selected highway and secondary roads under a special government program. Total federal contributions to support this three-year, cost-shared program will amount to $79.0 million;
- to manage and co-ordinate a three-year demonstration project on transportation of disabled travellers by Roadcruiser in Newfoundland; and
- to administer, during 1985/86, the federal contribution of $13.6 million to support the Highway Transportation element of the Transportation Subsidiary Agreements negotiated under the Economic and Regional Development Agreement with Prince Edward Island and New Brunswick. Total federal contribution to this five-year, cost-shared program of road construction and improvement activities on provincial highways, secondary roads and access roads will amount to $79.8 million.

Resource Summary

This activity accounts for approximately 6% of the total 1985-86 Program expenditures and 7% of the total person-years.

Figure 21: Activity Expenditures ($000) and Person-Years

	70,012	21	43,664	22	26,348	(1)

Explanation of Change: The change is due to the following major program additions approved in 1983-84 Supplementary Estimates:

- payments to the Province of Newfoundland under the Primary Highway Strengthening/Improvement Agreement;
- transfer of the Highway funding program under General Development Agreements with the provinces from the Department of Regional Economic Expansion to Transport Canada ($13.1 million). Final payments under these programs were made in 1983-84; and
- highway funding programs under a special government program amounting to $13.7 million for road construction and improvement projects on selected highway and secondary roads.

Description

Payments for Highway Construction: The government enters into cost-sharing agreements with the provinces for the strengthening and improvement of primary and other selected highways. Highway construction programs provide such benefits as improved safety, increased capacity, reduced user costs, higher vehicle load limits, and reduced travel times.

Policy and Administration: This component contains the resources required to develop, implement and monitor policies and programs pertaining to highway construction and motor carrier operations. Responsibilities include negotiating and administering highway construction agreements and conducting engineering and economic evaluations of highway programs. Responsibility for the regulation of extra-provincial motor carrier operations has been delegated to the provinces under the Motor Vehicle Transport Act. The Highway Transport Directorate is responsible for promoting uniform provincial regulations and developing federal policies to encourage efficient and effective inter-provincial and international trucking and bus operations.

Performance Information/Resource Justification

Highways Development: A second phase of the highway strengthening/improvement program was approved in 1982 for the three Maritime provinces (New Brunswick, Nova Scotia, Prince Edward Island). This involves an expenditure of $84 million, of which $23 million is estimated for 1985-86. A similar phase II program was approved for Newfoundland, where the federal outlay amounted to $36 million, the final payment of which was made during 1984-85. The current program in Newfoundland runs for three years (1982-83 to 1984-85) and the agreements with the Maritime provinces last for five years (1982-83 to 1986-87).

Highway programs under General Development Agreements with the provinces, transferred from the Department of Regional Economic Expansion to Transport Canada in 1982, involved the completion of the upgrading and construction of roads in British Columbia, New Brunswick and Quebec. Final payments were made to the Provinces in 1983-84.

Additional highway funding programs under a special government program for road construction and improvement projects on selected highways and secondary roads in New Brunswick and Newfoundland were approved in 1983-84. Both programs run for three years (1983-84 to 1985-86) and will involve total federal expeditures of $35 million in Newfoundland and $44 million in New Brunswick during the agreement period.

Subsidiary agreements on Transportation Development containing specific highway and road construction and upgrading programs were executed during 1984/85 with the provinces of Prince Edward Island and New Brunswick. These programs of road construction activities cover a five-year period terminating on March 31, 1989 with total costs amounting to $32.8 million in P.E.I. and $90.5 million in N.B. with federal contributions amounting to $16.4 million and $63.4 million respectively.

(1) Prairie Northland Highway Program
(2) Primary Highway Strengthening/Improvement Plan
(3) Other Highway Funding Programs (transferred from DREE)
(4) Special Government Projects Program
(5) Economic and Regional Development Agreements (ERDA)

NOTE: Records are not maintained at Transport Canada to indicate the accumulated mileage/kilometres of highway improvements. In some cases, for example final paving, projects represent the final step on projects not implemented under the Program. Likewise some grading projects implemented as part of the Programs will not be completed due to time and financial constraints.

Regulatory Reform in Trucking: The purpose of regulatory reform in trucking is to increase efficiency and productivity in the Canadian trucking industry so that Canadian commercial enterprises can be competitive with those of our international trading partners. Federal and Provincial transport ministers have agreed in principle to develop and implement a first phase of regulatory reform.

D. Water Transport

Objective

To attend to the development and operation of safe, efficient, and adequate coastal steamship and ferry services in accordance with commitments made under the Terms of Confederation with P.E.I. and the Terms of Union with Newfoundland and the responsibilities accepted on the basis of government policy decisions.

Specific related initiatives for 1985-86 are:

- to limit growth in subsidy requirements by better contracting processes and tighter control of costs;
- to fully implement the decisions to make CN Marine Inc. a Crown Corporation;
- to acquire new vessel for CN Marine Inc. in order to improve the efficiency of existing services; and
- to continue to develop new performance indicators and reporting format in order to provide more effective monitoring of all ferry services.

Resource Summary

This activity accounts for approximately 16% of the total 1985-86 Program expenditures and 9% of total person-years. Grants, contributions and payments to CN Marine Inc. for ferry and coastal shipping services make up 96% of the activity's expenditures.

Share purchase in CNR	-	-	6,100	-	69,032	-

[1] Resources and responsibility for the Keewatin Resupply operation provided by NTCL was transferred to the Marine Program for 1984/85 and beyond.

[2] Includes payment to the Atlantic Container Express estimated at $3.5 million in 1984-85 and $2.8 million in 1983-84.

[3] For more detailed information on the difference between Forecast and Estimates figures please see page 5-43.

Revenue is generated through the annual chartering of four vessels owned by Transport Canada. This revenue, estimated at $.44 million in 1985-86, is credited directly to the Consolidated Revenue Fund and is not available for use by the activity.

1983-84 Financial Performance: Figure 25 shows the variations that occurred between actual and planned budgetary and non-budgetary expenditures for 1983-84.

Figure 25: 1983-84 Financial Performance ($000)

	Actual 1983-84		Main Estimates 1983-84		Change	
	$	P-Y	$	P-Y	$	P-Y
Budgetary						
Payments in respect of ferry and coastal shipping services operated by:						
Provinces	18,557	-	18,571	-	(14)	-
Private operators	12,176	-	10,771	-	1,405	-
CN Marine Inc.	156,612	-	158,864	-	(2,252)	-
Northern Transportation Company Limited	643	-	650	-	(7)	-
	187,988	-	188,856	-	(868)	-
Policy and Administration*	1,836	26	2,779	27	(943)	(1)
Total	189,824	26	191,635	27	(1,811)	(1)
Non-Budgetary						
Share purchase in CNR	69,032	-	42,900	-	26,132	-

*Includes capital expenditures of $84,000 (Main Estimates $461,000)

Explanation of Change: Cash requirements for CNR Share purchases exceeded original projections because of an acceleration in payments for the construction of the new M.V. Caribou.

Description

Payments for Ferry and Coastal Shipping Services: The federal policy sets eligibility for water transport financial assistance to constitutional services, alternatives to constitutional services, Newfoundland coastal services, services offering special development opportunities and services to remote communities. Constitutional services are ferry services that the federal government must support under the Terms of Union with Newfoundland and the Terms of Confederation with Prince Edward Island. The recipients of financial assistance under this policy are:

- Newfoundland, Quebec and British Columbia;
- Atlantic Container Express, a direct water shipping company;
- five private operators of ferry services on the East Coast; and
- CN Marine Inc. operator of five passenger and highway vehicle ferry services, two rail car ferry services in the Atlantic provinces, and the Newfoundland coastal service.

Policy, Planning and Administration: This component contains the resources required for establishing and administering policies, plans and programs for all aspects of water transportation assistance and associated services subsidized by the federal government. Responsibilities include setting levels of service for subsidized water transport, negotiating and monitoring performance against operating contracts with CN Marine Inc., and private operators of ferry services, negotiating agreements with provincial governments for shared-cost ferry services and ensuring a proper federal input to inter- and intra-provincial ferry and other coastal water services.

Performance Information/Resource Justification

Ferry and Coastal Shipping Services - Payments to Provinces: In return for a commitment by the Provinces of Newfoundland and Quebec to provide adequate services in specific areas and by British Columbia to ensure adequate passenger and cargo services on the West Coast generally, the Department of Transport pays annual grants to the three provincial governments. Each subsidy is modified annually to reflect changes in the Consumer Price Index in the cities of Vancouver, St. John's and Quebec City, respectively. Figure 26 shows the payments made, or to be made.

Figure 26: Grants to the provinces ($000)

	1982-83 Actual	1983-84 Actual	1984-85 Forecast	1985-86 Estimates
British Columbia	12,542	13,683	14,361	15,080
Newfoundland	1,958	2,140	2,267	2,380
Quebec	2,472	2,734	2,870	3,015
Total	16,972	18,557	19,498	20,475

Ferry and Coastal Shipping Services - Payments to Private Operators: Subsidy payments are made to private operators to supply ferry and coastal passenger and freight services. All of the ferry services in this category are inter-provincial except the Black's Harbour/Grand Manan service in New Brunswick and the Placentia Bay service in Newfoundland. Figure 27 shows subsidy payments for the acquisition of ferry services from private carriers. Figure 28 shows subsidy per auto-equivalent nautical miles of Capacity offered for three of the largest private operators.

Figure 27: Subsidy Payments for the Acquisition of Ferry Services from Private Carriers

Figure 28: Subsidy per Auto-Equivalent Nautical Miles of Capacity Offered in 1983 dollars

Note: Auto-equivalent nautical miles of capacity = maximum capacity of vessel in auto equivalent units x # of trips per vessel x crossing length in nautical miles.

Ferry and Coastal Shipping Services - Payments to CN Marine Inc.: Since January 1, 1979, CN Marine Inc. has provided ferry and coastal shipping services under operating contracts with the Department of Transport. The Department also has contracts for the carriage of rail cars by CN Marine Inc. between the mainland and the provinces of Prince Edward Island and Newfoundland. These contracts are renegotiated annually, subject to the terms and conditions of the Tripartite Agreement between Transport Canada, CNR and CN Marine Inc. which has recently been reviewed. New vessels will be acquired, within existing funding levels, which will result in more efficient services, increased capacity, and reduction of operating costs.

The operating contracts are by calendar year to correspond with the companies' fiscal year. Figure 29 shows the allocation of planned 1985-86 payments by calendar year.

Figure 29: Allocation of Planned 1985-86 Payments to CN Marine Inc. by Calendar Year ($000)

1985 calendar year	
Forecasted payments	132,911
Less funding provided from previous years' appropriation	32,750
	100,161
1986 calendar year	
Provision for first quarter	32,750
	132,911

Figure 30 outlines the basis used to arrive at the level of payments to CN Marine Inc. for calendar year 1985. Figures 31 and 32 details these payments by ferry service offered.

Figure 30: Basis for Payments to CN Marine Inc. (by Calendar Year in $000)

	Forecast 1985	Forecast 1984	Actual 1983	Actual 1982
Operating expenses	**157,618**	157,248	149,147	147,246
Depreciation	**11,500**	11,943	11,602	8,517
Administration and other unallocated items	**17,500**	19,221	17,824	16,725
Total expenses	**186,618**	188,412	178,573	172,488
Profit allowance	**-**	22,800	19,803	16,507
Total eligible costs	**186,618**	211,212	198,376	188,995
Revenues from users	**52,282**	46,312	43,982	37,451
Interest income	**1,425**	2,000	1,236	1,888
Federal government payments	**132,911**	162,900*	153,158*	149,656*

* Includes labour assistance payments.

The 1985-86 reference level reflects fundamental changes in the operation and management of CN Marine Inc. as announced by the government. The most significant change was the decision to create a separate parent Crown Corporation and eliminate the profit allowance for two years and the dividend payment to CN. This represents a saving of $21.5 million. Other savings totalling $15.3 million are possible from selective increased cost recovery, from operating efficiencies in the restructuring of the Coastal, Gulf and Bay of Fundy ferry services, and from fare adjustments resulting in increased revenues of approximately $5 million.

Total	186,618	53,707	132,911	-	-	-	-

* The Yarmouth/Portland service was terminated on December 31, 1982.

Figure 32: Subsidy per Auto-Equivalent Nautical Miles of Capacity Offered (1980-1984 includes a profit allowance)

Note: Auto-equivalent nautical miles of capacity = maximum capacity of vessel in auto equivalent units x # of trips per vessel x crossing length in nautical miles.

CNR Share Purchase (non-budgetary): A $164.8 million fund was established to finance fixed asset acquisitions by CN Marine Inc. The original balance of the fund, created under the Tripartite Agreement, was increased during 1983-84 by $21.7 million; $6.7 million is an allowance for inflation relative to funds not drawn in accordance with the original plan, and the other $15 million represents a contribution towards the Gulfspan vessel project from the Department of Regional Industrial Expansion. Under the terms of the Agreement, the Government of Canada purchases shares in CNR, who, in turn, must apply the funds to purchase shares in its subsidiary, CN Marine Inc.

Most of the current capital funds are being used by CN Marine Inc. to acquire a new ferry (the M.V. Caribou vessel project).

E. Rail Freight Transport

Objectives

To contribute to the development and operation of a safe, efficient, and adequate national rail freight and grain transportation system that contributes to the achievement of government objectives.

Specific related goals and initiatives are:

- to ensure the provision of adequate rail capacity throughout the country;
- to review the Western Grain Transportation Act;
- to assist in increasing the capacity of the grain handling and transportation system;
- to manage the rehabilitation of selected grain-dependent branch lines in the basic rail network; and
- to recover $46.8 million in subsidy overpayments to Canadian National Railway.

Resource Summary

This activity accounts for approximately 13% of total Program expenditures for 1985-86 and 11% of total person-years. Most of the expenditures (96%) are contributions to railway companies for the costs of rehabilitating Prairie branch railway lines and to the Canadian Wheat Board for the leasing of hopper cars.

Figure 33: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Grain transportation support						
Branch line rehabilitation	99,800	-	132,900	-	93,200	-
Acquisition of hopper cars	-	-	164,665	-	86,183	-
Leasing of hopper cars	17,242	-	17,718	-	17,054	-
	117,042	-	315,283	-	196,437	-

Freight development - Nfld. railway containerization	-	-	9,200	-	12,810	-
Labour Assistance	-	-	2,000	-	958	-
Other freight development	163	-	490	-	292	-
Policy, planning and administration	3,332	31	4,697	29	3,156	34
Office of the Grain Transportation Coordinator*	-	-	268	4	1,138	18
	126,537	31	361,574	33	539,384	52

* The Office of the Grain Transportation Coordinator was established as a separate program during 1984-85.

The activity has two sources of revenues, estimated to total $1 million in 1985, that are credited directly to the Consolidated Revenue Fund and are not available for use by the activity.

One source of revenue is the interest paid by the railways to the government for rehabilitation program funds advanced during the year and not used by the end of November. The second source of revenue comes from the rental of grain hopper cars to the railways for the winter grain movement when not required for the transportation of grain in Western Canada.

1983-84 Financial Performance: Figure 34 shows the major components of expenditures.

Figure 34: 1983-84 Financial Performance ($000)

	Actual 1983-84		Main Estimates 1983-84		Change	
	$	P-Y	$	P-Y	$	P-Y
Grain Transportation Support						
Branch Line Rehabilitation	93,200	-	93,200	-	-	-
Acquisition of hopper cars	86,183	-	-	-	86,183	-
Leasing of hopper cars	17,054	-	17,718	-	(664)	-
	196,437	-	110,918	-	85,519	-
Payments to Railways resulting from implementation of the Western Grain Transportation Act	324,593	-	-	-	324,593	-
Freight development - Nfld Railway Containerization	12,810	-	21,000	-	(8,190)	-
Labour Assistance	958	-	2,000	-	(1,042)	-

Policy, planning and administration	3,156	34	3,977	37	(821)	(3)
Office of the Grain Transportation Coordinator	1,138	18	1,670	20	(532)	(2)
	539,384	52	139,565	57	399,819	(5)

Explanation of Change: The change is due to the following major program additions approved in 1983-84 Supplementary Estimates:

	Increase-(Decrease) ($ million)
• Increased funding for the acquisition of hopper cars	86.2
• Compensation to the railways for the movement of grain resulting from implementation of the changes contained in the Western Grain Transportation Act.	324.6
• Decrease due to reprofiling of cash flow for the Newfoundland Railway Containerization program and the Labour Assistance Program	(9.2)

Description

Branch Line Rehabilitation Program: This program intends to improve the branch line system in Western Canada in order to permit the movement of railway cars at certain standards, generally year-round. Work is restricted to grain-dependent lines in the permanent network.

Hopper Car Program: Contributions are provided to the Canadian Wheat Board for the purchase and leasing of hopper cars to assist in transporting grain to markets.

Compensation to Railways for Losses Incurred in the Transportation of Grain: The federal government agreed to compensate the railways for losses incurred in the transportation of grain for the 1982-83 crop year and to December 31, 1983 for 1983-84 crop year, at which date the Western Grain Transportation Act became operative.

The payments made in 1983-84 were in respect of: 1982-83 crop year $182.6 million and 1983-84 crop year $141.9 million for a total of $324.5 million. A payment was made in 1984-85 government fiscal year of $29.3 million as a final adjustment of these interim railway payments arrangements.

Freight Development - Newfoundland Railway Containerization: This five-year program commenced in 1980-81. Its primary objective was to revitalize the Newfoundland railway, and to determine the role that the railway should play in the overall transportation system. The program developed and tested a fully operational container-based railway. Funds had been allocated for the purchase of containers, the placement of modern container loading equipment at key distribution points and the purchase of appropriate narrow-gauge railway equipment including flatbed cars and yard equipment, to permit effective interlining with the marine and trucking modes. An evaluation of the railway containerization program is now underway.

Policy, Planning and Administration: This component contains the resources required for establishing and administering policies, plans and programs for all aspects of rail freight assistance and associated services provided by the Program. Responsibilities include advising the government on all matters concerning rail freight and grain movement and handling, assessing the commercial viability of the railway system, monitoring railway services and freight rates, assessing railway technology and energy efficiency, evaluating government programs and projects, providing advice on subsidies and legislative proposals, and advising the Minister on the disposition of certain lands of the Canadian Government Railways which was a group of government owned railway companies that became part of the Canadian National Railway.

Performance Information/Resource Justification

Grain Transportation Support: The two major undertakings to ensure adequate movement of grain are the Branch Line Rehabilitation Program and the provision of grain hopper cars.

Branch Line Rehabilitation: Under this program, prairie branch lines are rehabilitated and upgraded to being capable of handling modern railway grain car standards. As of March 31, 1985, $628 million will have been spent on work such as bank widening and drainage, ballast and tie replacement, rail relay, bridge repairs and resurfacing.

Studies have indicated that branch line rehabilitation has resulted in significant increases in branch line capacity, reduced line closures from weather factors, and contributed to improved car cycle times.

Figure 35: Actual and Planned Branch Line Kilometres of Rehabilitation

	Bank Widening and Drainage	Ballast and Tie Replacement	Rail Relay	Final Surfacing
1977/78	359.2	164.0	-	-
1978/79	791.5	840.4	105.1	-
1979/80	652.7	990.8	75.2	33.3
1980/81	880.9	741.9	282.1	568.1
1981/82	703.3	547.0	231.4	683.6
1982/83	764.4	708.9	159.8	544.6
1983/84 (Completed)	600.1	645.5	260.2	634.1
1984/85 (Planned)	1,547.7	826.5	279.9	518.7

Provision of Hopper Cars: Over the ten years to 1982-83, the federal government acquired 11,280 cars dedicated to grain movement, including 2,000 cars under lease for 25 years at an estimated annual cost of $17.0 million.

Recent decisions approved the purchase of an additional 3,840 cars at a cost of $250.6 million.

1983-84	$ 89.6 million	1,380 cars
1984-85	$161.0 million	2,460 cars

This will bring the total of government-owned cars to 13,120.

The combined effect of the branch line rehabilitation and hopper car programs contributed to increasing the capacity of the grain transportation and handling system.

Newfoundland Railway Containerization: Upon completion on March 31, 1985, this five-year program will be fully evaluated to determine whether it met its original objectives. Transport Canada, Labour Canada, CNR and the affected railway unions have established a special labour assistance program to aid those who may be adversely affected by changes introduced during the five-year period. The federal government will compensate the railway for a prescribed portion of the costs, and has authorized expenditures of $10 million during the testing and evaluation period.

Figure 36: Newfoundland Railway Programs Financial Schedule ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	%	$	%	$	%
Container plan	-	-	9,200	92	12,810	93
Labour assistance	-	-	2,000	8	958	7
	-	-	11,200	100	13,768	100

Other Freight Development: This program is designed to demonstrate the effectiveness of centralized, well-equipped, all-weather potato loading facilities in P.E.I. Two facilities, at Souris and Albany, were constructed for use during the 1983-84 shipping season.

The completed facilities have been entrusted to the CNR. The P.E.I. Potatoes Marketing Board is responsible for management and operation. A federal-provincial committee, with representation from potato shippers and the railway, will evaluate the results of the program based on three years of operation to the end of 1985-86 to determine what follow-up action, if any, is required.

F. Rail Passenger Transport

Objective

To contribute to the development of a safe, efficient and adequate national rail passenger system that contributes to the achievement of government objectives.

Specific related goals are:

- to continue to make available to VIA Rail additional funds for the modernization of its equipment, facilities and infrastructure;
- to bring about operating cost savings and a reduction of government operating subsidies per passenger kilometre in constant dollars;
- to improve the institutional, legal and management aspects of the rail passenger program; and
- to improve the rail passenger services through the acquisition of appropriate rolling stock and the restoration of certain routes.

Resource Summary

This activity accounts for approximately 61% of total Program expenditures and 9% of total person-years. More than 98% of the activity expenditures (approximately 60% of the total Program expenditures) are payments for the provision of rail passenger services by VIA Rail.

Figure 37: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

	610,756	25	575,588	20	612,624	22

1983-84 Financial Performance:

Figure 38: 1983-84 Financial Performance ($000)

	Actual 1983-84		Main Estimates 1983-84		Change	
	$	P-Y	$	P-Y	$	P-Y
VIA Rail payments:						
Operation of passenger services	445,541	-	568,400	-	(122,859)	-
Acquisition and renovation of plant and equipment	158,207	-	182,000	-	(23,793)	-
Labour assistance	7,365	-	5,000	-	2,365	-
	611,113	-	755,400	-	(144,287)	-
Policy, Planning and Administration	1,511	22	1,773	22	(262)	-
	612,624	22	757,173	22	(144,549)	-

Explanation of Change: Payments for the operation of passenger trains were lower than expected, mainly due to lower than anticipated railway charges to VIA Rail, and improved productivity and cost control measures by VIA Rail. Capital payments were also lower than expected due to delayed, deferred, and avoided capital project costs.

Description

VIA Rail Payments: Since April 1, 1979, VIA Rail has been responsible, under the Rail Passenger Services Agreement with the Ministry of Transport, for managing all rail passenger services in Canada formerly operated by CNR and CPR. Before this transfer of responsibility, 80% of the passenger losses of CNR and CPR had been subsidized under the Railway Act. VIA Rail must provide the services identified by the Minister in contracts called Subsidiary Service Requests (SSR). SSR's cover all of VIA Rail's railway passenger services. As of October 1984, with the introduction of the Moncton - Edmundston service, the number of SSR's increased from 33 to 34. It will increase again in 1985 with further planned service restorations. VIA Rail, in turn, contracts with CNR and CPR for the running rights and operation of passenger trains on their rail systems, equipment maintenance and other support facilities.

Montreal Area Commuter Train Service: These grants, made to the province of Quebec, are for the modernization of commuter train services in the Montreal area.

Policy, Planning and Administration: This component contains the resources required to administer payments for rail passenger services, to develop and evaluate rail passenger policy, to assess program performance and to conduct studies on the efficiency and cost effectiveness of rail passenger services.

Performance Information/Resource Justification

VIA Rail: Figure 39 provides a summary of the financial support the government has provided to VIA Rail since it started operations in 1979. Because VIA Rail operates on the calendar year, the government contracts with VIA Rail for passenger services are also by calendar year. Figure 40 shows the allocation of planned 1985-86 VIA Rail payments by calendar year. VIA Rail's capital requirements during 1984-85 reflect an increase in the Corporation's contribution to funding capital investment of $41 million in 1984. For 1985-86, a $93 million reduction in subsidy requirements will be made to VIA Rail's reference levels. The reduction will be effected mainly through a decrease in railway charges to VIA Rail, and a decrease in VIA Rail overhead and administrative expenses. As part of its mandate, the Rail Passenger Action Force established in 1984 is supervising the implementation of the expenditure reduction.

Figure 39: Summary of VIA Rail Capital and Operation Requirements ($000)

	1979-80	1980-81	1981-82	1982-83	1983-84	1984-85	1985-86*

Property, plant and equipment	67,100	117,500	89,111	130,782	158,207	92,569	175,200
Labour assistance	-	3,169	5,198	11,664	7,365	5,000	5,000
Total requirements	341,451	451,669	540,617	603,936	611,113	568,700	600,700

* The amounts dedicated to operating and capital programs is currently under review by the Rail Passenger Action Task Force and may be adjusted during 1985-86.

Figure 40: Allocation of 1985-86 Payments to VIA Rail by Calendar year ($000)

	Passenger Services	Property Plant and Equipment
1985 calendar year Approved payment*	434,800	192,300
	434,800	192,300
Less: Funding provided from last year's appropriations*	120,300	40,000
	314,500	152,300
1986 calender year Provision for first quarter*	106,000	22,900
	420,500	175,200

*Includes Special Employment Initiative Program and the transfer of funds from the Department of Regional Industrial Expansion for improvements to stations and shelters in the lower St. Lawrence.

Operation of Passenger Services: The main objective is to provide an effective system of rail passenger services in Canada. A meaningful measure of performance is the evolution of the operating subsidy per revenue passenger kilometre of service measured in constant and current dollars. The average subsidy in constant dollars is shown in Figure 7 on page 5-22, and the subsidy by type of service is shown in Figure 41.

During 1985 a number of services will be restored. This will complete the establishment of the national network as identified by the Rail Passenger Action Task Force.

- The Supercontinental - Winnipeg, Edmonton, Vancouver
- The Atlantic - Montreal to Halifax via Sherbrooke and Saint John, N.B.
- The Canadian - Montreal, Ottawa, Sudbury
- Montreal-Sherbrooke
- Toronto - Peterborough - Havelock
- Mont Joli - Montreal

The funds necessary to restore these services will be approximately $40 million. These funds will be found within the current VIA Rail budget of $600.7 million.

Figure 41: Operating Subsidy by Type of Service

	Budget 1985			Budget 1985	Forecast 1984	Actual 1983	Actual 1982
	*Cost	Revenues	Subsidy	Federal Subsidy Level			
	($ million)			($ of subsidy by type of service)			
Operations by type of service							
Transcontinental	245.2	76.5	168.7	38.8	37.9	43.1	41.5
Intercity	243.7	106.9	136.8	31.5	37.7	36.0	36.6
Local-Regional	96.3	19.1	77.2	17.8	12.0	10.0	11.2
Remote	60.9	8.8	52.1	11.9	12.4	10.9	10.7
Total	646.1	211.3	434.8	100.0	100.0	100.0	100.0

*Cost includes depreciation and administration.

Acquisition and Renovation of Plant and Equipment: Funding is being allocated on a priority basis to the upgrading of equipment. It is planned to replace all but the new LRC equipment over the coming years. Backshopping, the on-going refurbishment of the existing fleet, will continue to be an expense item until the equipment replacement program is completed. Construction of a new modern maintenance facility for VIA Rail at Toronto is underway at an estimated cost of $98.7 million. The facility is expected to significantly reduce operating costs.

A major station upgrading project is the reintroduction of rail passenger service to downtown Quebec City through the construction of Gare du Palais. The total estimated cost is $28 million. Funds are also being provided to improve VIA Rail station and shelters at Toronto and in the Gaspé, Mont Joli and Lower St. Lawrence areas. Infrastructure improvements will continue to be made on an as required basis, mainly in support of planned service restorations. Capital expenditures for 1985 are currently being determined in conjunction with the work of the Rail Passenger Action Force.

Labour Assistance: Labour assistance payments are made under regulations set by Governor-in-Council in October 1977 that allow the government to pay a prescribed portion of the total cost of employee assistance benefits. The remainder is covered by the railways. In 1985-86, approximately $5 million will be allocated to displaced employees for early retirement benefits, relocation expenses, job retraining costs, layoff benefits and other similar programs.

Montreal Commuter Train Services: The total grant for this portion of the Montréal commuter program is $40 million, with $8 million planned for 1985-86, and $28 million in the future years. This grant is intended to improve commuter train frequency, encourage ridership and lower fares.

G. Direction and Administration

Objective

To provide timely and effective direction, policy analysis, and financial and administrative services to the Program.

A specific related goal is to identify methods to improve intermodal and inter-governmental transportation planning to more effectively meet the needs of Canada's regions.

Resource Summary

This activity accounts for approximately 1% of total Program expenditures and 17% of person years. More than 69% of the expenditures for this activity are contributions and statutory payments.

Figure 42: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y

Planning, Finance, and Administration*	8,368	31	9,447	38	7,961	27
Total	9,610	48	11,602	53	10,923	42

* Includes contributions for Newfoundland Pensions, Intercolonial and P.E.I. Railways Employees' Provident Fund and the Victoria Jubilee Bridge totalling $6.6 million in 1985-86; 1984-85 $7.6 million; 1983-84 $6.7 million.

1983-84 Financial Performance: Increase of $2.3 million in communication expenditures for the Western Grain Transportation Inquiry. The increase in the person-years is due to the reorganization of the word processing services within the Administration.

Figure 43: 1983-84 Financial Performance ($000)

* Includes contributions of $6.7 million for Newfoundland Pensions, Intercolonial and P.E.I. Railways Employees' Provident Fund and the Victoria Jubilee Bridge (Main Estimates $7.2 million)

Description

Office of the Administrator and Deputy Administrator: The office manages and controls the undertakings and resources of the Program and advises the Minister and Deputy Minister on surface transportation matters.

Policy and Analysis: The functions are to review, analyze and propose government and departmental policies affecting the Program.

Planning, Finance and Administration: The main responsibilities are to establish and maintain effective planning, evaluating, forecasting and controlling functions; to provide financial advice and guidance to management; to provide administrative and coordination services for the Program; to administer the use and maintenance of government rail cars; and to administer the contribution agreements between the federal government and the CNR related to the Supplementary Pensions for Newfoundland Employees, the Intercolonial and Prince Edward Island Railways Employees' Provident Fund and the Victoria Jubilee Bridge.

4ECO

Performance Information/Resource Justification

Planning, Finance and Administration: The resources needed for the three contribution agreements between the federal government and the CNR and for the use and maintenance of the government rail car service total $6.9 million or 62% of the component's resources.

Supplementary Pensions - Newfoundland Employees: The Newfoundland government's railways and steamships services and a part of public telecommunications systems were entrusted to the Canadian National Railway Company for management and operation on April 1, 1949. Employees transferred were made subject to the Canadian National Railways' Pension Plan. The government of Newfoundland contributes towards costs, to the extent of its liability under the former Newfoundland pension plan based on service before Confederation. Canadian National Railway contributions cover the service of employees after April 1, 1949, in accordance with existing pension regulations. Beginning in 1954-55, the federal government assumed the balance of pension costs that were not payable by the other two parties.

The estimated cost to the federal government for 1985-86 is approximately $1.8 million. After 1983, both the number of pensioners entering the plan and the federal government's cost will increase by approximately 10% per year. There is no intake into the program, and so there will be an equal decline in the number of contributors.

Intercolonial and Prince Edward Island Railways Employees' Provident Fund: This fund was established on April 1, 1907, under authority of the Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act. The object was to provide retirement or disability allowance to employees. The fund was closed to new entrants in August, 1929. An item has been included annually in the Estimates since 1921 to increase the minimum pension allowance. To improve the financial position of CNR and to reduce the apparent need for recapitalization, Cabinet in 1967 approved that responsibility for the Provident Fund deficit be assumed by the federal government.

The estimated deficit in the fund for 1985-86 is $2.3 million.

Victoria Jubilee Bridge: On June 1, 1962, the federal government discontinued collection of tolls on the Victoria Bridge in Montreal. On January 31, 1963, the Minister of Transport entered into an agreement with CNR to provide compensation annually for the loss of net revenues derived through tolls and to reimburse it for annual maintenance and repair costs of the highway portion of the bridge. Figure 44 shows the estimated costs of maintenance and foregone revenues.

Figure 44: Payments to CNR for Maintenance and Foregone Revenues of the Victoria Bridge ($000)

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	%	$	%	$	%
Foregone revenues	640	26	640	27	640	39
Maintenance costs	1,860	74	1,750	73	1,019	61
	2,500	100	2,390	100	1,659	100

Government Rail Cars: In 1959, the Department of Transport assumed responsibility for the administration of rail car service for members of the Royal Family, the Governor General, the Prime Minister, Cabinet ministers, foreign dignitaries visiting Canada, Parliamentary committees, or delegates on official business and, as provided under Section 292 of the Railway Act, for staff and officers of the Canadian Transport Commission. This service is provided through a government-owned, two-car unit for use by the Royal Family and the Governor General and one private rail car on loan from VIA Rail for use by the Prime Minister and Cabinet ministers. Four person-years are directly involved in providing steward services.

All other expenditures	38	43	16
Total operating	759,755	776,876	806,426
Capital			
Construction and acquisition of land, buildings and works	461	337	797
Construction and acquisition of machinery and equipment	2,007	2,301	1,750
Total capital	2,468	2,638	2,547
Transfer payments	244,122	492,104	686,711
Total expenditures	1,006,345	1,271,618	1,495,684

2. Personnel Expenditures

The Program's personnel costs account for only 1% of the total operating expenditures. This includes the statutory contributions to employee benefit plans. As the primary function of the Program is contracting for transportation services, major changes in expenditure levels do not necessarily have a direct effect on personnel numbers and costs.

Figure 47 provides a breakdown of numbers of personnel by activity, and Figure 48 shows the person-years and annual salary by category.

Figure 47: Person-Year Requirements by Activity

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84

General Services	4	5	5	13,253 - 39,988	26,515

The person-year column displays the forecast distribution by occupational group of the authorized person-years for the Program. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and reclassifications divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Capital Expenditures

As shown in Figure 49, there are two main areas where capital expenditures are required in the Surface Program. Road Safety and Motor Vehicle Regulation uses capital for the acquisition of motor vehicles and parts to be tested, along with equipment necessary to do the testing. Water Transport uses capital funds to undertake miscellaneous repairs to docks and terminals.

Figure 49: Capital Expenditures ($000)

Projects by Activities	Currently Estimated Total Cost	Estimates 1985-86	Forecast 1984-85
Road Safety and Motor vehicle Regulation			
Test Centre Equipment	on-going	289	138
Vehicles and Equipment for testing	on-going	1,609	1,509
Miscellaneous Furniture and Equipment	on-going	74	326
Water Transport			
Miscellaneous repairs to docks and terminals	on-going	461	337
Rail Passenger Transport			
Purchase of bus for Rail-bus project	270	-	270
Direction and Administration			
Miscellaneous Furniture and Equipment	on-going	35	58

4. Transfer Payments

Figure 50 summarizes all grants and contributions made by the Surface Program. For details on purpose, recipient and expected accomplishments for 1985-86, refer to the page indicated.

B. Cost Analysis

Net Program Cost

The Surface Program's 1985-86 Estimates include only those expenditures to be charged to the Department's voted appropriations and statutory payments. Other cost items, as well as revenue, must also be included when the actual costs to operate the Program are considered.

Figure 51: Net Cost of Program by Activity for 1985-86 ($000)

	1985-86 Expendi-tures	Add Other Costs	Total Cost	Deduct Revenue	**Net Cost**	Total 1984-85
Urban Transport	16,989	9	16,998	-	**16,998**	27,320
Road Safety and Motor Vehicle Regulation	14,366	586	14,952	300	**14,652**	14,617
Highway Transport	61,942	86	62,028	-	**62,028**	86,404
Water Transport	166,145	112	166,257	910	**165,347**	204,018
Rail Freight Transport	126,537	133	126,670	1,000	**125,670**	287,958
Rail Passenger Transport	610,756	107	610,863	-	**610,863**	639,281
Direction and Administration	9,610	206	9,816	-	**9,816**	11,002
Total	1,006,345	1,239	1,007,584	2,210	**1,005,374**	1,270,600

The adjustments made to the estimated operating expenditures to calculate a total net cost include: accommodation provided without charge by Public Works $1.2 million; other services provided without charge by other departments $.03 million; and inclusion of all revenues generated by the Program except return on investment.

C. 1983-84 Main Estimates: Financial Comparison of Restated to Original Financial Plan by Activity

The activity structure is being changed effective April, 1984. Financial information throughout this document has been presented on the basis of the new activity structure. Figure 52 provides a financial reconciliation between the new structure and the old structure that was used in the 1983-84 Main Estimates.

Figure 52: Reconciliation of New and Old Activity Structures for 1983-84 Main Estimates ($000)

	Old Activities						
	Highway Transport	Water Transport	Railway Transport	Urban Transport	Grain Transport	Direction and Admin	Total
New Activities:

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Treasury Board of Canada
Comptroller General

4605

Preface

This Expenditure Plan is designed to be used as a reference document, and as such contains levels of detail to respond to the various needs of its readers.

There are two chapters in this document, both of which present the Expenditure Plans for each of the Department's Programs. Each chapter begins with extracts from Part II of the Estimates for the particular Program being described. This is to provide continuity with the other Estimates documents.

The first Program Expenditure Plan is divided into two sections. Section I presents an overview of the Program and a summary of its current plans and performance. Section II provides further information on costs and expenditures by object that the reader may require to understand the Program more fully. Because of the nature of the second Program, all information is presented in a single section.

This document is designed to permit easy access to specific information that the reader may require. Detailed tables of contents are provided for each Program. In addition, references are made throughout the document to allow the reader to find more details on items of particular interest.

Appropriation Authority

Authority is sought in these Estimates to spend $10,605,000 in support of the 1985-86 Management Practices and Controls Program. The remaining expenditures, estimated at $1,101,000 for contributions to employee benefits will be made under existing statutory authority.

Section I
Program Overview

A. Highlights

In 1985-86, the Office of the Comptroller General (OCG) will continue to work towards the improvement of management in government. In response to the current environment of economic restraint, the OCG will focus on initiatives which result in improved productivity and savings. The long term benefits expected from good management practices are: a more cost-effective delivery of government services and programs; an improved capacity to account for program costs and results; and the emergence of a public service which responds quickly to changes in government direction and priorities.

To contribute to the achievement of these benefits, the OCG will undertake the following in 1985-86:

- Assist departments in identifying and achieving productivity improvements (see page 1-12);
- Continue the implementation of the Improvement in Management Practices and Controls Project (IMPAC) (see page 1-9);
- Continue the implementation of internal audit and program evaluation infrastructures in departments (see page 1-9);
- Improve the efficiency and economy of departmental financial administration through projects reviewing financial policies and systems (see page 1-12);
- Continue to improve the quality of information reported to Parliament in the Estimates and Public Accounts (see page 1-12).

B. Financial Summary

	Estimates 1985-86	Forecast 1984-85*	Change
Financial and Management Accounting and Reporting	4,423	4,566	(143)
Management Practices and Processes	4,952	4,782	170
Administration	2,331	2,089	242
Total	11,706	11,437	269
Authorized person-years	156	156	-

* The 1984-85 Forecast is the same as the 1984-85 Main Estimates (see Extracts from Part II of the Estimates, page 1-4).

C. Background

1. Introduction

The Management Practices and Controls Program carries out the responsibility assigned to the Comptroller General of Canada to develop and implement sound managerial practices in the federal government. This includes policies for financial and management accounting and reporting, program evaluation and internal audit, the provision of assistance to departments and agencies in the development and implementation of action plans for improvements in management practices, and the monitoring of the results achieved.

The Office of the Comptroller General is one of two organizations serving the Treasury Board. The other is the Treasury Board Secretariat, headed by the Secretary to the Treasury Board. Both the Comptroller General and the Secretary report to the President of the Treasury Board.

2. Legal Mandate

The Management Practices and Controls Program derives its mandate from the amendment to the Financial Administration Act, creating the position of Comptroller General of Canada in 1978. The legislation empowers the Treasury

4695

4694

Board to assign to the Comptroller General such responsibilities as it deems appropriate. Subsection (2.1) of Section 4 of the Financial Administration Act states that "The Governor in Council may appoint an officer called the Comptroller General of Canada to hold office during pleasure and to perform such duties and functions as may be assigned to him by the Treasury Board, and the Comptroller General shall rank as and have all the powers of a deputy head of a department".

3. Program Objective

The objective of the Management Practices and Controls Program is to see to the establishment and maintenance of sound management practices in the federal government by developing policies and standards for financial and operational planning, reporting and controls, and by promoting and monitoring improvements in the practice of financial and operational management in departments and agencies.

Therefore, the role of the OCG is two-fold: a policy role to assist the President of the Treasury Board in the administration of the Financial Administration Act and an assistance role to departments in the improvement of their management practices.

4. Program Description

The Management Practices and Controls Program has three activities as follows:

Financial and Management Accounting and Reporting: This activity's objective is to establish and maintain sound financial and management accounting and reporting in the federal government. This is accomplished by developing and administering financial, accounting and reporting policies and by providing technical and implementation advice to departments and agencies on these policies. It includes the following components:

Financial policies and systems: This component is responsible for financial and accounting policies for departments, agencies and Crown corporations; the monitoring of the planning and design of major central and departmental financial and management accounting systems; and the provision of advice and guidance to central agencies and departments on financial systems development.

Reporting to Parliament: This component is concerned with revisions to the form and content of the Estimates and Public Accounts.

Professional development: this component ensures an OCG participation in the recruitment and training of financial officers.

Management Practices and Processes: This activity seeks the establishment and maintenance by departments and agencies of sound management processes and systems. It includes the following components:

Improvements in Management Practices and Controls (IMPAC) Project: aims to improve the processes by which programs are planned and controlled in the 32 largest government departments so that government operations will be more economical, efficient and effective. The project is pursued in three phases. Firstly, departmental management processes are surveyed to identify deficiencies. Secondly, an action plan to address shortcomings is formulated by the department and endorsed by the OCG. Thirdly, the approved action plan is implemented as the joint commitment of the deputy head concerned and the Comptroller General. During all three phases of IMPAC, the OCG works closely with departmental staff to achieve change cooperatively. The Management Practices Branch also undertakes special projects such as reorganizations at the request of Departments or other central agencies .

Program Evaluation: ensures that departments and agencies establish and maintain an appropriate program evaluation function providing relevant and objective information on the effectiveness and efficiency of programs which is accessible to decision-making at the department, central agency, and Ministerial levels. This function involves the elaboration of policies, guidelines and standards, the provision of implementation advice and assistance to departments and agencies, the monitoring of their evaluation practices, and participation in the training and development of managers and practitioners of program evaluation.

Internal Audit: is charged to establish and maintain broad scope internal auditing in the 49 major departments and agencies covered by Schedules A and B of the Financial Administration Act. It involves the elaboration of audit policies, guidelines and standards, the provision of implementation advice and assistance to departments and agencies, the monitoring of audit practices and participation in the training and development of internal auditors. Studies on internal audit issues of interdepartmental or government-wide concern are also conducted.

Administration: This activity provides administrative support services to the Program. The services provided include department-wide planning, evaluation and coordination; departmental secretariat functions and direct support to the Comptroller General; and personnel, financial, language and administration services. Administrative services are shared jointly by the OCG, Treasury Board Secretariat, and Finance Canada.

5. Program Organization for Delivery

The Management Practices and Controls Program is comprised of three activities: Financial and Management Accounting and Reporting; Management Practices and Processes; and Administration. These activities are delivered by four branches (Policy Development, Management Practices, Program Evaluation, and Administration) and a Planning and Coordination Unit.

The Policy Development Branch is responsible for all aspects of the Financial and Management Accounting and Reporting Activity and the Internal Audit component of the Management Practices and Processes Activity. The Management Practices Branch and the Program Evaluation Branch are responsible respectively for the two other components of the Management Practices and Processes Activity, namely IMPAC and Program Evaluation.

The Administration Activity is comprised of the Comptroller General's Office, the Planning and Coordination Unit, and the Administration Branch which is a shared service with the Department of Finance and the Treasury Board Secretariat. Figure 2 links the organization of the Office of the Comptroller General to the activity structure and provides a breakdown of the 1985-86 resources by activity.

Figure 2: 1985-86 Resources by Organization/Activity ($000)

Activity					Activity Total ($000)
Financial and Management Accounting and Reporting	4,423				4,423
Management Practices and Processes	1,318	1,965	1,669		4,952
Administration				2,331*	2,331
Total	5,741	1,965	1,669	2,331	11,706
Person-Years	79	28	23	26	156

* Includes only the OCG portion of the resources needed to fund the shared services provided by the Administration Branch and the Comptroller General's Office.

D. Planning Perspective

1. Environment

It is particularly important, in the present period of economic restraint, to establish and maintain sound management processes and systems for strategic and operational planning and review and to ensure sound financial management accounting and reporting in the federal government. The implementation of appropriate management practices and processes enables informed decision-making at all levels of government. This provides for lasting improvements in the efficiency, effectiveness, and economy of government operations.

In this environment, it is critical that Ministers have the relevant, timely and accurate information they require on program performance to review and challenge existing programs. Significant progress has been made in recent years to establish an adequate program evaluation function in departments and agencies. The OCG is now working with departments to improve the quality of evaluation information and to ensure that government-wide priorities are adequately reflected in the program evaluation process.

New initiatives by the Government to improve management and productivity in the Public Service can affect the scope of the Management Practices and Controls Program. The Program has already been adjusted to support the government's productivity improvement program.

2. Initiatives

Departmental Infrastructures: The strategy followed by the Office of the Comptroller General in its effort to improve management practices and controls involved an initial emphasis on the establishment of appropriate processes and infrastructures in departments. The intent of this approach is to strengthen the capacity of departments to plan and control their operations in an integrated fashion and to enhance their ability to generate information internally about the quality of management practices and controls and the performance of departmental programs.

The OCG will continue to work toward the implementation of improved management processes and infrastructures in departments. In 1985-86, it is expected that 94% of the work associated with the Improvement in Management Practices and Controls Project (IMPAC) will be achieved. It is also anticipated that the number of departments and agencies with an adequate program evaluation function will increase from 20 to 40. The proportion of programs which have been evaluated is expected to rise from 30 to 45 per cent. In addition, the OCG expects that the number of departments with an appropriate internal audit function will increase from 38 to 49 and that the quality and effectiveness of the function will also improve.

Quality Assurance: With the largely successful establishment of internal audit and program evaluation infrastructures in departments (see Section 3 -Program Effectiveness), the OCG is now giving more priority to assuring the quality and monitoring the effectiveness of the the results of program evaluation and internal audit functions in departments. In both these areas, the OCG will continue to provide leadership in terms of policies and methodologies for conducting program evaluation and internal audit studies. For example, in 1985-86, Program Evaluation Branch will be involved in the development and applications of methods for evaluating programs in specific areas such as regulation, communications and research and development. As well, it will develop and implement procedures to ensure that relevant evaluation information is available to Cabinet and that such information is being reported in a reliable and balanced way. These procedures will be developed in conjunction with the evolving Policy and Expenditure Management System. With respect to internal audit, Volume II of the Audit Handbook which presents general audit principles, will be completed in 1985-86. Furthermore, four issue specific audit guides, addressing subjects of government-wide audit application will be developed and field tested.

Productivity Improvement: Experience to date with the IMPAC project has demonstrated that a major weakness in departmental attempts to improve their management practices and controls is their ability to report on program delivery performance. The design and implementation of systems to measure the performance of programs is a major component of productivity improvement. The Office of the Comptroller General will give increasing emphasis to productivity improvement initiatives in 1985-86 by fielding project teams from the Management Practices Branch to work on specific productivity improvement pilot projects (such as the one initiated in Supply and Services Canada - Supply Administration during 1984-85).

Financial Policies and Systems: The Financial and Management Accounting and Reporting activity is equally concerned with the improvement of management and financial practices in departments. Policies and systems are reviewed to ensure that they are cost-effective and practical for departments. In 1985-86, two projects will be undertaken which should result in financial benefits in terms of the efficiency and economy of departmental financial administration.

Framework for the Control of Financial Transactions: This initiative involves a comprehensive review of existing legislation, policies, procedures and systems covering departmental transactions for payments and receipts and the development of a new control framework designed to make the best use of up-to-date systems and electronic technology. In 1985-86, the framework will be piloted in four to six departments. The expected benefits or savings associated with this initiative would take the form of reductions in workload.

Improved Cash Management: This initiative involves developing new or improved policies which contribute to better management of cash in order to optimize the government's cash flow. During 1985-86, attention will focus on projects such as prompter collection of monies due the government and making payments from Parliamentary appropriations only when the monies are actually required, as opposed to when the funds are approved.

Reporting to Parliament: Two major initiatives are underway in the OCG to improve the comprehensiveness, relevance, and clarity of information available to Parliament in the Estimates and the Public Accounts.

Revisions to the Estimates: Initial implementation of the three-part presentation of the government's spending plans will be completed as planned with the tabling of the 1985-86 Estimates. In 1985-86, the focus will be on improving the quality of Part III of the Estimates, Departmental Expenditure Plans. An important feature of Part III of the Estimates is that it reports actual performance in relation to significant planned accomplishments, including relevant program evaluation information. The 1985-86 Part IIIs include this feature for slightly more than one-half of all programs to which Part III applies. Next year, the Part III's will include this type of reporting for approximately 85% of all departmental programs with the remainder following suit one year later.

Revisions to the Summary Financial Statements: This project aims to develop a conceptual framework which should provide a basis for dealing with the current reservations of the Auditor General on the financial statements of Canada.

3. Program Effectiveness

The effectiveness of the Management Practices and Controls Program can be gauged by its ability to effect improvements in the quality of management in the federal government. The critical test of these improvements is the degree to which they enable improved decision-making and accountability in departments and agencies.

Management Practices and Processes: This section describes the extent to which the OCG and departments, working cooperatively, have succeeded in establishing and maintaining the departmental management processes and infrastructures described earlier.

IMPAC: Thirty-two departments have been surveyed through the IMPAC process and 28 departmental action plans have been endorsed by the Comptroller General. The completion of these IMPAC action plans went from approximately 40% at the end of 1981-82 to an estimated 80-85% by the end of 1984-85. IMPAC has encouraged departments and agencies to establish and use management processes in order to yield tangible financial benefits. To November 1, 1984, a total of $201 million in tangible benefits have been reported by departments, including $182 million in annually recurring benefits and $19 million in non-recurring benefits. These benefits mean that the total cost of IMPAC, an estimated $250 million one-time cost over five years, is being recovered every two years as a result of the tangible benefits to date. Between April 1, 1985 and April 1, 1986, these benefits are expected to increase from approximately $350 million to $500 million.

A program evaluation study of the IMPAC project is currently in progress.

Program Evaluation: Four ongoing measures of effectiveness of the program evaluation function are used: the establishment of a basic infrastructure, the development of an adequate evaluation capability, the amount of evaluation done, and the use being made of the evaluation findings.

The OCG maintains program evaluation liaison with the 30 largest departments and agencies (which represent 85% of program expenditures), 47 smaller agencies and 19 Crown corporations. By August 1984, most of the 30 largest departments, 10 smaller agencies and 4 Crown corporations had the basic infrastructure for evaluation. At the end of 1983-84, 10 of these 44 organizations had an adequate program evaluation function, having demonstrated competence in conducting and reporting evaluations. Less formal evaluation procedures were agreed upon with 8 smaller agencies and 2 Crown corporations.

The 254 evaluation studies completed by the end of 1983-84 covered 17% of programs to be evaluated. This equalled 23% of program expenditures.

Finally, of 170 studies followed-up on, there is evidence that evaluation findings are being used for resource allocation, improving program design and delivery, and reporting results to central agencies, to Cabinet and to Parliament. Moreover, in 1983-84, 253 briefing notes on submissions were prepared by the OCG resulting in numerous interventions on the quality of information going to Ministers in Committee.

Program Evaluation Study Results: In 1983-84, the OCG evaluated the Treasury Board policy on Program Evaluation (1977-47) and its implementation by the OCG and departments. The study confirmed the general appropriateness of the policy and uncovered no major implementation problems. These results agree with and partially rely on the 1983 audit of evaluation by the Office of the Auditor General. Recommendations included suggestions for further development of the policy in the areas of evaluation in Crown corporations, small agencies, and interdepartmental programs. In addition, the evaluation identified a continuing need for a central agency quality assurance role.

Internal Audit: In 1984 the Auditor General reported the results of his government-wide audit of the function. This audit confirmed the appropriateness of the Treasury Board policy on internal audit and commented favourably on the progress which has been achieved in the implementation of the policy across government. This study recommended measures to increase the function's usefulness to departmental managers.

Financial and Management Accounting and Reporting:

Revisions to the Estimates: Major revisions to the form of the Estimates initiated in 1981 in response to recommendations of the Public Accounts Committee are now complete. These revisions include the introduction of an annual expenditure plan for each department and agency of government which provides details of upcoming spending plans and past performance. The ongoing effectiveness of the Estimates documents can be judged by the extent to which they remain relevant to the information needs of Members of Parliament. To this end, the usage of the new documents and the comments of Members and others are monitored on a continuing basis.

Revisions to the Summary Financial Statements: research work undertaken to date has provided a basis for initiating revisions to the Government's Financial Statements which respond to the criticisms of the Auditor General.

4. Performance Information/Resource Justification

The Management Practices and Controls Program requests 156 person-years and $11.4 million in 1985-86 in support of its mandate to establish and maintain sound management practices in the Public Service. As explained in the Initiatives section, these resources will be allocated among three activities: Financial and Management Accounting and Reporting, Management Practices and Processes, and Administration. Figure 3 presents a five-year overview of the financial requirements of the program.

Figure 3: Five Year Overview of Financial Requirements ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83	Actual 1981-82

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Expenditures by object for the Management Practices and Controls Program are presented in Figure 4.

Figure 4: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and wages	7,868	7,650	7,351
Contributions to employee benefit plans	1,101	993	1,206
Goods and Services			
Transportation and communication	172	256	158
Information	489	682	293
Professional and special services	623	579	498
Rentals		5	3
Purchased repair and upkeep	3	3	1
Utilities, materials and supplies	53	34	13
Administrative Services (Finance)	1,397	1,235	1,280
Total operating	11,706	11,437	10,803
Transfer Payments	-	-	4
Total expenditures	11,706	11,437	10,807

2. Personnel Expenditures

Figure 5: Authorized Person-Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management	68	71	71	50,350 - 96,300	65,197
Scientific and Professional	4	4	4	14,570 - 65,080	60,915
Administrative and Foreign Services	47	57	57	13,853 - 57,987	48,730
Administrative Support	35	23	36	12,636 - 31,946	21,592
Other	2	1	2	12,635 - 57,764	24,927

Note: The person-year columns display the forecast distribution of the authorized person-years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person-years for the occupational group. Year-to-year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

The Program's cost is shown in Figure 6.

Figure 6: Net Program Cost ($000)

	1985-86 Operating Expenditures	Add Other Costs	Total Cost 1985-86	Total 1984-85
Management Practices and Controls	11,706	952	**12,658**	12,543

Other costs include services provided without charge by Public Works Canada ($828) and other departments ($124).

Section I
Program Overview

A. Highlights

The Implementation Assistance Program (IAP) will terminate on March 31, 1985. IAP resources will have assisted 23 departments over the six-year life of the Program in accelerating their improvement of management practices and controls. Details on the performance of the Program are provided in Section D.

B. Financial Summary

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change
Implementation Assistance	-	4,000	(4,000)
Total	-	4,000	(4,000)
Authorized person-years	-	45	(45)

C. Background

1. Introduction

The Implementation Assistance Program is a program of short-term resource assistance available to departments implementing the Improvement in Management Practices and Controls Project (IMPAC). Through the Implementation Assistance Program, the Office of the Comptroller General provides resources over the short term, and when necessary, to supplement departmental funds for the purpose of assisting them to implement their OCG approved action plans for improved management practices and controls. IAP funds typically represent 20% of the costs incurred by departments in implementing their IMPAC action plans.

2. Legal Mandate

Treasury Board Minutes in 1979, 1981 and 1982 approved respectively the establishment, restructuring and extension of the Implementation Assistance Program to 1984-85.

3. Program Objective

To accelerate improvements in management practices and controls in federal departments and agencies.

4. Program Organization for Delivery

The management of the Implementation Assistance Program formed an integral part of the operations of the Improvement in Management Practices and Controls Project (IMPAC), which is described on page 1-9. The Office of the Comptroller General assessed the need for IAP resources on the basis of the cost and complexity of the department's IMPAC action plan and the resources available to the department for implementation. Program allocations from IAP were requested by means of a Treasury Board submission signed by the responsible Minister.

D. Performance Information/Resource Justification

A formal evaluation of the Program was carried out in 1982-83. The study concluded that there was a continuing need for the Program for a period of up to three years, to enable departments to complete their IMPAC action plans.

In terms of past performance, the evaluation study found that the Program provided a meaningful incentive for 71% of the departments participating in the Program to launch their program of management improvements and induced 64% of them to contribute more of their own resources to the implementation of action plans for improvements in management practices when they were ready, or ahead of planned schedule, as was the case for five departments. The study also highlighted the program's contribution in accelerating by an average of one year the on-going implementation of management improvements in 92% of the participating departments.

Actual and forecast resource requirements for the Implementation Assistance Program for the three-year period from 1983-84 to 1985-86 are presented in Figure 2.

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Treasury Board of Canada
Secretariat

4719

Preface

This Expenditure Plan is designed to be used as a reference document. It contains several levels of detail to respond to the various needs of its readers.

There are five chapters in this document. The first provides an introduction to the Secretariat; the other four present the Program Expenditure Plans for each of the Secretariat's programs.

Chapters 2 to 5 begin with extracts form Part II of the Estimates for the particular program being described. This is to provide continuity with the other Estimates documents.

This document is designed to permit easy access to specific information that the reader may require. A general table of contents lists the various chapters, and detailed tables of contents are provided for each program.

Table of Contents

Departmental Summary

Role and Responsibilities

The Treasury Board is a committee of the Queen's Privy Council for Canada. The Board consists of the President of the Treasury Board, the Minister of Finance and four other Ministers who are nominated from time to time by the Governor in Council.

The Treasury Board Secretariat is one of two organizations serving the Treasury Board. The other is the Office of the Comptroller General of Canada. Both the Secretary and the Comptroller General report to the President of the Treasury Board.

The Treasury Board Secretariat is the administrative arm of the Treasury Board. The Secretariat, headed by the Secretary, operates under the broad authority of Sections 3-7 of the Financial Administration Act, as well as other acts, and supports the Treasury Board as the general manager and employer of the Public Service. With this mandate, the Secretariat is responsible for recommending and providing advice to the Treasury Board on policies, directives, regulations and program expenditure proposals in respect of the management of the government's financial, human and materiel resources and is concerned with initiatives, issues and activities that cut across all policy sectors of the government.

Departmental Organization and Programs

The Treasury Board Secretariat consists of five branches and four Programs. This Departmental Expenditure Plan describes these Programs, which are summarized briefly below.

Central Administration of the Public Service: This consists of six activities, five of which provide advice and develop policies in the areas of expenditure management, personnel management, staff relations, administrative policy and official languages; the sixth provides departmental administration. This program also provides the resources to administer the other three programs of the Secretariat.

Government Contingencies and Centrally Financed Programs: This provides funds to supplement other votes for paylist and other requirements and to provide for miscellaneous minor and unforeseen expenses not provided for otherwise. It also provides resources to cover the costs of a limited number of centrally financed programs.

Employer Contribution to Insurance Plans: This provides funds for contributions by the government, as employer, with respect to employee insurance and benefit plans.

Temporary Assignments: This provides a pool of executives and senior officers used to carry out high priority temporary assignments in other departments and agencies on a cost-recoverable basis.

Appropriation Authority

Authority is sought in these Estimates to spend $53,385,000 in support of the Central Administration of the Public Service Program. The remaining expenditures, estimated at $4,822,400 for contributions to employee benefit plans and the President's salary and motor car allowance, will be made under existing statutory authority.

Section I
Program Overview

A. Background

1. Introduction

The Central Administration of the Public Service Program provides the human and financial resources for all operations of the Secretariat. The Secretariat assists the Treasury Board in reviewing and approving service-wide policies, guidelines and directives governing the management of the Public Service and submissions from individual departments and agencies.

2. Legal Mandate

The principal legislative authorities for the Treasury Board are the Financial Administration Act and the Public Service Staff Relations Act. The Treasury Board is also authorized by the Governor in Council to implement certain provisions of the Official Languages Act as it applies to the Public Service, the Public Service Superannuation Act, the Supplementary Retirement Benefits Act and other superannuation acts. As well, the Board is assigned responsibilities in a number of other acts, usually as part of an approval process.

3. Program Objective

The objective of the Central Administration of the Public Service Program is to support the Treasury Board in performing its statutory responsibilities for the management of the government's financial, human and materiel resources.

4. Program Organization for Delivery

Activity Structure: The Central Administration of the Public Service Program is composed of six activities: Expenditure Management, Personnel Management, Staff Relations, Administrative Policy, Official Languages, and Departmental Administration.

Organization Structure: Figure 1 shows the reporting relationship of the six branches of the Secretariat and their corresponding resources. The branches and the activity structure have a one-to-one relationship.

The Administration Branch provides common services to the Secretariat, the Office of the Comptroller General and the Department of Finance. The funds shown under the Administration Branch include the costs of the Offices of the President and the Secretary, the Communications Division, direct support services and the Treasury Board Secretariat's share of the administrative services.

$000	11,873	14,757	5,711	7,392	5,082	13,392	58,207

B. Planning Perspective

1. Environment

The Treasury Board, as the general manager and employer of the Public Service, responds to government priorities which reflect social and economic concerns of the country.

2. Initiatives

The initiatives which the Secretariat will pursue during 1985-86 involve a number of general areas of concern:

Expenditure Review: Emphasis will continue on financial analysis of new spending proposals in order to provide advice to the Treasury Board and policy committees on the management and resource implications of such proposals.

Human Resources Management: A priority for the Secretariat will be to encourage a positive relationship with Public Service unions and to address issues which are important to improved employer-employee relations. In support of this goal a separate Staff Relations Branch was established during 1984. In addition, work will continue on improving the personnel management system.

Crown Corporations Directorate: The Directorate was established in 1984 from units previously in the Secretariat and the Department of Finance to implement the recent amendments to the Financial Administration Act and to provide in depth analysis and advice on matters relating to Crown Corporations.

Administrative Policy: Work will continue in many areas of the Secretariat, and especially in contract administration, to find ways to improve Public Service management through more effective delegation of authority and correspondingly more effective accountability mechanisms.

3. Program Effectiveness

For the most part, program effectiveness is measured by the adequacy of the approved policies in the areas of personnel management, official languages and the management of materiel and services. These policies are reviewed continuously through formal review and evaluation processes as well as through consultation, monitoring and liaison with officials of other departments and agencies.

Section II
Analysis by Activity

A. Expenditure Management

Objective

On the basis of the analysis of departmental plans and programs and within the context of the Policy and Expenditure Management System, to recommend to the government the acceptance or modification of specific expenditure proposals, in order to:

- reflect the priorities which the government assigns to the objectives;
- increase the effectiveness of existing and proposed programs;
- increase the efficiency with which the person-year resources, facilities, equipment, materials and supplies are used in the operation of programs; and
- to develop the Estimates for the approval of Parliament.

4735

Description

This activity is the responsibility of the Program Branch, which is headed by a Deputy Secretary who reports directly to the Secretary of the Treasury Board. The activity has four sub-activities.

Program Analysis: analyses programs and reviews multi-year operational plans in order to provide advice to the Treasury Board on the allocation of resources and also communicates to departments and agencies the policies, directives and decisions of the Treasury Board which affect the use and level of resources.

Expenditure Analysis and Estimates: maintains an up-to-date account of government expenditures, provides technical support in matters of Estimates and internal electronic data processing systems, provides instructions to departments on the preparation of Multi-Year Operational Plans (MYOP) and Main Estimates submissions and publishes the Main Estimates.

Crown Corporations: provides a common service to the Treasury Board Secretariat and the Department of Finance by analyzing and advising on the financial requirements and the development of policies and legislation related to Crown corporations and their subsidiaries.

Management: includes the Deputy Secretary's Office, which provides executive direction and coordinates the activities of the Branch.

B. Personnel Management

Objective

To develop, communicate and evaluate personnel policies, regulations, standards, systems and terms and conditions of employment to enable managers to manage the human resources required to carry out government programs.

Resource Summary

Figure 3: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y

Management	822	13	791	13	31	-
	14,757	190	15,614	197	(857)	(7)

Description

This activity is the responsibility of the Personnel Policy Branch, which is headed by a Deputy Secretary who reports directly to the Secretary of the Treasury Board. The activity has four sub-activities.

General Personnel Management: develops and implements policies and provides advice on matters related to health and safety, pensions, benefits, and executive and management compensation, and is responsible for the Employer Contributions to Insurance Plans Program.

Organization and Classification: develops and implements policies and provides advice on matters related to the organization of government departments, systems and standards of classification and the training of classification personnel, the development of pay administration policies and government-wide personnel information systems to support the Treasury Board and departments in the management of the personnel function; is responsible for the Temporary Assignments Program.

Human Resources: develops and implements policies, and provides advice, on matters related to affirmative action programs, visible minorities, human rights, training programs, human resources planning and innovative management practices.

Management: includes the Deputy Secretary's Office, which provides executive direction and coordinates the activities, including the program evaluation function for the Branch.

C. Staff Relations

Objective

To develop and implement policies promoting effective employer-employee relations in the federal public service.

Resource Summary

Figure: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Change

Management	984	16	883	16	101	-
	5,711	90	5,479	90	232	-

Description

This activity is the responsibility of the Staff Relations Branch, which is headed by a Deputy Secretary who reports directly to the Secretary of the Treasury Board. The activity has four sub-activities.

Collective Bargaining: negotiates, interprets and administers collective agreements for the federal public service, conducts bilateral and joint consultations with unions, and develops and implements proposals to improve the collective bargaining process.

Representation and Adjudication: administers the grievance process at the adjudication level, establishes the employer's position on designations and exclusions and certification of bargaining units.

Compensation: recommends and maintains information and data systems; conducts compensation research and related analytical activities.

Management: includes the Deputy Secretary's Office, which provides executive direction and coordinates the activities of the Branch, including compensation analysis.

D. Administrative Policy

Objective

To develop, communicate and evaluate administrative and information policies, regulations, standards and systems in order to ensure probity and prudence in the acquisition and use of materiel and services required to provide effective support to government programs.

Resource Summary

Figure 4: Activity Expenditures ($000) and Person-Years

Management	168	3	174	3	(6)	-
	7,392	95	7,425	98	(33)	(3)

Description

This activity is the responsibility of the Administrative Policy Branch, which is headed by a Deputy Secretary who reports directly to the Secretary of the Treasury Board. The activity has six sub-activities.

Policy Development and Revision: develops and revises policies dealing with materiel, real property, services and information management systems. It is also responsible for the development of administrative policies related to the Access to Information and Privacy Acts.

Policy Implementation and Review: reviews departmental submissions to the Treasury Board, monitors selected policies and maintains the Branch's Submission Information System.

Planning and Evaluation: conducts evaluations of selected policies on a five-year cyclical basis and special studies as required. It also publishes the Administrative Policy Manual and provides advice to departments on socio-economic impact analysis of new major government regulations relating to health, safety and fairness.

Incentive Awards: includes the Incentive Awards Board Secretariat, which is responsible for the administration of the Incentive Award Program for the Public Service.

Common Services Review Board: includes the Common Services Review Board (CSRB) secretariat, which advises the CSRB, itself an independent advisory committee of senior officials formed to advise the Treasury Board Ministers on the resolution of common services issues.

Regulatory Reform: includes the Office of the Coordinator of Regulatory Reform, which is responsible for the coordination of and liaison with departments, agencies and private sector groups involved in the regulatory reform process.

Management: includes the Deputy Secretary's Office, which provides executive direction and coordinates the activities of the Branch.

E. Official Languages

Objective

To develop, communicate and evaluate Official Language policies and programs within the federal public service.

Resource Summary

Figure 5: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y
Operations	1,355	24	1,220	24	135	-

Management	597	11	646	11	(49)	-
	5,082	67	4,920	67	162	-

Description

This activity is the responsibility of the Official Languages Branch, which is headed by a Deputy Secretary who reports directly to the Secretary of the Treasury Board. The activity has four sub-activities.

Operations: ensures that the Official Languages policies and programs are effectively implemented in departments, agencies and Crown corporations.

Policy: develops policies, interprets their intent and application, determines their impact, and effects the necessary adjustments to implement the Official Languages Act and government policy.

Evaluation and Audit: develops and maintains information systems and administrative procedures, ensures compliance with mandatory policy provisions, defines performance indicators, evaluates progress towards government objectives and provides advice to departments, agencies and Crown corporations on data management, audit and evaluation of the Official Languages program.

Management: includes the Deputy Secretary's Office, which provides executive direction, coordination of activities for the Branch and liaison with the provinces and Official Languages communities.

F. Departmental Administration

Objective

To provide senior executive direction and information, financial, personnel and administrative services for the Secretariat.

Resource Summary

Figure 6: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Change	
	$	P-Y	$	P-Y	$	P-Y
Administration	13,392	157	12,828	161	564	(4)

Description

This activity includes provision for the offices of the President, the Secretary, the Corporate Services and Communications Divisions and the Administration Branch.

Corporate Services provides planning and co-ordination services in support of departmental senior management.

The Communications Division provides writing, editing and advisory services for speeches, news releases, publications, public relations and communication strategies produced on behalf of the Secretariat and the Office of the Comptroller General.

The Administration Branch provides the requisite financial, personnel and administrative services jointly to the Treasury Board Secretariat, the Office of the Comptroller General and the Department of Finance.

	355,000	355,000	485,000

4751

Section I
Program Overview

A. Background

1. Introduction

The Government Contingencies and Centrally Financed Programs exist to provide a capability to finance items which cannot be foreseen when the Main Estimates are prepared. As well, it funds special employment programs which are co-ordinated through the Treasury Board pending final allocation of funds. These funds are available to supplement all government programs.

Allotments made from the Contingencies Vote, with the exception of paylist adjustments, are recovered from departments through Supplementary Estimates subsequently tabled in Parliament. The Contingencies Vote provides a funding mechanism whereby departments and agencies can proceed to implement urgent policy decisions of Cabinet. Allotments for salary adjustments are not recovered from departments and agencies but remain as a supplement to the appropriation which has incurred the expenditure.

2. Legal Mandate

The principal legislative authorities are the Financial Administration Act and the Appropriation Act for each fiscal year.

3. Program Objective

The objective of the Government Contingencies and Centrally Financed Programs is to provide funds for unforeseen and urgent expenditures which arise after the Main Estimates have been tabled and for centrally financed programs.

4. Program Organization for Delivery

Activity Structure: The program is divided into two activities which reflect the different purposes for which funding is requested: Government Contingencies and Employment Initiatives.

Organization Structure: The costs of administering this program are included in the Central Administration of the Public Service Program. Decisions to allocate funds from the Contingencies Vote and for special employment purposes are made by the Treasury Board. Implementation of the decisions is the responsibility of the Deputy Secretary, Program Branch.

B. Planning Perspective

1. Environment

Government Contingencies: A major factor in determining the level of funding for government contingencies is the policy and expenditure management system and, in particular, the management of the policy reserves by the Policy Committees and the timing of approvals for new expenditures. Temporary financing is frequently proposed for items the specific nature of which cannot be included in Main Estimates because they lack specific definition at that time.

Employment Initiatives: The level of funding for summer employment initiatives is determined by Cabinet in conjunction with the government's overall employment strategy.

2. Program Effectiveness

The provision by Parliament of funds for government contingencies to meet miscellaneous minor and unforeseen expenditures contributes to the efficient and orderly conduct of government business. It gives the executive the discretion and flexibility to respond quickly to urgent expenditure requirements, while maintaining the principles of Parliamentary control and executive accountability.

Section II
Analysis by Activity

A. Government Contingencies

Objective

To provide funding for increased salary costs arising out of negotiated and non-negotiated agreements and other paylist requirements not included in departmental Estimates and for urgent expenditures of a miscellaneous character which cannot be foreseen when Estimates are drawn up.

Resource Summary

Because of the nature of this activity, the expenditures are not incurred directly against this account. All allotments from the Contingencies Vote during the course of the year have, by year end, been either reimbursed through Supplementary Estimates or transferred to supplement other votes for paylist adjustments. Any balance remaining lapses at the end of the fiscal year.

Description

The level of funding required for Government Contingencies is assessed in relation to the magnitude and complexity of approved government spending, the extent of Parliamentary control over discretionary reallocation of approved expenditures by the executive, and the level and rate of increase in Public Service salaries.

Since the introduction of the current vote structure in 1970-71, an amount of approximately one per cent of the total of all budgetary votes in Main Estimates has been found to be an adequate level and an amount agreeable to Parliament.

The requirement for contingency financing is expected to remain close to the historical level of one per cent of voted Main Estimates.

Figure 1: Comparison of Resources to Main Estimates Budgetary Expenditures ($million)

	1985-86	1984-85	1983-84
Budgetary Voted Expenditures	36,910	36,830	32,549
Government Contingencies	340	315	315
% of Budgetary Expenditures	0.9	0.9	0.9

B. Employment Initiatives

Objective

To provide funding for qualifying projects, approved during the fiscal year, which support the government's employment strategy.

Resource Summary

Figure 2: Activity Expenditures ($000)

	Estimates 1985-86	Estimates* 1984-85	Change
Student Summer and Youth Employment	15,000	170,000	(155,000)

*Estimates as tabled in Parliament.

Because of the nature of this activity, the expenditures are not incurred directly against this account. During the course of the year all the funds are transferred to supplement other votes.

Description

The Employment Initiatives activity provides financing for student employment centres which have received approval under the Employment and Insurance Program of Employment and Immigration Canada.

For performance information, refer to Employment and Immigration Canada, Part III, under the Employment and Insurance Program, Direct Job Creation activity.

Less: Receipts Credited to the Vote Receipts from Revolving Funds	25,211	22,186	3,025	
	242,134	214,546	27,588	

Receipts are collected from revolving funds in accordance with Treasury Board policy, which requires revolving funds to include full costs, including all direct, indirect and overhead costs, in their accounts.

The increase in 1985-86 estimated expenditures over the 1984-85 forecast is the net result of the following:

- a net increase of $14.6 million in estimated costs of health insurance;
- an increase of $12.1 million for the provincial health payroll tax;
- an increase of $0.4 million for unemployment insurance premium rebates; and
- an increase of $0.5 million for locally-engaged employees health insurance plans.

B. Background

1. Introduction

The Employer Contributions to Insurance Plans Program provides for the payment of the employer's share of costs for the health, income maintenance and other insurance plans applicable to employees for whom the Treasury Board is the designated employer under the Public Service Staff Relations Act or other authorities.

The insurance plans in place provide employees and their families with protection against financial loss in the event of illness, disability or death, at levels generally comparable to the protection provided by other employers in Canada. As well, the program provides funding for periodic non-discretionary payments which the government, as an employer, must make in accordance with the terms of the Unemployment Insurance Act and provincial legislation.

The program also provides for the payment of the employer costs of pension and social security plans to which employees of the Government of Canada, locally engaged abroad, are subject, as well as statutory payments under the Public Service Pension Adjustment Act and earlier retirement acts.

Benefit plans for the Public Service, which have evolved over the years, have been implemented to maintain the government's competitive position in the labour market. Some plans have been introduced by the government as a result of negotiations and agreements with labour unions. Other plans have been introduced to satisfy the obligations imposed by Canadian laws or to comply with local practice in the case of employees engaged in foreign countries. Changes to costs associated with these plans result primarily from actuarial adjustments required to maintain existing benefits, changes to insured populations, increases in salaries, revisions to benefits and, in the case of benefits for people employed by the Canadian Government in foreign countries, changes in the international monetary exchange rates.

2. Legal Mandate

The principal authorities under which the Treasury Board administers this program are the Financial Administration Act and the Appropriation Act of each fiscal year.

3. Program Objective

The objective of the Employer Contributions to Insurance Plans Program is to provide for contributions by the government as employer in respect of employee insurance and benefit plans and programs and for payments made under certain residual pension plans.

4. Program Organization for Delivery

Activity Structure: The program consists of two activities which reflect the different purposes for which expenditures are authorized: Public Service Insurance and Public Service Pensions. The Pensions activity encompasses only certain specific, centrally-funded plans, because contributions to benefit plans, such as those payable under the Public Service Superannuation Act, are disclosed within individual programs of all government departments.

Organization Structure: The costs of administering this program are included in the Central Administration of the Public Service Program. The administration of the Employer Contributions to Insurance Plans Program is the responsibility of the Assistant Secretary, General Personnel Management, who reports to the Deputy Secretary, Personnel Policy Branch.

Section II
Analysis by Activity

A. Public Service Insurance

Objectives

To provide for the payment of the employer's share of health, income maintenance and life insurance premiums, for payments to or in respect of provincial health insurance plans, provincial payroll taxes and the employee's share of the unemployment insurance premium reduction.

Resource Summary

The Public Service Insurance Activity accounts for 96 per cent of the 1985-86 Employer Contributions to Insurance Plans Program.

Description

Surgical-Medical and Other Insurances: Parliament authorizes the government to share the premiums payable by employees for coverage under the Group Surgical-Medical Insurance Plan, the Disability Insurance Plan, the Public Service Management Insurance Plan, the Service Income Security Insurance Plan and the R.C.M.P. Group Long-Term Disability Insurance Plan. The government is also authorized to share the cost with employees of their provincial health insurance by paying part of the cost of premiums where applicable, or by making cash payments to employees where no premiums are levied.

The benefits package provided by the government to its employees is designed to be comparable with those provided by other employers, in order to attract and retain employees with the requisite skills. Expenditures are determined within the confines of regulations and directives which are established by the Treasury Board. To illustrate how expenditures increase, surgical-medical insurance premiums are adjusted actuarially to ensure that premiums remain adequate to finance the benefits, which are directly dependent upon medical and hospital care costs. Long term disability premiums are based on employees' insured salaries and, therefore, increase in accordance with salary increases. Thus, levels of expenditure regularly increase simply to maintain a specified level of benefits. Introduction of new benefits to maintain a competitive package would also increase expenditures.

The estimated expenditure for this item is an amalgamation of the estimates for a number of different plans and for different populations (Public Service employees, members of the Canadian Armed Forces and RCMP, pensioners, etc). The estimates for each plan are, in turn, based on various factors, depending on the particular characteristics of the plan. Those factors include the number of persons insured under the plan and the estimated annual turnover rate, the levels of premium or contribution rates, anticipated changes to those rates, and expected increases in insured salary levels where plan costs are salary related.

Payments to Employees of their Share of Unemployment Insurance Premium Reduction: The Unemployment Insurance Act provides for a reduced employer premium for employers who maintain certain levels of income for employees who are absent from work because of illness, on the condition that at least five-twelfths of the reduction is passed on to the employees. The government qualifies because of its sick leave policies and makes an annual cash payment to the concerned employees equivalent to five twelfths of the reduction granted to the employer in respect of them.

The estimated expenditure for this item is based on the anticipated amount of the premium reduction to be granted to the government, as employer, for the relevant years and on the number of employees and the level of their Unemployment Insurance premiums. The costs are estimated on employee populations of approximately 288,000 in the Public Service and 100,500 in the Armed Forces and RCMP.

Health and Other Insurance Plans for Employees Engaged Locally (outside Canada): Health plans are in effect for local people employed at diplomatic missions in some 35 countries. Premiums may be cost-shared with employees or fully paid by the government, depending on local practice. In addition a cost-shared Group Life Insurance Plan is in effect for employees locally-engaged in the United States.

Expenditures for this element are determined by the number of insurance plans in force, the number of insured employees, the level of benefits provided, and the extent to which the government contributes towards the plan costs. The costs are estimated on employee populations of approximately 450 in the United States and 1,300 in other countries.

Provincial Health Payroll Taxes: Under provincial legislation, Quebec and Manitoba impose payroll taxes on employers at a set percentage of the gross salaries paid in respect of all employees reporting for work at an establishment in those provinces. The government has agreed to pay the taxes on behalf of its employees, including members of the Canadian Forces and the Royal Canadian Mounted Police.

Four factors determine the expenditures for this purpose: the existence or introduction of provincial legislation imposing payroll taxes on employers; the level of the provincial tax; the government's agreeing to pay the tax; and the number of federal employees in the province and their salary levels. The Quebec Health Insurance Act imposes a 3 per cent tax. The Manitoba Health and Post-Secondary Education Levy Act imposes a 1.5 per cent tax which the government commenced paying in 1983-84.

B. Public Service Pensions

Objective

To provide for payments under earlier superannuation and retirement acts, under the Public Service Pension Adjustment Act of 1959 and for employer costs of pension and social security plans to which employees engaged locally outside Canada are subject.

Resource Summary

The Public Service Pensions Activity accounts for 4 per cent of the 1985-86 Employer Contributions to Insurance Plans Program

Figure 4: Activity Expenditures ($000)

	Estimates 1985-86	Forecast 1984-85	Change
Public Service Pension Adjustment Act and earlier retirement acts	412	470	(58)
Locally-Engaged (outside Canada) Pension Plans	4,167	3,896	271
Social Security Plans for Employees engaged locally (outside Canada)	6,000	6,213	(213)
	10,579	10,579	.....

Description

Public Service Pension Adjustment Act and earlier retirement acts: This item provides for statutory increases in the pensions granted to certain public servants, members of the Canadian Armed Forces and the Royal Canadian Mounted Police who retired prior to 1953 and for the payment of pensions pursuant to earlier retirement Acts.

Expenditures under the Pension Adjustment Act are determined by adjustment factors specified in the act and by the size of the population to which the act applies. Adjusted pension payments recognize the reduction in real pension income brought about by inflation. Expenditures are decreasing in line with the reduction in the number of beneficiaries, now approximately 1,950.

Expenditures under earlier retirement acts are for pensions provided under those acts. There are now only three pensioners; the number decreases annually through deaths.

Locally-Engaged (outside Canada) Pension Plans: This item provides for employer contributions to a variety of pension schemes. The terms and conditions of contribution and levels of benefits vary from country to country. In some instances plans are fully integrated with existing national schemes; in others, they may provide a benefit to employees who are not otherwise covered by any plan.

This expenditure provides for Canada's participation, on behalf of locally-engaged employees, in worldwide or private pension plans and contributes to the maintenance of comparable employment standards, as well as meeting requirements of local practice and law. Amounts are specified in the individual country plans and can fluctuate from year to year with changes in the number of retirees, benefits chosen on retirement and other factors. Cost increases result from salary increases, annual pension escalation, population changes and plan improvements. These plans provide pension coverage to over 3,000 employees in 50 countries, as well as payment of pensions to former employees.

Social Security Plans for Employees Engaged Locally (outside Canada): This item provides for the cost of employer contributions to national social security plans which provide locally-engaged employees with benefits such as pensions, sickness and maternity payments, unemployment insurance, worker's compensation and family allowances.

These expenditures enable the government to provide comparable benefits and to comply with the legislative requirements of some 47 countries where Canada employs locally-engaged persons. Costs vary with salary increases and changes in contribution rates and ceilings under national social security plans. The cost is determined by the provisions of each country's social security laws, so that Canada's expenditures are largely non-discretionary. The various plans provide coverage to over 2,500 employees.

Figure 5 shows historical and forecast expenditures for Public Service Pensions.

Section III
Supplementary Information

A. Cost Analysis

The Estimates for the Employer Contributions to Insurance Plans Program include those expenditures expected to be charged to the Program's voted and statutory appropriations.

In addition to these program costs, other statutory pension and insurance costs, such as the Public Service Superannuation Act, have been decentralized and are displayed throughout Part II of the Main Estimates under the description "Contributions to Employee Benefit Plans" for each program with salaries and wages expenditures. The program and decentralized statutory costs are shown here (Figure 6) to provide a better understanding of the overall costs of employee benefits.

Figure 6: Cost of Employee Benefits ($ Millions)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Program Costs			
Surgical-Medical and other Insurances	173.8	156.2	141.9
Payments to Employees of their share of Unemployment Insurance Premium Reductions	9.3	8.9	7.8
Health and other Insurance Plans for Employees engaged locally (outside Canada)	1.1	.6	.5
Provincial Health Payroll Taxes	72.5	60.4	64.7

The Temporary Assignments Program operates on a partial cost-recovery basis whereby the direct costs of assignments are recovered from the host departments. The recovery rate is 88-90 per cent of the appropriated costs. The unrecovered balance results mainly from language and management training costs, leave, and time between assignments not charged to departments.

B. Background

1. Introduction

The Temporary Assignments Program provides a means to meet temporary requirements of departments and agencies at senior management and executive levels. Personnel are assigned to tasks or projects in departments, on request, eliminating the need to establish new positions and avoiding delays associated with the staffing process. Assignments often involve major policy and program revisions in light of changing economic or social conditions and improvements in the management of human and financial resources.

2. Legal Mandate

The Temporary Assignments Program (TAP) was established as a separate Program, as approved by the Treasury Board under the authority of the Financial Administration Act, in the 1976-77 Main Estimates. Prior to that time, it was operated as a pilot project, which began in 1974, under the Central Administration of the Public Service Program.

3. Program Objective

The objective of the Temporary Assignments Program is to provide executives and senior officers to carry out high priority temporary assignments in response to departmental and agency requests.

4. Program Organization for Delivery

The TAP is a single activity program. The administration of the program is the responsibility of the Assistant Secretary, Organization and Classification Division, who reports to the Deputy Secretary, Personnel Policy Branch.

C. Planning Perspective

Description

The number and quality of requests from departments remain high with about one in three requests for assistance being met.

Since its inception in 1974, the TAP members have completed a total of 377 assignments in 54 departments and agencies. In 1983-84, TAP management received 110 requests for assistance. The number of officers available permitted 33 new assignments to be undertaken. With the current level of resources it is expected that a similar number of assignments will be undertaken in 1985-86.

Assignments under way by policy field at year end were:

The Estimates Documents

The Estimates of the Government of Canada are structured in three Parts. Beginning with an overview of total government spending in Part I, the documents become increasingly more specific. Part II outlines spending according to departments, agencies and programs and contains the proposed wording of the conditions governing spending which Parliament will be asked to approve. The Part III documents provide additional detail on each department and its programs primarily in terms of the results expected for the money spent.

Instructions for obtaining each volume can be found on the order form enclosed with Part II.

1985-86 Estimates

Part III

Veterans Affairs Canada

4785

Preface

This Expenditure Plan is designed to be used as a reference document and as such contains several levels of detail to respond to the various needs of its audience.

There are six chapters in this document. The first provides an introduction to the portfolio. The other five present the Expenditure Plans for each of the portfolio's programs. It should be noted that for 1985-86 Estimates, the former Pensions Program has been split into the Canadian Pension Commission Program and the Pension Review Board Program.

Each chapter begins with extracts from Part II of the Estimates for the particular program being described. This is to provide continuity with the other Estimates documents. Also included are extracts from Volume II of the Public Accounts. These are provided as an aid in assessing the program's financial performance over the past year.

The Program Expenditure Plans for the Veterans Affairs Program is divided into three sections. These sections provide increasing levels of details for the program. Section I presents an overview of the program and a summary of its current plans and performance. For those interested in more detail, Section II identifies, for each activity, the expected results and other key performance information that forms the basis for the resources requested. Section III provides further information on costs and resources as well as special analyses that the reader may require to understand the program more fully.

The Program Expenditure Plans for the War Veterans Allowance Board Program, the Pension Review Board Program, Canadian Pension Commission Program and the Bureau of Pensions Advocates Program comprise two sections. Section I provides a detailed overview of the program including a description as well as information on its background, objectives and planning perspective. Section II provides further information on costs and expenditures by object that the reader may require to understand the program more fully.

This document is designed to permit easy access to specific information that the reader may require. A general table of contents lists the chapters, and detailed tables of contents are provided for each program. For access to financially oriented information, the Portfolio Spending Plan in Part I provides page references to the schedule of Financial Requirements in each Program Expenditure Plan. When appropriate, each of these schedules in turn provides cross-references to the more detailed information about each of the activities of a program.

Portfolio Summary

4789

Roles and Responsibilities

In recognizing the unique contribution made by veterans and certain civilians to Canada's war and peacekeeping efforts over the past decades, Canada has established various assistance programs designed specifically for these persons. The following items constitute the core of the assistance benefits available to veterans and certain civilians, their survivors and dependants:

- pensions and benefits to compensate for death and disability regardless of income of recipients (some few cases are, however, discretionary and a means test is required);
- health care related to pensioned disability including medical care in the home; and uninsured services (drugs, glasses, etc., institutional care in departmental, contract and non-contract facilities) for eligible veterans;
- income support, in the form of allowances, as compensation for veterans suffering financially due to the intangible effects of war;
- legal aid service available at all levels of the pension process and to represent applicants for appeals to the War Veterans Allowance Board;
- an appeal and review forum for applicants and recipients of allowances under the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowance Act;
- a final tribunal for pension claims under the Pension Act; and
- assistance and services to veterans who settled under the Veterans' Land Act so that they may acquire title to the property on which they are established.

Portfolio Organization and Programs

The Veterans Affairs Portfolio is headed by a Minister responsible to Parliament for the Department of Veterans Affairs and the Bureau of Pensions Advocates. The Minister also reports to Parliament for the Canadian Pension Commission, the Pension Review Board, and the War Veterans Allowance Board. To provide support for the Deputy Minister, where direct contact is required with Central Agencies and client interest groups, the Department of Veterans Affairs established a National Capital Operations Branch in Ottawa. The Canadian Pension Commission is represented by the Ottawa Core Group. Figure 1 represents the organization of the Veterans Affairs Portfolio.

Figure 1: Veterans Affairs Portfolio Organization

The Department of Veterans Affairs, which manages the Veterans Affairs Program, provides income support, in the form of allowances, and health services to veterans, their dependants and survivors through a head office organization as well as regional and district offices located throughout Canada. It also provides counselling services and assistance to veterans in managing or acquiring title to property acquired under the Veterans Land Act.

The War Veterans Allowance Board provides an appeal and review forum for applicants and recipients of allowances under the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act.

The Canadian Pension Commission manages the Canadian Pension Commission Program and administers the Pension Act, Parts I to X of the Civilian War Pensions and Allowances Act, and various other acts, orders and regulations which provide for the award of pensions and benefits as compensation for disability or death related to military or other qualified service. These services are provided through a head office organization with district offices in each province.

The Pension Review Board is responsible for determining all matters of interpretation of the Pension Act and for reviewing and rendering decisions in cases of appeal by eligible ex-members of the armed forces, certain civilians and/or their respective dependants who are dissatisfied with final decisions of the Canadian Pension Commission.

The Bureau of Pensions Advocates provides a legal service to applicants seeking to establish claims under the Pension Act and related statutes and orders. This assistance is available at all levels of the pension process. As a result of a recent ammendment to the War Veterans Allowance Act, the Bureau now represents applicants for appeals to the War Veterans Allowance Board. Services are provided through a head office organization and district offices in each province.

War Veterans Allowance Process: Bill C-39 as approved in 1984, by Parliament, has resulted in significant changes to the decision and appeal structure governing the operation of the War Veterans Allowance/Civilian War Allowance program. The Veterans Allowance District Authorities (VADA) were abolished effective October 1, 1984 and replaced with a more efficient and responsive decision making structure. In addition, Regional Directors General, Veterans Services Branch, have become the first level of review for appellants who are dissatisfied with initial adjudications. As an improvement to the appeal process the Bureau of Pensions Advocates is now allowed to represent appellants at hearings of the War Veterans Allowance Board.

Figure 2 presents the basic steps of the War Veterans Allowance application process.

1.	Application	
a)	Applicant/representative prepares an application or requests Veterans Services District Office counsellor to do same. This is sent to the Veterans Services Regional Office.	Applicant/ representative
b)	An adjudication is made by a Veterans Services Entitlement Clerk, who informs the applicant of the decision and that the applicant has 60 days to ask for redress from the Minister through the Veterans Services Regional Director General, if the decision is unsatisfactory.	Entitlement Clerk
c)	The Entitlement Clerk calculates the allowance and a monthly remittance is sent to the applicant.	Entitlement Clerk

d)	War Veterans Allowance Board (WVAB) may review any decision made.	WVAB
2.	Redress Request	
a)	The Veterans Services Regional Director General (VSRDG) reviews the initial adjudication and advises the applicant of his ruling.	VSRDG
b)	If unsatisfactory, the applicant or the Bureau of Pensions Advocates (BPA), if requested by the applicant, has the option of filing a notice of intent to appeal with the WVAB within 60 days of receiving the redress ruling, and preparing an appeal.	Applicant/BPA
3.	Appeal	
a)	When the notice of appeal is received, the WVAB case analyst requests documentation from the Veterans Services Regional Office.	WVAB Case Analyst
b)	The case analyst will review the case and make written recommendations to the War Veterans Allowance Board for a ruling.	WVAB Case Analyst
c)	On the required date, the applicant/Bureau of Pensions Advocates may present the case to the War Veterans Allowance Board.	Applicant/ Bureau of Pensions Advocates
d)	The War Veterans Allowance Board makes a decision. If dissatisfied, the applicant may request the Board to review it's decision or appeal to the Federal Court.	War Veterans Allowance Board

Pensions Process: Together, the Bureau of Pensions Advocates, the Canadian Pension Commission, and the Pension Review Board are the three organizations involved in the processing of pension benefit applications. Initially, any eligible ex-member of the armed forces, certain civilians and/or their respective surviving spouses or other persons who believe they have a claim for any benefit may submit an application to the Canadian Pension Commission. There are a number of steps beyond the initial applications where an applicant can introduce further evidence to support the claim. Figure 3 presents the basic steps of the pension application process and the organizational responsibilities assigned for each stage.

Figure 3: Application and Appeal Process for Pensions

Pensions Process		
Step	**Activity**	**Responsibility**
1.	First Application	
a)	The applicant contacts an advocate (Bureau of Pensions Advocates, Royal Canadian Legion, etc.) re making a claim.	Applicant
b)	The advocate submits a notice of intent to the Canadian Pension Commission.	Advocate
c)	The advocate obtains the file, service dossier, relevant medical reports, etc., prepares the case and submits a claim to the Canadian Pension Commission (CPC).	Advocate
d)	The application is registered, acknowledged, medical précis prepared, medical opinion prepared and the case is placed before Commissioners who adjudicate the claim.	CPC
e)	If the decision is unfavourable, the applicant is informed of appeal rights. If favourable, a medical examination is required to establish quantum (present disability).	CPC
f)	A medical examination is carried out and a recommendation for Pension Award submitted to Head Office, Canadian Pension Commission for approval.	CPC
g)	Documentation is forwarded to Pension Pay for processing and requisition of cheque. The applicant is informed of the amount of the pension.	CPC/ Department of Veterans Affairs
2.	Application for Entitlement or Assessment Board	
a)	The applicant, through the advocate, sends a request for hearing to the Head Office, Canadian Pension Commission. The Commission will acknowledge the request.	Applicant/ Advocate/CPC

b) Statement of Case is prepared and mailed to the advocate.	CPC
c) The advocate notifies CPC of readiness to be heard.	Advocate
d) A date is set for the hearing.	CPC/Advocate
e) The claim is adjudicated (Board hears evidence of applicant and witnesses, and argument by advocate).	CPC
f) The remaining process is as for steps e) to g) of First Application.	
3. <u>Appeal to Pension Review Board</u>	
a) The applicant, through the advocate, notifies the Pension Review Board (PRB) of wish to appeal.	Applicant/ Advocate
b) The Pension Review Board requests case documentation from the Canadian Pension Commission, who comply.	PRB/CPC
c) The Pension Review Board sends documentation to the advocate and awaits notice of readiness to proceed.	PRB/Advocate
d) The case is listed, heard and adjudicated.	PRB/Advocate
e) If successful the Pension Review Board notifies the Canadian Pension Commission. If unsuccessful, the applicant can appeal to Federal Court or file an application to vary the Board decision on basis of new evidence, error in fact or in law.	PRB/CPC/ Applicant

Portfolio Spending Plan

Figure 4 presents the spending plan for the portfolio. All proposed expenditures are budgetary.

Figure 4: Portfolio Spending Plan ($000)

	Estimates 1985-86	Forecast 1984-85	Change $	Change %
Veterans Affairs Program	**802,139**	778,495	23,644	3.0
War Veterans Allowance Board Program	**1,636**	1,599	37	2.3
Pension Review Board Program	**1,209**	1,148	61	5.3
Canadian Pension Commission Program	**767,564**	734,465	33,099	4.5
Bureau of Pensions Advocates Program	**4,899**	4,586	313	6.8
	1,577,447	1,520,293	57,154	

Portfolio Priorities

Within the portfolio, highest priority is placed on the adequacy and responsiveness of service to clients. In this context, the following areas are being developed or enhanced on a continuing basis:

- actively pursue desired turnaround times;
- study and implement ways to improve services and communications with an increasingly aging and in some cases severely disabled clientele;
- refine Management Information Systems with a view to improving forecasting capability; and
- implement procedures to simplify and speed up process.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $785,509,600 in support of the 1985-86 Veterans Affairs Program. Existing statutory authority authorizes the expenditure of an additional $16,629,400.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	Veterans Affairs Program		
1	Operating expenditures	259,717	262,571
5	Grants and contributions	525,793	501,854
(S)	Minister of Veterans Affairs - Salary and motor car allowance	42	41
(S)	Provision for Reserve for Conditional Benefits, Veterans Land Act	2,100	2,600

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

During 1985-86 the Veterans Affairs Program expects the following:

- $466,565,000 will be paid directly to 85,953 clients as income support under the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act (see page 2-24);

- $258,649,000 will be paid to or on behalf of clients for medical treatment, Aging Veterans Program benefits, related administration and hospital transfer agreements. Of the total, $14 million relates to the Aging Veterans program which will provide service to 6000 aging veterans; and

- the War Veterans Allowance/Civilian War Allowance administrative process will be harmonized by April 1986 with the Old Age Security/Guaranteed Income Supplement program administered by National Health and Welfare. This will enable person years to be reallocated to the extension of the Aging Veterans program (see page 2-18).

2. Financial Summary by Activity

Funding requirements for the Veterans Affairs Program for both the Estimates year and the current fiscal year are presented by activity in Figure 1.

Figure 1: Financial Summary by Activity ($000)

	Estimates 1985-86	Forecast 1984-85	Change	For Details See Page
Social and Income Support	507,726	523,593	(15,867)	2-22
Health Services	258,649	207,275	51,374	2-28
Management of Property Contracts	9,109	9,304	(195)	2-34
Departmental Administration	26,655	38,323	(11,668)	2-37
	802,139	778,495	23,644	
Authorized person-years	3,521	3,739	(218)	

Explanation of Change: The financial requirements for 1985-86 are 3% or $23.6 million higher than the 1984-85 forecast expenditures.

The increase is due primarily to:

	($000)
• increase in salaries and purchases due to inflation	8,100
• contributions to the respective provinces in accordance with the agreements of transfer of departmental hospitals	17,300
• extension to the Aging Veterans program	6,100
• increase in other health purchased services requirements due to increased needs of eligible recipients	2,000

- contributions to province of Ontario for construction of:

  - Western Counties Wing, Parkwood Hospital 4,800
  - replacement of G Wing at the Sunnybrook Medical Centre 2,100

- miscellaneous, consisting of various small items 700

- decrease in costs due to finalization of relocation, involving a 112 person year reduction and ongoing administration reductions of 36 person years (10,700)

- War Veterans Allowance/Civilian War Allowance expenditures for 1985-86 originally were projected to be $12.4 million above the 1984-85 Main Estimates. New legislation has increased the forecast expenditure, however this has not been included in the 1985-86 Main Estimates. (4,400)

- decrease in person years of 55 for various reasons (1,400)

- decrease in specific Client Oriented System costs, involving a reduction of 21 person years, for costs required in 1984-85 but not in 1985-86 (1,000)

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of August 31, 1984) is $2.1 million or less than 1% lower than the 1984-85 Main Estimates of $780 million (Extracts from Part II of the Estimates, page 2-4). The difference of $2.1 million reflects the following major offsetting items:

	($000)
• an increase in War Veterans Allowance/Civilian War Allowance (WVA/CWA) due to new legislation	16,800
• additional salary requirements for ongoing administration (36 PY) and relocation finalization (22 PY)	2,200

• additional salary requirements for such items as Aging Veterans program extension (11 PY), WVA/CWA administrative process harmonization with Old Age Security process (16 PY), and Ste. Anne's Hospital (11 PY)	2,400
• additional grant for Aging Veterans program extension	2,400
• additional funds to cover cost of common services	2,200
• a reduction in contributions required under hospital transfer agreements, due to delays in construction	(21,500)
• decrease in cost for chronic care at Deer Lodge Hospital due to change in per diem rate	(3,200)
• miscellaneous, consisting of various small items	(1,300)

B. Recent Performance

1. Highlights

Highlights of the Program's performance during 1983-84 were:

- $421,605,000 was paid to 88,638 clients under the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowance Act;
- $204,571,000 was paid to or on behalf of clients for medical treatment, Aging Veterans program benefits, related administration and hospital transfer agreements. Of this total, $3,185,000 was paid on behalf of 2,924 clients under the Aging Veterans program benefits;
- several significant achievements in the completion of system development projects (page 2-19); and
- completion of the review of the WVA/CWA administrative process and legislation (see page 2-19).

2. Review of Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Social and Income Support	470,998	479,104	**(8,106)**
Health Services	204,571	226,138	**(21,567)**
Management of Property Contracts	6,331	6,987	**(656)**
Departmental Administration	37,022	37,375	**(353)**
	718,922	749,604	**(30,682)**

The difference between actual expenditures and the Main Estimates is mainly due to the following:

	($000)
• total payments required under the War Veterans Allowances and Civilian War Allowances were approximately 3% less partly due to lower than expected inflation rates;	(15,500)
• expenditures for the Aging Veterans program were less as a result of a lower than expected inflation rate and cost per client; and	(2,600)
• contributions to the respective provinces in accordance with the transfer agreements of departmental hospitals were less, mainly due to delays in construction	(12,100)

C. Background

1. Introduction

The Government's social affairs policy sector considers health, social and income support expenditures. The Veterans Affairs Program is part of this policy sector. The range of services provided by the Veterans Affairs Program to veterans, dependants and survivors includes the payment of allowances and benefits, counselling and the authorization of payments for provision of medical, surgical and dental treatment, prosthetic appliances and domiciliary care, as well as the acquisition of title to property on which the veteran has been established.

2. Legal Mandate

The Department of Veterans Affairs Act, 14 other Acts of Parliament and nine sets of Regulations (as listed in Section III) constitute the mandate of the Program.

The War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act specify eligibility for allowances for veterans, their dependants and other persons who meet the specified requirements. The Veterans Treatment Regulations provide for medical, surgical and dental treatment and prosthetic appliances. Veterans Care Regulations, which came into effect on October 1, 1984 provide for long term care of eligible veterans.

3. Program Objective

The objective of the Veterans Affairs Program is to provide support for the economic, social, mental and physical well-being of veterans and their dependants and other eligible persons.

4. Program Organization for Delivery

Activity Structure: As shown in Figure 3, the Veterans Affairs Program is divided into four activities. Two activities, namely, Social and Income Support, and Health Services are the major contributors to the achievement of the Program's stated objective.

Figure 3: Activity Structure

Organization Structure: The Veterans Affairs Program consists of: Head Office; five Regional, 32 District Offices, one of which functions as a sub Region; one hospital and two domiciliary homes under the Veterans Services Branch; and four Regional, eight District, one Service, and 36 Field Offices under the Veterans Land Administration.

The Deputy Minister manages the Veterans Affairs Program and is assisted by four Assistant Deputy Ministers (Veterans Services; Finance, Personnel and Administration; National Capital Operations; and Veterans Land Administration), and the Director General of Audit and Evaluation.

The operating branches of the Program consist of:

Veterans Services (VS): provides for the medical care and social well-being as well as the income support of eligible veterans and their dependants. This is achieved through provision of care in departmental, contract, and hospitals of choice as well as through utilization of community services, provision of emergency and on-going income support and provision of social counselling and referral services.

Veterans Land Administration (VLA): provides services related to the administration of agreements between the Director, Veterans Land Administration and veterans as well as assistance in managing properties which are the subject of such agreements until the title is acquired by veterans, their heirs, devisees or personal representatives.

Finance, Personnel and Administration (FPA): provides financial, personnel, and administrative support to the Program and to associated agencies.

National Capital Operations (NCO): provides support for the effective execution of the Deputy Minister's responsibilities which require direct contact with people in Ottawa. This also includes the managerial support functions of public affairs, commemoration and corporate planning.

Audit and Evaluation Division (A&ED): provides a complete program of independent evaluations and comprehensive internal audits for all Veterans Affairs operations on four and five year cycles respectively.

Figure 4 relates the Program's organizational structure to its activities and the 1985-86 resources required.

Figure 4: 1985-86 Resources by Organization/Activity ($000)

Activity				Activity Totals	P-Y
Social and Income Support	507,726			507,726	556
Health Services	258,649			258,649	2,288
Management of Propery Contracts		9,109		9,109	191
Departmental Administration			26,655[1,2,3]	26,655	486[1,2,3]
Total	766,375	9,109	26,655	802,139	3,521

1 Includes A&ED
2 Includes Minister and Deputy Minister
3 Includes NCO

D. Planning Perspective

1. Environment

The following factors have a significant impact on the Veterans Affairs Program:

- the aging pattern of veterans, shown in figure 5 indicates a gradual drop in the total number of veterans over the next few years due to mortality, but more important is the dramatic increase in the proportion of veterans over age 65. This has the effect of:

  - creating an additional demand for age related services, particularly in the areas of health care and social casework,

  - causing War Veterans Allowance/Civilian War Allowance expenditures to decrease as veterans become entitled to such benefits as the Canada or Quebec Pension Plan, Old Age Security and Guaranteed Income Supplement. In the short term, this expected decrease in expenditures will be offset by the provisions of recent legislation which has increased benefits.

- the higher mortality rate of male veterans as compared with their spouses will have a significant impact on the composition of the client population. Widowed women will become a greater proportion of the total client population; and

- provincial programs in the health and social services area vary in their scope and availability. This is reflected in the varying demand from province to province for services in support of the veteran clientele.

Figure 5: Veterans in Canada

2. Initiatives

War Veterans Allowance/Civilian War Allowance (WVA/CWA) Review: Extensive work is now underway to streamline the administration of the WVA/CWA program and to harmonize certain income test features with the Guaranteed Income Supplement program. By April 1, 1986, it is intended that both programs will be using similar definitions of income, payment and assessment year and provisions for change of circumstances. Adoption and implementation of such common program features will allow income declarations filed with Health and Welfare to be used by the Department of Veterans Affairs for WVA/CWA purposes. The result will be less duplication of effort, less intrusion into a client's affairs and person year savings which can be redeployed to meet the demands of an expanding Aging Veterans program.

Veterans Land Administration Reorganization: Recognizing the continuing decline in client population, management has embarked on a reorganization based on centralization of the fund accounting and property management functions. The change is scheduled over the period 1985 to 1988 and will result in the elimination of four Regional Offices and an approximate savings of 28 person years. The level of client service should not be affected.

3. Update on Previously Reported Initiatives

Aging Veterans Program (AVP): The emphasis on the Aging Veterans program has continued. In 1983-84, $3,185,000 was expended and supplied benefits to 2,924 clients. The success of the program was such that it is being progressively extended to a much larger group of eligible veterans.

War Veterans Allowance/Civilian War Allowance (WVA/CWA) Review: The extensive review of the WVA/CWA administrative process and legislation has now been completed. The results of this review have culminated in several changes. In 1984 Parliament approved Bill C-39 which increased benefits to more than 50,000 WVA/CWA recipients under the age of 65. Further, it provided for free legal assistance to WVA appellants, and authority to harmonize certain income test features with the Guaranteed Income Supplement program (see page 2-18).

Client Oriented Systems: As a result of various organization and management improvement efforts undertaken by Veterans Affairs over the last several years, various client oriented systems have been either modified or developed in order to improve services to veterans and their dependants, improve financial controls, improve operational controls, and replace obsolete systems and procedures. Fiscal year 1983-84 saw several significant achievements in the completion of system development projects. The total estimated costs of $17.3 million spread over eight years has not varied. An update on individual projects follows:

- the Veterans Services Benefit Delivery System consisting of manual and automated procedures to deliver War Veterans Allowances and Civilian War Allowances was implemented in all Regional Offices as of October, 1983;

- the Pension Benefit Delivery System consisting of manual and automated procedures to deliver disability pensions, was implemented as of March, 1984 for a total project cost of $2.3 million; and

- the Registry Support System, developed to control the movement of the Veterans hardcopy files, was implemented as of March 1984 for a total cost of $.7 million.

Now that the individual projects are in operation, results will be monitored to ensure desired results are obtained.

4. Program Effectiveness

As the program does not lend itself to the development of ongoing effectiveness measurements, increasing attention is being paid to the efficiency of the processes by which the two major activities, Social and Income Support, and Health Services, are being delivered. In this regard:

- recent enhancements to the computerized Veterans Service Benefit Delivery System are expected to increase operational efficiency by allowing for system modifications such as automatic benefit calculations which remove a source of error while decreasing processing time. Preliminary information from testing of the enhanced system indicates efficiency improvement in the area of accounts.

- a new health services delivery model has been implemented for the assessment of clients under the Aging Veterans program and Veterans Care Regulations. It is expected this system will improve the quality and timeliness of the decision making required to initiate and monitor client care. Supporting data should be available for the 1986-87 Part III of the Estimates.

On a periodic basis, the Audit and Evaluation Division carries out various program evaluations. Recommendations from these evaluations are issued in reports which are provided to managers to assist them in improving related operations.

Recent evaluation studies conducted on the War Veterans Allowance/Civilian War Allowance program (WVA/CWA) and the Drug program, disclosed the following:

WVA/CWA: This program is intended to provide income support to low income veterans as compensation for service in a theatre of war. The purpose of the study was to determine the future needs of this program, its impact on clients, and way and means of delivering the program in a more cost effective manner. The findings from the study indicated that the program contributes significantly to meeting income needs of its clientele and has a continuing role to play in this area for the future.

The study supported the initiative being taken by the Department to harmonize the WVA/CWA income test with that of the Guaranteed Income Supplement program and to raise benefit levels for single recipients. These initiatives were realized by Parliamentary approval of Bill C-39 in June 1984.

Drug Program: The program provides free prescription drugs, medications and supplies to WVA/CWA recipients (veterans only) and to CPC recipients (for pensioned condition only). A study was done to determine if a more cost-effective and efficient alternative could be found for delivering the program. The study found that the costs of delivery were less in Atlantic Canada where the program was administered by Blue Cross. In addition, the computerized audit and control procedures used by Blue Cross were more comprehensive and reliable than the manually operated systems existing in other regional offices. As a result of the study findings, the Department is presently preparing to pursue similar arrangements for the administration of the drug program in other regions.

Section II
Analysis by Activity

A. Social and Income Support

Objective

To provide social and income support to qualified veterans, specified civilians and their dependants.

Within this objective, specific targets include the following:

- to propose legislative changes arising from War Veterans Allowance/Civilian War Allowance (WVA/CWA) review as a sequel to the non-legislative changes made in 1983-84;
- to maintain established turnaround times of 40 days for processing of WVA/CWA first awards, 18 days for processing assistance grants, 25 days for processing of funeral and burial grants; and
- to ensure the harmonization of the WVA/CWA administrative process with the Old Age Security/Guaranteed Income Supplement process.

Resource Summary

Expenditures for the Social and Income Support Activity will amount to 63% of total program expenditures in 1985-86.

Figure 6: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Benefits and Allowances	**484,123**	**-**	488,403	-	437,790	-
Operations	**13,480**	**295**	20,098	458	18,966	450
Administration	**10,123**	**261**	15,092	406	14,242	398
	507,726	**556**	523,593	864	470,998	848

The decrease between Forecast and Estimates for Operations and Administration sub activities results mainly from an internal adjustment between this activity and the Health Services activity (see page 2-28).

Past Financial Performance

Figure 7: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Benefits and Allowances	437,790	454,629	(16,839)
Operations	18,966	13,043	5,923
Administration	14,242	11,432	2,810
	470,998	479,104	(8,106)

The decrease in the Benefits and Allowances sub activity results mainly from a $15.5 million reduction in payments under War Veterans Allowances and Civilian War Allowances partly due to a lower than expected inflation rate. The increase in Operations and Administration sub activities is mainly a result of an internal transfer of person years from the Health Services activity.

Description

The Social and Income Support Activity provides social and income support benefits to qualified veterans, their dependants and surviviors, and comprises three sub-activities.

Benefits and Allowances: provides the payments for allowances, grants, and other types of financial assistance to clients or client related organizations. Of this the War Veterans Allowance/Civilian War Allowance represents the major payment and ensures that eligible veterans, their dependants and survivors receive a guaranteed level of income. Other payments are made for such things as the Last Post Fund (a non-governmental organization which ensures each veteran will receive a dignified burial), educational assistance (Children of the War Dead), and burial assistance.

Operations: provides counselling services, determination of eligibility for allowances, entitlement calculations for applications, and the adjustment and updating of accounts for social and income benefits.

Administration: provides the executive functions within the Veterans Services Branch and financial, personnel, records management, clerical and administrative support services including payment services to clientele.

Performance Information/Resource Justification

Benefits and Allowances: The major portion of spending in this activity is on War Veterans and Civilian War Allowances. Actual and anticipated payments for the period 1983-84 to 1985-86 are reflected in Figure 8. To qualify, a veteran must meet service eligibility requirements and because of age or incapacity be unable to work and have insufficient income for maintenance as determined by an income test. The income test determines the initial and ongoing financial eligibility of all veterans, widows and orphans. Figure 9 reflects the monthly rates covering the period 1980-1984.

Figure 8: WVA/CWA Anticipated Requirements ($000)

Figure 9: WVA/CWA Rates[1] Effective 1980 - 1984

	1980	1981	April 1st 1982	1983	1984	Oct 1st 1984
Married[2]	541.26	706.37	802.38	887.26	941.68	987.73
Single	317.05	418.86	478.67	532.14	567.59	625.55
Orphans	219.48	252.78	283.62	316.24	338.38	348.63
Each Additional Child	79.83	88.98	99.57	108.61	113.81	116.33

1 Rates are adjusted quarterly to reflect increases in the Consumer Price Index.
2 Less family allowance paid for each child.

Operations: The major operational functions involved in the Social and Income Support Activity are the processing of WVA/CWA first awards, WVA/CWA account maintenance (as a result of change in domestic or financial status), counselling services to other programs such as the Canadian Pension Commission Program, and casework counselling services. Figure 10 indicates volumes from 1980-81 for these functions. Actual workload for 1983-84 was fairly close to projected. The demand for "services to other programs" has fallen off somewhat thus allowing reallocation of resources to handle the increased responsibility of the Aging Veterans program.

Figure 10: Workload Volumes

For significant work areas, staff requirements are determined by forecasting workload volumes based on historical and sociological data. These volumes are related to a pre-determined time standard per work unit to determine the person-hours required. To determine staff size the person-hours required is then divided by the number of hours per person-year. Figure 11 reflects the person year utilization for 1982-83 and 1983-84, and projects the person year requirements for 1984-85 and 1985-86 for major activities. This can be related to workload volumes in Figure 10. Support functions such as counsellor travel and administrative support are not included.

Figure 11: Person-Year Requirements for the Major Activities

In terms of quality of service, Figure 12 summarizes the desired processing times and shows the actual obtained for 1983-84. The same desired processing time will be maintained for 1985-86. The processing time is measured from the date of application to the updating of the data base for WVA/CWA First Awards. For Assistant Fund and Funeral and Burial grants, it is from the date of application to the date of the cheque requisition.

Figure 12: Desired and Achieved Processing Time (Average Elapsed Days)

[1]single cash grants to WVA/CWA recipient to alleviate an emergency situation

Administration: The $10.1 million and 261 P-Y's required for the provision of payments to clients and other support functions represent 2% of dollars and 47% of P-Y's for the activity.

B. Health Services

Objective

To ensure the provision of adequate medical, surgical and dental treatment, prosthetic appliances and domiciliary care to eligible veterans and other qualified persons.

Resource Summary

Expenditures for the Health Services Activity will amount to 32% of total program expenditures in 1985-86.

Figure 13: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Hospitals	47,361	1,192	45,945	1,192	44,228	1,144
Other Health Purchased Services	113,824	-	110,509	-	104,838	
Operations	31,237	599	19,925	435	19,444	445
Grants and Contributions	47,182	-	16,960	-	22,666	
Home Related Services	5,395	160	5,286	163	4,954	159
Administration	13,650	337	8,650	245	8,441	250
	258,649	2,288	207,275	2,035	204,571	1,998

See page 2-9 for explanation of changes between the 1984-85 Forecast and the 1985-86 Estimates.

The fluctuation between years, for the Operations and Administration sub activities, results from the Aging Veterans program extension, inflation, and an internal adjustment between this activity and the Social and Income Support activity (see page 2-22).

Past Financial Performance

Figure 14: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Hospitals	44,228	48,981	(4,753)
Other Health Purchased Services	104,838	102,900	1,938
Operations	19,444	22,422	(2,978)
Grants and Contrib[illegible]ns	22,666	37,107	(14,441)
Home Related Servic[illegible]	4,954	5,276	(322)
Administration	8,441	9,452	(1,011)
	204,571	226,138	(21,567)

The major items contributing to the decrease are:

- for the Grants and Contributions sub activity;
  - Aging Veterans program payments were $2,600,000 less than expected mainly due to a lower inflation rate and cost per client; and
  - payments to provinces under the Departmental hospital transfer agreements were approximately $12,100,000 less than expected mainly due to delays in construction under the agreements.
- an internal transfer of person years from the Health Services activity to the Social and Income Support activity. This affects the Operations and the Administration sub activities; and
- for the hospital sub activity, difficulty was experienced in attracting specialized clinical and nursing staff thus resulting in lapsed person years.

Description

The Health Services Activity provides benefits in the health related area to eligible Canadian and allied veterans, as well as certain classes of civilians, within and outside departmental institutions. Also involved is the interpretation, preparation and administration of related legislation and regulations at head office and in field operations. This Activity comprises six sub-activities:

Hospitals: involves all aspects of the operation and administration of the departmental hospital and the provision within this hospital of health care to eligible clients.

Other Health Purchased Services: includes payments for health services outside the Program's institutions. The major expenditures in this sub-activity are for drugs, doctors and dentists of choice, nursing services, prosthetic supplies and outside hospitals/community health services.

Operations: provides counselling services, operation of dental units, chaplain services, and the use of departmental transportation facilities by the client. Determining entitlement for claims submitted is also performed.

Grants and Contributions: represents funds paid for grants and contributions to clients and provinces, in accordance with specific agreements relating to health services or hospital transfers. This includes payments under the Aging Veterans program. Under the Aging Veterans program existing operations are extended to provide for medical care in the home, assistance with household chores and home adaptations for qualified veterans. It also arranges for treatment in day hospitals. Eligible veterans may thus be able to remain in their homes rather than being institutionalized. These benefits apply to veterans who are receiving War Disability pensions and whose health care needs stem from these disabilities and now also to a larger group of low income disability pensioners and veterans with service in a theatre of war.

Home Related Services: includes all operating expenses for the Program's two departmental veterans homes. At March 31, 1984 the Rideau Veterans Home in Ontario had 142 beds and 131 patients while the Saskatoon Veterans Home had 79 beds and 74 patients. All veterans who served overseas are entitled to this service if they meet the criteria in regard to health status. A multi-disciplinary team determines eligibility and establishes a priority list.

Administration: includes the provision of financial management, records management, typing, administrative support services, and payment services to clientele.

Performance Information/Resource Justification

Hospitals: For 1985-86 there will be one hospital under the administration and control of the Program. Figure 15 shows operating costs and person-years. At March 31, 1984 St. Anne's Hospital had 1084 beds and 974 patients. Those eligible include: any veteran who receives a disability pension or War Veterans Allowance and veterans requiring domiciliary care. The province of Québec reimburses the Department for certain services provided.

Figure 15: Operating Costs for the Program's Hospital ($000)

Other Health Purchased Services: Eligible veterans and other qualified persons are entitled to medical, surgical and dental treatment, and prosthetic appliances under Veterans Treatment Regulations. In addition, long-term institutional care and extended home care is available under Veterans Care Regulations. Those deemed eligible include those requiring care as a result of a pensionable condition, and veterans receiving War Veterans Allowance (for health care benefits not covered by a provincial health insurance plan). Veterans utilized a total of 1,038,865 patient-days in contract institutions and the hospital of choice program in 1983-84. Over 90% of the expenditures are for the four major items shown in Figure 16.

Figure 16: Other Health Purchased Services ($000)

In order to enhance ease of access to hospital facilities, hospital beds for long-term care are being contracted for in several locations. This will enable veterans in those areas to be cared for closer to their homes. Recently twenty beds have been relocated in Nova Scotia and similar adjustments elsewhere are under review.

Operations: Counselling interviews for 1985-86 are estimated at 37,500, with 38,000 in 1984-85 and 39,937 in 1983-84. It is intended to maintain an average turnaround time of 25 days in processing travel expense claims submitted by clients. The $31 million and 599 P-Y's required for this function represent 12% of the dollars and 26% of the person years for this activity.

Grants and Contributions: In 1963, the government announced a policy to transfer veterans hospitals to other jurisdictions in order to maintain professional stimulus and high standards. Under the terms of agreement, grants and contributions were made to the respective provinces. Of the total $47 million to be paid in 1985-86, the major portion relates to hospital transfer agreements, with $33 million paid as contributions to the respective provinces (see Figure 17). The terms are based on individual negotiated agreements between federal and provincial agencies. The remaining $14 million is mainly used to assist aging veterans in defraying costs of extended health care not covered by provincial health programs.

Figure 17: Contributions to Provinces for Hospital Transfers ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Nova Scotia	**12,000**	3,500	259
Quebec	**4,400**	3,000	1,855
Ontario	**6,900**	500	15,426
Manitoba	**9,300**	2,000	500
Alberta	**-**	-	920
British Columbia	**600**	-	-
	33,200	9,000	18,960

Home Related Services: The $5.4 million and 160 person years required to cover operating costs for the two departmental veterans homes represent 2% of dollars for the activity and 6% of person years.

Administration: The $13.7 million and 337 person years required for the provision of payments to clients and other support functions represent 5% of dollars and 14% of person years for the Activity.

C. Management of Property Contracts

Objective

To ensure the effective and efficient implementation of the Veterans' Land Act and Regulations by providing veterans, their heirs, devisees and personal representatives with guidance, advice and assistance in acquiring title to the property covered by an Agreement of Sale and in adhering to their contractual obligations.

Within this objective, specific targets include the following:

- to maintain arrears in collections at 1.5% or lower of the total due to the Crown; and
- over the period 1985 to 1988 centralize the fund accounting and property management functions. This reorganization will result in the elimination of four Regional Offices and the savings of 28 person years.

Resource Summary

Expenditures for the Management of Property Contracts Activity will amount to 1% of total program expenditure in 1985-86.

Figure 18: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	**P-Y**	$	P-Y	$	P-Y
Management of Property Contracts	**9,109**	191	9,304	192	6,331	179

Past Financial Performance

Figure 19: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Management of Property Contracts	6,331	6,987	(656)

Unexpected retirements and staff movement prior to centralization caused actual expenditures to be less than estimated.

Description

The Management of Property Contracts Activity provides services to veteran clients, their heirs and representatives through four Regional, eight District, one Service and thirty-six Field Offices to ensure that the objectives of the Activity are achieved. Lending was completely terminated in 1977, leaving basically a management, monitoring, counselling and collection function. At March 31, 1985 there are approximately 27,100 accounts and $201 million to be collected.

Performance Information/Resource Justification

One of the key performance indicators is person-years per 1000 active accounts, as illustrated in Figure 20.

Figure 20: Person-Years per 1000 Active Accounts

The increase in 1981-82 resulted from the transfer of the VLA Fund accounting function, along with nine person-years, from Veterans Services to Veterans Land Administration in the Ontario Region. The minor increase in subsequent years is due to the need to maintain a satisfactory level of service to clients. The increase projected for 1985-86 results from double banking of positions related to centralization, and will decrease in 1986-87.

Under the current mandate, one of the Activity's major responsibilities involves the timely collection of all amounts due to the Crown. Figure 21 shows the percentage of arrears to total amounts due as of the end of each fiscal year from 1978-79 to 1985-86.

Figure 21: Percentage of Arrears to Total Amounts of Payment Due

Figure 22 displays the number of active accounts remaining at the beginning of each fiscal year along with the number of person-years required to maintain the operation.

Figure 22: Active Accounts Remaining and Person-Years Required

D. Departmental Administration

Objective

To provide financial, administrative, personnel and management support services to the portfolio in the most efficient and effective manner; and to make an effective contribution to portfolio management.

Resource Summary

Expenditures for the Departmental Administration Activity will amount to 2% of total portfolio expenditures in 1985-86.

Figure 23: Activity Expenditures ($000) and Person-Years

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	$	P-Y	$	P-Y	$	P-Y
Departmental Administration	26,655	486	38,323	648	37,022	710

The major portion of the decrease results from finalization of relocation, involving a 121 person year reduction.

Past Financial Performance

Figure 24: 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	Change
Departmental Administration	37,022	37,375	(353)

Description

The Departmental Administration Activity covers the operation of the offices of the Minister, Deputy Minister, Assistant Deputy Minister (National Capital Operations), Assistant Deputy Minister (Finance, Personnel and Administration) and the managerial support functions of financial management, personnel administration, planning, audit and evaluation services, public relations, administrative services, management processes, commemoration, and electronic data processing services.

Performance Information/Resource Justification

Costs for the Departmental Administration Activity are $26.7 million 1985-86 (Estimates), $38.3 million 1984-85 (Forecast), $37.0 million 1983-84 and $34.2 million 1982-83.

Resources required for 1985-86 represent 2% of dollars and 12% of person years for the Portfolio operation.

The person year column displays the forecast distribution of the authorized person years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person years for the occupational group. Year to year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 27 presents a summary of all grants and contribution expenditures of the Program.

Figure 27: Details of Transfer Payments

B. Cost Analysis

Figure 28: Net Cost of Program for the Year 1985-86 ($000)

	1985-86 Program Expenditures	Add* Other Costs	Total Cost	** Deduct Revenue	Net Cost	Net Cost 1984-85
Veterans Affairs	802,139	18,433	820,572	30,541	**790,031**	777,763

* Other costs of $18,433,000 consist of:

	($000)
• accommodation provided without charge by this department	7,322
• services provided without charge by other departments:	
- accommodation (Public Works)	7,787
- cheque issue (Supply and Services)	249
- employee surgical-medical insurance (Treasury Board)	2,366
- employee compensation (Labour)	709

** Revenue consists of:

	($000)
• receipts credited to revenue (interest on Veterans' Land Act loans)	10,700
• provincial hospital insurance plans	14,040
• other	5,801

C. Acts and Regulations Relating to the Veterans Affairs Program

1. Acts

Allied Veterans Benefits Act

Program Overview

A. Financial Summary

Funding requirements for the War Veterans Allowance Board Program for both the Estimates year and the current fiscal year as shown in Figure 1. In addition, comparative information on financial performance for 1983-84 is also provided.

Figure 1: Financial Summary and Review of 1983-84 Financial Performance ($000)

	Estimates 1985-86	Forecast* 1984-85	Change	Actual 1983-84
Appeals, Reviews, Adjudication and Interpretation	**1,636**	1,599	37	1,428
	1,636	1,599	37	1,428
Authorized person-years	**35**	35	-	32

* There has not been significant change from the 1984-85 Main Estimates. The 1984-85 forecast is $1,599,000 or 4% less than the 1984-85 Main Estimates of $1,666,000. (Extracts from Part II of the Estimates, page 3-4.)

Explanation of Change: There is only a minor change from the 1984-85 forecast expenditures to the financial requirements for 1985-86.

Recent Performance: The reduction in expenditures of $105,000 between 1983-84 actuals and 1983-84 Main Estimates resulted mainly from delays in staffing Governor in Council positions.

B. Background

1. Introduction

This Program provides an appeal and review forum for applicants and recipients who feel they were unjustly denied benefits under the War Veterans Allowance Act, and Part XI of the Civilian War Pensions and Allowances Act. The programs on which the Board adjudicates are administered by the Department of Veterans Affairs. Until October 1, 1984, initial adjudications were made by seven District Authorities, which were independent adjudicating bodies. Currently, initial adjudications are made by a Departmental official to whom the Minister has delegated authority to adjudicate. The Minister may also conduct a review of the initial adjudication. Any adjudication of the Minister, other then under Subsection 19(2) of the War Veterans Allowance Act (the Minister's authority to remit overpayments), is subject to appeal to or review by the Board.

2. Legal Mandate

The statutory framework within which the Board functions is set out in the War Veterans Allowance (WVA) Act, Veterans Allowance Regulations, Part XI Civilian War Pensions and Allowances (CWP&A) Act. These Acts and Regulations outline the terms and conditions of eligibility for receipt of benefits under the legislation.

3. Program Objective

The objective of the Program is to ensure that veterans and their dependants receive their entitlement under the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act.

4. Program Description

The Board's major responsibilities are: to act as a court of appeal for aggrieved applicants and recipients; to review decisions of the Department to ensure that adjudication is consistent with the intent and purview of the legislation, and that the legislation is applied uniformly throughout Canada; to adjudicate pursuant to specific sections of the WVA/CWP&A Acts where the Board has sole jurisdication; to provide interpretation of the WVA/CWP&A Acts and Regulations; and to advise the Minister on Regulations under the WVA Act. The Board also periodically issues Precedent Decisions which serve to continuously refine the jurisprudence respecting allowances, and provide guidance to the Department on adjudications.

5. Program Organization for Delivery

Organization Structure: As shown in Figure 2, the Board is composed of the Chairman, Deputy Chairman, three Members and three Temporary Members who are appointed by the Governor in Council.

The Chairman of the Board has control and direction over the duties to be performed by the other members of the Board and the duties to be performed by such members of the staff of the Department as may be assigned to the Board by the Minister. The Chairman reports to Parliament through the Minister of Veterans Affairs. The Deputy Minister of Veterans Affairs and the Dominion Secretary of the Royal Canadian Legion are additional Members of the Board without remuneration.

The total of 35 person-years authorized for 1985-86 includes eight person-years for a Chairman, a Deputy Chairman, and six Board members. Twenty-seven person-years will be utilized by the Board for developing the following organization and support expertise to carry out its mandate.

Executive Support Group: Five person-years for providing specialized services to the Chairman, Deputy Chairman and Board Members in the areas of policy and management of resources; operational control; advice on legislative matters; medical aspects of the legislation; development and implementation of activities to ensure the optimum efficiency of the Chairman's office; and stenographic and secretarial requirements. Legal advice to the Board is provided by a full time Legal Advisor attached to the Department of Justice. The Legal Advisor functions as a member of the Executive Support group.

Operations Division: Thirteen person-years for systematic review and the preparation of summaries for those cases that require adjudication by the Board; promulgation of resulting Board decisions, providing services to the Board in the areas of registration and preparation of agenda for cases requiring adjudication; writing official Board minutes; issuing internal policy guidelines, maintaining a library of precedent decisions and related information.

Information and Research Division: Three person-years to provide for the Board's requirements for information and research respecting operational planning and policy development, interpretation and communications.

Administration Division: Six person-years to provide for financial management, personnel management, transcription administration and other general administrative functions of the Board.

Figure 2: Organization Structure

C. Planning Perspective

1. Environment

National economic conditions have a major impact upon the volume of work of the Board. In difficult economic times recipients tend to appeal any decision which is perceived to limit their entitlement. In the present environment a high volume of appeals is occurring.

Historically, the Board received an average of 454 appeals per year. The rate of appeal accelerated rapidly in 1982-83 reaching 1176 appeals. In 1983-84 the high volume continued as the Board received 930 appeals (double the historic average). This higher than projected volume of appeals is continuing to restrict the review activity.

2. Update on Previously Reported Initiatives

The Board has, as indicated in the 1983-84 Part III, established screening criteria for incoming cases whereby appeals in which the Veterans Affairs Program has failed to apply established interpretations or where new pertinent information is provided are now returned to the field. The individual's right of recourse to the Board is protected in all referrals. The Department has responded promptly respecting cases referred. In 1983-84, 430 cases were considered by the Board and returned to the Department for appropriate action. Due to changes introduced to the Acts in 1983-84 referrals will decline significantly or disappear in 1985-86 and beyond.

The results of this screening criteria are proving to be extremely positive. It has assisted the Board in achieving its objective of 60 day turnaround time while receiving an extremely high volume of appeals.

3. Program Effectiveness

The main objective of the War Veterans Allowance Board Program is to ensure that applicants and recipients of allowances receive full entitlement under the legislation. Two main criteria for assessing the effectiveness of the program are: maintenance of an acceptable level of service; and the application of quality control processes.

In maintaining an acceptable level of service, the Board has determined that an average turnaround time of sixty days per case is optimal. This is sufficient time to ensure that the average case is carefully researched and considered, and that applicants and recipients are provided with a reasonable and timely service. It should be noted that in 1983-84, actual turnaround times were 60.2 days/case and 50.2 days/case for appeals and reviews respectively. In addition, the issuing of periodic Precedent Decisions which enhance veterans/dependants benefits and which lead to greater national uniformity in the adjudication process also aid in the maintenance of acceptable levels of service. The relative success of the Board with respect to these efforts is reflected in communications received from veterans, their dependants and the Minister's Office as well as in statistical reports prepared by the Board.

In the area of quality control, the Board conducts periodic reviews of the more complex and difficult cases which are initially adjudicated upon by the Department of Veterans Affairs. This review process leads to improved initial adjudication decisions based upon a better understanding of Board policy. As a further step in establishing an effective quality control process, the Board has developed a machine selection process which will eliminate the need to manually sort through thousands of adjudications in order to select those of concern and interest. As well, the Board is developing minimum standards based, in part, upon accepted statistical sampling techniques in order to add structure to the review process. These tools will enable the Board to strengthen the review process and to identify acceptable levels of review activity for planning and control purposes.

Figure 3 sets out the actual and projected ratio of altered and reversed adjudications. The ratio of decisions that have been altered or reversed is not indicative of the quality of the majority of first line adjudications because the Board deals with the more complex and difficult cases (this makes up approximately 1% of the cases adjudicated upon). These figures do, however, indicate trends for the more complex cases.

Figure 3: Summary of Adjudications

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	No.	%	No.	%	No.	%
Cases where the Board concurred with decisions						
Appeals	240	60	300	60	289	57.5
Reviews	204	30	50	25	23	20
Cases where Board Altered or Reversed decisions						
Appeals	180	40	200	40	214	42.5
Reviews	476	70	150	75	91	80

4. Performance Information/Resource Justification

Appeals are given priority over the other work of the Board. There is a wide variety of cases, and depending on its complexity, an appeal can take from 20 to 200 person-hours to bring to the final ruling stage. It is therefore not possible to express workload as units of production.

Reviews, like appeals, vary in complexity. In keeping with its mandate to ensure that the veteran receives his/her full entitlement under the Act, the objective of the Board, under ideal conditions, is a much higher rate of review of adjudications. Figure 4 illustrates the past and present level of activity and projections for the planning period.

Figure 4: Profile of Actual and Projected Activity of the Board for the Period 1980-87

Appeal Workload Profile

Review Workload Profile

* In 1980-81 the War Veterans Allowance Board relocated from Ottawa to Charlottetown.

** Reflected in 1983-84 figures are 430 cases considered by the Board and returned to the Department for appropriate action. Due to changes introduced to the Acts 1983-84 referrals will decline significantly or disappear in 1985-86 and beyond.

Secretarial	5	5	3	12,636-31,946	19,168
Other	1	1	1	40,054-85,140	63,289

The person year column displays the forecast distribution of the authorized person years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person years for the occupational group. Year to year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

B. Cost Analysis

Total Program - Budgetary	1,263,000	1,278,000	**965,967**

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

During 1985-86, the Pension Review Board Program expects to accomplish the following:

- to render decisions on 1,500 cases;
- to update and publish Pension Review Board reports on particularly significant or precedent making decisions of the Board; and
- to maintain the turnaround time of approximately two months from the date the case is heard to the date the decision is promulgated.

2. Financial Summary

Funding requirements for the Pension Review Board Program for both the Estimates year and the current fiscal year are presented in Figure 1. In addition, comparative information on financial performance for 1983-84 is also provided.

Figure 1: Financial Summary and Review of 1983-84 Financial Performance ($000)

	Estimates 1985-86	Forecast 1984-85	Main Estimates 1983-84	Actual 1983-84
Pension Review System	1,209	1,148	1,263	966
Authorized person-years	25	25	28	20

Explanation of Change: The financial requirements for 1985-86 are 5% or $61,000 higher than the 1984-85 forecast expenditure. The increase is due primarily to inflation in operating and salary costs as well as adjustments to salary costing.

Explanation of 1984-85 Forecast: The 1984-85 forecast (which is based on information available to management as of August 31, 1984) is $150,000 or 15% higher than the 1984-85 Main Estimates of $998,000 (Extracts from Part II of the Estimates, page 4-4). The difference is three additional person-years due to workload requirements.

The reduction of expenditures between 1983-84 actuals and the amount estimated resulted mainly from positions left vacant by staff turnovers on the relocation to Prince Edward Island.

B. Background

1. Introduction

The Pension Review Board, established in 1971 when major revisions were made in the Pension Act, is an independent agency of the federal government reporting to Parliament through the Minister of Veterans Affairs. It is the final tribunal for pension claims under the Pension Act and related statutes and, provides interpretations of the Pension Act.

The procedures followed by the Board in the preparation for the conduct of hearings are informal. Proceedings are non-adversarial and the Board is not permitted to hear oral evidence. It does, however, exercise wide latitude in accepting documentary evidence. Hearings are conducted in both official languages. (A description of this Program is found in the Portfolio Summary, page 1-5.)

2. Legal Mandate

The Pension Review Board's mandate on matters of pension entitlement, amount of pension award and the interpretation of pension legislation comes from Sections 75 to 81 of the Pension Act.

3. Program Objective

The objective of the Pension Review Board Program is to ensure that eligible ex-members of the armed forces, certain civilians and/or their respective dependants receive the full benefits of the Pension Act and related statutes.

4. Program Organization for Delivery

The Board consists of a Chairman, a Deputy Chairman and five members, two of whom are ad hoc appointments. According to legislation, the Pension Review Board sits and hears appeals in such places in Canada as may be designated by order of the Governor in Council. The Executive Director and related support staff are responsible for providing services in the secretarial, records management, clerical, financial, personnel and administration fields. The Legal Advisor is responsible for the quality control aspect of decisions and the issuance of the Pension Review Board Reports series.

C. Planning Perspective

1. Environment

Declines in the overall veteran population are forecast for the next several decades. Figure 2 shows the projected veteran population to the year 2001. The declining veteran population will ultimately result in a decreasing requirement for resources for the Pension Review Board Program. This reduction will be partially offset due to the increasing numbers of veterans' survivors becoming eligible for pensions as a result of legislative changes in the provision of pension benefits. An additional offsetting factor will be the increasing number of pension applications from ex-Regular Forces members.

Figure 2: Veteran Population

2. Initiatives

The Board intends to update and publish its reports on particularly significant or precedent making decisions of the Board from year 1979. This will enable veterans' organizations and veterans' representatives to analyse decisions issued by the Board for future guidance in the preparation of pension appeals.

3. Program Effectiveness

Effective delivery of benefits to the Board's client population has been identified as the most appropriate indicator of program effectiveness, and is defined as the average time, in months, measured from the date the case is heard by three members of the Board to the date the decision is issued. Figure 3 illustrates actual and projected performance in this area.

Figure 3: Average Time to Issue a Decision (Months)

It should be noted that the hearing of an appeal and the issuing of a decision is the culmination of a process which begins some 8-9 months earlier with the initial registration of an appeal with the Board. This processing time, which is quite variable, is beyond the control of the Board since it is during this period that the veteran or his representative prepares his case, including the development of new evidence.

4. Performance Information/Resource Justification

The caseload handled by the Pension Review Board is largely determined by the number of decisions rendered by the Canadian Pension Commission's Assessment and Entitlement Boards. By experience, it has been demonstrated that a large percentage of eligible ex-members of the armed forces and RCMP, certain civilians and/or their respective dependants who are dissatisfied with the decision of the Commission elect to have their cases appealed to the Board. The Board must accept all appeals, hear cases and render decisions. Figure 4 presents actual and projected information on appeal workload for the period 1983-84 to 1985-86.

Figure 4: Appeal Workload

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Appeals awaiting hearing at beginning of year	1,499	1,299	946
Appeals received during the period	1,700	1,700	1,688
Hearings held	1,500	1,500	1,335
Appeals remaining outstanding at year end	1,699	1,499	1,299

Noting the increase in appeal workload, it would appear that a change in attitude of the veteran population has taken place with respect to the full appeal process. More and more veterans are availing themselves of the appeal procedure allowed under the Pension Act after a decision by the Canadian Pension Commission has been handed down. This, combined with the fact that the Canadian Pension Commission has recently increased its ouput of decisions, has resulted in an increase in the number of appeals being made to the Board. This trend is expected to continue over the next several years.

The Board is developing a performance measurement system in order to strengthen and identify the resource levels required to efficiently and effectively conduct its activities.

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

During 1985-86, the Program's plans include the following:

- to make total benefit payments of some $748,408,000;
- to render decisions on 7,500 new or revised pension applications and on 3,600 cases to its Entitlement and Assessment Boards (see page 5-20 and 5-21);
- to achieve the following average response times: (see page 5-21)
  - less than 90 days to render a decision on initial applications;
  - less than 150 days from certification of readiness to be heard to a decision on an application to either Assessment or Entitlement Boards; and
- to increase medical examination frequency on aging pensioners.

2. Financial Summary

Funding requirements for the Canadian Pension Commission Program for both the Estimates year and the current fiscal year are presented in Figure 1. In addition, comparative information on financial performance for 1983-84 is also provided.

Figure 1: Financial Summary and Review of 1983-84 Financial Performance ($000)

	Estimates 1985-86	Forecast* 1984-85	Change	Actual 1983-84
Pension Adjudication and Administration	767,564	734,465	33,099	662,540
Authorized person years	397	391	6	357.8

* There has not been significant change in dollar resources from 1984-85 Main Estimates of $733 million although person years increased by 21 due to workload requirements. (Extracts from Part II of the Extimates, page 5-4).

Explanation of Change: The increase of $33,099,000 in the 1985-86 requirement over the 1984-85 forecast is due mainly to the following major items:

	($000)
• increases in total pension benefits paid due to the net affect of volume changes and annual indexing to the Consumer Price Index	31,954
• increase of 9 person years and related operating expenses based on workload projections (net increase of 6 person years results from a 3 person year reduction for summer students reflected in the 1984-85 Forecast)	333
• allowance for inflation in operating costs	1,014

Recent Performance: Actual expenditures varied from the 1983-84 Main Estimates of $685,321,000 by approximately 3%, mainly relating to pension benefits paid. The estimated pension benefits were based on a model projection and a 3% variance is reasonable.

B. Recent Performance

1. Highlights

In 1983-84, the Program accomplished the following:

- made benefit payments of $646,883,000 to some 101,748 pensioners and 41,651 dependants, and carried out medical examinations on 15,980 pensioners. These volumes are all within 1% of planned performance.

- adjudicated 16% more decisions than planned on applications for new or revised pensions.

- decreased the backlog of outstanding applications to Entitlement and Assessment Boards through a 12% increase in the number of adjudications.

However, it should be noted that the loss of experienced staff, both professional and support, as a result of relocation, and the lack of a full complement of commissioners had a negative impact on program performance. For example:

- The Program estimated turnaround times of 60 days and 90 days to process survivor and disability pension applications. It achieved 82 and 132 days respectively.

- Preparations of Statements of Case for Assessment Boards required an average of 92 days versus the target level of 30 days. The estimate of 60 days to prepare Statements of Case for the Entitlement Board was achieved.

- Average time elapsed between the certification of readiness for a case to be heard and the actual hearing by either an Assessment or Entitlement Board was 188 days, or 68 days over target. However, because the Program attempts to maximize use of available manpower by scheduling Boards only when there are sufficient cases ready to be heard in any one of the 32 geographical locations, time lapses can and do occur.

C. Background

1. Introduction

The Canadian Pension Commission Program consists of the Canadian Pension Commission which reports to Parliament through the Minister of Veterans Affairs.

The Canadian Pension Commission renders decisions and holds Entitlement and Assessment boards on disability and dependant pension applications. (A description of this Program is found in the Portfolio Summary, page 1-5.)

2. Legal Mandate

Acts governing the operations of the Canadian Pension Commission include: the Pension Act, under which pensions are awarded for disability or death related to military service; the Civilian War Pensions and Allowances Act, Parts I to X, which provides for similar pension awards for disability or death attributable to service during the Second World War in certain organizations closely associated with the Armed forces such as the Merchant Navy; and the Compensation for Former Prisoners of War Act which provides compensation to victims for time spent in prisoner-of-war camps.

In addition, the Commission considers claims for pensions under certain other measures, including the Flying Accidents Compensation Regulations, the RCMP Superannuation Act, the RCMP Pension Continuation Act and the Halifax Relief Commission Pension Continuation Act. Payments pursuant to the RCMP Superannuation and Pension Continuation Acts are provided for under the spending authority provided in the Law Enforcement Program of the Ministry of the Solicitor General. The Commission is also the agency through which grants and annuities that accompany some gallantry awards are paid under the Gallantry Gratuities and Annuities Order.

3. Program Objective

The principal objective of the Canadian Pension Commission Program is to ensure the provision of service related death and disability benefits to eligible ex-members of the armed forces, certain civilians and/or their respective dependants.

4. Program Organization for Delivery

Figure 2: Organization and Resources ($000)

Canadian Pension Commission Program

	1985-86 Main Estimates ($000)
P-Y	397
Operating Costs	19,156
Grants	748,408

The four sub-activities consists of the following:

Sub-Activities	Description	Functions
Executive Direction (13 P/Ys)	The Chairman is the Chief Executive Officer of the Commission. Certain Administrative and support services are provided by office staff of the component in Charlottetown while a Core Group performs planning, liaison and administrative services from Ottawa.	Planning and Support to operational planning and as well to the Chariman, Parliamentary bodies, Central Agencies, other Agencies and the Department of Veterans Affairs, client-oriented agencies and clients.
Adjudication (24 P/Ys)	Composed of a Deputy Chairman, a Secretary, between eight and fourteen Commissioners appointed for terms of up to ten years (renewable) and up to ten additional ad hoc Commissioners appointed for periods of one year (renewable). All are Governor-in-Council appointments. Renders decisions on applications regarding eligibility for, and the amount of benefits to eligible veterans, certain civilians and, or their respective dependants.	First Decisions Entitlement and Assessment Board Decisions Ancillary Benefits Decisions Assessment Reviews Trust Fund Decisions
Adjudication Support Medical (51 P/Ys)	Headed by a Chief Medical Advisor and composed of a Deputy Chief Medical Advisor and Head Office Medical Advisors, provides medical advice to the Commission on the evidence available in	Medical Examinations Medical Assessments Field Medical Reviews Head Office Medical Reviews and Quality Control Field Medical Opinions Head Office Medical Opinions

Sub-Activities	Description	Functions
	support of claims and on pension matters generally. Writes medical opinions on all individual cases and maintains medical standards. The functions extend into District Offices through the Senior Pension Medical Examiners and Pension Medical Examiners who conduct medical examinations on applicants and pensioners.	
Adjudication Support Administrative (309 P/Ys)	Headed by an Executive Director, responsible for providing all managerial and operational support functions and service at Headquarters and in 17 District Offices as well as three sub-offices. Provides support to the adjudicative function by preparing documentation required to enable decisions to be rendered regarding entitlement or level of assessments; provides benefit related information and advice. Provides support to policy and planning initiatives of management and ensures provision of financial, personnel and administrative services to the Commission.	Non-medical Claims Prepared First Level Cases Prepared Second Level Cases Prepared Boardroom Decisions Typed Entitlement Board/ Assessment Board Decisions Typed Trust Fund Decisions Typed Medical Decisions Promulgated Non-medical Decisions Promulgated Trust Fund Decisions Promulgated Ministerial and Other Inquiries General Correspondence Entitlement Board/ Assessment Board Cases Serviced Clients Counselled Policy and Planning Support Finance, Personnel and Administration Coordination

D. Planning Perspective

1. Environment

The more significant environmental factors that will affect this Program include:

Changes in Population: Declines in the overall veteran population are forecast for the next several decades. Figure 3 shows the projected veteran population to the year 2001. The declining veteran population will ultimately result in a decreasing requirement for resources for the Canadian Pension Commission Program. This reduction will be partially offset due to the increasing numbers of veterans' survivors becoming eligible for pensions as a result of legislative changes in the provision of pension benefits. An additional offsetting factor will be the increasing number of pension applications from ex-Regular Forces members.

Figure 3: Projected Veteran Population and Number of Individual Pensioners in Pay

Aging of War Disability Pensioners: Disability pensioners average age is now 66. The currently accepted medical opinion, taking age and the nature of the disability into account, is that on the average a pensioned veteran of that age should be medically examined every 3½ years. The optimum frequency increases to every 2½ years for a veteran of seventy-two. Figure 4 below shows the number of medical examinations which can be performed within the approved resource ceiling to 1985-86 with additional resourcing required in 1986-87 and 1987-88 to examine veterans at an interval less than every five years.

Figure 4: Medical Examinations

2. Initiatives

The Commission's major initiative will be to successfully deal with an increased workload of approximately 10% resulting from its goal to examine pensioners at a more medically acceptable frequency and to meet targeted turnaround times (See Figure 11 on page 5-21).

3. Update on Previously Reported Initiatives

Improved Client Services: The Commission negotiated goals related to medical examination with its medical staff for 1983-84 and achieved a virtual 100% attainment. Similarily, it has negotiated goals for 1984-85.

Owing to the loss of experienced staff through relocation, the Commission fell short of its targeted 90 and 60 day turnaround on applications for disability and survivor pensions. Nevertheless the Commission has progressively reduced processing time since 1982-83 and continues to work toward the original targets, planning to achieve these by the end of 1984-85.

The Commission intends to continue to review its District Office boundary delineation and to identify specific locations, possibly closer to the client's home, to be used as medical examining points.

The Commission investigated two telecommunication technology services as a means of speeding up the Entitlement and Assessment Board process. The first process was not cost effective. The second was deemed useful in certain types of cases and will be monitored in 1984-85.

Decentralization of Certain Functions: After a feasibility study, the Commission determined that the payment of grants to cover funeral and burial expenses could be more rapidly carried out by the District Offices than by Head Office and transferred this function to the field during 1984-85.

4. Program Effectiveness

Criteria for measuring the effectiveness of the Canadian Pension Commission Program must be related to its basic objective of providing benefits to eligible ex-members of the Armed Forces, certain civilians and/or their dependants. The Program's effectiveness can therefore be measured in respect of its administration of legislation, including the length of the administration process, the extent to which legislation is appropriately interpreted and the relative benefits provided to recipients. Two indicators of the effective delivery of benefits to this client population and their dependants are level of service and amount of pension.

Level of Service: This indicator measures the quality of service to clients in terms of the amount of time required to process an application through the stages of the pension process involving only the Canadian Pension Commission. Figure 5 presents the trends in this area including projections for fiscal years 1984-85 and 1985-86.

Figure 5: Level of Service Summary (Reductions in Turn Around Time)

Amount of Pension: The basic rate of pension is that amount paid to an unmarried pensioner with a disability assessed at 100%. It was originally established at an amount equivalent to the composite of the salaries of five selected categories of unskilled public servants after income tax is deducted at the rate for a single person in the province with the lowest tax rate. The two have on occasion, moved apart with the one moving at times ahead and at times falling behind the other. This is because the basic rate is adjusted each January 1st in line with the change in the Consumer Price Index, which is not necessarily equivalent either in time or in amount to that obtained by the five selected categories in wage negotiations. The Commission monitors the composite to ensure relative comparability and recommends, at times, an amendment to the Pension Act to narrow any gap that may have developed.

Figure 6: Amount of Pension* ($)

5. Performance Information/Resource Justification

Benefit Payments

Disability Pensions: Under the Pension Act, pensions may be paid to members or former members of the Armed Forces who are suffering a disability due to an injury or a disease or the aggravation of an injury or disease which was incurred during military service in wartime or which arose out of or was directly connected with military service in peacetime.

Disability pensions range from 1% to 100% and are paid in accordance with the extent of disability which is found to exist through medical examination. Medical examiners are guided as to the extent of a disability by a Table of Disabilities which, under the Pension Act, the Commission is required to prepare and maintain. For pensionable disabilities assessed at less than 5%, no monthly pension is payable but the pensioner is entitled to the appropriate single payment as provided in the Schedule of Rates.

The Civilian War Pensions and Allowances Act provides for similar benefits to certain civilians who served in organizations closely associated with the Canadian Armed Forces during World War II.

Survivors Pensions: Following the applicant's or pensioner's death the surviving spouse and eligible children of a deceased pensioner may, upon application, receive either a full pension, or a proportionate pension.

Benefits, including pensions, are adjusted annually on the first of January in accordance with the Consumer Price Index. Some benefits are discretionary and the amounts may be altered based on the degree of dependancy. Those benefits paid as a right to disability pensioners, spouses and children are not subject to any type of a means test. Figure 7 provides examples of payment levels, effective January 1, 1985.

Figure 7: Scale of Pensions for 100% Disability ($)

	January 1, 1984 (per month)	January 1, 1985 (per month)
Basic Pension	1,086.22	1,137.27
Additional pension for spouse (equal to 25% of the basic pension)	271.56	284.32
Additional pension for children		
First child (equal to 13% of the basic pension)	141.21	147.85
Second child (equal to 9.5% of the basic pension)	103.19	108.04
Each additional child (equal to 7.5% of the basic pension)	81.47	85.30

Compensation for Former Prisoners of War: Under the Compensation for Former Prisoners of War Act, veterans may receive compensation depending on the length of imprisonment and the country involved. A veteran may be eligible to receive between 10% and 50% of the 100% disability rate.

Other: A pensioner who is totally disabled and needs assistance to care for himself or herself may, in certain circumstances, be awarded an Attendance Allowance. The amount of the allowance is based on the degree of attendance needed but is limited to $752.55 monthly in 1985 ($718.77 monthly in 1984).

Pensioners who are amputees or who must wear special appliances or who require specially made clothing may receive an allowance to compensate for the special apparel. The maximum monthly allowance in 1985 is $85.26 ($81.43 in 1984).

When a pensioner is in receipt of a pension for disabilities assessed at 100% and is suffering an exceptional incapacity as a result, an additional monthly allowance in varying amounts may be awarded up to a maximum monthly amount of $602.05 in 1985 ($575.02 in 1984).

The Gallantry Gratuities and Annuities Order provides for the payment of an annuity if the recipient of an award for gallantry as listed in the Order is awarded a disability pension, War Veterans Allowance or an annuity under the Canadian Forces Superannuation Act.

In Figure 8, the main variables that affect total expenditures are summarized according to the number of recipients and total payments. This figure illustrates the relative change over a 10 year period.

Figure 8: Number of Recipients and Total Payments

At March 31	Number of Recipients	Average Monthly Benefit	Total Payments
			($000)
1975	145,477	190	332,533
1976	142,254	212	362,015
1977 *	141,939	229	391,534
1978	138,891	245	408,591
1979	136,433	265	436,058
1980	135,844	298	486,900
1981	133,829	324	520,525
1982	135,109	331	538,070
1983	141,840	352	599,775
1984	143,399	376	646,883
1985	142,738	418	716,438

* effective 1977, recipients of P.O.W. compensation are included in the above figures.

Workload

The major elements of the Commission's workload are summarized in Figures 9 and 10. In an effort to maximize its use of resources, the Program began developing a Performance Measurement System in 1982-83. The system is based on an analysis of output produced by a given person year.

Figure 9: Summary of Initial and Other Applications and Decisions

	Estimates 1985-86				Forecast 1984-85				Actual 1983-84			
	Disability	(1) Survivor	(2) Special Awards	(3) Other	Disability	(1) Survivor	(2) Special Awards	(3) Other	Disability	(1) Survivor	(2) Special Awards	(3) Other
Decisions rendered by 31 March	5,100	200	2,200	29,590	5,250	250	2,000	29,600	4,361	284	1,841	29,590(4)
Applications pending beginning of year	1,688	43	255	788	1,938	43	255	788	1,269	66	204	786
Applications received during year	4,800	200	2,200	29,590	5,000	250	2,000	29,600	5,030	261	1,892	29,592
Decisions promulgated	5,100	200	2,200	29,590	5,250	250	2,000	29,600	4,361	284	1,841	29,590
Applications pending	1,388	43	255	788	1,688	43	255	788	1,938	43	255	788

(1) Survivors of eligible persons where entitlement had not been established at time of death.

(2) Includes Exceptional Incapacity Allowances, Attendance Allowance, Clothing Allowance and Fixed Disability Age Increase Awards whether or not associated with applications for concurrent disability award.

(3) This figure includes items such as awards to spouses, children, widows and orphans as well as compassionate awards and grants for burial expenses, as well as assessment change and trust fund decisions not included in 1984-85.

(4) The relative workload weight of other decisions is 5 times less that of first decisions and 12 times less that of EB/AB decisions.

Figure 10: Summary of Assessment/Entitlement Board Hearings and Decisions

	Estimates 1985-86		Forecast 1984-85		Actual 1983-84	
	Assessment	Entitlement	Assessment	Entitlement	Assessment	Entitlement
No. of hearings held at 31 March	1,100	2,500	1,100	2,500	1,367	2,666
Cases pending at beginning of year	784	2,125	734	1,925	900	2,153(1)
Cases received during year	1,150	2,700	1,150	2,700	1,201	2,438
Decisions promulgated	1,100	2,500	1,100	2,500	1,367	2,666
Cases pending end of year	834	2,325	784	2,125	734	1,925

(1) Cases certified ready to be heard.

Quality of Service: Figure 11 summarizes selected quality of service indicators related to the work done by the Commission.

Figure 11: Selected Quality of Service Indicators

Average Elapsed Days to Process	Estimates 1985-86	Forecast 1984-85	Actual 1983-84	Actual[1] 1982-83	Actual 1981-82
	Less than

Assessment Board					
Preparation of Statement of Case	90	90	92	123	204
Certification of Statement of Case[2]	150	150	188	160	144
Hearing					

1. The large decrease in processing time from 1981-82 is directly linked to our additional 32 person-years approved by Treasury Board for 1982-83 and to improved operating procedures.

2. The certifications process involves mailing a statement of case to the applicant and awaiting his/her certification as to completeness of documentation. Any time consumed in this step is beyond the control of the Commission. This is estimated at 57 days.

Although, as indicated on page 5-9, the loss of experienced and trained staff, both professional and support, due to their choosing not to relocate to Charlottetown and the lack of a full complement of Commissioners resulted in projected average response times not being achieved in 1983-84, the Commission has still managed to steadily reduce its average processing times.

The person year column displays the forecast distribution of the authorized person years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person years for the occupational group. Year to year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Transfer Payments

Figure 14 presents a summary of all grant and contribution expenditures of the Program.

Extracts from Part II of the Estimates

Appropriation Authority

Authority is requested in these Estimates to spend $4,329,000 in support of the 1985-86 Bureau of Pensions Advocates Program and $570,000 for employee benefits which will be made under existing statutory authority.

Financial Requirements by Authority

Vote	(thousands of dollars)	1985-86 Main Estimates	1984-85 Main Estimates
	Bureau of Pensions Advocates Program		
30	Program expenditures	4,329	4,085
(S)	Contributions to employee benefit plans	570	499
	Total Program	4,899	4,584

	4,685,000	4,743,000	4,393,247

Section I
Program Overview

A. Plans for 1985-86

1. Highlights

During 1985-86, the Bureau's plans include the following:

- to represent 9,765 applicants for pension with claims and appeals to the Canadian Pension Commission and appeals to the Pension Review Board (see page 6-10);
- to counsel 2,730 applicants with respect to the application of the Pension Act for cases where no claim will be made;
- to represent 200 applicants with appeals to the War Veterans Allowance Board and 1,100 applicants before the Pension Review Board; and
- to maintain established average response times for research, preparation and presentation of pension applications and appeals throughout 1985-86 (see page 6-11).

2. Financial Summary by Activity

Actual and forecast resource requirements for the Bureau of Pensions Advocates are presented in Figure 1.

Figure 1: Financial Summary ($000)

	Estimates 1985-86	Forecast* 1984-85	Change	For Details See Page
Legal Counselling and Representation	4,899	4,586	313	6-11
Authorized person-years	118	120	(2)	

* There has not been significant change from 1984-85 Main Estimates. The 1984-85 forecast is $4,586,000 or $2,000 more than the 1984-85 Main Estimates of $4,584,000. (Extracts from Part II of the Estimates, page 6-4.)

Explanation of Change: The financial requirements for 1985-86 are 6.8% or $313,000 higher than the 1984-85 forecast expenditures. The increase is due primarily to:

	($000)
• increase, due to inflation in operating costs	246
• staffing delays occurring in 1984-85	187
• decrease of 2 person years relating to projected workload requirements	(93)

B. Recent Performance

1. Highlights

Highlights of the Program's performance during 1983-84 were:

- In 1983-84 the Bureau represented 11,520 applicants for pensions and submitted 14,464 new claims and appeals on their behalf. An additional 4,344 applicants received counselling relating to pension entitlement for cases where no claim or appeal could be made. The major increase in activity was due to the number of clients receiving counselling services.

- The following average response times were achieved in 1983-84:

  - 5.2 months to research, prepare, and submit an initial application to the Canadian Pension Commission

  - 2.6 months to research, prepare, and certify as ready to be heard an appeal to an Entitlement or Assessment Board of the Canadian Pension Commission; and

  - 10.6 months to research, prepare and present an appeal for hearing before the Pension Review Board.

2. Review of 1983-84 Financial Performance

Figure 2: Review of 1983-84 Financial Performance ($000)

	1983-84		
	Actual	Main Estimates	**Change**
Legal Counselling and Representation	4,393	4,685	**(292)**
Authorized person-years	116	120	**(4)**

Explanation of Changes: Dollar and person year reductions resulted mainly from positions left vacant by unexpected staff turnovers and delays in staffing vacant positions on the transfer of Head Office to Prince Edward Island.

C. Background

1. Introduction

This Program provides a complete independent legal aid service to persons seeking to establish claims under the Pension Act and allied statutes and orders or an appeal to the War Veterans Allowance Board. This service is provided by professional advocates and support staff located in 19 cities throughout Canada. The relationship between the Bureau and an applicant is that of a solicitor and client. The services of the Bureau are free, but an applicant can employ a private lawyer at his own expense or be represented by a service officer of an accredited veterans' organization. The Bureau must accept all requests for assistance from veterans. (A description of this Program is found in the Portfolio Summary, page 1-5.)

2. Legal Mandate

The legal mandate for the Program is set out in Part II of the Pension Act. The legislation specifically prescribes the duties as: counselling applicants with respect to the application of the Pension Act and related statutes and orders; assisting applicants in the preparation and submission of applications; and arranging for applicants to be represented by a pensions advocate at hearings held under the Act. The War Veterans Allowance Act was recently amended to allow the Bureau to represent applicants for appeals to the War Veterans Allowance Board.

3. Program Objective

To provide an independent professional legal aid service to persons seeking to establish entitlement under the Pension Act and allied statutes and orders, or an appeal to the War Veterans Allowance Board.

4. Program Organization for Delivery

The Pension Act provides that the Bureau is not part of the Department of Veterans Affairs but reports directly to the Minister of Veterans Affairs.

The Bureau of Pensions Advocates is under the direction of a Chief Pensions Advocate appointed by the Governor in Council. The Bureau is divided into two responsibility areas:

- the Deputy Chief Pensions Advocate heads the operational area which researches, prepares, and presents claims to the various adjudicating bodies in the Pensions Program; this includes the 17 District Pensions Advocates and their support staff, as well as Area Advocates and their support staff at Head Office who present appeals to the Pension Review Board and the War Veterans Allowance Board; and

- the Executive Director and his staff who provide the necessary administrative support to all sections of the Bureau.

The Bureau has a decentralized organization to provide its services. There are 17 District Offices and 2 sub-offices in larger centres across Canada with 17 District Pensions Advocates. In addition, advocates travel to other locations in their districts and interview applicants in their homes when required.

5. Operations

In its role as representative for applicants seeking to establish claims or appeals under the Pension Act and related statutes and orders, or an appeal under the War Veterans Allowance Act, the Bureau performs the following actions:

- immediate notification of a new claim to the Canadian Pension Commission (CPC) by means of a Notice of Intent;
- gathering of information in support of the claim, including follow-up correspondence with the client to inform him of the status;
- submission of the prepared application to the CPC for adjudication;
- follow-up of submitted applications and decisions, including counselling with respect to potential appeals;
- notification of appeal to the CPC Entitlement or Assessment Board, including review of Statement of Case and research for additional evidence;
- certification that appeals are ready to be heard by CPC, scheduling the appeal hearings, preparation, and personal appearance at the appeal hearing;
- notification of appeal to the Pension Review Board or the War Veterans Allowance Board, including research and review of the appeal documentation;
- completion of Notice of Readiness, scheduling the appeal hearings at Head Office, preparation, and personal appearance before the Pension Review Board or the War Veterans Allowance Board; and
- follow-up of the appeal hearing, including counselling and explanation of the decision.

D. Planning Perspective

1. Environment

The workload associated with the provision of counselling and representation services by the operations area is directly affected by the overall decline in veteran population. In spite of the decline, however, significant workload increases are occurring due to current economic conditions, aggravation of latent disability due to aging and the fact that most veterans are now approaching retirement age. Figure 3 shows actual and anticipated workload in terms of the number of clients served.

Figure 3: Workload Volumes for the Bureau of Pensions Advocates

2. Update on Previously Reported Initiatives

Reduce response time: In 1983-84 the Bureau reduced the time related to the research and preparation of claims and appeals in all three areas of pension adjudications. Due to an unexpected increase in the number of new applications for pension and requests for appeals, and staff shortages caused by unforseen turnovers and delays in staffing, the Bureau was unable to significantly reduce the number of pending applications and appeals.

3. Program Effectiveness

For the program to be effective the Bureau must prepare and present each case in a professional manner and have the claim or appeal ready for presentation with minimal delay to the client.

Figure 4 shows the overall success rate while Figure 5 reflects the turnaround time for applications and appeals. Although the Bureau must accept all requests for assistance, historically it has obtained positive decisions in 25-30% of its cases.

Figure 4: Overall Success Rate

Figure 5: Turnaround Time (in months)

4. Peformance Information/Resource Justification

The Bureau has traditionally used performance measurement techniques to assist in the determination of resource requirements to meet the demands of anticipated workload fluctuations. Resources for the Estimates year were determined using weight factors relative to the base year evaluations (1979-80).

In 1984 the Bureau undertook a study of its operations to re-evaluate the average processing times of all operational staff, to be used for the measurement of efficiency and for calculating future resource requirements. Six types of work were identified and accepted as suitable for ongoing work measurement: claims to the Canadian Pension Commission, appeals to Entitlement and Assessment Boards of the Commission, appeals to the Pension Review Board (initiated by District Offices), hearings before the Pension Review Board and appeals before the War Veterans Allowance Board (head office staff only), and counselling services to clients where no claims can be made. The first three types are measured by the number of claims under entitlement sections of the Pension Act, rather than clients. A method of weighting is used to allocate staff to these six types of work, excepting only head office executive and administration personnel.

Figure 6 shows performance measurement information used to determine resource requirement.

Figure 6: Performance Data

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84	Actual 1982-83
Workload Volume	16,384	16,892	19,742	16,820
Output Weight (PY)	117.3	119.1	134.7	121.4
PY's Budgeted or Utilized	118	120	117.6	113.9
Efficiency Index *	109.7	109.6	126.3**	117.7

* Base year 1979-80

** In 1983-84 the volume of cases was distorted due to the heavy increase in new appeals and counselling services. This had the affect of reducing individual processing time below the established norm and exaggerating the level of efficiency. With the exception of 1983-84, workload has remained relatively constant over the period 1982-83 to 1985-86.

Section II
Supplementary Information

A. Analysis by Object

1. Expenditures by Object

Figure 7: Expenditures by Object ($000)

	Estimates 1985-86	Forecast 1984-85	Actual 1983-84
Personnel			
Salaries and Wages	4,077	3,831	3,633
Contributions to employee benefit plans	570	517	575
Goods and services			
Transportation and communication	152	141	111
Professional and special services	68	67	59
Other operating expenditures	11	11	1
Total operating	4,878	4,567	4,379
Capital	21	19	14
Total expenditures	4,899	4,586	4,393

2. Personnel Expenditures

Figure 8: Authorized Person Years and Salary Provision

	Authorized Person-Years			Current Salary Range	1985-86 Average Salary Provision
	85-86	84-85	83-84		
Management					
Executive	1	1	1	50,350-96,300	68,805
Scientific and Professional					
Law	43	42	43	20,523-88,120	50,459
Administrative and Foreign Service					
Administrative Services	3	4	2	13,912-57,987	36,143
Program Administration	19	18	18	13,912-57,987	27,497
Administrative Support					
Clerical	5	4	6	12,932-31,743	21,441
Secretarial	47	45	50	12,636-31,946	21,293

The person year column displays the forecast distribution of the authorized person years for the Program by occupational group. The current salary range column shows the salary ranges by occupational group at October 31, 1984. The average salary column reflects the estimated base salary costs including allowance for collective agreements, annual increments, promotions and merit pay divided by the person years for the occupational group. Year to year comparison of averages may be affected by changes in the distribution of the components underlying the calculations.

3. Cost Analysis

Figure 9: Total Cost of Program for the Year 1985-86 ($000)

	1985-86 Operating Expenditures	Add Other Cost	**Total Cost**	Total Cost 1984-85
Bureau of Pensions Advocates	4,899	467	**5,366**	5,091

Other costs of $467,000 consist of:

	($000)
• accommodation provided without charge by Public Works	363
• other services provided without charge by other Departments	104
